MONDAY afternoon, July 6, we bade Gpd speed to twenty-eight Indian pupils who, under the care of Rev. Mr. Gravatt and Miss Ludlow, left us for their homes in Dakota and Indian Territory. Fourteen of this number were returned principally for illness, the rest for expiration of time. Thirteen have been here at school nearly four years, and go back to their homes very much in earnest in their desire to help their people. Many hope to come back in the Fall for another term of years to better prepare themselves for stronger work. One will return to enter a theological school, and another to study medicine and so become the first civilized "medicine-man" of his tribe.

They go to the different agencies as follows:

SAC AND FOX, I. T.

Lucas Shield.	20 June, '84

\*Graduated. \*Second term at Hampton.

### Lending a Hand.

As soon as news came to us of the cyclone at the Omaha Reservation, a meeting of our Lend-a-Hand Club was called, the matter discussed, and a generous sum voted to be sent the sufferers.

This Club is yet in its infancy and its members are only learning their first lessons in systematic giving. Seeing how difficult it is for Indians to earn money here, Miss Walker, of Pittsfield, Mass., kindly offered to sell for them all the articles they would make and send to her. The Indians entered most cheerfully into the plan and in a few weeks two large boxes went north filled with bows and arrows, dolls, Indian work, fancy work, carving and various small things, all made and given by Indian boys and girls.

Miss Walker held her fair and astonished us all by sending to the Club over \$50. Until this, the treasury has been in imagination only, and the fact that his name even was forgotten; not to be so treated again we hope.

The story of the trouble gleaned from letters and newspapers roused the sympathies of the Indians to such an extent that they would—Indian fashion—have parted with their entire fortune had they not been restrained by the representative of a less impulsive race.

Very interesting were the speeches delivered, some in English and some in Indian. Philip and Minnie who, with little Eddie, were among the sufferers, were spoken of with much feeling.

The many wars between the Omahas and Sioux tribes was brought up, but quietly and delicately put away as things of the past. The whole spirit of these earnest, extemporaneous speeches, made freely among themselves and for themselves, was Christian in its broadest sense, and should be a great encouragement to all who are laboring to make the Indian a man in the true sense. The following is the letter of Benj. Ohitika to Philip Stabler at Omaha Agency:

DEAR FRIENDS.—We were very sorry to hear that you were a great trouble with the strong winds, and I think you know that we all the Indian students Club call "Lend-a-Hand Club," that we will try to make something and sell it and make some money and keep them to help somebody in danger. We chose some officers and I am one of the officers. We had a meeting last night and talk about what we should do. I was standing up and I thought it was better for us to help you somehow. That it will be remembered to us, because our forefathers and your forefathers were a great enemies to each other and make a war between the Sioux and the Omahas, but how in this generation we go to the east to learn some way new life, and better way, and to love each other—treat each other very friendly as I said. We used to enemy each other, but now that is all past and try to live another way, and now there are some money for you that will help you. Something for need. All the boys are sending to you their

money. Especially most of them Sioux. We want you to let us know if you get the money. May write to me if you have time because I leave the Hampton very soon if you write you must write good one because I must read to the boys. They are anxious to hear from you as soon as possible. I shall ask God will bless you and keep you in a trouble. Give my love to your family. I hope to hear from you soon.

Yours Respectfully,  
A Sioux friend,  
BENJ. OHITIKA.

### Abstract of Indian Reports.

#### CHEYENNE RIVER.

This agency is about half way between the northern and southern boundary of the Great Sioux Reserve, and, stretching 150 miles along the western side of the Missouri, has the lion's share of its muddy waters. On the north the Moreau forms the boundary. Fifty miles or more south of this the Cheyenne zigzags its swift but clearer waters through the desolate country, encouraging vegetation all along its banks, and winning from the Indians the name Walipa Wastu—or Good River. Several miles south of this, where everything looks discouraging, another stream flows to the Missouri, and this the inhabitants—justly call the Bad river.

Two military posts are stationed near here—Fort Sully on the east bank and Fort Randall farther up the river on the right, and at the agency proper. Why anyone should have chosen this place as a settlement is beyond conception, for there seems not the slightest thing to recommend it as a location—so far as the people of the present can see. Near a small fort, the traders' stores, the scouts' camp, and a few houses huddled together on the river bank, form what is called the "agency," while a mile or so beyond, the government school and the girls' boarding school and mission church stand at a respectful distance apart.

Nine hundred children between six and seven years of age were reported on the agency last year.

The government school, composed of bright young boys, under Miss Swan's management, promises to turn out, in the course of time, some strong, manly youths; while the Episcopal mission school, under Mr. and Mrs. Kinney—probably the best school in Dakota—promises girls who will be more than a match for the boys.

The Episcopal missionary, Rev. Henry Swift, has his mission 60 miles north of the agency. Of his work he says:

About 700 Indians are under the influence of the Episcopal mission. Services are kept up regularly at three points. In the sphere of our influences dancing and conjuring have ceased. The majority have assumed the dress of white people, and almost all are living in houses. Of one hundred and ten families living in the vicinity of Saint Stephen's, in a radius of 30 miles, all are scattered at distances from each other on homesteads, and the greater part have fields of their own ranging from one to fifteen acres, broken or plowed by themselves, under cultivation. Many of the women have learned to do housework at the mission, and greater cleanliness and order and neatness is found in their houses in consequence.

In connection with education I have felt the great need there is for systematic industrial teaching. Children trained in letters for three or five years and then returned to their homes will derive but little benefit and in many cases, after a while the parties will be of little use to their people, unless in conjunction with their knowledge of books is united a thorough knowledge of every-day work.

Bigamy has been pretty well checked. Indian marriages are, however, frequent; that is, a man taking a woman, with father's consent, but without any further ceremony, or any bond to hold the couple together, and, in many cases, after a while the parties may separate and contract new alliances. Fifty-three couples have been married by me in the church, and in every case the parties have remained true to each other. In the past year there have been 63 infant and 36 adult baptisms, and 36 have been confirmed. The aggregate attendance at the three stations on Sundays has averaged about 120. Offerings have amounted to \$140.

Rev. Thomas L. Riggs, son of Dr. Riggs, one of the first missionaries to

the Sioux, has a more extensive field of labor, and is assisted more than any other missionary by native workers. Except his industrial school at Oahe, all his schools are taught by Indian men or women. Of them and their work he says:

"Progress in all our schools has been good, the teachers faithful, and the average attendance much better than for past years. Instruction given by the native workers is chiefly in the vernacular, though at three schools English also has been taught. It is a marked fact that when a child can read in his own language he is usually far better able to master the difficulties of English speech."

"Closely connected with school training we are carrying forward the religious and moral education of the people. We endeavor to teach them to think, and to think pure thoughts, as well as to read and write. Nor have our schools been lacking in effort to promote physical industry and training, if in nothing more than this—that every native teacher is obliged to plant and care for a small field at his station. We have furnished object lessons to enforce precept."

Born and brought up with these people, he must know whereof he speaks when he says, at the conclusion of his report:

"It is time now to compel attendance at school. Not alone at Government schools, but with mission schools as well. The ration system should be used as an educational lever. When a village has located within reach of a school affording opportunity, the children of that village should be made to attend or the ration be forfeited. This is not visionary; it is a fact at some time or another a fact with us. The time for fooling in this matter of education is past. We cannot afford to build and furnish schools and then depend on caprice and slender desire to fill them up. Attendance must be forced."

This has certainly been tried at this agency, and with success. When a child's respect for the "white man's way" decreases to such an extent that he is impelled to seek refuge and sympathy under the paternal tipi, the Indian policeman is sent as an assessor from the agent and the child escorted back to his teachers, or rations withheld from the whole family.

These Indian policemen, wherever I have seen them, command great respect. They are chosen from the stronger men of the tribe, the more advanced; and outside their duties as guardians of the peace—for which they receive the sum of \$5 per month—they exert a most beneficial influence not only in the line of law and order, but also by their more advanced ideas of every day living.

The Government land on the east side of the river, running parallel with the entire length of this reservation, has brought the white people closer to the Indians than is best for their good.

Their agent, Major Swan, says:

"Numerous towns and villages have lately sprung up on the east side of the Missouri River in which there are always, as in all new settlements on the frontier, a few white men whose influence with the Indians cannot be otherwise than detrimental, viz., by the sale of liquor, arms, and fixed ammunition; by encouraging and hiring Indians to resume their wild dress and give dances for amusement of whites; by persuading them to sell annuity goods issued by the Government, and finally by prostituting their women. All these are great obstacles in the way of civilization."

"An element of great evil is the residence of squawmen among the Indians. As a rule their influence with the Indian is bad and their example pernicious."

It is the old story over again—a few good-people giving their lives to help up a fallen race, while many more evil or unscrupulous ones are holding them down. It is strange that the Indian finds it hard to trust the white people when four-fifths of all the men he comes in contact with are of this stamp.

Evidently the Indians at this agency do not intend to follow the course prescribed for them by many—worthy people and "die out." Their report for last year places their number at 3,144. In spite of their birthright of scrofula and consumption, only 72 died during the year, while the number of births reported was 123. They average four persons to a family.

Their agent, Major Swan, concludes his report to the Commissioner of Indian Affairs with the result of his experience, as follows:

"I have no ambition to indulge in vague speculations and idle theories regarding the advancement and civilization of the Indian. Paid labor for the adults and generous education for the young, in my opinion, the surest means of solving the problematical question of Indian civilization. The pauperization of Indians is the one great impediment to their advancement. All able-bodied Indians should be compelled to work for their subsistence; reasonable wages should be paid them for their labor, and, above all other requisites, good faith should be kept with them on the part of the Government in every particular."

#### Aunt Pokey's Son.

(Continued from Page 85)

with a perfectly flat nose, wide open eyes, and thick, red lips, who cautiously peered into the room from the shop. Seeing that he was unnoticed, the child slipped into the chair vacated by Professor Randolph, and was soon making way with the provisions in a stealthy and astonishing manner. Occasionally he glanced at Aunt Pokey in surprise, and had very nearly resolved to stop eating from sheer inability to swallow anything more, when the mistress of the house suddenly awoke to his proceedings. "Well," she said, abruptly, "Don't you think you has 'stroyed about enough for one time, sir? Nigger, if you was valibb 'cordin' ter what you kin do in de way of 'stroyin' vittals you p'intly would be worth keepin'."

The boy dropped his knife and fork, folded his hands on his breast, and responded in a deeply injured tone, "I was mos' choked tryin' to 'stroy dem vittals 'bout nuthin' ter drink, 'cos I didn't want to 'sturb you, marm." Aunt Pokey bowed a withering glance upon the boy, shaking her head and rolling her eyes until only the whites were visible, as she proceeded to fill a large mug with coffee, which having duly sweetened, she presented to him, and then hastily gathered up the cups and plates, which were soon washed and put away in a cupboard with glass doors which stood on one side of the chimney.

Aunt Pokey was too much absorbed in her thoughts and her occupation as she moved about tidying the room, to notice her impish assistant, who, having finished his coffee, placed himself in rear of her party form, following her motions with a series of derisive gestures and grimaces, which were suddenly brought to an end as Professor Randolph, reaching to look up from his papers, quietly remarked, "What are you doing, Julius?" That graceless urchin disappeared inconspicuously into the shop as Aunt Pokey, without knowing what he had been doing, moved vigorously in his direction, and then drawing herself up to her usual dignified bearing, she left the room without speaking.

An hour later, during which customers had been coming and going, waited upon by Julius under the sharp supervision of the proprietor of the establishment, that stately personage again entered the parlor, where her son sat studying the papers which she had left him. She looked very imposing in a large waterproof cloak, with the hood drawn over her head, and having closed the blinds and locked the inner door of the shop, she lightly rapped Julius' round, woolly cranium with the key, saying, severely, "Now set yosef down ther, sir, an' don't let me 'yer a puttin' on more o' yer niggrified ways. Not a ar' do you put on tell I come back."

"Why, mother," said the young teacher, for the first time noticing the movements of the old dame, "what makes you close up so early to-night?" There is no service that I know of at the church. Is there a meeting of your society?" "No," said Aunt Pokey, "it ain't church, nor 'cley neither, but I've got some business to 'tend arter, an' it's raimin' a little, an' I reckon ther won't be many folks out buyin' ter night. Here's the shop key, ef anybody comes wuth a openin' de shop fer. You needn't set up fer me, sonny, ef I stay long. An' you kin say to dat nigger go to bed when you sees him a noddin'." Aunt Pokey bristled up and her voice grew suddenly stern as she turned towards Julius, who had been leaning a little, but now sat bolt upright and protested that he was not "sleepy nor nuthin'."

When his mother had gone out, Professor Randolph pushed aside his books, and desired Julius to get his slate and pen, and come to the table, an order which was obeyed with some reluctance.

The young man spent the next half hour very patiently, trying to interest his pupil in the arts of writing and ciphering, the time being occupied by Julius in equally diligent efforts to wear out the patience of his teacher by endless tricks and evasions. At the end of that time, he abruptly announced

that he was "so tired an' sleepy he couldn't see dem tricks or de slate," and with an air of abject humility begged permission to go to bed.

The professor looked at the boy grimly, and said, with a sigh, "Julius, you seem to have no desire to improve yourself, however. Will nothing induce you to drop your foolish ways and try to learn?" Julius instantly became wide awake, and with shining eyes and eager face he sprang to his feet, saying, "Yes, sah! 'Deed an' 'truf dar is somefin' would make me dat anxious to 'prove myself, nobody wouldn't know me."

"What do you mean," said his teacher, surprised at his sudden change of aspect. Julius approached a step nearer, his whole frame quivering with excitement as he exclaimed, "Oh! Professor, please sah! Will you as Aunt Pokey ter lemme go ter de circus Sat'dy night and de baptizin' Sunday. She dun 'clar she gwine ter make me stay at home 'bout 'casion's ef she haf ter tie me ter de bed post?" "I fear you had been having badly, Julius," said young Randolph, gravely, "you are very troublesome sometimes. What had you done that made my mother say you should not go to the circus?" Julius dropped like a limp rag, his jaw fell, his eyes closed, his whole figure seemed about to collapse. "I haint done nuffin," he whined, "cep'tin'—cep'tin'—when she done saunt me w' dem cakes, what Miss Gintul Paterfel done order fer her tea party—an'—an'—I stopped long o' dem circus pictures, tull ef done got too late."

"What ther?" said his teacher, with some sternness, "what became of the cakes?" Julius was sobbing and gasping now, his appearance betokening utter desolation. "I dunno what became ur dem," he wailed, "I tuk an' sot de basket down, an' when I looked at it 'mos all de cakes was gwine 'cep'tin' two ur free, an' I tuk 'em eat dem. I knowed dem wasn't nuf fer Miss Gintul Paterfel. I specks dem low-life white boys an' niggers, who dun call my 'tention to dem pictures tuk an' dem cakes, an' I tuk an' brung Aunt Pokey's basket home and she tuk an' say—say—" Julius was overcome with emotion, his voice choked in sobs. "You had better go to bed, Julius," said Professor Randolph, "I fear my mother will find the trouble she has bestowed on you is all in vain. Julius shuffled dismally away, apparently much discouraged in regard to the "circus Sat'dy and the baptizin' Sunday," but was soon afterwards heard singing, as he walked about the upper floor, in a clear, musical voice.

"Amulie! Grace, how sweet de sound, Dat save a wretch like me!"

For some days the young teacher noticed that his mother was unusually absent, talked little, and went out every night as she could close the store, carrying a covered basket with her. He was much occupied with his half-yearly examinations, and being well aware that his energetic mother was fully able to manage her own business and liable to resent any intrusion thereupon, he asked no questions and made no comments.

One evening as he reached the sitting-room, looking somewhat jaded from his work, he was surprised to meet his mother at the door, apparently a good deal excited. "Ikey, sonny," said she in coaxing tones, "is done set y' supper in de kitchen ter night. Mammy's got oysters an' dem flitters you is allers so fond uv, an' de big lamp an' all yo' papers is in dar' too. I thought you wouldn't mind eatin' in dar' once in a while, Julius," she added briskly, her manner changing abruptly, "I'll 'ten ter shop myself ter night, an' you kin stay in de kitchen an' wait on de Professor. I believe dat's de bell now," said Aunt Pokey, as, with an air of some embarrassment, she turned away from her son.

The professor frowned slightly as he retraced his steps through the side entry and opened the door of the kitchen, which, though small, was tidy and comfortable. A tempting meal was set upon a table near the stove, and several books and newspapers lay beside the handsome student lamp.

The young man began to eat his supper without speaking, and Julius, standing opposite to him, gazed solemnly at the appetizing viands. "Why did not my mother want me to go into the parlor to-night," said the professor, looking suddenly up at Julius, who instantly dropped a fitter he had managed to secure by reaching backwards to the stove, and folding his hands upon his breast, he assumed a most innocent aspect. As the question was repeated Julius brightened up, and approaching a step nearer, said, in a low, eager voice, "Cos Aunt Pokey done fetch dat ole white woman fur de bodin' house, an' she done elar' out all dem tings of yours outen yo' room nex de parlor an' done fix dat up extra for dat ole white woman to sleep in. I specks you is got ter sleep up in de lof over dis here kitchen long o' me, I does," he added with a giggle.

Professor Randolph dropped his knife and fork and pushed his plate eagerly from him. "A slave to the last," he muttered, indignantly. Then turning to the boy, he said, sternly, "Say Mrs. Moncure when you speak of that lady, and now show me where my things have been put." Aunt Pokey entered at this moment, and seeing from her son's manner that he had heard the tidings she hesitated to give him, she approached the table and affectionately urged him to be helped to the various dishes.

"No, thank you," said her son, dryly, and Aunt Pokey, much less complacent in her stately bearing than usual, told Julius in an undertone to come and eat his supper quickly, as she had use for him. The old woman sighed as her son put on his hat and gathered up his papers, but she busied herself in quickly clearing the table, without seeming to notice him. Filling a large dish with hominy boiled to a turn, from a pot on the stove, she offered some of the savory meat to Julius, who was now polishing his plate and licking his fingers.

"No, thankee, marm," said the hopeful urchin, drawing away his plate and gazing hungrily at the bowl of oysters which had been placed on a shelf. "I don't like hominy," he drawled. "But you is got to eat sumfin to fill up, you is," said Aunt Pokey with wrathful eyes, "does you believe kin stan' keepin' a triffin' nigger like you on oysters an' flitters? Don't I know it takes jes' as much to fill you up as one uv dem cake barks in dar, an' ef I don't fill you wid sumfin rather solid, whar will all dem white fruuts in dar stay go ter?" Julius slid from his seat to the floor, and, covering his face with his hands, looked to and fro, sobbing piteously. Aunt Pokey calmly continued her labors, by turns rolling her eyes up at the boy and clanking anxiously at her son. "What is the matter with you, child?" said the latter impatiently, as he laid his hand on the door. "I haint got no pain, no misery, no nothin' at all, and Aunt Pokey she is so cross," whined Julius. "Nivver you minc 'bout me," said Aunt Pokey, as she gave the boy a jerk which raised him in the air, and then set him on his feet with a heavy shake. "You 'ten ter dat bell, an' I'll 'ten ter de cross." Julius stood regarding her with a broad grin on his face. "Go long in de shop an' don't eat up no more o' de vittals, ef you is deid, an' give a lunge after his retreating form with the dish-cloth; then turning quickly towards her son, she said, in soft, deprecating tones, "What makes you go out again, Ikey? It's a mighty sorry night, son, an' dat cough o' yours seems ter be a pesterin' you a leap dese nights. I bin' a fixin' up a stew o' 'ho'ban' an' some yother truck for you."

"I did not know that you cared to have me at home, mother," was the answer. "You seem to be giving up the whole house to your friend, Mrs. Moncure, and I can go down to the Institute and share John Watson's room while she is here. He has very good quarters, and says he is always glad to see me. I suppose you will let me sop out the fryin'-pan after your white visitor has finished her meals, so you can look out for breakfast time," and before his mother could reply, he abruptly left the room.

The next evening, as the young teacher, his face still wearing the gloomy frown which it had shown since he received the information, was sitting at the kitchen table, on which a bountiful meal was spread, the door between the kitchen and parlor was softly opened, and steps so light that they were unheard, approached the young man. Isaac Randolph was somewhat startled, when a thin, white hand was laid upon his arm and his name uttered in sweet tones. "Is this really you, Isaac, my little Isaac," said a fair, sad-looking old lady, with a worn, weary face and a voice full of tears.

Professor Randolph sprang to his feet, and for an instant stood speechless before the best form robed in black, which reminded him of some ghostly vision, and seemed to bring him faint memories of distant happy years. Then he bowed with grave courtesy, and said, in cold, formal tones, "Mrs. Moncure, I believe." A slight flush passed over the pale face, and the old lady said, gently, "Isaac, I fear my coming here has disturbed you. I know my good Poccohontas so well, I can tell when there is anything on her mind, and I see that she is troubled. It is very sweet to me to be with my faithful old servant once more. You know we were nursed at the same breast, as I nursed you, and my precious lost Edward at my breast, and we were playmates and girls together, and have been life-long friends. We were never separated until the time of my death, which took my child and my fortune, took her away too. But I am not willing to be the means of making you uncomfortable in the home you and your mother have so dearly loved. I shall enjoy it more, so I will call a carriage for me, while she is out, so that I can return to the boarding-house at once, without having to pain her by refusing her kindness and hospitality." The old lady seemed very feeble, and as she

saw she grasped the back of a chair for support. "How you have changed," she continued in the gentle voice, which seemed to pierce the young man's heart as it recalled the home of his childhood, where his mistress had been his kindest friend, her young-est son his best loved playmate.

"You do not seem strong, madam," said the young man in milder tones than could have been expected from one who had worn such a heavy burden for some nine past. "Will you not take a seat?" he added, turning an armchair, which had been placed near the lamp for his benefit, towards the fire. "No, Isaac," was the answer, "I am very weak, and you must get the carriage quickly, or I shall not be able to go." But even as she spoke, the pale lady placed her hand upon her heart with an expression of pain, her slight form swayed helplessly, and she would have fallen to the floor, had not the young man caught her in his strong arms, and lifting her gently, he carried her into the parlor and laid her upon the sofa, then turned hastily to look for restoratives, Camphor and a bottle of wine used to flavor Aunt Pokey's richest cakes, and carefully put out of Julius' range, were soon found, and pouring out a glassful of wine, the teacher knelt beside the couch and held it to the colorless lips of his old mistress.

"Thank you," she said in a faint voice, after drinking the wine, "Isaac, I entreat you, and heard your voice, the thought of my lost darling, who used to love you so dearly, came over me with such force I could not bear it. I am very weak now—days, but I will feel better soon. I think I can sit up presently, an' you must get at once for the carriage." "Rest quietly, dear Madam," said the teacher earnestly, "pray rest as you drink the wine, Isaac, I entreat you, and do not say anything more about leaving my poor little home, if it affords you any satisfaction to stay in it." Tears slowly coursed down the faded cheeks that lay upon the pillow, and there was such an air of helplessness about the frail form which Isaac remembered as his childish ideal of grace and beauty that the young man was infinitely moved, and he could scarcely restrain his voice as he enquired gently if he could do anything for her. "You are so kind. I see you have your mother's true, honest heart," said the old lady, "sit down by me, Isaac, don't stand in that formal way. Bring that stool and sit here at my side as you and Edward used to do when you were boys together, and always came to me with your childish troubles. I want to hear all about your life since we parted. Your mother tells me you did so well in the mission schools here, you attracted the attention of good people from North, and they gave you the advantage of a thorough education."

"My mother is so fond of me. I fear she overrates me," said the young man modestly. But I have certainly much to be grateful for. My Northern patron gave me every opportunity for improvement enjoyed by his own. We went to the same college, and spent our vacations together in his beautiful and luxurious home on Lake George. And he always keeps me supplied with the best books and papers of this and other countries."

Aunt Pokey could hardly restrain her astonishment and delight when she returned as hour later to find her son seated beside the invalid, reading to her from a batch of papers he had just received, to which she was listening with eager interest. Julius, who had been left in charge of the shop with many admonitions as to his good behavior, had exhausted himself in grimaces and gesticulations at the scene he regarded through the glass door, and had fallen asleep with his head resting on a barrel of apples. Having despatched him to bed, in spite of his assertion that he was wide awake, Aunt Pokey closed the shop for the night and entered the little parlor with a happy smile illuminating her handsome dark face. When the doctor, who was operating on Mrs. Moncure's eyes, paid his usual visit, he smiled approvingly at the Professor's occupation, and said cheerfully, "Now, Madam, I shall begin to look for some improvement, for I see a chance for you to turn your thoughts from care. With Aunt Pokey's fine cooking and the Professor's excellent reading, you would be a bad case indeed not to mend fast." Aunt Pokey nodded her head complacently. "I knowed Missus wasn't agwine to mend none while she was at dat bodin' house, wid all dem commin' doings," she remarked decidedly. "Po' white folk's eatin's allurs does colic quality people, an' she larn' Ikey to read herself 'long o' her own dear chile, what's dead an' gone. I reckon his readin' order do her some good."

(To be continued.)

#### Horsford's Acid Phosphate,

VALUABLE MEDICINE.

Dr. W. H. Parmelee, Toledo, O., says: "I have prescribed the acid in a large variety of diseases, and have been amply satisfied that it is a valuable addition to our list of medicinal agents."

In a sketch of "Comenius," recently published by Prof. Painter of Roanoke College, such of our readers as are teachers will find an interesting bit of biographical history. Comenius was born in Moravia in 1592, and in the words of Prof. Painter, "became the most celebrated educational reformer of the seventeenth century." Early in life he devoted himself to the profession of teaching, and in his work embodied many of the educational ideas which are now-a-days claimed as the production and property of modern thinkers. Like all reformers he was a little ahead of his times, and we can imagine that the "model school" which in 1650, he attempted to establish in the town of Patak, in Hungary, furnished a target for the local wits and critics, rather than the example for educators which he intended it to be.

His enthusiasm and the strength of his convictions made his life admirable, and that he had the inspirations of a true teacher is shown by the following gleanings from his works, which Prof. Painter has arranged in the form of "Principles." They might be hung upon the walls of many modern school rooms.

1. Education is a development of the whole man.
2. Educational methods should follow the order of nature.
3. Both sexes should receive equal instruction, since the end of education is individual development.
4. Learning should be made agreeable. Teachers should always have something interesting and profitable to communicate to their classes. School-houses should be made comfortable and attractive.
5. If the superstructure is not to totter, the foundation must be laid well.
6. Nothing should be taught that is not of solid utility.
7. Studies should be adapted to the capacity of the pupil.
8. Nothing is to be learned by heart that is not first thoroughly understood.
9. Let nothing that admits of sensible or rational demonstration be taught by authority.
10. In the sciences, the student should have the objects studied before him.
11. Things to be done should be learned by doing them. "Mechanics," Comenius says, "understand this well; they do not give the apprentice a lecture upon their trade; but they let him see how they as masters do; then they place the tool in his hands, teach him to use it and imitate them. Doing can be learned only by doing, writing by writing, painting by painting, and so on."
12. Religion is of supreme importance; and in addition to religious instruction, the young should be accustomed to the exercise of Christian virtues, such as temperance, justice, compassion, patience, and so on.
13. Discipline should aim at improving the character.
14. The teacher should be an example, in person and conduct, of what he requires of his pupils.

**Horsford's Acid Phosphate**  
ASSISTS MENTAL LABOR.  
Prof. Adolph Ott, New York, says of the Acid Phosphate: "I have been enabled to devote myself to hard mental labor, from shortly after breakfast till a late hour in the evening without experiencing the slightest relaxation, and I would not now at any rate dispense with it."

**JAMES PYLE'S**

**PEARLINE**

The Great Invention,  
FOR EASY WASHING,

IT IS HARD ON SOFT, BUT ON SOFT WATER.  
Without Harm to FABRIC or HAND,  
and particularly adapted to Warm Climates.  
Sold by all Grocers, but beware of the cheap imitations. PEARLINE is manufactured only by  
**JAMES PYLE, NEW YORK.**

**Hygeia Hotel.**  
Old Point Comfort, Virginia.  
Harrison Phoebeus, Proprietor.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material favors being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 72° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sand; beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

## AND Hampton School Record.

VOL. XIV.

HAMPTON, VA., SEPTEMBER, 1885.

No. 9.

THERE is probably not a newspaper in this country which has not during the last four weeks devoted a large share of its space to biographical and editorial notices of General Grant. Every child in America knows now the story of his life and death in fullest detail, and neither in the North nor the South has there been any lack of honest mourning for the man to whom we are all now ready to acknowledge the nation's indebtedness. To realize what that indebtedness is and to appreciate the character of the man, should be easier now than ever before, and we believe that the facts upon which such appreciation must be based are already so well known to our readers as to require no recapitulation here. We know the places of his birth and death, we know familiarly the surroundings of his early life, we know how the great wave of war took him up from insignificance and swept him into fame; it seems, indeed, as if nothing had been left untold. The history of what may be called the accidents of his life has been given to us without a gap, but remarkable as these accidents are, they remain unmeaning until supplemented by the man himself—a strong, impressive, determined figure, standing, from the outset, in relief against a strangely shifting background.

For the first forty years of his life Fate seemed to have nothing in store for him beyond what is included in the ordinary lot of man; while into the last twenty-five years have been condensed struggle and success, glory and grief almost without parallel. It is all ended now; and the world is passing its verdict upon him who for many months has been the subject of world-wide discussion. Never, perhaps, was verdict more nearly unanimous or critics more nearly agreed, for the simplicity, so to speak, of General Grant's power, the unity of his qualities, make his character easy to analyse and bring it within the comprehension of all men. His energy, resolution and singleness of purpose made him a great general, and it is the possession of these qualities in an extraordinary degree which must always ensure to him unstinted admiration and respect. And obviously enough, it is to what the French call "the defects of his virtues" that his failure as a statesman is to be attributed. He was at the mercy of his friends, to whom it was impossible that he could be anything less than thoroughly loyal, and the strength and stubbornness of his convictions were manifestly against him when he passed into the hands of maneuvering politicians. The sorrows which fell upon him in the last year of his life, and the way in which he endured them, seem to have thrown a clearer light upon his previous mistakes, and brought at the last the finer qualities of his character into the prominence which they deserved. The world has been ungrudging in its praise, it has written him down upon its roll of honor, "Honest, resolute, loyal, heroic," and his mother country, whose true son he was, will hold him always as chief among her children.

THE New York Evening Post has published within the last few weeks a number of very interesting letters from various parts of the South and from correspondents of various shades of opinion. Our attention has been especially drawn to one of these ar-

ticles, entitled "A Missionary Problem," dated from Baltimore, and signed "P. A. B." The author is fresh from the exploration of Southern Virginia, and has received certain strong impressions in regard to the condition of the people. This letter is sensible and temperate in tone, but while with many of his statements we entirely agree, to some of them we do most decidedly take exception, believing them to indicate a superficial observation which is likely to be, to a greater or less extent, harmful. He says, we quote of course verbatim:

"As far as I could judge, the Negroes in Southern Virginia receive as a race very little, if any, moral instruction. The great majority of their teachers in the free schools take a literal view of their duties; in other words, they are engaged at a definite salary to set their pupils certain tasks, and all the discipline they enforce is of a purely physical and mental character, and just enough of that to impart a stated amount of elementary knowledge. Few as yet feel, or are even capable of feeling, as strenuous and zealous an interest in the moral as in the intellectual progress of those under their tuition. It is true that they are not required by their contracts to do Sunday-school work at the time that they teach the different branches of the appointed course of study, but I am inclined to think that this is very much to be regretted."

As a reply to this we should be glad to put into the hands of our readers a collection of letters received here during the past year, from graduates and students of the School who are now, or have lately been, teaching in Southern Virginia.

This our space will not permit, but we can ask them to notice that in every number of the SOUTHERN WORKMAN are to be found two or three such letters, one and all of which bear witness to the fact that an important proportion of the schools under discussion are taught by young colored men and women who are fairly equipped, for their work, and thoroughly in earnest, not only in their schoolrooms, but wherever their people need them.

Although we consider these letters perfectly satisfactory evidence upon which to base our claims, we do not rest upon them alone, but take into consideration also the Reports of the Hampton School officials, Gen. Armstrong, Rev. Mr. Frissell, and others, who from time to time inspect the schools of the State with, it is to be supposed, unprejudiced and not inexperienced eyes. Our students tell us of the establishment of Sunday Schools, Sewing Schools, Helping Hand Associations, Bands of Mercy, &c.; of Christmas Trees, "on which the children are never seen one before;" of the distribution of books and papers, of visiting from house to house. Our officers corroborate these statements (*vide* Gen. Armstrong's letters in July and August Nos. S. W.), and it is under these strong lights that the "Missionary Problem" presents itself to us. Again "P. A. B." says:

"After the school, the principal centres in every civilized community from which moral influences radiate, are the home and the church. The cabins of a people who have only recently been set free, and who earn their bread by the sweat of their brows, is their atmosphere in which integrity in every relation and circumstance of life is fostered, nor is it that in which the young child, even of a superior race, learns unconsciously those unwritten lessons that refine the mind and the heart. It is this very atmosphere which must be purified, and it can only be done by imparting a healthy moral tone to the generations that are yet to come upon the stage."

We raise here no dissenting voice, but at the same time we believe—may we not fairly say we know—that something is being done. Not much, Heaven knows; but something; a little light through the darkness, a little leaven in the lump.

If the correspondent of the *Post* would retrace his steps through Southern Virginia we could introduce him to a few schools, both primary and graded, which, we are not afraid to say, will compare favorably with the average New England country school, and when he shall have visited these schools and their teachers, we believe that he will agree with us that it is in such work as they are doing that the best hope for the future lies. We do not undervalue the darkness; we confess that we cannot compute the forces of ignorance and prejudice that are massed behind the walls which slavery built up, but we do claim that the "Problem," even as stated by "P. A. B.," is not a hopeless one. To us, indeed, it is so far from hopeless that we think we can see the solution of it, but in all humility we confess that it is a solution which means common sense, hard work and a faith which will take no denial. Cannot the American people of the North and the South supply these?

It has been the good fortune of the Hampton School to grow up as the work of many hands. To no single benefactor does it owe its beginning or its continuance, but rather to the willing efforts of thousands of contributors, to many, perhaps to most of whom, the gift to Hampton has meant some sacrifice of self. The value of this is that it holds both teachers and students to their duty as, probably, nothing else could, for with the knowledge of what our sources of revenue are, comes a sense of responsibility for its proper use, which is thoroughly wholesome and in the best sense stimulating. That so many of the dollars which come into our treasury bring more than their mere money value, is a fact which has not only influenced our past growth, but is also the best assurance of our future, and it is to such givers as the writer of the following letter that we look for some of our most helpful influences.

The sewing machine which the note introduces is pretty certain to do good work, even if it came to us only as the bearer of its owner's kind wishes, or as a lesson in "free will offerings" to our boys and girls.

"I am so glad you can turn the machine to good use. It is yours, and you shall have it as soon as I can get some one to attend to the packing and forwarding. My mother has for the past few days been lying at the gates of death, but the doctor now pronounces her out of danger. I am too ill to do business myself, but I can within a few days get some one, I think, to act for me."

Later.—Your machine starts to-day on its journey South. I hope it will reach you safely, and work long and well for you. But it seems shameful to offer a charitable institution a gift whose acceptance compels payment of even one cent out of its treasury. I cannot here ascertain the exact cost of transportation, but if you will write what you are obliged to pay, I will send the money by mail, and you shall have the machine free of cost.

Heavenly Father gives me work for the coming year and strength to do it, I may again be able to contribute my mite. Earnestly praying that you and those for whom you work may have all courage, strength and success.

"I am, yours sincerely,

A VERY INTERESTING speech, delivered recently by Judge Beckner, of Winchester, Ky., has been published in full by the New York *Freeman*, from whose pages we quote the following extracts. After drawing the attention of his audience to the experience of various European countries, Judge Beckner says:

"Cannot we in Kentucky learn from these examples the impossibility of retarding the highest standard of civilization without the education of all the people who compose the State? Heathen Japan, under a despotic government, has done more since she opened her ports to the world toward the establishment of an adequate system of common schools than has this free Christian Commonwealth during the same period. The last census shows that over thirty per cent of our population over the age of ten years cannot read and write. It is stated that in this class may be found nearly one hundred thousand of those who by their votes control the destinies of the Commonwealth. Why is all this illiteracy in this State, the first born of the Union? A per capita of \$1.55, an average of \$22 per month for teachers and an average value of \$78 for school houses may indicate the cause of the trouble. We are hardly able to sustain such systems as they have in the North, because in the Eastern and Middle States there are greater aggregations of wealth to be taxed, while in the West the government has furnished rich foundations in reservations of public lands. According to the census, Massachusetts has but little more population than Kentucky, with about four and one-half times as much taxable valuation, whilst Iowa has substantially the same population with an excess of forty millions in property. Each of these States spends nearly five times as much as we do in the maintenance of public schools. It is easy to see from the figures how Massachusetts can afford to do what she does, and her history shows how well it has paid. Of course public lands account for a part of the difference between Iowa and Kentucky. In this matter of expenditures But it would be untrue if we should claim that we had done our duty in the matter of public schools."

"Virginia, without as much population as Kentucky, and with forty millions less of taxable property, devotes one-third more per annum to the maintenance of her common schools. Devastated by war and burdened by debt, she puts us to shame in the noble effort she has made for the improvement of her children. Why, we are so derelict in duty, that the State has for years been a field for missionary efforts on the part of the good people of other Commonwealths. The handsome and commodious buildings erected in Berea, and the noble efforts of the faculty of that institution, are fruits of the liberality of those who give as they do to missions in Africa. Governor Hoadley, of Ohio, told me two years ago, that he had for a long time contributed to the maintenance of this institution as regularly as he had to the spread of the gospel."

"I do not mean to say that we have not gone forward in Kentucky. We have increased the tax for schools more than three-fold since the war, and now divide its proceeds equally with all the children, of whatever race or color. In many of the towns and in all our cities, graded schools have been established in which free tuition may be had for ten months of the year. On the rich foundation furnished by the Federal Government, we have built a State college which grows in usefulness and public regard. Much remains to be done, however."

"In Europe, respect for law and order is enforced by means of standing armies, supported by most burdensome taxation. Here, life, liberty and property depend for their protection on public opinion, and this is enforceable only in proportion to the intelligence of the people."

"Observe, if you please, those who have caused the lawlessness that has so injured Kentucky abroad, and made such misery and desolation at home. They are, without exception, people who have not enjoyed proper educational facilities, and have, consequently, had the animal developed, at the expense of the intellectual and moral. We may send soldiers to the disturbed districts, we may change the officers whose duty it is

to administer justice, and we may condemn violence as much as we please, but it will all be in vain so long as the State fails to do its duty in the matter of public schools.

"Massachusetts is, in my humble opinion, the highest type of a free, enlightened commonwealth that the world has ever known. This may startle sectional prejudice and self-complacent ignorance, but nevertheless it is true."

"With a provision of nearly \$15 per annum for the education of each child in her confines, and a law that permits no absentees from school, she presents a record of only three per cent. of immigrants from other countries. Some one may say that the statistics show as much crime in Massachusetts as in other States visited her prisons and know how large a proportion of her inmates have not had an opportunity to attend her schools. I do not mean to contend that her knowledge is virtue, because we are still human, however thoroughly our intellects may be cultivated. But the experience of the world has put it beyond peradventure that the intelligent man is more apt than the ignorant one to be orderly and well-behaved. He is, of course, better able to comprehend the purpose of government and the value of freedom regulated by law. He can understand the advantage of controlling his passions and conquering his prejudices."

"It is related of a leading colored man whom I know well that when in New York a few years after the war, he called to see the great philanthropist, Wm. E. Dodge, who asked him what he could do for his race in Kentucky. 'Help to educate the ignorant whites,' was the wisest reply. Nearly all the race troubles of the South have resulted from lack of intelligence on the part of those who have caused them. 'The race problem,' says Mr. Lamar, 'is a large part of the problem of illiteracy. Most of the evils, the problem of illiteracy, which have grown out of that problem have arisen from a condition of ignorance, prejudice and superstition. Remove these, and the simpler elements of the question will come into play with a more enlightened understanding and a more tolerant disposition.'"

"If we are to have a harmonious, homogeneous citizenry, we must have universal education, no matter what the expense."

"Congress may guarantee a Republican form of government as provided in the Constitution, but the spirit will not be there if the free school is neglected. If a government of the people, by the people, for the people, is not to perish from the earth, the people must be intelligent enough to comprehend the importance of its preservation. Liberty in this new world will never be in danger from crowned kings or titled nobles, from military chiefs or standing armies. Its most serious menace is in the vast aggregation of wealth that the operations of commerce and the profits of monopoly make possible. But an educated citizenry will be able to deal even with this tremendous force. The watchful intelligence of the many will ever keep within bounds the sordid schemes of the few."

"As necessary aids to the common school in the education of the citizen, there should be Normal Institutes for teachers, industrial training to take the place of the now abandoned system of apprenticeship, and the popular library which shall give opportunity for a course of reading not otherwise open to the poor. The child problem in the South at present with reference to these matters is how to get money with which to organize and conduct even a broken system of merely elementary institutions. To ask ignorance to vote in communities that are able, is to expect of ignorance a virtue which it rarely possesses. Avarice joins in with ignorance, and these fit co-workers find a potent ally in that race prejudice which has been one of the evil spirits of the South. We have had no aid from the Federal Government as have had the States across the Ohio river; we have a mass of illiteracy far in excess to what is found in other sections of the Union; our population is so sparse in many regions as to make it quite difficult to sustain schools; and our taxable property is so insufficient that the people in many instances are really not able to bear the taxation necessary to sustain an adequate system of schools. Avarice, yet in spite of these discouragements we dare not fail. We must accept greater burdens for the sake of our children, to whom after all must grow these fertile fields, these cattle on a thousand hills, these profitable banks and the forces of an aroused public opinion, compel our Senators and Congressmen to abandon the insane theories of a past, in which conditions were different, and to join hands with their generous colleagues from the North, who are willing from the surplus in the Federal treasury to make us equal with the North-west in the matter of aid to education. Those whom I address will have their part to play in the solution of the problem that confronts us in the South,

when we come to consider how to establish a sufficient system of common schools. Let me urge you to bear yourselves boldly without fear of condemnation, with an eye single to the preservation of liberty and the uplifting of humanity."

"This institution is a type of what we see throughout the South. The two races mingle in all the pursuits of life and are daily refuting the theories of those who say that they cannot simultaneously occur the same thing. The elevation of the one is a blessing to the other, and they should go hand in hand in the work of building up a land worthy of their love, and perfecting in right and which they cannot too faithfully cherish. There is room for all and work for all, and let us all stand together in the confidence and intelligence and ignorance, and do what we can for the right. To doubt that it will triumph is to lack faith in the force that has made the nineteenth century so glowing a period in history and will yet push humanity to higher power."

#### Book Notice.

"THE CONGO AND THE FOUNDING OF ITS FREE STATE" by Henry M. Stanley. The International African Association owes its origin to the King of the Belgians, who in 1876 convened a conference of distinguished African travelers at his palace in Brussels, to devise the best means of opening equatorial Africa to civilization. The result of this conference was the establishment of central organizations in nearly all the countries of Europe and in the United States. In June, 1877, a Congress, composed of representatives from all those organizations, was convened to meet at the Palace in Brussels. There was a large attendance of delegates, and the practical means of carrying out the objects of the Association were determined upon. When Mr. Stanley reached Europe in January, 1878, after his long and remarkable explorations of the "Dark Continent," he was met by two Commissioners from the King of the Belgians, and asked to assist in the work of the Association. A few months later a conference was held at Brussels, and it was decided to form a society called the "Committee for the Study of the Upper Congo." The name indicates the work that it intended to do, and it will be seen that its field of labor was more limited than that of the International African Association. The former society was, however, soon consolidated with the latter, and the work confined to the Congo Basin. The purpose of the Association is now more clearly defined. It is three-fold: Philanthropic, inasmuch as it aims to wean the tribes from their savage and suspicious condition; and to show them that the white man is their friend; scientific, as it intends to make a systematic survey of the Congo Basin and to determine all points of interest to the geographer and the merchant; commercial, as it proposes to experiment how far people may venture into commercial relations with the tribes, by inviting them to possess for the goods of civilized countries. The Association very wisely selected Mr. Stanley to carry out this great work. He was authorized to build stations, to establish steam communication wherever it was practicable, to purchase land, and make treaties with the native tribes—in short, to sow along the banks of the Congo civilized settlements and to peacefully conquer and subdue it. On the 12th of August, 1877, Stanley arrived off the mouth of the Congo with a large supply of material, a flotilla of steam launches, and a band of faithful Zanzibari. After a brief delay at Banana Point, the expedition pushed on up the Congo to Vivi, one hundred and ten miles from the sea, the highest point which ocean steamers can reach. Mr. Stanley decided to build the first station here, and to make it the base of his supplies and the foundation of his future work, because it is accessible to the sea, has a safe cove for landing cargo and for mooring steamers, is at

the foot of the Livingston Falls, and can be easily defended. After careful inspection, a site was selected on a small plateau 350 feet above the river; but before the work of construction could begin, a title to the land must be acquired. The five Chiefs of the Vivi district were assembled in council, and after a palaver of four hours they ceded to the Association absolute control over their territory, consisting of about twenty square miles, receiving as compensation \$10 in cloth and a rental of \$10 per month. Work was now begun in earnest; the morning of October 1st, 1879, was saluted with the inspiring sounds of striking picks, ringing hoes, and dull thudding of sledge hammers as the Zanzibari commenced building the road up the side of Vivi Hill. The chiefs wonderfully looking on while Stanley taught the natives the use of the sledge hammer in pulverizing rock, bestowing upon him the title of "Bula Matari," breaker of rocks, by which name he is now known from the sea to Stanley Falls. In thirteen days the road was finished, and on the 6th of February, 1880, the station was completed in all its details. A commodious house for headquarters had been erected, magazines, stables, and houses for the Zanzibari had been built. A large garden had been arranged for flowers, vegetables, and a grass plot. To make this garden, two thousand tons of earth had to be brought up in baskets from the river. The steamer Albion had discharged the hard tons of merchandise in the magazine. All carefully stored in the great work of making a road round the Falls to Isangila, a distance of fifty-two miles. When we consider the difficulties to be overcome and the handful of men who assisted him, this was by far the most difficult struggle the expedition had to encounter. No one can read the chapters describing it without admiring the untiring energy, skill and pluck of the author. With one hundred and six Zanzibari and a few score of natives this road was built through the hard wood forests, over rocky marshes, across deep ravines, and along the sides of steep, rocky mountains. In twelve months the road was finished, two miles long, two steel lighters, and fifty tons of miscellaneous goods had been transported over it to Isangila, the second station. To accomplish this, Mr. Stanley tells us, "was no holiday affair, with its diet of beans, goat meat, and sordid bananas, in the muggy air of the Congo canon, with the mosquitoes and the heat from the rocks and the chill bleak wind blowing up the gorge." Six Europeans and twenty-two natives died and thirteen white men were invalided. One cannot be surprised at this mortality when we consider the poor diet, the unusual exhaustion in a tropical climate, and the fact that the marchings and counter-marchings during the year amounted to 2,352 miles. The arrival of one hundred and fifty Zanzibari and several Belgian officers added new life and vigor to the expedition. With their aid the author pushes on, the first station is built at Manyanga, a central station is built at the second series of Livingston Falls, distant from Vivi 140 miles. This second series of Falls extends for eighty-five miles to Stanley Pool, which is a lake-like expansion of the Congo about 250 square miles in extent. The advance from Manyanga was undertaken with the same energy as the road-making from Vivi. The steamer En Avant and a large stock of merchandise were loaded on light steel wagons. As the country was now more open and level, it was only necessary to make a few patches of road and to bridge the streams. Good progress was made, and in five months the En Avant was floating in Stanley Pool. With an open navigation of 5,000 miles before her, Leopoldville was founded, and the object of the work, which had hitherto been to demonstrate the practicability of communicating with the Upper Congo from the sea, was accomplished. The ensuing year was devoted to exploring the affluents of the Congo.

The nature of the work was much easier, there were no more tedious journeys on foot, treaty-making took the place of road-building, food was abundant and good, and the natives were very friendly. After a brief visit to Europe, Mr. Stanley returned to complete the explorations of the Upper Congo and to establish three more stations. The last one is at Stanley Falls, which is thirteen miles from the sea. It was not deemed wise to proceed further up the river. Attention was now turned towards obtaining Protectorship of the districts intervening between station and station, so that the Association might become master of the entire territory from Vivi to Stanley Falls, which was an easy task as the seeds of goodwill had been sown along the entire route.

The Congo River is over 3,000 miles long, and, unlike many other large rivers, it has no fluvial delta. It flows into the Atlantic Ocean in one united stream with a breadth of seven miles and an unknown depth. The volume of water is one and a half times greater than the Mississippi. From the sea to Boma the country is covered with dense forests; it is sombre and gloomy, nearly the entire population has been swept off by the former of slave trade. In the neighborhood of Boma the mountain region commences, a mountain belt, 240 miles wide, is a billowy mass of hills, none of which rise to a greater height than 2,500 feet. It is a wild, dreary region; the tropical rains have washed the alluvial soil down into the deep gorges, the hillsides are covered with rain polished granite and limestone; the sides of the hills are thickly covered with great boulders. The hollows into which the soil has been washed are easily traceable by the dark, wavy lines of foliage, which appear more and more shadowy as they recede. The vegetation in these ravines is so dense, it is almost impenetrable. A few native huts may be seen occasionally, but the country is very thinly populated. This whole region is estimated to have only 300,000 inhabitants.

The real commercial basin of the Congo begins at Stanley Pool, 235 miles from the sea. From here there is steam navigation along the Congo and its affluents for 5,250 miles. The treeless hills have disappeared, the river flows between grassy banks, a beautiful savannah, park and prairie stretch away to the horizon.

The author estimates the population of this region at 43,000,000. Some of the villages are miles in length. They are clean, with commodious houses shaded by palm palms and bananas, and surrounded by carefully divided fields, in which, contrary to the usual African practice, man is seen to till the soil, whilst woman attends to household affairs. The soil, which is of great fertility, is a reddish loam, and bears luxuriant grass and clumps of trees. The rainfall during eight months of the year, but they are not excessive. The temperature varies from 65 degrees Fahrenheit to 91 degrees. The vegetable productions of this section are rich and varied; the one of greatest commercial value is the oil palm. There are immense forests of this tree, and the mense forests of that might be collected quantity of oil that might be collected product of the forest is the Indiarubber plant. There are also large deposits of gum copal. Vegetable oils are extracted from the ground nut, the oil berry, and castor bean. Vast extents of forests are veiled with orchilla moss. The vegetation of the Upper Congo is also remarkable for the varieties of fibres it furnishes for the manufacture of paper, rope, basket work, fine and coarse matting and grass-cloth. Ivory is abundant, but in commercial value it ranks fifth in the products of the country. There are forests of valuable timber: cotton, coffee, and sugar-cane grow wild.

In minerals, this section is by no means poor. Iron, copper, and plumbago are abundant, and gold has been

found in the beds of streams. Rice and bread made from millet are the staple farinaceous food. Among the vegetables are yams, beans, sweet potatoes, melons, pumpkins, tomatoes, cabbages, and onions. Every variety of tropical fruit flourishes here, and indeed this seems to be a land of plenty; but there remains the question, "Is the climate suited to Europeans?" The author devotes two chapters to demonstrating that the country is not necessarily unhealthy, and lays down rules which will guard Europeans against sickness. These rules seem of little value, and he appears convicted by his own argument when he tells us that during his residence in Africa he has had one hundred and twenty fevers. There is no question but the climate of the Lower Congo, from the sea to Stanley Pool, is deadly to Europeans, and it seems equally true that it is not so in the Upper Congo, if one abstains from alcoholic drinks and takes ordinary precautions of protection from the sun.

The Association were in possession of treaties made with over 450 African chiefs, whose rights were indisputable, since they held their lands by long ages of succession. Of their own free will, but for substantial considerations, they had transferred their rights of sovereignty and ownership to the Association. The time had then arrived when it was necessary to consolidate these concessions into one concrete whole, to present it to the world as an independent State. Prince Bismarck was induced by the King of the Belgians to assume the direction of this important work. Having received from all the great Powers a favorable reply to his proposition for a conference, it was convened at Berlin on November 13th, 1884. There were representatives from Germany, Austria, Denmark, Spain, the United States, France, Italy, Holland, Belgium, Portugal, Russia, Sweden, Norway, Turkey, and Great Britain. After many sittings and protracted discussion, the boundaries of the new State were laid down and the laws by which it shall be governed were agreed upon. Its area is greater than the whole of Europe, with the exception of Russia. The Congo Free State was officially recognized by all the Powers represented at the conference. We can heartily join with the author in wishing "that it may expand and flourish to be a fruitful blessing to a region that has been until to-day as dark as its own deep, sunless forest shades."

## The Southern Press, Both Sides.

As a matter of history, if for no other reason, it seems fitting that our space for this month should be given up to memorial notices of General Grant. The Southern press has been at least as hearty as the Northern in expressions of admiration and sympathy and there is little evidence that he is felt to belong to the one section rather than the other. He has taken his place as the hero of the American people, and those whom he conquered are among the first to acknowledge that, in the clearer light of to-day, they stand as his debtors. It was for them that his victories were won, and his share in creating the splendid future that they see opening before them, is not likely to be under valued:

"The people of this Republic, without regard to section or latitude, will lament the death of General Grant, some account of which is elsewhere published. His end was peculiarly sad and pathetic. His recent past was shadowed by misfortune, but we are heartily glad that his disappointments were somewhat assuaged by his restoration to the service of which he was once the most conspicuous ornament. General Grant was a successful commander, and whatever may be thought of his relative rank among military celebrities of the world, he will always have just credit for certain great qualities which he possessed in a remarkable degree. He was brave, clear-headed, tenacious, and capable of that self-reliance which is so necessary to success in war; and he was not lacking in the magnanimous temper which goes with courage. His political career was thought of his military one; but on the *nil nisi* principle we shall not consider his civil administration, except to extenuate its errors, by the reflection that he was placed, from the first, at many and great disadvantages. His life was marked by strange vicissitudes of fortune, but high as he ascended, it seems to us that the patience, dignity, and fortitude of his latter days showed him in a more heroic aspect than he wore even in his most splendid successes; nor will his countrymen soon forget the noble serenity with which he met the trying and mournful dispensation under which he fell. He has left the Republic more than one memorable saying—more than one memorable achievement—and with one accord, North and South, we can all utter before his ashes a paraphrase on words of his own: 'Let [him] have peace'—peace, honor, immortality!"—*Norfolk Landmark*.

"While the North remembers that General Grant received the sword of Lee, the South will not forget with what generous and soldierly courtesy he returned it. We cheerfully recognize his high place in history, and we cannot think otherwise than with regret of the misfortune that saddened the last days of his life. It seems but yesterday that he came back to us from his triumphant journey around the world, and after having found no land so remote that his fame had not preceded him there. The hero of a great war, twice elected President of the United States, the honored guest of kings and nations, possessor of an ample fortune, the husband of a devoted wife, the father of loving and happy children—what had he to expect but peace and prosperity for his declining years? Alas! the answer has been written. We will repeat on words of the North and South, let us join mournful bands together around that newly opened grave, remembering that while all earthly goods are evanescent, honor, truth and love are eternally secure."—*N. O. Picayune*.

"LITTLE ROCK, Ark., August 5.—Mayor Kirst has issued a proclamation requesting a general suspension of business here next Saturday. The Ex-Confederate Society last night adopted resolutions eulogistic of General Grant. Speeches were made by Governor Hughes, General Newton, and others. The ceremony here on Saturday promises to be memorable."

"After a long and painful illness the distinguished soldier, brave and magnanimous conqueror, breathed his last on Thursday morning about 8 o'clock at Mount McGregor, New York. His magnanimous treatment of the South at the close of the war and his patient endurance of suffering in the last months of his life, will cause him to be as sincerely mourned in the South as in the North."—*Hampton Monitor*.

## The New York correspondent of the Central Presbyterian says:

"I suppose nothing has done so much to win the hearts of the whole country to the deceased hero as his patience in suffering and the calm and dignified manner with which he met the inevitable approach of death. It is a matter of common remark in New York, that no more sincere and grateful tributes of good feeling and sympathy have been paid than those from Southern men and Southern newspapers."

"Mr. McGregor, July 23.—General Grant died at 8 o'clock this morning. With his death there passed away one of the greatest captains of modern times. Military critics may differ as to his character and rank as a military commander, but in the face of his achievements any attempt to belittle his military character is idle. Judged by the standard, he held a place in the affections of the people of this country which was equaled by no one except Lincoln, and his record as leader of the Union army which crushed the rebellion will leave him an undying name in the proudest chapter of our history."—*Newport's News Commercial*.

"Like all of her Confederate sisters, Atlanta was ready to die in the last ditch. She found this last ditch something more than a lurid figure of warlike rhetoric. Literally it was a bloody chasm, and when she tumbled into it, swarming legions of German soldiers were just beginning to ash the ashes of her shotted resistless onward, a mighty blue wave rolled straight to the sea. It was months before the shattered victim struggled to her feet again, and stood amidst the ashes of her ruined temples. The tremendous tidings of Appomattox failed to stir her pulse or thrill her breast. Slowly, as the seasons glided away, her strength was renewed, her old courage revived, and the hum of industry and the clatter of traffic were again heard in her long deserted mart."

The last days of sixty-five found the Gate City a busy place. The old thoroughfare was just beginning to struggle out from under the ash-heaps and a tumultuous mushroom growth of temporary structures, spread out in every direction. The dismantled redoubts circling the city told their story of the famous siege of forty days. There were other disagreeable suggestions of disaster and defeat. Victorious foemen, flushed with triumph, jostled the sad-eyed citizens in the street and killed the air with their martial clangor. On almost every corner stood an ebony statue, a crowning menace to civilization, in the shape of a black soldier with a bayonet in one hand and a spelling book in the other.

These discordant elements and evidences of peace and war, of destruction and reconstruction, were their usual grim look one gloomy December day. So thought a silent stranger whose quiet gray eyes took in the scene as he drove with a companion through the ragged streets, vast blackened ruins and over piles of debris left over from the siege. Learning back in the top buggy with the lap robe well drawn up to keep off the pelting, sleety rain, the stranger pulled his slouch hat down over his brow and took a thoughtful survey of the situation. He listened attentively to his companion, a military-looking man, but said little in return. The few people hurrying to and fro on this inclement day dismissed the silent man with a glance. They saw only a middle-aged man of business, evidently a plain citizen. His careless attire, his apparently listless manner, and his hat slouched over his eyes, made him anything but a conspicuous figure. Those who took a second glance noted that this stolid person was squarely and solidly built, with square shoulders, a square head, and a square face covered with a closely trimmed brown beard. In his square firm mouth was a cigar which he puffed industriously.

The presence of this visitor, unknown, perhaps, to more than a score of persons, was a notable event. It did much to decide the fate of Atlanta and of the South. This was the first and last time that the hero of Appomattox ever looked upon Atlanta.

Throughout that dreary December day General Grant quietly devoted himself to the object of his mission. He was making a tour of the South, at the request of President Johnson, and his brief sojourn in Atlanta was for the purpose of ascertaining the sentiment and temper of the people and their leaders. Federal officers, ex-Confederates, Union sympathizers, the unconquered, to one and all the General listened with grave attention. Indignant loyalists told him that the rebels had raised a red flag, and threatened violence to the Unionist. "It is natural," was the only comment that could be drawn from the General. Some wild schemers suggested confiscation, disfranchisement, and military rule. "We don't

do that way in America," was the calm reply. An old man referred feelingly to the sad blood engendered by the war. "It cannot last," said the General.

The next morning the silent visitor with his inevitable cigar was on his way to Washington to report to the President. Over his signature he assured the Government and the country that "the masses of the thinking men of the South accepted the situation in good faith." Against that calm judgment it was useless to struggle. It broke the full force of the cruel legislation then in progress, and the enemies of the prostrate South were compelled to modify their programme. The demagogues were powerless when the man of Appomattox barred their reckless march."—*Atlanta (Ga.) Constitution*.

From the Colored journals come warm and general tributes of gratitude, some of them being remarkable for the appreciation which they show of the causes of General Grant's greatness:

"General Grant has at last surrendered. The King of Terrors has conquered him. In death as in life, in the hours of affliction as in times of pleasure, the same distinguishing characteristics which placed him at the head of our generals, and which made him one of the best presidents, shine forth more resplendently and encircle his name in a halo of immortal glory."

The life, the early struggles, the adversity, the military achievements, the political career, the public acts, the private deeds of General Grant are known world-wide. Not only in our own America, in which he was greater than Washington, but wherever the English language is spoken, is General Grant the most commanding, the most unique figure in our history. A plain citizen of our republic, king and subject, lord and peasant, in Europe, in Asia, in Africa, shrouded honors on him that have been awarded to no other human soul.

He is dead. The mourning is universal. The entire country wears the sable habiliments of sorrow in honor of the illustrious dead. Universal as is the gloom, deep as is the sorrow, there is consolation in knowing that the intense suffering, borne with calm, Christian resignation, is at an end.

We undertake not now an analysis of the character of General Grant. His name and fame are secure so long as this country has a place among the nations of the world, or as long as liberty, justice and integrity of character are treasured as jewels of many worth.

The feeling over the death of General Grant is still marked on all sides. The heavily draped stores and public buildings; the flags flying at half mast; the portraits of the General displayed at many private residences enveloped in heavy folds of mourning; are but slight manifestations of popular sentiment.

In the calmness which followed the sudden shock, the same high place of the first citizen, the first soldier, the first patriot of his era is still accorded Grant,—by democrat as well as republican, by Confederate as well as by Union soldier."—*People's Advocate*.

"A nation mourns, and the colored people

of this country are plunged in sorrow. The death-sounding tones of the city bells, the solemn faces of the laboring throng all speak with unmistakable meaning—Grant is dead. Ah, his glories have been many; his troubles not a few. The people of this great country look on him as the central figure in the saving of our glorious republic; the kings and rulers of the mighty nations of the world have done him honor.

The progress of the disease that has borne him away was watched by a sympathetic nation. His troubles have been their troubles; his afflictions, their afflictions.

We glance around us, look into the air, gaze on the faces of people passing by, why even the evening zephyrs in their murmurs seem to say that—Grant is dead. Macedonia may claim her Alexander; Rome, her Caesar; Carthage, her Hannibal; France, her Napoleon; England, her Wellington; but as long as the sunbeams of evening play on the hilltops, the dew of the morning kiss the rosebuds, so long will the people of America treasure the hero and statesman, warrior and pacificator as one of the greatest chieftains the world has ever seen. Peace to his ashes and honor to his dust."

"Surrounded by his grief-stricken and beloved family, the brave warrior passed from time to eternity at his mountain home, (whether he went to meet grim Death, at six minutes past eight o'clock on Thursday morning last. The memorable struggles and glorious achievements of General U. S. Grant in the late war for the preservation of

JOHN G. GASMANN,

"THE THING now necessary," says the *Springfield Republican*, in discussing the legal status of the Indians, "is to enforce the law in such a way as to put them on equal terms with the white men, as they have never been. Until the murder of an Indian by a white man is surely visited with the penalty of the law, the law will not be respected by the Indians."

THE SPRING of the whole thing lies in the abominable notion prevalent on the border of civilization, and with a cold recklessness adopted by politicians and capitalists, and regarded with too much and too long indifference by the people of the older States, that the interests of the white man ought to be precedent to those of the red man; that if a white man wants any land the Indians have, that is a sufficient reason for his having it; and that all treaties, laws, or arguments that prevent this are wrong, and are to be evaded or overridden. \* \* \* All these things emphasize the fact that even the most honorable relations we have with the Indians are mere concessions from superior power, with no fundamental respect to rights.—*Springfield Republican*.

#### The "Gentle Cow-boy."

"THE cow-boy," says ex-Delegate Orwig, "is of inoffensive nature, and there is not an instance on record showing that even the worst of this class ever invaded an Indian reservation or murdered a single Indian." A traveller in the South-west relates the following incident:

"A short time since my train was stopped for the night at an Indian village. I met there an Indian with his family of grown-up boys. They were social and kindly, and treated me with courtesy and respect. A day or two later, as I came again to the place, I saw the dead body of a white man lying before the house I had so recently visited, and on inquiring, found that he had been shot by the son of the old man, who himself had been murdered by a cow-boy in cold blood while standing before his house. One of those 'gentle, inoffensive' lads galloped by and in sheer wantonness, or to win a bet, shot the poor old man in his own doorway. No wonder the untutored son, in revenge, took the life of the next white man who came in the range of his rifle. This cowardly act of a white man was followed by one of those Indian outbreaks which are not infrequent, and the Northern papers were filled with the diabolical conduct of the Indian, while the cause was never alluded to."

#### Sheridan's Success.

It was creditable to the new administration, and suggestive of a new theory in the adjustment of Indian affairs, when the Commander-in-Chief of our army was sent to the Territory to settle the Indian troubles among the Cheyennes and Arapahoes. A few years ago this would have meant but one thing—extermination; now it means impartial inquiry and peaceful arbitration. Gen. Sheridan said at once that the newspaper reports had been greatly exaggerated, that the trouble was caused by the construction of cattle-men's fences and the influx of cattle upon Indian lands, and that "almost all Indian troubles arise from accidents and misunderstandings."

This last admission of the experienced statesman and Indian fighter deserves somewhat closer consideration. There is an air of ingenuousness about it, the appearance of an unpremeditated remark, which considerably heightens our appreciation of its hidden satire. Indian warfare, then, is purely accidental. Broken treaties, despoiled homes, whole villages and tribes destroyed, are merely the consequences of a trifling misunderstanding. Such consequences are disastrous, such mistakes criminal. It will not any longer be safe for our makers of law, our guardians of order, to "misunderstand" the rights and needs of the Indian.

It is apparent that the President means to put an end to "misunderstandings" between the warlike Cheyennes and the cattle-men. Indian lands have been leased for nominal sums, the semi-annual rental distributed to heads of families—"the most demoralizing feature," says Senator Dawes, "of this mistaken policy"—all with the tacit consent, but without responsible control of the Department. The consequences of this "illegal and illogical" position are succinctly set forth by Senator Dawes in his recent letter to the *Tribune*. "Five years ago these Indians were as peaceable as any in the land. August of that year I travelled nine days through that reservation unguarded, and slept securely in tents in the open prairie. \* \* \* A month ago the War Department found itself unable to furnish me a safe escort across the reservation, and I was compelled to go round."

President Cleveland, acting upon Sheridan's report, declares that the leases are void and that the cattle-men must go. The plausible statement of their case and their appeal for delay are of no effect. "The point is, the public interest" against private interests. This answer is significant. The time for "accidents and misunderstandings" is past, and the rights of the Indian are acknowledged to involve "public peace, public security, the safety of lives." At last the unanswerable argument is on their side—"the public interest."

#### A Glimpse of "Indian Character."

The peculiar twist which prejudice gives to a naturally observant mind is curiously illustrated by a recent sketch in the *Youth's Companion*, suggestively called, "A Glimpse of Indian Character."

That the writer of this sketch is quick to see and apt to describe is evident enough. This is his mercilessly literal vision of such an "aboriginal party" as happens in the vicinity of railroads in the far West, in the pitiful poverty and degradation brought upon them by the advent of the white man.

"Half a mile farther down the track stood a small collection of dingy teepees, the squalid inhabitants of which soon made their way to the delayed train. Each long-haired and filthy 'buck' carried, half-wrapped in his blanket and resting on one of his crossed arms, a short Winchester carbine unknown as to the barrel. Several wretched squaws with stolid pap-pooes strapped at their backs, slunk about, picking up furtively such scraps of food as our passengers had begun to throw about. A dozen noiseless, woe-begone boys with bows and arrows completed the aboriginal party. Not a soul of them begged. All took thanklessly anything offered. But for their occasional change of plaintive, low unflinched (?) short sentences, their curious look as of subdued dumb animals might have suggested that they were not entirely human."

We see further on, in this description of the old chief, Snorting Horse, that he is not after all, incapable of appreciating the dignity of the type.

"Snorting Horse was the only Indian I ever saw who could properly be called king. His face was wise, dignified, impressive. He was a purely natural grand demeanor, effective in spite of a costume that must have rendered

ridiculous any mere pretences of haughtiness. But the garments of the Horse seemed purely accidents; they were not even an important enough element in his appearance to suggest that he was 'a gentleman in spite of his clothes.' No garb had power to abstract from, or vulgarize, the dignity of that face and form; the expression, as I thought, of life-time of authority."

The chief is persuaded to tell the story of one of his exploits on the war-path, which is cunningly interpreted by an old "Indian trader"—a story of wonderful caution, daring and cruelty. Here first the apparently ineradicable prejudice crops out. "His narrative," says the author, "only presented a face of war but a little more brutal than that of civilization." Then why, in the name of justice and common-sense, such an outburst as this?

"All this Spotted Horse had told with an air of self-satisfaction. (1) *The temptation to end his wretched career then and there was very strong.* The Rattle-snake had followed the chief's narrative with interest and admiration. When I expressed, through Colquhoun, some little of the horror I felt for the crime, both looked indignantly at me and walked majestically away." *It was not a crime in Indian eyes,—but an act of rare courage and enterprise.* And what of the "temptation" to which the writer confesses? In the wish to murder his entertainer, he outdoes the savage.

Now comes the most curious and least probable part of the story. A young educated Indian—a theological student—is the sole remaining member of the family destroyed by Snorting Horse when the young man was three or four years old. This youth runs away from his college to seek a horrible revenge upon his old enemy. This may not be an impossible incident, but it is based on a false and sensational theory of "Indian Character."

"He took his degree with high honors. But I don't think his education will ever make him a very good white man. He is Indian in heart yet."

"Why do you say so?"

"He carries a scalp around."

"A scalp?" I was startled by the confirmation of my suspicions. Jack

had seen the last relic of a terrible tragedy—the taint of revenge in the young student's blood—a characteristic that had grown for a thousand years—had proved too strong for the few years teaching and discipline that civilization had given him."

A plausible supposition, no doubt, but it will not do to generalize from murderers of any caste or color.

#### My Lady Pocahontas.\*

This "true relation of Virginia," quaintly writ in the language of the time—with a trace of modern daintiness and affectation—makes us pleasantly acquainted with her whose goodness and grace are matter of historic record. The adventures of Capt. John Smith, whose character in this sketch we cannot but suspect is somewhat so toned; the beauty—possibly a trifle idealized—of the dusky princess; the savage state and dignity of Pocahontas, and the fanciful coupling of Shakespeare's "Tempest" with this idyl of the New World, create the material for a rather fascinating little narrative. This is "how I first see my Lady Pocahontas:"

"The angel comes out of the woods with her wild train of attendants, and the full baskets weigh down the backs of the dusky people. They were full-grown and hawny, with coverings of deer and bear skins, but I was looking at the osier baskets of corn and venison."

"The maid comes toward us, stepping with a pretty and proud gait, like a fawn. Her hair was black and straight, but scarce seen for the broad, white plume in it. Now I knew that my Captain had spoken truth of her face and form, for scarce have I in England seen maid so beautiful. She comes

\*By John Eaton Cooke. Houghton, Mifflin & Co., Boston, 1885.

putting down each little foot, covered with bead moccasins, light but firm, and smiling out of black eyes."

This pretty princess gives much aid to the starving little colony at Jamestown, all for the love of the English, and especially of the gallant Captain. The relation, no doubt, is fact, with a slight garnish of legendary fancy. Presently the Captain sails away, and John Rolfe falls in love with a "strange woman," and would convert and wed the charming pagan. "Never saw I gayer sight," says Amos Toddlin, than their marriage in the church at Jamestown.

"The cedar pews were wreathed with flowers, for this Virginia land hath daisies in April, what we call the old field daisy and others. Sure the flowers were sweet and heartsome, though I approve not this vain, Popish fashion of decking the sanctuary with such; and a great crowd filled the church (whereof the bells in the west tower were ringing), pushing into the cedar pews quite up to the chancel and walnut communion table. I well remember me the strange sight of buff jerkins and gold-laced doublets rubbing dusky, naked shoulders of Indian chiefs, with feathers on heads, bow in hand. Many heathen had come to see their Lady Pocahontas wed the white face, and the bride marches up the aisle with Master Rolfe and her old uncle Opachisco, a conjuror with a wondrous wrinkled face, and behind these advance, with his head up like a deer of the forest, the lady's best beloved brother, Nantagans."

Then comes the sad, early end, across seas, of the transplanted beauty, and sundry tender passages between her and Capt. Smith round out with imagery woe the truly touching little history. In England, too, we meet "Master William Shakespeare, of the Globe Theatre," and he tells us how his Ferdinand is Smith, "though a king's son," Caliban is a deformed Indian called Rarohent, and in his Miranda he has figured "the blessed Pocahontas."

The extracts given below, from a Dakota newspaper, are clear illustrations of the way in which Indian Rights are recognized by their white neighbors. *The Republican* admits that the Indians on the Crow Creek Reserve own their Reserve under the Treaty of 1868, and at the same time calmly states that Congress will probably abrogate this treaty and provide for the removal of the Indians during the coming winter!

"The legal point involved in the Winnebago reservation question is whether or not the President has the right to issue an order setting aside the terms of a treaty. It is contended in behalf of the Indian claimants that Congress alone has that right. When the treaty was made seventeen years ago, it was not expected that the Indians would remain upon the lands more than three or four years, but would be removed to the west side of the river. They are there yet, however, protected by the treaty, and the probable solution of the matter is that an act of Congress abrogating the treaty, and providing for their removal, will be passed next winter."—*Republican*.

If the President will order the removal of the Indians from the Sioux reservation to the Indian Territory, upon the lands to be vacated by the stockmen, Dakota will scarcely feel called upon to shed many tears for the bad luck of the stockmen."—*Republican*.

#### Horsford's Acid Phosphate.

HUNDREDS OF BOTTLES PRESCRIBED.

Dr. C. R. Dake, Belleville, Ill., says: "I have prescribed hundreds of bottles of it. It is of great value in all forms of nervous disease which are accompanied by loss of power."

### Incidents of Indian Life at Hampton.

We have now at Hampton 115 Indian pupils.

Benjamin Bear Bird, infant son of Baptiste and Julia Bear Bird, died on the 3d inst., aged two weeks.

By Indian Inspector Armstrong's census of the Cheyennes and Arapahoes, the population of these tribes was found to be 2,167 and 1,307 respectively. They had been drawing rations for ten years for 3,769 and 2,198 members respectively. The saving in beef and flour alone by the new census is \$105,000 a year.

### New Arrivals.

July 26th, Noah LaFlesche arrived from the Omaha and Winnebago Reservation with a party of 13.

James Hamilton,	Omaha.
Minnie Hamilton,	"
Irish Leming,	"
Stella Leming,	"
Grace Pitcher,	"
Elsie Fuller,	"
Emma Fuller,	"
Annie Fuller,	"
Madeline Scott,	"
Albert Fontenelle,	"
Eugene Fontenelle,	"
John Bear,	Winnebago.
Chas. Bonaparte,	"

As there is no physician at the Agency they were brought without examination. Only six prove to be strong. Some may improve and others will return.

Mr. Gravatt with a force of 22 Sioux arrived from Dakota the 8th of this month.

Joseph and Ellen Ellis,	Lower Brule.
Leon and Susan De Shugnette,	"
Cora Rulo,	Santee.
Anna Arpa,	Plandreau.
Wesley Huntsman,	Lower Brule.

### Indian Correspondence.

The only true way to know any people is to go among them, to touch the current of their thoughts, and to see them as they are. Much trouble comes from ignorance of people and their customs, their difficulties and temptations.

The East has wrongly interpreted the West and the West has misunderstood the East. The more people see of each other and work for each other the more they find there is to work for. Goethe in a melancholy

moment, said there is no man who has not something bad in him if you only knew him. May we not take a more hopeful view of life and men and say there is some good in everybody if we will only look for it? Let us visit the Indian country in this spirit, realizing that human nature is a very potent thing and that he is human—with all that word means—as well as the rest of us. If we go with Goethe's idea we will find the bad, and a plenty of it. No one has ever seen any heathenism that was not bad. But if we can only lay aside prejudice and seek for something good we will find it. It is but heaven—it can, by God's grace, leave the whole lump. The leaves and fishes seem to be far too little for the great multitude, but they were multiplied till all were fed. Christ used what the people had and increased it—so he is building up this people by blessing the efforts used in their behalf and by multiplying the few leaves and fishes. Contrast the Indians of to-day with the Indians of fifteen or twenty years ago, and we see what has been done by faithful missionaries and teachers. Too much can not be said about the fidelity and earnestness of these devoted men and women—A missionary took a boy from the camp when 14 years old in his home, trained and educated him. He is to-day a graduate of an Eastern College and of a Theological Seminary and is an accomplished gentleman and scholarly man. He served a white congregation last summer most acceptably. He has since been ordained and will no doubt do great good among his people. That proves what can be done when only right means are used. But what has become of Hampton returned students? we are often asked. At Yankton agency I did not hear of one doing badly at present. There were two or three who had given some trouble and caused some anxiety to friends but had done nothing criminal. One of them has married and has settled down to household duties. Her house, while a log cabin, shows the effects of school training. She had it quite nicely fitted up a sewing machine was an important piece of the furniture, and she showed me a dress she had made, getting the pattern from Butterick.

Joe Estes had been teaching in the Gov. school with great success; his Hampton methods had been copied by other teachers. David Simmons who had worked faithfully as issue clerk for some years voluntarily resigned his place to take a farm. I saw his crops; the wheat was very beautiful. The agent said so far as he knew, it was the best wheat raised in Dakota. One noticeable thing is that nearly all of these children are very regular in their church attendance.

We have returned about twenty-three to Lower Brule agency. Of this number several have died and I heard of two only who have acted badly. One boy who was here about six months and sent home because physically unsound, has painted himself and was a regular attendant upon the dances. A girl who was here a short time and was returned home because unwell, had been very wild. Some had dropped back, but had come up again. Like all children, some had been indiscreet, but I believe it was nothing more.

At Crow Creek agency I found one girl whose conduct had been very bad. To this agency we have returned more than twenty, and others working in the shops.

Eugene First Hall, a promising boy whom we took home a year ago because of weak lungs, has greatly improved in health and is working at his trade in the Gov. shop. The agent says he is the best boy he has ever had in the shop. He made a desk for the agent's office which would do credit to a much older workman.

The boys who returned with me found the schools closed, and not being able to secure places in the shops, went to work in the harvest field. Amy Wizi, daughter of the chief—not finding her home civilized enough, could not eat as they ate, or sleep as they slept. She took some chinaware which her father had some time before bought from a retired agent, but which he had been unable to use, and arranged for the first time the table in a civilized manner, thus delighting the old man's heart.

It surprised me that these children stand up as well as they do. The old Indians try to drag them down, fearing they may lose their power. Where employees have not a missionary spirit it is to their interest to keep these boys out of employment. In some cases there is not enough sympathy for them and they feel it. In the next place there is not the necessary facilities for work. These students go and ask for work and the agent really has nothing to give them. His work is going to apply to the Department for more schools, shops, and houses for employees, and thus provide for the returned students. This is of the first importance and everything should be done to further their efforts.

J. J. G.

In the death of Mrs. Helen Hunt Jackson the Indians of this country have lost a warm, faithful and powerful friend, whose influence in their behalf will be missed in more than one direction.

From the time of her marriage to Mr. Jackson in 1876, when she became a resident of Colorado, she has been devoted, heart and soul, to the interests of the Indians, sacrificing her personal ambitions to, and using her talents in, the advancement of their cause. In 1881 she wrote "A Century of Dishonor," as a result of which she was appointed by the U. S. Government as one of two Commissioners to report upon the condition and needs of the mission Indians of California. In 1884 she published "Ramona" in which again she set forth with all the strength of her facile pen the wrongs of the people with whose history she had become so familiar, and it is said that at the last she felt that the best work of her life was represented by those two books. In one of her last letters dated July 27th, 1885, she says:

"I feel that my work is done, and I am heartily, honestly, and cheerfully ready to go. In fact, I am glad to go. You have never fully realized how for the last four years my whole heart has been full of the Indian cause—how I have felt, as the Quakers say, 'a concern' to work for it. My 'Century of Dishonor' and 'Ramona' are the only things I have done of which I am glad now. The rest is of no moment. They will live, and they will bear fruit. They already have. The change in public feeling on the Indian question in the last three years is marvelous; an Indian Rights Association in every large city in the land. \* \* \* Every word of the Indian history in 'Ramona' is literally true, and it is being reenacted here every day.

I did mean to write a child's story on the same theme as 'Ramona,' but I doubt if I could have made it so telling a stroke, so perhaps it is as well that I should not do it. And perhaps I shall do it after all, but I cannot conceive of getting well after such an illness as this."

To the memory of so loyal a friend, some tribute is surely due, and we trust that the gratitude of those for whom, as well as of those with whom she labored will find fitting expression in some of the tangible forms in which she herself would have chosen it.

The San Francisco *Argonaut* has some observations on the Indian "war" in Arizona and New Mexico which are well worthy of attention. It says, with much show of reason, that this Indian "war" is the annual one, got up by white gentlemen to promote a revival of business in the Territory, or, in other words, to send up the price of hay, and grain, and wood, transportation stores and merchandise. It says:

"If there were no Indians there would be no Solomon Wickersham & Co., at Bowie; no Zechendorf & Co., at Tucson; no Hooker, at Wilcox. When the Indian war comes on, and the Indian war comes on, from all the village stores; every cultivated acre looks forward to a sale of hay, grain, vegetables, and farm produce; every town and crossroad larder to employment; every village bar and squaw-hunter to enlistment. The price of beef goes up, and every broken mustang is in demand. Florida lived for thirty years upon Billy Bowlegs, and Arizona looks forward to an indefinite prosperity in the person of Geronimo, Natchez, Chetto, and the other brave and painted Indian desperadoes whom the wrongs done them by white men so often drive upon the war-path."

There is a horrible probability about all this. It would appear now from the reports of competent observers that the reports of the Indian massa-

ces have been greatly exaggerated. Gen. Crook says only seventeen persons have been killed. Judge Wilson, Associate Justice of the Supreme Court, and Mr. Morrison, the Attorney of the Southern Pacific Railroad, say only twenty persons have been killed in all, and only those who stood in the way of the Indian fight. "All the Indian massacres," the *Argonaut* adds with cruel point, "perpetrated in the Territory of Arizona, do not represent 5 per cent. of the murder roll."—N. Y. *Post*.

### A Proposed Substitute for the Dawes Sioux Bill.

The Editor of the Chamberlain *Register*, who may have become known to some of our readers, during the past few months, through the ludicrous violence of his attacks upon Senator Dawes, Bishop Hare, and various members of the Indian Civil Rights Association, on account of their action in the Crow Creek affair, has prepared a substitute for the Dawes bill. Not long ago he proposed to the Corresponding Secretary of the Indian Rights Association to hold a meeting in Chicago, by which Western and Eastern men should be brought together for the purpose of devising some plan for the opening of the Sioux Reservation to white settlement. To this proposition the secretary of the association, after due consultation with others, declined to accede, upon the ground that such a project would be a needless expenditure of time and money, since the work proposed by Mr. King had already been accomplished. The bill prepared by Senator Dawes was shown to be the best plan that could be devised for the opening of the Reservation, with due regard to the rights of both the Indians and honest whites—only the interests of speculators being disregarded. Mr. King's attention was especially called to the fact that the bill in question had received the endorsement of such a representative Western man as ex-Secretary Teller and other prominent gentlemen, who had formally approved its terms.

To this Mr. King replied by a letter containing a complete rejection of the Dawes bill, an accusation of "bad faith" directed against the corresponding secretary of the association because he refused to entertain the project of a Chicago meeting, and a new bill apparently devised by the editor of the *Register*, and intended as a substitute for that prepared by Senator Dawes. The character of this intended piece of legislation leads us to suppose that its author's ideas of justice to the Indian and the general fitness of things in their treatment, are rudimentary. In no clause of the bill is any allusion made to the Treaty of 1868, upon which rest the relations existing between the United States Government and the Sioux Indians. This treaty, which more than once has proved a necessary protection for the rights of these Indians, is, in the proposed bill, utterly ignored. So far as we can understand it, the bill proposes to take from the Indian about twenty million acres of reservation land, without in any way seeking the consent of its present owners. It further proposes that the United States shall pay out of the Treasury for the land so taken, at the rate of fifty cents per acre, instead of disposing of it by sale to settlers. This would require an appropriation by Congress of ten millions of dollars. Such an appropriation Congress would never consent to make. We have neither time nor space to note more of the crudities and absurdities contained in this remarkable production. The moral to be drawn from this bill in particular, and from all the circumstances which have attended the Crow Creek affair, is painfully apparent. Those who have set their hearts upon getting possession of Indian land are entirely oblivious of the fact that the Indian himself has any rights. The treaties we have made with him they utterly ignore the moment they find that these treaties are barriers to their rapacity. Any plan which the friends of the Indian may devise by which an equitable cession of Indian lands shall be made, the demands of civilization being fairly met and the rights of the Indian protected, they are not willing to adopt. Or if they acquiesce in them nominally, such perfidy as was resorted to in the attempt to appropriate the Crow Creek lands must be against it. A little experience in Indian affairs is likely to bring one to the belief that men are better judged by their actions than by their professions. HERBERT WALSH.

### Horsford's Acid Phosphate.

IN DEBILITY FROM OVERWORK.

Dr. G. W. Collins, Tipton, Ind., says: "I used it in nervous debility brought on by overwork in warm weather, with good result."

## The Southern Press. Both Sides.

Continued from Page 94.

this Union will cause his name to become indelibly fixed in the heart of a great grief-stricken nation, who will sing his praise from the shore of the frigid North to the burning sands of distant Africa. General Grant, during his public life, was the most conspicuous target for the sordid malice of vindictive knaves, of any of America's truly great men, and yet, no man, living or dead, was ever, or is now, more revered and lamented than he. He was the first and only American born that ever received the hospitable reverence of the world.

How different were the struggles at the grave from those at Vicksburg, Donelson, Five Forks, and even in the Wilderness! What a difference between the picture of that memorable day at Appomattox and the picture to-day! Upon that memorable day our hero stood with a dignified boldness, as the conqueror, receiving the sword of peace in behalf of a distracted nation; to-day he stands with the same dignified boldness, after fighting desperately, the conquered, resigning the sword of peace to the mighty Destroyer of all mankind! His resignation, however, does not signify defeat; no, he only lays down the sword of combat with death to hasten to the just reward that awaits him in the realms of bliss."—*N. Y. Enterprise.*

"The evidences of profound sorrow which have been drawn out by the death of General Grant, have been confined to no one section of our vast country nor to any one class of our heterogeneous population. The sorrow and grief have been universal, all classes hastening to express sorrow at the death of the nation's hero.

It might appear invidious in the midst of the general sorrow to say that any one class feels more than another the great loss sustained by the nation in the death of the man whose iron courage and tenacious genius cemented anew the union of the States; but we feel that the colored people of this country have a right to claim that mournful distinction. Out of the tremendous and sanguinary conflict which General Grant waged for the stars and stripes the colored people not only emerged as factors of a united and invincible people, but the chains which enervated their limbs for two hundred years were snapped asunder when Lee surrendered to him the sword which had sustained the fortunes of the Confederacy, and they proudly stepped forth into the awful yet pleasing reality of freedom.

As a soldier, victorious over the hydra-headed foe, General Grant opened the way to our manumission and enfranchisement, for had not his arms been victorious from Fort Donelson to Appomattox, President Lincoln might have issued a ton of Emancipation Proclamations, which would have forever remained inoperative and useless.

It was the great good fortune of General Grant not only to break the infamous fetters of the crouching slave, but as President of the re-united Union, to place upon the brow of the black freeman the signet of citizenship. Few men have ever lived who were called upon to make possible and round up a piece of work more grand, human and far-reaching in its nature and possible results. And when the pages of our National history shall be illuminated by the grandeur and brilliancy of his life work his great services to the colored people will occupy no second place.

We yield to no class of our fellow-citizens in our gratitude to General Grant for his eminent services to the country and to humanity. As soldier and as President he was mindful of us. Nor have we had a President since his time who recognized our just claims to co-equal citizenship and its benefits in a larger and more generous measure. We loved and honored him in his period of life, and now that he is dead we enshrine his memory in the warmest, most sacred chambers of our affections."—*N. Y. Free Press.*

## Aunt Pokey's Son.

Continued from page 94.

Mrs. Moncure looked at him anxiously, and when he lay back in his chair, apparently exhausted, she said gently, "Isaac, you ought not to excite yourself, and I see that you ought to have a holiday and change of scene at once. I wish you would come back to the old plantation, and stay until you are strong and well again."

Professor Randolph sighed. "I wish I could live on a farm," he said, "country life is what I love and what I feel I was intended for. I hate brick walls and narrow bounds."

Mrs. Moncure smiled. "You know your father was part Indian," she said, "and it is the wild blood in your veins and the remembrances of your childish life that make you long for liberty. Isaac, you tend me to make you an offer I have only hesitated about, because I found it might seem as if I thought chiefly of my own interest. How would you like to come back to your old home and become manager on the estate?"

The young man started up and looked at Mrs. Moncure with an expression of extreme surprise. "I should like it of all things," he said eagerly, "but is it possible that I could take such a position with my present ideas and feelings and give satisfaction?"

"I do not see why you should not do so," said Mrs. Moncure. "Your good old father was our head man in old times, and was entrusted with the care of all our property when the white family were absent from home, and I never knew him to be unworthy of the confidence reposed in him. Your education ought to give you advantages over him, for he could not read or write, though he had remarkable natural ability, and it was always subject for wonder with us that he was able to make calculations, and kept an accurate knowledge of all his master's business. Our affairs could not be worse managed than they are at present by a white man, whom I suspect of looking up to a fortune for himself at our expense."

Aunt Pokey now came in from the kitchen to set the tea table, and her eyes glistened with pleasure. Mrs. Moncure referred her proposition she had made Isaac to her for consideration. She promptly expressed her approval of it as the chance needed for her son's health. "My old man never could star 'bout shut up in de house no time," she said vigorously. "I allurs use ter tell him he was a hunker in arter livin' in a tent like dem ole Injun kin folks ur his'n, an' I key is like his power. From chile he never could 'bar stayin' shut up in a close place. An' all dem Yankee folks build der houses so tight an' keeps 'em shut up so close." After the tea table had been cleared away, Aunt Pokey went into the shop to give directions to Julius, and in answer to some question from him she was heard ordering him sternly to keep silence. "Shet yo' black mouth nigger, you a talkin' 'bout Civil Rights inded! Cibil manners and cibil behavior, dats what niggerified folks like you wants, an' when you is got dat you is get enuf." Having concluded her lecture and dispatched various housemaids and errand boys with baskets and packages of hot rolls and fresh cakes and fruit, she bestowed a parting admonition upon her assistant to "minussist now," and entered the parlor. Taking a seat at the end of the sofa where Mrs. Moncure was reclining, and placing herself so that she could keep a sharp eye upon Julius, she, unfetters the long tresses of her mistress' hair, which floated in silvery waves to the floor, and gently combed and brushed the soft locks, winding them about her fingers and smoothing them with gentle touch as she had been wont to do in bygone years.

"Pocohtantas," said Mrs. Moncure, laying her little white palm for an instant on the strong black hand lavishing such tender caresses on the head over which the storms of fortune had raged with the tempest's wrath, "my good, faithful friend, if I should close my eyes for a moment, lying here feeling your touch, and hearing Isaac's voice, I might fancy that the last ten years was all a terrible dream, but for this weary pain in my heart which will not let me forget that my precious children, the pride and joy of my life, are gone forever."

If I have succeeded in interesting my readers in the fate of two families of different races who had been bound together for generations by many ties of interest and affection, and after being for a time separated by the waves of revolution, which had to a wonderful degree changed the relations of master and slave, they will think it worth while to peruse the following long letter from Professor Randolph in regard to the manner in which old friends had been reunited.

It dated three years after the conversation related of the last day of Mrs. Moncure's stay at Aunt Pokey's snug little home in Richmond, and is written from the old plantation where generations of Isaac's family had been born, slaves and to which he had returned as manager after receiving the long cherished of a fine education from his Northern benefactor.

The letter is addressed to Hon. Philip Northrop, city of New York.

Oakhill, Virginia, May 1st, 1878.

"Mr. Philip Northrop,

"My dear and honored Friend: "Your kind and welcome letter from New York was forwarded to me from Richmond yesterday, and I rejoice to hear of your safe return to your native land after my long sojourn abroad. I have never been able to realize that the United States is quite the grand and glorious region you taught me to consider it, when you were not in it, to represent the best type of an American citizen.

"I have not been unmindful of your request to keep you regularly informed in regard to myself and the various circumstances of my life, in which you take such a kind interest, but as I was not always sure of your address, instead of sending letters in pursuit of you to the ends of the earth, I have from time to time noted down the incidents most important to me, and most likely to interest you, and now give you a full account of myself since my last letter to you. When it was written, I was living with my mother in Richmond, and teaching in the Institute, of which you have always been such a liberal patron. At that time my health was somewhat feeble, and I feared I was going to have serious chest trouble. Now I am much more robust than when I last saw you, indeed stronger than I have ever been.

"I am glad to tell you that the Institute is flourishing, and is doing excellent work for our people. My mother, for whom you are so kind as to enquire, is very well, and gives no indication of yielding to the infirmities of age. She is absorbed in business, and her faculty and success in that way are remarkable, when all the disadvantages she has had are taken into consideration. I think she is probably worth fifteen thousand dollars, though she is very reticent about her affairs, and does not allow anyone to pry into them. I have no disposition to do so, and as I have never given her any assistance or been desired to do so, I do not feel that I have any right to ask for confidence she does not voluntarily bestow. She is entirely devoted to me, and I think takes intense satisfaction in realizing that at her death I will enter upon possession of an estate which will enable me to live "like white folks," as she would say. She strongly opposes any suggestion of Civil Rights for Negroes, except where I am individually concerned, and is quite content with things as they exist in the South. Next to myself and her old mistress, her dearest earthly treasure is a troublesome little black wail she took out of the gutter, and is trying to make into a respectable man of business. So far her success has not been gratifying, but I hope as he grows older, he will develop his own usefulness. If he fails to do so, it will not be for the lack of precept or example!

"I think you will be surprised to know that I am living on the plantation where I first met you, and am the manager of my old master's estate. It is a strange statement, even in my ears, and I am sure you will feel interested in hearing the whole story.

"Soon after I wrote you last, and at a time when my mother was very much concerned about my health, her old mistress, Mrs. Moncure, chanced to be in Richmond under medical treatment for a disease of the eye. She was uncomfortably situated at a boarding-house, and fast sinking under the burden of disease and care. Mother at once insisted upon removing her old friend to her own home, and she spent some weeks in the home of her old servant, where she improved rapidly in health and spirits. My coming here was the result of Mrs. Moncure's visit, and I can but believe the hand of Providence is plainly to be discerned in the whole chain of circumstances.

"My recollections of the place where my happy childhood had been spent were of an abode of luxury, which seemed to my boyish mind to border on magnificence. The place swarmed with slaves. My master was one of the leading gentlemen of the country, his wife a most beautiful and accomplished lady. They had three fine young sons, the youngest of whom was my companion and playmate from the cradle. We were equally petted and indulged, and equally happy and light-hearted.

"The war changed all this, and when I returned to the plantation, three years ago, it seemed as if the spirit of desolation had swept over the fair scene. The three sons had been killed in battle. The youngest entreated his mother to let him join a raiding party just for one day, led by his elder brother, to surprise a regiment of Federal troops near the place. He was but fifteen years old, and she gave a most reluctant consent. At nightfall his dead body was brought back to her arms. One of the other sons had been killed at Gettysburg, and the last one, who was mourned, was slain just on the eve of the surrender, in one of the last skirmishes that occurred. His wife died after giving birth to a child a few

weeks later, and their two little sons, with their bereaved old grand parents, constitute the present family. The estate was overrun by both parties, and little had been done to repair the damages of war when I came here. My old master is utterly brokehearted. He is very infirm, and nothing can rouse him from the despondency in which he has been plunged since his idol was overthrown. He believed so entirely in slavery!

"Mrs. Moncure is much younger, although grief has made her look old and worn, and she has still a wonderful amount of spirit. She is devoted to her little grand children, and full of determination to educate them and preserve at least a portion of the property for them.

"When I came here there seemed little hope of this, for the estate was heavily involved, and the debts and the taxes seemed likely to devour everything. I have done my best, and Providence has certainly favored us of late years, though it seemed for a time as if the vials of wrath had been emptied upon my unfortunate old master."

"If the people of the South have shared surely they have suffered, even unto the death of the first born!

"There is an immense quantity of timber on the place, with abundant water-power. The first thing I did was to build a saw-mill, and by the time it was completed a railroad now in full operation was surveyed through the property. The damages paid by the company, and the money for cross-ties furnished the road, gave us funds for paying off the most pressing debts and putting the place in some sort of order. Some Northern men have built a factory for wooden ware near us, and we are constantly buying lumber contracts with them. There are indications of fine minerals of various kinds on the estate, of which I am shipping to you specimens, which I beg you will at once have examined by experts. Unless I am much mistaken in their value, before another year we shall be building a furnace and have a large force of miners at work. At first it was extremely difficult to induce Mr. Moncure to have any dealings with Northern people, towards whom he cherished the most deep-rooted suspicion and aversion, but in all my efforts in this direction my old mistress has been my able assistant, and she has succeeded in obtaining his consent, where alone I should have failed. It seems advisable to sell part of the property to carry out our plans for development, and my mother, who is greatly attached to the place as well as the family, has some money now idle, which she is willing to invest in this way with a view to providing a home for me in future. So you see I am likely to own a part of the estate where I was born a slave! How wonderful are the changes wrought by the whirligig of time! Mrs. Moncure desires me to present her compliments to you, and ask you, in her name, at your earliest convenience to make us a visit. We are now in a condition to make your stay with us agreeable and entertain you as we should like to do. She is so kind as to say that she wishes to thank you for what you have done for me, and to get your counsel in regard to the two little boys, who are now her chief interest and comfort in life.

"I hope my long letter has not wearied you, and that I may soon have the pleasure of seeing you in my Virginia home. I realize from the bottom of my heart that my present position and prospects in life are mainly the result of the kindness bestowed upon me by you."

Your grateful and attached,  
"JAMES ISAAC RANDOLPH."

DIED.—At the school on the 21st inst. J. B. Yates, of the Middle Class.

## Horsford's Acid Phosphate,

FOR SICK HEADACHE.

## Horsford's Acid Phosphate.

FOR NIGHT SWEATS AND PROSTRATION.  
Dr. R. Studhalter, St. Louis, Mo., says: "I have used it in dyspepsia, nervous prostration, and in night sweats, with very good results."

## Correspondence.

We are glad now, as always, to hear from Gen. and Mrs. Marshall, and only regret that they have not more time to give to their old and faithful friend, the *SOUTHERN WORKMAN*.

Weston, Mass., July 21, 1885.  
We are passing the summer quietly at our beautiful country home, which has more natural beauties and attractions than any we have ever yet occupied. Hill and valley, magnificent elms, a beautiful lake directly under our windows, rocky knolls, and winding farm roads, shaded with trees of various kinds, combine to make the location remarkably beautiful.

Our old-fashioned house is roomy and very convenient, with its "Hampton Hall" running through the middle of it, giving a cool breeze at almost all times. We have memorials of our Hampton life at every step, and occasional visits from Hampton friends keep us acquainted with the progress of that loved and noble work. \* \* \* Our doors are always open to a Hampton teacher, and the most cordial welcome awaits our old friends, with whom we have been so long and pleasantly associated. \* \* \* I find enough to occupy me in the pleasant but costly amusement of getting an old worn out farm and its buildings into proper condition. \* \* \*

Politics seem to be very quiet as the summer heats come on, but the cauldron is bubbling and will boil over in due time. The President seems firm as a rock in his determination to make a reform non-partisan, and pure administration, and in so doing seems to be getting a horrid nest about his ears, and to be antagonizing the leading politicians of both parties. It is somewhat discouraging to find prominent and able leaders, both Republicans and Democrats, who seem allied to the grandeur and importance of the stand which Cleveland has taken in the great cause of reform, and who, instead of aiding him in this great work, upon the success of which the stability of our Democratic institutions so much depend, are badgering and hampering him in every possible way. I have faith to believe that the President will triumph over the enemies of civil service reform, and that the party leaders who are now opposing him, will live to be thoroughly ashamed of their narrow partisan opposition.

#### Horsford's Acid Phosphate, BEWARE OF IMITATIONS.

Imitations and counterfeits have again appeared. Be sure that the word "Horsford's" is on the wrapper. None are genuine without it.

## DENTISTRY.

## Hygeia Hotel.

Ed Port, Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth.

The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

OF THE

## Negro Race in America

FROM 1619 TO 1880.

NEGROES AS SLAVES, AS SOLDIERS, AND AS CITIZENS; TOGETHER WITH A PRELIMINARY CONSIDERATION OF THE UNITY OF THE HUMAN FAMILY, AN HISTORICAL SKETCH OF AFRICA, AND AN ACCOUNT OF THE NEGRO GOV. DEPENDENTS OF SIERRA LEONE AND LIBERIA.

By GEORGE WILLIAMS,

First Colored Member of the Ohio Legislature, and late Judge Advocate of the U. S. A. of Ohio.

POPULAR EDITION, TWO VOLUMES IN ONE, LARGE OCTAVO, WITH PORTRAIT ON STEEL, \$4.00.

(A few sets of the original edition, in two volumes, can still be obtained. Price, \$7.00.)

"This is a most interesting and most valuable book—interesting because of its subject-matter, and of the ability with which it is treated; valuable as a great contribution to the history of a race whereof the knowledge is most meagre; and both valuable and interesting as the work of a negro, who has learned not to be ashamed of his race or its name, and by this work has offered the highest proof of the capacity of that race for development, and culture, and highest encouragement to the people of his race that they seek to lift themselves up from the degradation into which they have fallen."—*Fort Louisville, Ky.*  
The author has made a wide and careful study for his book, and has not only created a permanent monument of his own culture and scholarship, and accomplished a noble service for his race, but he has added a valuable treatise upon a living theme to the literature of Christian civilization."—*Zion's Herald.*

## HAMPTON SCHOOL RECORD.

VOL. XIV

HAMPTON, VA., OCTOBER, 1885.

No. 10.

The question of Negro education in the South, has, since the election of President Cleveland, been the subject of more general discussion in Northern papers and magazines than ever before, and the new appreciation of its importance which is thus indicated is not likely to be made less keen or earnest by the facts which are brought to light on both sides. While many factors in the problem still remain unknown and for the present unknowable, the immensity of it has at last fully dawned upon the American people, and for the somewhat abrupt impetus which it has lately received, we have to think, indirectly at least, the change of administration. The attitude of both political parties towards the Negro has unmistakably changed, and no less is true of his attitude towards them. The Republican party has discovered that to manipulate the Negro vote is not so simple a matter to-day as it was ten years ago; while the Democratic party has come to recognize his importance as a permanent political element with a hospitable warmth which it is not likely the leaders of that party will permit to cool. As for the colored man himself there is growing evidence of a divided allegiance. He has found that his Republican protectors are not altogether what his fancy had painted them, and he has come to see that there are possibilities for him outside the limits which they had set for him. As the inducements offered him by those whom he has believed to be league together for his destruction, have become more and more definite, his distrust has shown signs of yielding to the proffered advantages, and the advances on both sides include a good deal more than the mere surface maneuvering of politics. No more interesting study was ever offered to the sociologist than these conditions now present—but for the moment our concern with them is chiefly that out of them has grown new opportunities for the Negro and for those who believe in his capacity for better things than have been possible in the past.

In Mr. Dudley Warner's "Impressions of the South," published in the September No. of Harper's Magazine, he says, speaking of the attitude of Southern whites towards the Negro: "In looking at this question from a Northern point of view, we have to keep in mind two things: first, the Federal Government imposed colored suffrage without property qualification—a hazardous experiment; in the second place it has handed over the control of the colored people in each state to the state, under the Constitution, as completely in Louisiana as in New York. The responsibility is on Louisiana. The North can not relieve her of it, and can not interfere, except by ways provided in the Constitution. In the South where fear of a legislative domination has gone, the feeling between the two races is of amity and mutual help."

That President Cleveland's election has done much towards removing this "fear of legislative domination" there can be no doubt, and the conditions which it has presumably created are already giving fuller play to forces whose development would have been retarded or seriously distorted had not this manifestation of a change in public sentiment taken place just as it did. Mr. Warner goes on to say: "The thoughtful and the leaders of opinion (in the South) are fully awake to the fact that the mass of the people must be educated, and that the only settle-

ment of the Negro problem is in the education of the Negro, intellectually and morally. They go further than this. They say that (for the South to hold its own—since the Negro is there and will stay there, and is the majority of the laboring class—it is necessary that the great agricultural mass of unskilled labor should be transformed, to a great extent, into a class of skilled labor, skilled on the farm, in shops, in factories, and that the South must have a highly diversified industry. To this end they want industrial as well as ordinary schools for the colored people."

Agreeing thoroughly as we do with Mr. Warner, we find that practically there still remains the question as to how we of the North, to whom these things were patent twenty years ago, are to join forces with our brothers in the South, to whom they are just becoming evident?

Take, in this connection, for example, the work of a single denomination, the Baptist, among the freedmen. Since the war they have established fifteen schools, one in Washington, D. C., two in Richmond, one in Raleigh, N. C., one in Columbia, S. C., two in Atlanta, one in Nashville, one in Louisville, one in Live Oak, Fla., one in Selma, Ala., one in Jackson, Miss., one in New Orleans, one in Marshall, Texas, and one, the Creek Freedmen's School in Tullahassee, Ind. Ter. These schools represent a total of 2,558 students with 101 teachers. In ten of them departments of industrial work have been fairly established, while in eight special theological work is being done. The reports from these schools indicate, without exception, steady progress, not only as to the numbers enrolled, but as to the character of the work done, and the general equipment of the graduates. The President of the school at Nashville says: "It would surprise those who have never visited Southern institutions for colored people to see the proficiency which has been made in intellectual attainment during the twenty years since slavery was abolished."

The great majority of our students support themselves and pay for their education with their own earnings." The testimony from all these schools is to the same end; it is evident that all they need to accomplish thoroughly good results is the hearty support of their constituents. But it is equally evident that up to the present time this support has been drawn wholly from the North. Southern sentiment being in the main averse or indifferent to such attempts to elevate the Negro. Within the past few months however, signs of a change in this respect are becoming apparent, and although as yet they carry meaning only to a close observer, they are none the less surely the surface indications of a deep and far reaching alteration in the current of Southern thought.

The white population of our Southern states, have known of course that a great deal of quiet work was going on among them, but so long as it was quiet they have paid little attention to the manner of it. Now, its fruits are beginning to show their value in a practical way and can neither be ignored nor undervalued. Imperceptibly, even ultra Southerners are coming to look upon these schools and the power which they represent as their best safeguard against the political and social dangers which they feel to be imminent, and we

venture to say with some assurance, that the more intelligent and advanced among them are at last ready to lend a helping hand. It is futile to say that this would have come with a better grace ten years ago than now, as a matter of fact it *could* not come then, and that it is offered with more or less heartiness now is an immense encouragement to those who have labored so long as strangers in a strange land.

We have spoken here especially of the Baptist work because its statistics are perhaps less known to many of our readers than are those of some other denominations and because we want to draw attention to the fact that all these various undertakings of Christian philanthropy in the South, form, when taken together, a sort of vast framework or skeleton which is waiting to be filled in all its interstices and details. If, upon a map of the Southern states, every school established by Northern hands is indicated as a point, and if between these points connecting lines are drawn, it will be seen that while there are many centres of light, there are also vast, empty spaces. Here, then, lies the opportunity for the Christian philanthropists of the South; here is the work which they and they alone can do. They are in the midst of it, its clamors at their doors, they understand it in its details as outsiders cannot—in the highest sense it is theirs as a magnificent birthright, this opportunity to lift up a race, to build up a nation on these new foundations and we welcome with a gratitude born of knowledge, the first joint evidences of their desire to assume the responsibility intelligently and heartily.

There is no time now for complaints on either side; the opportunity, which if not created has at least been ushered in by the political changes of the last two years, is the opportunity of a united people, who forgetting alike their sorrows and their wrongs, join hands in the greatest work which has ever been given to a nation to do. Neither individual nor state nor section can accomplish it alone, but hand to hand and shoulder to shoulder, the people of the country, the citizens of the nation, must undertake it, and calling it as they choose, burden or privilege, must face its unyielding demand together.

UP TO THE present time the number of charitable institutions in the Southern States founded by private benevolence, has been comparatively small, because, as a matter of course, it is only as communities become prosperous that such institutions are possible.

They are directly dependent upon the acquisition by individuals of a superfluity of property in an available shape, and their existence is one of the surest indications, not only of material prosperity but also of increasing intelligence and a higher moral standard. Every such undertaking in the South then is peculiarly welcome and encouraging and for several reasons such work as that now fairly under way at the "Miller School" in the western part of this State, is especially worthy of notice. Samuel Miller, the founder of this school, was born in 1793 in Albemarle Co. Virginia, and starting life as a penniless boy, ended it as one of the richest men in his native State. Dying in 1869, he had given \$100,000 to the University of Virginia, although not one of its graduates, had largely endowed the Lynchburg Female Orphan Asylum in which city he had

passed the most of his business life, and finally bequeathed over a million of dollars, the profits and income of which were to be for the establishment and perpetual support of the Miller Manual Labor School for orphan children.

In 1878 this school was opened, and has ever since been in operation, supplying at the present time food, clothing and education to about 200 boys and girls. In the buildings and their fittings, in the appliances for both academic and technical education, no expense has been spared, and the school in all its departments is equipped with remarkable completeness.

Instruction is given in mathematics, languages, chemistry, natural history, physics, music, electrical and civil engineering, book-keeping, freehand and mechanical drawing and printing.

The farm of 1000 acres supplies opportunity for a good agricultural training, and horticulture and bee-keeping are included in this.

At the age of 15, if properly prepared, the boys are assigned to places in the "shops" where a three years' course is given in wood, iron and brass work, in making and using steam and in technical drawing. It is intended that the girls, who are a new element in the school, shall be provided as soon as possible with facilities for industrial training fully equal to those now offered to the boys.

While the resources of the institution are such that it is not necessary to make the work profitable at the expense of its educational values, still it is not forgotten that competition in an open market is the only test of success; and the products of the students' labor, when not consumed by the school, are sold and the proceeds devoted to the school expenses. That Mr. Miller's legacy has been well applied there can be no question, and the value of such work not only to the children whom it directly benefits but to the community at large, is not to be computed. And yet, in considering it, the question forces itself as to whether under such a system the inherent weakness of human nature is sufficiently provided for? It is only exceptional natures which do their best, without the persistent pressure of outside forces; it is the "stings and arrows of outrageous fortune" which drive most of us to our work, and to be shielded at all points from these is no desirable lot. If healthy and complete human beings are ever to be produced by institutions, it can be done only by supplying some artificial force which shall take the place of the pressure of those natural laws which seem somehow to be kept in abeyance by any cut and dried system of charity.

Full of promise as are such benefactions as the Miller School, we do not find in them the final outcome of the revolutions in philanthropic ideas which have been going on in our own day, and indeed it sometimes seems as if the work of this generation is in the main only to demonstrate that the science of philanthropy is still in its infancy.

THE School, is indebted to Mr. J. Heflinger of Hampton for the addition to its Library of a curious and interesting volume entitled "An enquiry concerning the intellectual and moral faculties, and literature of Negroes, followed with an account of the life and works of fifteen Negroes and Mulattoes distinguished in Science, Literature and the Arts." This somewhat ambitious work was translated by

D. B. Warden, Secretary to the American Legation in Paris, from the French of "H. Gregoire, formerly Bishop of Blois, member of the Conservative Senate, of the National Institute, of the Royal Society of Göttingen, etc."—and was published in Brooklyn, N. Y. in the year 1820.

It is dedicated "to all those men who have had the courage to plead the cause of the unhappy Blacks and Mulattoes, whether by the publication of their works, or by discussion in national assemblies, etc." This dedication being followed by a list of names of men and women who have thus allied themselves with the cause of the Negro, grouped according to their nationalities, viz: French, English, Americans, Germans, Danes, Hollanders, Italians, Spaniards and Negroes. Of the eight chapters into which the book is divided, the first is a semi-scientific discussion as to the meaning of the word "Negro," and as to the unity of the primitive type of the human race; the second, third and fourth, discussions as to the moral inferiority of the Negro, and the obstacles slavery opposed to the development of their faculties; the fifth is devoted to statements in regard to the "talents of the Negroes for arts and trades" and their political organizations, the sixth, to their literature, while the seventh includes short biographical notices of the following: "Negroes and mulattoes distinguished by their talents and their works,"

Hannibal, a protégé of Peter the Great, a Guinea Negro taken when very young to Europe and there educated by a Princess of Brunswick, who became a doctor of the University of Wittenberg and wrote some remarkable theses, though nothing is known of his after life; L'Islet Geoffroy, an artillery officer and "guardian of the depot of maps and plans of the Isle of France," who seems to have been a man of some attainments, a correspondent of the French Academy of Sciences, etc.; James Derham, a physician in New Orleans; Thomas Fuller, an uneducated Virginia Negro said to have been possessed of remarkable mathematical ability; Othello, of whom nothing is told us except that he published in Baltimore in 1778, a powerful "essay against the slavery of Negroes," Banaker of Philadelphia, astronomer and almanac maker; Cuvano, a slave at Granada, who being freed by an English nobleman, published in England a forcible appeal against slavery; Capitein, an African Negro, educated in Holland by a lady who taught him Latin, Greek, Hebrew and Chaldean, and sent him to the University of Leyden, where he studied four years as a Calvinist minister to Guinea; Francis Williams, a Jamaica Negro, educated at Cambridge, England, where he made considerable progress in his Latin verses; Vassa, an African, who, "after a wandering and stormy life," settled in London where he published a curious volume of his memoirs; Sancho, a Guinea Negro carried to England at the age of two years, where he was befriended by a noble family and did in his later years some noticeable literary work; Phillis Wheatley, who, taken as a child from Africa to Boston, became well known to all Americans interested in her people, as a woman of unusual ability. The last chapter is a summary of the task the author has undertaken "in proving that the Negroes are capable of virtues and talents," and leaves no doubt as to his earnestness and strong faith in the future of the people whom he so warmly defends. The aspiration with which he closes his book, is, at last, after three quarters of a century, on the way to fulfillment, though it will still bear repetition. He says:

"May European nations at last expiate their crimes towards Africans. May Africans, raising their humiliated fronts, give spring to all their faculties, and rival the whites in talents and virtues only, and avenging themselves by benefits and effusions of fraternal kindness, at last enjoy liberty and happiness."

#### Tribute to General and Mrs. Marshall, by their friends.

In the Spring of 1883, when it became known that Gen. Marshall contemplated resigning his position as Treasurer of the school, the officers and teachers determined that something should be done to give expression to their sincere regards for him whose efficient services are a part of the fullness of Hampton's work.

At this juncture, learning that Gen. Marshall was refitting an old homestead in Weston, Mass., in which to settle, Gen. Armstrong suggested that steps be taken to raise among Gen. Marshall's friends as a very proper testimonial, an amount equal to the required outlays on this property.

This proposition meeting with the hearty approval of all, a soliciting committee was appointed and subscription books were opened in the Spring of 1884.

Contributions have been received from a number of Gen. Marshall's admirers scattered over this country and the Sandwich Islands.

Several Hampton graduates contributed—

glad of an opportunity to bear testimony to the goodness and greatness of General and Mrs. Marshall.

Many a Hampton "boy" feels deeply indebted to him for lessons of faithfulness and caution in the performance of duties.

Although the subscription books are not yet closed, the total of the collections to July 1st, 1885, has been transmitted to the General, who makes acknowledgment in the following letter.

Kendall Green, Weston, Mass., Sept. 15, '85.

Gen. S. C. Armstrong, } Committee.

Rev. H. W. Foote, }  
Mr. Frank D. Banks, }

My dear friends:

My grateful acknowledgments are due to those friends who have recently presented me, through your kind instrumentality, with a very substantial testimonial of their regard.

While I am unconscious of having done ought to merit such a valuable gift at their hands, I accept it with a heart-felt appreciation of their exceeding kindness.

If anything could reconcile me to the necessity of giving up the congenial work in which I have been associated with you for so many years, it would be the repeated proofs I have received of the sympathy and affection of my friends.

This new manifestation of their good-will, with the kindly expressed wish to have a share in this pleasant country home, already endeared to us by family associations, which has been made so convenient and attractive by the work done at the Hampton School, will now give it added value and interest in our eyes.

With the hope that our friends will often give us the pleasure of making this home theirs, and with my thanks to yourselves for your kindly agency and the treasured expressions of your interest and regard,

I remain gratefully yours,

J. F. B. MARSHALL.

It may be remembered by our readers that our last issue contained an editorial notice of a letter published in the New York Evening Post which gave a very forcible and, as we felt, a somewhat one-sided statement of the condition of the Negro population of Southern Virginia.

A later letter in the Post, over the same signature, "P. A. B." limits the share in the observations made to certain Counties of Virginia where the conditions are noticeably unfavorable, and, premising that, "the subject, in its relation not only to Virginia, but to the South and the Union, is too grave to be approached in any but an impartial, to express an appreciation of the theories upon which the Hampton School is founded, and a recognition of the work which the School is doing, which demand, we feel, an acknowledgment in our columns.

We give a single quotation, of which we trust our readers will see the force.

"It would be difficult to exaggerate the value of what the Hampton Institute has already accomplished in this wide and important field. The sober, practical, and discriminating good sense displayed in its modes of instruction, the keen and accurate insight which its teachers have into the needs of the negro character, and the whole successful effort to remedy those deficiencies in their pupils, entitle it to the warmest respect and gratitude of every citizen. It is to such institutions that the negro must look for regeneration, for they furnish him with an energetic and zealous army of teachers who have been selected with the greatest

care and judgment as best fitted for the educational and missionary work to be performed. The day will come when their influence will be seen even in these remote and secluded districts of the country to which General Armstrong alluded, and where the race fell under my observation. I believe that an unvarnished statement of its present moral condition there will hasten that day by enlisting the active sympathy and interest of those philanthropic persons at the North who, by pecuniary donations, can assist in enlarging the usefulness of such institutions as that at Hampton. This has been the only motive which has impelled me in what I have written."

In a third letter (Post of Sept. 18th,) the same writer offers us a carefully thought out study of the Negro character, with a series of suggestions as to the special difficulties surrounding the education of our freedmen, and as to the means by which these difficulties can best be met. Any analysis of his deductions would be out of place here and now, but such a statement as the following asks nothing at our hands.

"The illustrious mission of thus educating the negro has very properly fallen to men of his own race. I have already pointed out how advantageous this is to the blacks in their social and political relations with the whites. Many reasons can be offered why our men are the best instructors for their people morally and intellectually also.

In the noble mission of these colored teachers, the negro has put on a new dignity, a dignity indeed, that is not without elements of true grandeur when we contemplate the greatness of their task, and its intimate connection with the destinies of the Union; for out of that dark cloud that lowers over the South, supreme good fortune or supreme disaster must come finally to the republic. It depends chiefly upon them whether it shall be one or the other. He administers the most dangerous and deceptive of all political dreams is that, the so-called negro problem will solve itself. It will solve itself only by the most energetic and persistent application of the right means from without."

In the trustee meetings of the Hampton school for the past eight years, a prominent, beloved and trusted influence has been that of Judge Francis N. Watkins. On the night of Sept. 5th, in Lynchburg, Va., he died, aged 72 years. On Sunday morning the body was taken to Farmville, the home of his entire life, where, in the Presbyterian church of which he had been for forty years a Ruling Elder, the funeral services were held on Monday morning.

Judge Watkins was one of the truest and most helpful friends Hampton has had in the South. Elected in 1877 as one of her board of trustees, his faithfulness and hearty interest were from that time an encouragement to all his co-workers, and his absence will leave a gap which it will be hard to fill. The whole record of his life is one of faithful work; for thirty years he was county Judge, and at the time of his death was treasurer of the State Normal School at Farmville, and also of another educational institution in the neighborhood, and President of the Farmville Bank. That he was loved best by those who knew him best was shown by the warm demonstrations of feeling among his friends and neighbors when his body was brought back to his old home. A graduate of Hampton who was present at the funeral on Monday says, "The services were appointed for half past ten, but an hour before that time the church was crowded to its full capacity, a large proportion of the congregation, perhaps a majority, being colored. Among them I counted ten Hampton graduates. There were two colored pall-bearers, and the love of the colored people for this man of Southern birth and affiliations was a touching and hopeful thing to see. Many Hampton students owe their presence in the school to Judge Watkins' advice and assistance, and there is probably no man in the state who had more fully and deservedly the confidence of the colored people."

To his family there must be true consolation in the knowledge that his influence has been so deeply felt and appreciated, and his friends at Hampton, colored and white, are among those who will most truly mourn and miss his kindly ways and strong common sense.

We append extracts from an obituary notice published in the "Central Presbyterian."

"His father was Henry E. Watkins, of Prince Edward county, Va., long known and highly honored, both as a member of the House of Delegates and of the Senate of the Legislature of Virginia, an Elder of the Presbyterian Church, and a Christian gentleman of great intelligence and refinement. His mother was daughter of Col. Samuel W. Venable of the same county, a lady of decided piety and well fitted, by native and acquired qualifications, for the early training of her son. He was thus related in blood to two of the largest and most influential families in south-side Virginia, from which both state and church had often received members both male and female, distinguished by position and usefulness.

He was born April 24th, 1813, at the residence of his father, two or three miles north-east of Farmville, Virginia. In that institution he commenced his collegiate education, but completed it at Amherst College, Massachusetts, where he graduated in 1832.

In early life he held for a time the office of Treasurer of Hampden Sidney College. In 1844 he was elected Treasurer of Union Seminary, and continued to hold that office to his death, a period of over forty years. This period embraced several seasons of financial embarrassment to the seminary, especially the years of the war 1861-'65. Through all he performed his duty with a wise and judicious manner as to gain, yearly, more and more the confidence of the Trustees, and often to secure important increase in the investments. Not a cent was ever lost through neglect or mistaken judgment.

In 1865-'66, while a member of the Legislature, he was elected county Judge of Prince Edward county. He administered the duties of the office to the growing satisfaction of all classes, and when put aside by outside partisan agency, he so enjoyed the confidence of the entire community, white and colored, that both parties, that had the choice been left to the people there would hardly have been a vote against his remaining in office. Though friends of all parties complained of the bad treatment he received, he submitted in silence. Since the establishment of the "State Normal School" in Farmville he had been the Secretary and Treasurer of the board of Visitors, and contributed valuable aid to its organization and efficient work.

Of the extraordinarily large crowd which attended his burial, some one remarked "that two-thirds of those present had been under obligations to him for personal favors."

On the night of his death, to the question, "Is the Saviour with you, and does He comfort and sustain you?" he replied, "Oh, yes! oh, yes!" The courage his last remembered words. But such life needed no dying testimony—his end was peace.

Another of Hampton's true and faithful workers has laid down the burden of life which at the last had been for her heavy and grievous to be borne. In Boston, on the 7th of September, Miss Emily Kimball died, after an illness of nearly two years, during the whole course of which she had shown such a cheerful courage that until the very last it was difficult to believe that Death was to be the conqueror.

For six years she worked in the Treasurer's office here, being, during that time, Gen. Marshall's chief and most valued assistant. In spite of her retiring manner and curious undervaluation of her own powers, she won for herself many and warm friends outside the family circle which so lovingly enclosed her, and was more thoroughly appreciated than she perhaps knew. Hers was one of those spirits for whom it seems that the transition from earth to heaven must have been only a step, a closing of the eyes here, an awakening there. For such there should be no mourning, rather thankfulness as for one for whom weariness has been changed to strength, and pain to peace.

The victory was hers, not Death's, for through the long struggle of her last years her brave soul stood undaunted, and the record she has left for her friends is the record of a pure, brave life, unspotted by the world and strong with an unusual strength."

## SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

Reduced to eight pages from July to October)

Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

S. C. ARMSTRONG, Editor.  
M. F. ARMSTRONG, Editor.  
H. W. LUDLOW, Editor.

REV. H. B. FRISSELL, Chaplain.  
MR. W. N. ARMSTRONG, Editor.  
MRS. ORRA LANGHORNE, Editor.  
MISS ALICE N. BACON, Editor.

F. N. GILMAN, Business Manager.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Entered at the Post Office at Hampton, Va., as second  
class matter.

Subscribers are reminded that the "Work  
man" is reduced to eight pages during the  
next four months, resuming, in November, the  
twelve page form.

## The Southern Press. Both Sides.

Just as there was no acre in all the  
South that did not feel the maleficent  
influence of slavery, so already there is  
no acre which directly or indirectly is  
not responding to the stimulant of  
freedom. It is a wonderful history,  
that of the past twenty-five years, and  
to men of Southern origin and sentiment  
not unnaturally fill them with hope for  
the future.

Surely there is some compensation  
for the past in the realization of such  
possibilities as are indicated in the fol-  
lowing editorial from the *Industrial  
South*.

"Between the South of twenty-five years  
ago and the South of to-day there are con-  
trasts, in almost every point of view, that  
are not only striking but startling. Some  
of these contrasts are suggestive of sad re-  
membrances and reflections; others of them  
are full of inspiring hope, confidence, and  
courage for every southern man who has  
any knowledge of the resources and opportu-  
nities of this section.

For the man of middle age who was  
young when the war came, it is melancholy  
to look back upon the prosperity and hap-  
piness, the ease and luxury of the olden  
golden days. But even to him, if he be a  
man of brave and buoyant spirit, it has be-  
come encouragingly clear that while the  
war brought with it indelible losses,  
sufferings and sorrows, it brought also a  
great revolution filled with revelations in  
all the directions of industrial progress  
which are proving to be invaluable blessings  
to our people. And with the young man of  
the South, with him who has become a man  
since the close of the unfortunate contest in  
arms, between the two sections, it is a matter  
of curious reflection that so noble a people  
with so grand a country around them should  
so long have been loitering as laggards on  
the roads of progress when it is now shown  
that they have, and always have had every  
requisite of soil, of climate, of geographical  
eligibilities, of everything in fact, for a ma-  
terial wealth and strength which no region  
of the world has ever excelled. And it is  
this middle-aged man, with his wisdom e-  
volved from experience, and this young  
man with his intelligent appreciation and  
comprehension of southern resources and  
opportunities, who are the pillars of strength  
on which the South in her renaissance health  
and vigor may confidently rest her hopes,  
her expectations, her energies, and her pur-  
poses, to rise to a higher height of prosper-  
ity for all her people than was ever known  
in her brightest days of the old time by  
the fortunate few who were blessed with the  
greatest affluence and the best advantages."

The same writer, recognizes with a  
somewhat unusual frankness, the com-  
pleteness with which slavery blocked the  
path of progress, and that after  
all, Northern men were only instru-  
ments in the hands of a Power outside  
and beyond themselves:

"In the South the changes that have come  
are great, but the changes that are coming  
are still greater. The institution of slavery,  
existing for more than two hundred years,  
had become interwoven with every fibre of  
southern education, with every sentiment of  
southern thought and feeling. It was an  
enervating institution. It was an institution  
that made men unenterprising. It was an  
institution that repressed inventive genius  
and discouraged all advancement in the me-  
chanic arts. It was a nightmare, disturbing  
all dreams of adventurous spirit; to the  
southern people it was the great highway of  
progress for another. It was the high,  
broad, thick wall that kept the southern  
states from seeing out into the world and the  
world at the same time from seeing into the  
southern States. It was this thing that caused  
a contradiction of the South from the North.  
It was the only thing that hindered the  
southern people in progress and held them  
back to comparative inertness in the midst  
of their matchless resources. The de-  
struction of that institution was in itself the  
one great radical change that has come, and  
it is inevitable that it will necessitate other  
changes that are coming in the South.

The changes that have come and the  
changes that are coming in the South are no-  
thing more, nothing less, than the inevi-  
table results of the logic of the laws of progress  
that look and lead to advancement as soon  
as all difficulties have been cleared away."

It is interesting to notice how some  
of these changes are foreshadowed in  
such terms as these:

"It is gratifying indeed to notice the inter-  
est our people are taking in education. This  
is indeed wonderful. On every hand we see the  
little ones trotting to school. Educational  
institutions are every where patronized.

But while the head is being educated, do  
not forget the hand. Don't fail to have  
your child learn some trade. It is not while  
at school put him at it when he has completed  
his course in the public schools. We do  
not believe that any one can obtain too much  
education, even if he expects to be a black-  
smith or a carpenter or some other artisan.

It must be remembered that skilled men  
of every class are scarce, and that there is  
as much honor in being skilled shoe-maker,  
black-smith, machinist, etc. as it is to be an  
accomplished physician, able lawyer or learned  
professor. It is not the class of work but  
the quality of it." *Richmond Planet (Colored).*

"Ann Arbor had three colored graduates  
from the University this year. They are  
Miss Sophie Jones, Chatham, Ont., from the  
Medical department, and Messrs Strickland  
and Avant, of Mississippi, from the law de-  
partment." *Chicago Conservator.*

On Saturday at one o'clock p. m., Drs. C.  
N. Dorsette, A. C. McClellan, E. H. Mayer  
and W. D. Crum, met at the office of Dr.  
Crum and organized "The Colored National  
Medical Association." Dr. C. N. Dorsette,  
Montgomery, Alabama, was elected Presi-  
dent and Dr. W. D. Crum, of this city, Sec-  
retary; an Executive Committee, consisting of  
Drs. Crum and McClellan. The committee  
was authorized and empowered to issue a  
suitable address to the colored physicians of  
the United States, inviting their co-operation  
in this great work. The next meeting  
will be held at Charleston, S. C.,—*Augusta  
Baptist.*

BALTIMORE, July 7.—In the United States  
circuit court to-day Judge Bond affirmed  
the decree of the district court awarding  
three colored women damages of \$100 for  
having been excluded from first-class sleep-  
ing apartments on the steamer Sue after  
they had purchased first-class tickets. This  
settles the question so far as traveling on  
steamboats on Chesapeake bay is concerned.

It is so evident that President Cleve-  
land's administration has before it a  
quite unique opportunity that it is to be  
expected that its movements should be  
watched with a most critical anxiety  
by those who realize how much any  
deviation from justice and honesty, any  
mistake in policy, any misstep on  
one side or the other will mean to the  
country at large. "Confidence in the  
prudence and moderation of the Federal  
Government" is certainly playing an  
important part in the new develop-  
ment of the South.

"The causes which are leading to improve-  
ment in the financial and industrial world  
at home are just now riveting attention. It is  
conceded to be the product of increased  
and growing confidence in the prudence  
and moderation of the Federal Government,  
and the lessened influence of sectionalism

and political hatred. But the "bloody shirt"  
and "war paint" still disgrace and enfeeble  
the people's prosperity, and it is the interest  
as well as duty of patriotic men, of whatever  
party name, to make the annihilation of  
this fanaticism the prime aim of temporary,  
if not permanent, political association.  
We do not urge diminished concern in  
the choice of public servants, or less devo-  
tion to particular creeds when such matters  
are in issue. Vigilance watchful and  
thoughtful inquiry into public duties, are to  
be commended, but we should drive from  
the political arena violence, uncharitable-  
ness, fanaticism, prejudice and sectionalism.  
The banishment of these hurtful influences  
is the panacea for a hundred and one ills  
which blind partisan zeal assigns to causes  
entirely remote, if they are not altogether  
irresponsible for the frequent paralysis of  
business."

The political situation in Virginia  
has brought out many criticisms of  
the two parties and their methods,  
from colored journals, and every day  
makes it evident that the colored vote  
of 1885 demands much more serious  
consideration than did the colored  
vote of 1875. The *Peoples Advocate* says;

"The democrats are now making overtures  
for the colored vote by fair speeches and  
conciliatory admission."

The republican managers have perpetu-  
ated the silly blunder of failing to employ col-  
ored canvassers, as conspicuously as the  
talents and worth of many of them warrant.  
These primary causes have already led to  
apathy on the part of quite a number of col-  
ored men who have hitherto warmly sup-  
ported the republican movement.

It follows, therefore, that those who be-  
lieve in the ascendancy of republican prin-  
ciples should lose no time, not a single day  
longer, to appeal to General Mahone for a  
right about in his tactics with respect to the  
colored vote.

It is folly to expect that the Negro voter  
can be left alone to rally in force at the  
eleventh hour. It is equally foolish to con-  
clude that many will not be found suscep-  
tible to democratic influences and remain  
away from the polls if they do not vote open-  
ly for Lee.

For these reasons we look for surprises  
as the campaign progresses, and after the votes  
are counted, to see a great many long faces  
where smiling ones are now confidently an-  
ticipated.

The *New York Freeman* considers  
that the Democratic party has already  
declared its tactics so positively as to  
leave the colored people of Virginia no  
choice in the coming election.

"The Democratic party of Virginia has not  
improved the opportunity which was given  
it to conciliate and reassure the colored vot-  
ers of Virginia that they had as much to  
hope for from the one as the other party."  
The colored people are right, when it comes  
to deciding between a choice of evils, in  
attaching themselves to the Mahone party as  
opposed to the Danville party they show as  
much instinct as wisdom.—*N. Y. Freeman.*

But a wiser utterance than either of  
these is to be found in another issue of  
the *Peoples Advocate*.

Judging from the interest our people take  
in politics, it would seem that they are spe-  
cial conservators of that branch of the na-  
tional weal.

Notwithstanding the absence of intellectu-  
al and material strength, we go skimming  
along the surface, relying on the idiosyncras-  
ies of parties, while the great masses of the  
whites seem devoted to those interests which  
will render them indifferent to and indepen-  
dent of the political changes which are in-  
evitable in a country like ours. It is true  
that we are the element in the vast body  
politic most dependent upon political recog-  
nition and party friendship. But undivided  
attention to politics has been the bane of  
our race. It has begotten a sort of habit,  
that is fast undermining our desires, aspira-  
tions and ambitions, which should point in  
other directions.

For the past twenty years the colored peo-  
ple have devoted the major portion of their  
time to politics, and to-day we find oursel-  
ves as far, or nearly so, from the end we desire  
most to be attained as we were when our  
fidelity to party was first defined. We find  
to-day that we can command but little re-  
spect, and, although we number over a million  
voters, we are neither courted nor feared.

It is high time we were beginning to look  
into the causes which have operated against  
us. We should take advantage of the bits  
of history we find bearing on our case, and  
profit by them."

After giving in brief the political  
experience of the various foreign ele-  
ments in our population, the article  
continues;

"The case of the Hebrew is still a better  
example of the possibilities of a once hated  
and proscribed people. By frugality, by a  
non-partisanship quite astonishing in a  
country like this, by unity and wonderful  
perseverance of energy, they have become a  
most potent factor in this country. . . .  
They regard politics as an adjunct to their in-  
terests, and take part in it only when its drift  
is calculated to injure material prospects. Nor  
did the German and Jew at any time fail to  
divide with parties upon local, or even national  
issues. . . .

Hence, the principles of the parties were of  
less consequence to them than practices and  
as the practices of parties differed with lo-  
calities, there was a corresponding division  
of party affiliation on their part.

The colored people will find it necessary,  
sooner or later, to follow the example of  
other races.  
The race has now an opportunity of making  
itself felt among all political parties, and it  
remains to be seen whether advantage will  
be taken of it. We must have friends in all  
parties and among all people.

The attitude of the white journals of  
the State afford just now to the outside  
a curious study, and their political  
prophecies must, we should think, be to  
the average colored reader, somewhat  
confusing. Everything is promised;  
everything is threatened, with equal  
certainty by both parties, and, evident-  
ly, it is upon what has been in the past,  
rather than upon anything that is  
made clear in the present, that the col-  
ored people must base their choice in  
the coming election. Taking Mr.  
Sherman's late speeches as a text, the  
*Norfolk Landmark* says;

"He and his party never had any kind  
feeling, of a personal sort, for the black peo-  
ple of the South. He and his associates  
strive to use our newly emancipated slaves  
for the sole purpose of perpetuating Repu-  
blican power; and now that the colored  
people of Ohio and other Northern States  
are joining the CLEVELAND Democrats Mr.  
SHERMAN draws the color line and begins a  
crusade against the political rights and priv-  
ileges of the people of color. Revenge, self-  
interest, and a desperate ambition prompt  
him; and if his scheme succeeds, the blacks  
of the South will be stricken down without  
remorse by Sherman and his associates. It  
will take some time for the average man of  
color to realize this; but the Rev. Mr. POT-  
LAND and men of his stamp can compre-  
hend the danger, and to such we commend  
a study of Mr. SHERMAN's speech. In the  
hope of the colored people for intellectual  
and moral advancement is with the FIZ  
LEE-CLEVELAND Democracy; and the soon-  
er they realize this the better for them, as  
they are the burnt offering that the Repub-  
lican leaders would now sacrifice in order  
to regain the privilege of plundering the  
Treasury and defrauding the people."

The *Richmond Whig* (Republican),  
on the other hand, takes the ground that

"Facts, figures and solid argument are  
having their effect upon the voters; and we  
are glad to know that our modest and un-  
assuming approaches to the masses are re-  
cognized as better introductions to popular  
regard and confidence than the vain-glorious  
arrays and displays of Bourbonism."

## Notice.

Any schools, Sunday schools, or indivi-  
duals, willing to help some of our graduate  
teachers to make Christmas a happy time  
for their scholars, can be furnished with  
names and addresses by sending a postal  
card to Miss A. E. Cleveland, Poughkeepsie,  
N. Y.

Substantial help and much pleasure were  
given in this way last year by northern  
friends, and it is earnestly hoped that many  
who read the SOUTHERN WORKMAN will  
respond to this appeal.

## Letters from Hampton Graduates.

MY FIRST YEAR IN THE WORK. NOT A GENTLEMAN FARMER. A GIRL'S BRAVE STRUGGLE. IN NORTH CAROLINA. FROM LONG BRANCH TO LINCOLN.

MY FIRST YEAR IN THE WORK.

The new comers in the field bring fresh enthusiasm to the work, and have also the advantage of greater strength, and less hurried preparation.

S., Dec. 12th, 1884.

Miss A. E. C.

My Dear Friend:

This is the first time that I have ever had the pleasure of writing to you, and it is, indeed, a pleasure. I am, as you know, one of Hampton's recent graduates, and this my first year in the work. I am now teaching in S., a small city, situated in the heart of the beautiful and fertile valley of Virginia. The town is not so pretty in itself, but its surroundings are picturesque and beautiful. On all sides of the town there are to be seen mountains of lofty height. Regarding my work, I can but say that though I find it hard, I like it very much. The school in which I teach is a fourth primary, I have enrolled forty-seven pupils. In the beginning I had fifty enrolled, but as you see several have dropped out. The corp of teachers here numbers eight, five of whom are Hamptonians. Lizzie S., one of my class-mates, is here teaching with me. I have received two bundles of papers and one letter from Miss T. The children to whom I give the papers are delighted with them. Our Superintendent is a man who seems to be greatly interested in his work, and is very desirous that the children should improve as much as possible. I am glad to see that spirit existing, as it is not generally the case. I enjoyed reading your letter very much, and I shall endeavor with all the power that is in me to follow the motto which you so kindly suggested.

A. D.

Class of '84.

## NOT A GENTLEMAN FARMER.

The teacher who is also a farmer, and hopes one day to be a "gentleman farmer" so that he may have time to enjoy his books and papers, deserves a hearing, especially when his political creed is so encouraging as is that of this staunch young Republican.

H., Va., December 25th, 1884.

Miss A. E. C.

My Dear Friend:

The time has been long since we have shaken hands with our pens. It is true that the fault is alone my own. It is like me to procrastinate. It is also true and very pleasant to know that you have always been true and indulgent and forgiving. I wish to assure you that my course does not indicate a decline in the high respect and confidence which I have long since held for you. When I write before, I think I was on the eve of closing my last term, and commencing my farm work. I conducted in person our little farm, with some hired help. My principal crops were corn and cotton. Drouth, excessive rains, and my inexperience accounts for my poor crop. Mother and my farming friends bid me cheer up and go forward. Emerson says, "Success is made of failures." I am no gentleman farmer, but say to my help generally, "Come on" and "Go on." I call one a gentleman farmer when he does not have to work as it were, from sun to sun. I desire to work up to that point, then I can have ample time to enjoy the pleasure from reading books and papers. My brother is an office holder and also helps me when he can in my work. I am not so much a farmer now by choice as by necessity. The fact is, we don't want our homestead broken up. It seems to me, if father had not died, my finances would be better and I would be nearer the object of my ambition. I am teaching my same school and am getting on well.

Our Superintendent and the trustees of my school are very kind.

Mrs. B., the Sup't's wife, has charity so broad, sympathy so general, that she reminds me of our Hampton teachers.

We stood by the G. O. Rep. party in this County. Defeat may serve to crush some of its corrupt leaders, but its principles will live and at last prevail. I believed Mr. Blaine to be a great statesman and a noble man. I think Mr. Cleveland's policy will be liberal. I believe in suffrage for my people, but I believe more in education and property for their elevation and security.

My brother and I have classes in our Sunday school.

Yours truly,

A. J. S.

## A GIRL'S BRAVE STRUGGLE.

"I could not have done this except for our good friends at the North," is so commonly the explanation of our students' appearance at Hampton, that we do not perhaps give as much space as we should to instances like this of the brave girl whose burden when at the heaviest was lifted by kind hands, to whose bounty she acknowledges her debt.

Co., Va., Nov. 7th, 1884.

Dear Miss C.,—Your good sympathizing letter was received long, long ago, and I would certainly have written you before could I have spared time from other things which had to be done, but I could not. I have had many bitter trials since you heard from me. The death of my dear father was the greatest. I thought I had seen trouble in my life, but I never knew what it was until my father died. There was a deal of work to be done. I was left all alone, the oldest of three children, and it was my daily thought what to do with my brother and sister younger than I am, for we were left alone without money. At last, I thought it would be best to send both to Hampton; so, October 1st, I sent them. It had not been long for my friends at the North who aided me. Our home and all of the things about the place were sold. We thought it was useless to keep the home, when none of us could or would want to live there any longer, because we were compelled to work, and in order to do that, we had to go somewhere else. I waited until I put the children where they could do well, and then I had to look out for a place for myself. I was a long time becoming settled as to where I should go, but, at last, considered it best to come here. I arrived here on the 25th ult. and began to teach on the 28th. I am only ten miles from Farmville, Va. I am near ever so many of the Hamptonians, and have seen nearly all of them. S. teaches just two miles from me. I see him twice a week. It is very pleasant for me to be near so many of my old friends and class-mates. All of them try to make everything around wear a happy atmosphere, because they are aware of the fallen to my lot. I feel as if I shall enjoy my work here, for the people seem to like me already, though I have only been here two weeks, and I like both the place and people. Everything in my school house is quite convenient, at least, as much as we usually find things teaching in the common public schools. I have a large number of children now, but there are plenty more to come yet, so I am informed. I have fifty-eight, however. My boarding place is quite near, and I have a very nice one. I shall stay S. S. here next Sunday. It is a real shame to see so many children here who do not even know what a Sunday school is. I am going to try to do all the good I can in all the ways I can while I am here. If you know of any one which they do not need, and would like to send them South to children, will you kindly give them my address. These children here would be proud to get anything of the kind.

Please write to me when you can, and excuse my delay. If you could only imagine yourself in my place, you would not wonder at my long silence, for I have so many burdens laid upon my shoulders, lately, that it seems as if it is impossible for me to write often.

I hope that you are very well, and that you will often pray for

M. B.

## IN NORTH CAROLINA.

The condition of the colored population varies so much in different parts of the South, that the teacher's capacity needs to be equally varied, and it is not always easy to get the "right man in the right place."

G., N. C., April 22d, 1884.

Dear Teacher:

Having just closed the last month's teaching of the two terms that I have taught this winter, I take pleasure in attempting to give you some idea of the work, as found here in this state. Teaching in this, my native state, is unlike that of her sister state, Virginia. Especially on account of the very limited time which the schools are allowed to run during the year. Another trouble is prevalent here; the people think that they must have school during the summer and winter.

This they cannot do to an advantage on account of the limited time the children will be permitted to remain in school. The former might well be called the financial difficulty, and the other a misunderstanding of things among the people. Both are destructive to good results.

Since November the 15th, I have taught two night schools, one of three months, and another of two months. After returning to my home, here in old "North State," I was advised by a friend to take a school that had not been kept in three years. You can better imagine in what condition I found it than I can tell you here. After opening and classifying as best I could, I managed very nicely throughout the term. In this county, the colored people number about two-thirds of the population. Where I taught, there were very few colored people, but their relations with the whites were very pleasant indeed.

On entering the second school house, in which I was privileged to teach, I found a marked change in the general appearance of the children. Many of them were bright, and mentally active in their studies. Having been out of school only a few months, they were soon reviewed sufficiently to take up the advanced lessons. Great credit is due the young under-graduate of Hampton, who had preceded me in teaching that school.

The children belonging to this school are more advanced in their studies perhaps than those connected with any school in the county. I had a class in United States History; one in fractions, common and decimal; another in grammar, Reed and Kellogg; an object lesson in numbers each day was highly appreciated by the children.

Much general improvement is being made, especially among the colored people. Many of them are buying land and paying taxes. The time circle is being rapidly improved. Teaching is over for this season. Preparation for work in the school house cannot be too thoroughly made.

Very respectfully,

W. S. R.

## FROM LONG BRANCH TO LINCOLN.

To be confronted by the "formidable array" quoted below might well discourage even a determined Hampton graduate, but when he does not know where the money is to come from wherewith to buy the books without which he cannot make even a beginning, it must be admitted that both faith and pluck are needed by the young aspirant.

Lincoln University, Sept. 15th, 1884.

Miss A. E. C.

Dear Friend:

Your cards and very encouraging letter came to hand and found me at the time busy and cramped for time. I am at last here. The season at Long Branch has been very dull and I am consequently here under a great financial pressure, even for books, etc. I am now in a dilemma, though I am trusting in Him, believing that aid comes when we least expect and from sources unknown to us. I am just now only a Freshman, studying Loomis' Algebra, Goodwin's Greek Grammar, Leighton's Latin Lessons, Allen & Greenough's Latin Grammar, Quackenbush's English Composition and Bible, etc. You see a formidable array is before me and much to do. Professor Kendell has kindly granted me a scholarship, so I am unable to ask more of him. I did not stop in Philadelphia, on consideration, as it would be a loss of time and perhaps be the means of keeping me one year more.

I am pleased with the place, its religious aspect and the kind spirit of generosity and gentleness of teachers and students. If you do not consider your relationship with me severed by entering, you will please send me some papers and reading matter.

Do you remember that shortly after Wendell Phillips' death, there appeared in one issue of *The Southern Workman* an eulogy of his upon T. Ousaint L'Enguere. I shall be more than obliged if you could send me a paper containing it.

Mr. Lyceum is studying his pieces, and I am to declaim one of his best, soon, and as I was impressed with the production, I would like to do so. Please try and find it. Hoping soon to be the recipient of one of your characteristic letters,

I remain,

J. T. B.

## Horsford's Acid Phosphate, ONE OF THE BEST TONICS.

Dr. A. Atkinson, Prof. Materia Medica and Dermatology, in College of Physicians and Surgeons, Baltimore, Md., says: "It makes a pleasant drink, and is one of our best tonics in the shape of the phosphates in soluble form."

## SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

## The Freedman's Hat.

Chatham, Pittsylvania Co., Va., Aug., '85.

Having spent my early life in the beautiful Shenandoah Valley with its flocks and herds, its fine crops of wheat and corn, its large population of thrifty Germans, and its comparatively small African element, I meet many contrasts and novel scenes in this part of the state. The country and people are as new to me as if I were not a Virginian. Here the land has always been held in large tracts, just beginning now to be broken up into small holdings, as the white people are forced to sell, and the black man finds himself able to buy. There are 27,000 negroes in the county.

The principal crop is tobacco, which forms the great interest of the district. I see no attempt to raise grain except corn, and that away from the bottom lands, seems hardly worth cultivating. There are great forests stretching away as far as the eye can reach. Often one sees no human habitation except a log cabin in a little clearing, as if the sturdy pioneer had just reached a new country.

I found some friends staying here for the summer, who give me a cordial welcome to the cottage surrounded by big trees, and a large grassy lawn, and inquired about a vegetable garden. They have shown me everything on the place, including the log kitchen, with its broad hearth and great open fire place of the olden time, and a new lady, accustomed to city life and appreciating the modern improvements, put up a cooking stove when she came, and then secured an old woman to do the housework. This valued acquisition to the household looked askance at the stove, and would do nothing until it was taken down. Argument was of no avail, the stove was pushed aside, the wretched woman held her way, and was allowed to bend her back and scorch her eyes to her hearth's content.

## A MAN'S HOUSE IS HIS CASTLE.

To-day I wanted to ride out in the country to Marketown, a growing settlement of colored people, and inquired about a horse for the trip. Mrs. Strong's daughters tell me the village affords but one public conveyance, the rickety old ambulance which brought me from the station, and it also has an officious driver at a horse at the livery, in constant demand to carry the living on their way for business or pleasure and convey the dead to their last resting place. One of the girls went out at once to the lugubrious rattletrap, fearing some one else would engage it.

She soon returned unsuccessful as to getting the "harse" for me, but said a friend who had heard her exclamations of disappointment, had kindly offered his barouche with his little son to drive it, saying "Mrs. Strong and her visitor could use it as long as they wanted." In a short time a comfortable little carriage, with a stout horse, and a bright looking boy of fourteen to drive, was at the gate, and we were soon riding pleasantly along over smooth sandy roads to Marketown.

Like most court house towns in Virginia, Chatham has only a square or two of regular close built streets, and then rambling along half a mile in either direction. We passed several pleasant home-like places, all white houses with big yards and wide spreading trees, and then suddenly found to be seen here and there at long intervals, always built of logs or pine boards. Just on the edge of the village, I noticed a very pretty cottage, with the woods for a back-ground, very attractive in appearance, with its latticed porch, white fence, gay flower-beds and climbing vines. Through the open doorway, I observed neat furniture, and exclaimed on the pleasant aspect of the place, with a certain trim daintiness, about it I had not seen elsewhere in the town. Mrs. Strong said this was the home of a young colored woman, who had been to Hampton several terms, married and commenced housekeeping here. She was evidently setting a good example to her people in having things so tidy and comfortable around her. "A white woman builds her house, but the foolish plucketh it down with her own hands."

It was very pleasant driving through the breezy forest, with only an occasional opening, showing a cleared field or so in a variety surrounding a cabin with an adjacent tobacco patch and a little stunted corn.

Mrs. Strong gave me the history of Marketown, built upon part of one of the great estates of the district, the owner of which had once been very rich in land and slaves.

This portion of it had recently come into market, and was being put up into small lots and eagerly purchased by negroes, most of them the former slaves on the place, with their master's family, had for generations lived on the land. Both the white and

"THE INDIAN is an intuitive and imitative animal. The Indian acquires knowledge by association," says Col. Tappan of the Genoa school, according to a reporter. *Erratum. For the Indian substitute man.*

IT IS PROBABLY yet an open question whether a wild Indian of pure blood has ever been thoroughly and permanently civilized. *Henry King in The Century for August. Omnes i Otempora!*

Gov. BUSHVHEAR's proclamation appointing a day of mourning for Gen. Grant among the Indians is, as an official document, exceedingly well-expressed, and a deserved tribute to the famous inaugurator of the "Indian peace policy."

#### Helen Jackson.

The world has lost a brilliant woman; the Indians have lost a friend. Our deepest interest in the vivid, sorrowful, many-sided, far-reaching life lately ended, lies in its double character. The most gifted woman writer in America was also one of its greatest philanthropists. The critics have generally acknowledged that her ripest and best work was done in the service of the Indian; it is a significant fact that it was the work for which she cared supremely. When the "Century of Dishonor" and "Ramona" appeared, the extent of the popular indifference to the red man was forgotten. It could not be said of "Ramona" that the writer's theory or her sentiment, had spoiled her art. She had made the Indian cause the cause of humanity.

Genius has been too often opposed in the history of the world to a beneficent moral force, to make this success of Helen Jackson's a matter of no moment. It is important to all literature and to all humanitarianism, when a beautiful art is thus dominated by a strong conscience, and gains in beauty and maturity by its high discipline. The colorless, insignificant lives of many loving women have been given unnoted to the work; the generosity of a more richly endowed nature cannot pass unchallenged. It is well that in the blaze of light directed toward the popular writer, the fascinating woman, surrounded by admiration and friends, the simplicity and strength of her impulse toward a needy cause can be the more plainly seen.

There seems to be no dangerous mixture of self-conscious sentiment or egotism in such plain utterances as the following, written in a letter to a friend a fortnight before her death.

"I feel that my work is done, and I am heartily, honestly and cheerfully ready to go. You have never fully realized how for the last four years my whole heart has been full of the Indian cause—how I have felt, as the Quakers say, a 'concern' to work for it. My 'Century of Dishonor' and 'Ramona' are the only things I have done of which I am glad now. The rest is of no moment. They will live, and they will bear fruit."

The lovely "Indian romance," "Ramona," finished as it is in every detail, is said to have been written with inspired rapidity. We admire it the more fully for the characteristic modesty with which Mrs. Jackson herself entirely disclaimed having adequately repre-

sented the nature and ways of the Indian. As much as this has been unwisely claimed for her by friends who knew less than she of all "Ramona" leaves undone. "The great Indian novel," she wrote, "is yet to be written. I hardly know who could do it, unless it were that wonderful woman, Miss Fletcher." Before "Ramona" was attempted she said to a friend that one ought to have lived ten years among the Indians to prepare herself for such a work.

Every life has its lesson. The lesson of Helen Jackson's is that art may be obedient to the high demands of conscience, and still be art. It may be that justice to the Indian will never become popular; but let no one call that work narrow which was great enough to fill her large and loving nature.

#### A Woman's Life in Dakota.

The charm of Mrs. Custer's story of frontier life\* is its womanly quality. She takes us into her confidence, as it were, and writes with as much simplicity as if she were addressing a letter to an intimate friend. Not that there is any lack of the necessary and womanly reserve, or of a certain dramatic feeling which is, perhaps, peculiarly feminine. While she is artlessly teaching us to admire her golden-haired hero, she unconsciously leads her readers to draw an equally attractive picture of a woman's personality—a woman who just escapes being a heroine by an arbitrary display, at the right moments, of the winning weakness of her sex.

We cannot help being sorry that this weakness usually takes the form of an unreasoning dread and dislike of the Indian, yet this feeling is so natural as to be all but pardonable in a soldier's wife. When we remember that it is Mrs. Custer who speaks, and think with a shudder of the tragedy that closes the book, we cannot reproach her, we cannot even smile at such passages as the following, describing an incident which took place during the early days of the march through a friendly country. Gen. and Mrs. Custer were as usual, riding together a little in advance of the column.

"We were laughing and talking so busily I never noticed the surroundings until I found we were almost in the midst of an Indian village quite hidden under a bluff. My heart literally stood still. There were but few occupants of the village, but they glowered and growled, and I could see the venomous glances they cast on us as I mutely followed. I trembled so I could scarcely keep my seat as we slowly advanced; for the General even checked his horse to demonstrate to them, I suppose, that we were perfectly at home!"

In spite of the intense prejudice against Indians, which she evidently tried to conquer, Mrs. Custer sometimes betrays a keen eye for their minute peculiarities, as when she says, "The Indian feet are usually small; sometimes their vanity induces them to put on women's shoes. Their hands are slender and marvellously soft considering their life of exposure. The flexible wrist makes their movements expressive."

These undeniable personal attractions are often overlooked. And here is another delicate touch. "The Indian kiss is not demonstrative. The lips are laid softly against the cheek, and no sound is heard or motion made." To one who has seen this it is felt to be an exact account of a rare and rather impressive little ceremony.

Again, she makes some common mistakes, as when she tells us that "the Indian language," (meaning the Dakota), "is not deficient in abusive terms and epithets." As a matter of fact, there is but one word in Dakota, (*sica*) which is in common use to express every form of vituperation, and this word is scarcely stronger than our English "bad." It is another fact, seldom appreciated, that there is no such thing as profanity in Indian.

\* Boots and Saddles, or Life in Dakota with Gen. Custer. By Elizabeth B. Custer. Harper Bros., 1885.

One of the dramatic incidents of the volume is the capture and escape of the Sioux warrior, Rain-in-the-face. This is the touching account of his supposed last interview with his brother and a council of friends, when a prisoner at the garrison.

"The officers present could scarcely believe their eyes when they saw his brother approach and kiss him. It was only this grave occasion that induced the chief to show such feeling. Several of the ranking chiefs followed his example; then an old man among them stopped in front of Rain-in-the-face, lifted his hands, and raising his eyes, reverentially said a few words of prayer to the Great Spirit in behalf of their unfortunate brother. The prisoner dropped his head to hide the look in his eyes which he thought it became a warrior as brave as he really was. The bitter revengeful thoughts with which I had entered the room were for a moment forgotten, and I almost wished that he might be pardoned. But the vision of the hearth stones he had desolated came back to me directly, and I could not forget." Mrs. Custer—were you ever haunted by the vision of the hearth stones your husband had desolated?

We will pass over the story of the mingled gayety and peril of garrison life, so touchingly told, and close our account with a chapter of half-anticipated tragic injustice—tragedy more terrible even than her own, but too lightly felt and too coldly related.

The steamer containing supplies for the Indian's was delayed in starting and "frozen in" for the winter. The Indians were starving. An embassy of chiefs was sent to Fort Lincoln to ask that rations might be dealt out from the soldiers' stores, which were abundant. Their great orator, Running Antelope, described the sufferings of the people in a speech of such eloquence as its truth must have made heart-rending. Gen. Custer telegraphed to Washington for permission to grant their request. The answer came that it would create confusion in the relations of the Departments. Mrs. Custer tells us that it was hard to explain this answer to the famishing Indians. "They could not be told what we all knew that had the War Department made good the deficiency it would have reflected discredit upon the management of the Department of the Interior."

We have only to read the accounts of the late trouble in the southwest to make these words, spoken in all sincerity, sound like the bitterest satire. "Col. Bradley says the Muscatore Apaches are becoming restless because their supplies are giving out. Gen. Schofield suggests, as there are as many Indian difficulties as the troops are able to handle, that if the Indians cannot furnish supplies to these people the army had better feed them out of the stores and charge the amount to the Indian bureau. Secretary Lamar consented to this and Gen. Schofield was directed to issue rations from the military stores at the post where the trouble was threatened."

We leave it to the people's sense of justice whether the course taken by the Department in the former emergency does not reflect something more than "discredit" upon the administration of Indian affairs at Washington.

#### A Plea for American Languages.

Among the many books and pamphlets which have been produced by Dr. Daniel G. Brinton, (perhaps the best known of American archaeologists), none is more suggestive than his monograph on *American Languages and Why We Should Study Them*. It was delivered in the form of an address before the Pennsylvania Historical Society in March, 1885, and has since been reprinted from the Pennsylvania Magazine of History and Biography. In it we have a really eloquent plea for "one of the most neglected branches of learning for a study usually considered hopelessly dry and unproductive,—that of American aboriginal languages."

\* D. G. Brinton, Philadelphia, 1885.

The plea is of course a scientific one.

The Indian missionaries—from the time of the apostle Eliot to that of the veteran Dr. Williamson, and Dr. Riggs, who gave to the Dakota the dignity of a written language—have studied American tongues with amazing zeal and patience. We may sympathize rather with the reasons which moved these practical and loving men than with the scientific concerns of the theorists. Nevertheless, the devotion to learning and the philosophic breadth of such men as Dr. Brinton put forward strong claims to our interested attention.

"You will readily see," he says, "that my arguments must be drawn from other considerations than those of immediate utility. I must appeal to your interest in man as a race, as a member of a common species, as possessing in all his families and tribes the same mind, the same soul. \* \* \* After eighteen hundred years of labor, science has reached that point which religious instinct divined and it is in the name of science that I claim for these neglected movements of man's powers the attention which they deserve."

Anthropology is the science which studies man as a species; Ethnology, which studies the various nations which make up the species. To both of these the science of Linguistics is more and more perceived to be a powerful, an indispensable auxiliary. Through it we get nearer to the real man, his inner self, than by any other avenue of approach, and it needs no argument to show that nothing more closely binds men into a social unit than a common language. \* \* \* Personal names, family names, titles, forms of salutation, methods of address, terms of endearment, respect, and reproach, words expressing the emotions, these are what infallibly reveal the daily social family life of a community, and the way in which its members regard one another. They are precisely as correct when applied to the investigation of the American race as elsewhere, and they are the most valuable just then, because his deep-seated distrust of the white invaders—for which, let us acknowledge, he had abundant cause—led the Indian to practise concealment and equivocation on these personal topics.

Nowhere is an analytic scrutiny of words more essential than in comparative mythology. It alone enables us to reach the meaning of rites, the foundations of myths, the correct import of symbols. It is useless for anyone to write about the religion of an American tribe who has not prepared himself by a study of its language and acquainted himself with the applications of linguistics to mythology. Very few have taken this trouble, and the result is that all the current ideas on this subject are entirely erroneous. \* \* \* These languages offer also an entertaining field to the psychologist. On account of their transparency as I may call it, the clearness with which they retain the primitive forms of their radicals, they allow us to trace out the growth of words, and thus reveal the operations of the native mind by a series of witnesses whose testimony cannot be questioned."

These are valuable suggestions; yet Dr. Brinton goes beyond them in the height and breadth of his argument. "If the American languages are essential to a comprehension of the red race, not less so they are to the science of linguistics in general. This science deals not with languages, but with language. It looks at the idiom of a nation, not as a dry catalogue of words and grammatical rules, but as the living expression of the thinking power of man. \* In this high quest no tongue can be overlooked, none can be left out of account. One is just as important as the other."

It is a vulgar error which leads us to believe that the "native dialects" are of a very low order. "Those best acquainted with American tongues," says Dr. Brinton, "praise them most highly for flexibility, accuracy and resources

black dwellers were fully convinced that the system of which they formed a part, was perpetual; both were wholly unprepared for the wonderful changes our times have seen.

Close to the village the land sells for \$25 per acre, the price growing less as one approaches the wilderness, which seems to stretch away in the distance as far as the eye can reach. In the country, land brings about \$4 or \$5 per acre. I was told of one case, where five colored men put their resources, money, mules and labor together, and bought a tract of land deemed good for that section. They worked with vim, and raised a crop of fine tobacco, which sold at high prices, and the single crop paid for the land.

Marktown, about a mile and a half from Chatham, consists of a long row of small houses, built at irregular distances, extending from the public road and lying itself in the forest shades half a mile away.

There were one or two of the old time mud daubed huts, the home of the slave, with great chimneys made of sticks and clay, and the rest new weather-board houses. Mrs. Strong pointed out one larger than the rest, and roofed with tin, as the dwelling of a carpenter, a sensible industrious young man, very proud of being "one of the Markes" and considering himself fully entitled to the name and position occupied by his old master.

Some northern traveler has remarked that every Negro in the South has his own way of showing his delight in freedom, and no one can ever tell just where it will strike them. With this worthy young man it had taken the form of wearing his hat in the presence of white people for whom he was working. This would have been deemed an unpardonable offense in a slave, and was therefore intensely gratifying to the freedman.

Mrs. Strong had recently sent for this man, who is the chief workman of the village, a few days before, to make some repairs in her house, and felt deeply offended, as would any of the white holders, when the carpenter, otherwise gentle and agreeable in manners, walked from room to room examining doors and windows, with his hat set jauntily on his head. Fearing to reprove what seemed to her almost an insult, lest she should lose the services of the only available mechanic, Mrs. Strong swallowed her indignation and proceeded to give her orders. Her daughter is much quicker in her sources than her mother, and also much less prudent than the poor widow, who has learned to curb her high spirit in the stern school of adversity, and she shrewdly touched a sensitive chord in the breast of the ex-slave by remarking coolly, "Why Fred, I thought you were one of old Gen. Markes's people, and had fine manners like his family. I know none of the Markes ever wore their hats in a lady's house, when she was present." The man instantly took off his hat and throwing it on the floor, said gently, "Mistis you must excuse me. My business was so important to my mind, I forgot I was not in my own shop."—An amiable fib which showed Mr. Markes's easy adaptability to the customs of society.

It will be a good day for the colored people of the South, when they all learn, as many of them have already done, the value of good manners. One of the advantages the Negroes derived from slavery was the intimate association with the best class of Southerners, a people of gentle and courteous ways.

The slave adopted the manners of his master's family, who were naturally and inevitably his standard of living, and no people in the world had finer manners than some of the old slaves of the South, carefully trained and accustomed as they were to constant and affectionate association with their owners and his family.

But I am delaying too long at the edge of Marktown and must enter the hamlet. This was not so easy to do as it might have been, for one of the few fences in the neighborhood, somewhat rickety and inclining outward, separated the little settlement from the public road. Mrs. Strong and I scrambled over it, and as we approached a colored woman who seemed to be hovering over a big iron pot hung on a pole, under which a brush fire was burning. I begged my companion to come, or to go ahead, and by no means to permit my cloven foot to be recognized, and she at once addressed the woman inquiring if she had any fresh eggs. The woman answered civilly in the negative, and invited us to enter the house.

We found ourselves at the open door of an old log cabin, and accepted the invitation. There was but one room, which was scrupulously clean, and I seemed to go back to my childhood as I saw the plain wooden bedstead, rough table and split-bottom chairs, the spinning wheel in the corner, the crook handle, gourd on the wall, and the iron cooking vessel on the broad stone hearth in front of the wide chimney. I could touch the ceiling by raising my hand, and at once realized that this was the home of an old slave, who had been so long and so disturbed in this simple abode and was ignorant or unmindful of the changes of time. Everything

seemed wonderfully quiet about the place, and an elderly woman wrapped in a patchwork quilt, the only occupant of the house, sat in a low chair in the middle of the room and scarcely turned her head as we entered.

Mrs. Strong spoke kindly to the woman, and we soon found that the poor creature was in the last stage of dropsy and unable to move her swollen limbs, breathing with difficulty and almost ready to lay down her burden. She seemed pleased to see us, and glad to have sympathy in her sad condition, and in labored speech she told the simple story of the life which was so evidently drawing near its close. Some Negroes have a genius for misalluding words and mixing things generally, and Hannah seemed so highly endowed in this respect, that while full of compassion for her sufferings, it was almost impossible not to smile at her statement of them, mingled with accounts of her past life.

She said she had always lived in this place, had belonged to one of the aristocratic families and her white folks were her best friends now, though the colored people round were very kind too. She had a good constitution but she had always been sickly, all her family was that way—Her whole body was "flicted now, and she had kernels all about on her—She had such a dizziness in her back she could hardly lift herself without resistance and she was so faint. The colored people round was very kind in staying with her at night, and waiting on her when she needed anything—She was often weak and critical—The place she lived in belonged to her. Her father and brother bought it, and after the ceasin' of the war, it came to her. She had gone to Richmond to see her sister some years ago, but her sister's children didn't seem to patternize her, and she had come back to be near her white folks. She had worked for them as long as she were able and they were mighty good to her now. She had always been protractable from a child, and they would let her stay here.

When we left the poor soul, who seemed to take great comfort in the kindness of her white friends, she asked Mrs. Strong to let some of them know that she wanted ice, and promising to do so as we passed her, the owner's house on our return, we left the patient sufferer.

The next house, also of logs, standing within a few feet of the first, was a dilapidated, the furniture was of the rudest description, and every thing looked dirty and dirty. The hut had only a few loose boards laid on rafters for ceiling and glimpses of the ether blue were easily discerned through the cracks in the roof. A wretched old bed was covered with a few pieces of bags and strips of carpet and the place was as comfortable as a human dwelling could be. The window was but a hole in the wall, and as the board shutter was closed the only light came from the door, which would not open wide, and the cracks between the logs.

After our eyes became accustomed to the dim light, we were surprised to see a pleasant looking old black man standing near the little table covered with slipper's tools, dishes, gourd and all sorts of odds and ends, who very politely and hospitably invited us to be seated while he stood respectfully waiting until we explained our visit.

Mrs. Strong recognized him as a "jobber" who made door mats, seated chairs, mended shoes, and was serviceable in the village generally, and at once began to negotiate in regard to a split bottom chair.

In answer to my questions, he said he had once been a slave and had been married, but had no children. His wife was dead and he had long occupied this cabin, in consideration of doing such outside work as "Harner" his landlady, required of him for rent. He did not seem to be a very good tenant, as his roof leaked and his house was altogether much dilapidated, and I asked how he managed under rain and snow came in on him. The old man rather resented my criticism on the home which seemed to suit his taste and had been shelter for him for many years at small cost. He said the roof did not leak much, he didn't mind it, but he had intended to put new roofs to both houses, until "Harner" got so sick. He knew after "the ceasin' of Harner" her kinkfolks would want the place, and he would have to look out for another house, and it did not seem worth while to "sturb things." He looked around at his hovel with affectionate regret, and evidently felt that hard times were in store for him after "the ceasin' of Harner."

The old hermit was very gentle and amiable in his manners, but there was nothing encouraging in his windy establishment, and as I do not at all like this style of freedom, I was very willing to go from the rickety hut to a tidy little plank house, which stood near it and bore a very different aspect.

**NEW HOUSE AND PROGRESSIVE PEOPLE.**  
There was a group of children at the door who gazed curiously at the "white folks" as they entered and were politely re-

ceived by their old grandmother, one of "the Markes" who had been the cook in her old master's time, and spoke with pride and affection of "old master" and his family.

The mother of the children soon arrived and talked very sensibly, though her manners were not as pleasant as her mother's. She spoke very cheerfully of her affairs here and there at the brickyard, and made good wages. She took in washing and made something that way; she had taught school before she was married and meant to have her children educated. If she did not send them to school, she could teach them herself.

**THE HAT MAKES THE MAN, THE WANT OF IT, THE FELLOW.**

The next house was the dwelling of the Negro carpenter whose dignity was supported by his hat, and was the best house in the settlement, being distinguished by its size and its tin roof. Mrs. Strong knew the woman of the house, Markes's wife and mother-in-law, who were evidently pleased to see us, and flattered at our compliments upon their residence. The small cost of the really comfortable home was astonishing. The house and land had not cost over \$25. The carpenter seemed to have managed things very sensibly. He had bought the land some time before building, and he had worked at his trade, while his wife and her mother had been in service, working for their old master, whom they had never left until their own house was ready for them to move into. Mark had bought his lumber at a neighboring saw-mill and done most of the work himself, employing the village tinner, a white man, to cover the house. There seemed nothing to desire in the way of thrift and economy in this family. The little housewife was evidently very happy in her home, very proud of her husband and anxious to help him. She and her mother took in washing, and they had bought some nice furniture and meant to have things comfortable when the house, part of which was not yet plastered, was all done. When I asked for a glass of water she ran to the spring at the foot of the hill, quickly returned and handed us some pure delicious water in nice goblets, using a china plate for a tray. Then she brought her three little children to show us and was very much pleased with the picture papers we had brought them.

As we came out we noticed borders of bright flowers in the yard, and a little vegetable garden, and the whole scene was very pleasant and encouraging. If a man were born a slave and has suffered all the disabilities which the most fortunate of his race must endure, and is still able to secure a good home for his family and has the position of a steady-going mechanic in the community, what wonder is it that a little of the folly of independence should be shown in his demeanor? Perhaps it would be more civil, better calculated to gain favor with the white people upon whom he depends for a living, a better example to his children, to preserve the courteous manners taught his forbears in the hard school of slavery, but if wearing his hat in his employer's presence is the only offense he commits against us, can we not turn him to that extent? If it is any comfort to him, surely it does not hurt us. After a while he will tone down, he will get used to the proud feeling that he owns, the soil on which he was born, on which his people for generations have been slaves, and can give it as an inheritance to his children. After a while, if he goes on as he has begun, he will have subordinates and employees around him, and will feel that he has a right to exact respectful manners from them. Then he will appreciate the "small courtesies of life" and realize how they soften the asperities and smooth the thorny ways of intercourse between man and man. Yes! I have hopes that the time will come, if not for him, for his children, that it will seem proper for a man to take off his hat in the presence of a lady.

#### Among the Dakotas.

*Extract From Correspondence of The Boston Journal.*

Two thousand miles from the Hub, and "out doo" to the Indian hunter of our party, clutching his head up like an Indian pony to sniff the air of his native plains. Outdoors indeed, with no city walls between us and the home of the north wind that sweeps down upon us, vital, tonic, but stifled and fettered through countless miles of grass and flowers.

Where the eye sees the earth on its vast plain  
And one boundless reach of sky."  
Not a life-time of "gelling upward in the night," but only three days and a half of comfortable rail-road travel in a fast age have brought us to this breadth of view from the afternoon when on the platform of the Chesapeake and Ohio station at Hampton, Va., our twenty-eight Indian boys and girls, with no city walls between us and the home of the north wind that sweeps down upon us, vital, tonic, but stifled and fettered through countless miles of grass and flowers.

ing with the new recruits, who will take their places in the school, pledged to remain in the country long enough to visit most of the reservations in Dakota, Minnesota and Wisconsin, to study them with reference to the prospects of Hampton. I returned, to show the throng of average American citizens, who invaded our "Indian special" at every station this car-fair of well-mannered, self-respecting and respectable young Indian men and women. Thirteen of the number are communicants of the Episcopal Church at Hampton, whose rectory is their country home; others are members of the School Chapel. One will return to the fall, to be trained as a minister to his people; another, as a physician. Most is expected only the mission work of honest, industrious lives. Will they do it? Will they have the chance?

Bright and early on the morning after my arrival came one of our Hampton girls, married since her return a year ago, overjoyed to see a Hampton friend and shyly eager to take me to see her home. Next we found a stalwart, ex-slave, a young man, to whom I was duly introduced, with the sumner that he could speak English "very well," an assurance which only had effect to call his lips to drop his head in confusion, till his wife, quite mortified, apologized by saying, "He is so bashful, he never talks even to me for a long time after he is married." That being the case I could but excuse him, especially as he makes her an excellent, if silent partner.

Housekeeping in a shack! I was curious to see what it would be like, what our young Hampton housekeepers come home to, and how they can meet the situation. A hewn log cabin of one room, about twenty, and a few feet high, with an earth floor, a dirt floor through which the stovepipe pushes up. This is the regulation pattern of an Indian house at Yankton, and the young couple rent this one from a family who have turned out to be a tepee close by. Mrs. Houskeeper is not a native, but a white girl, and it must be an object lesson to astonish if not to impress her next door neighbors. The earth floor was swept as clean as could be, with strips of rag carpet laid down; clean white sheets lined the roof over the bed and lounge to keep the earth from sprinkling down; the tidily made bed was bright with a new patchwork quilt; pictures were fastened up on the wall, among which I recognized a reproduction of a Hampton teacher. On a corner shelf a little clock ticked cheerfully. There were two chairs, a lounge, a table, a cupboard, a clean little stove and a sewing machine, on which a new gray dress had just been accomplished. "From a slave in Butterick's!" Mary wore a clean calico. A bright tin basin hung on a nail, and outside the door I saw some clean wash tubs. Some lumber for a house which they will own themselves, lay near. It was one like that, costing \$50, the Agency says, but doors and windows being furnished by the Government. But "it will have a hard floor," the housekeeper states with pleasure. I know it will be kept kept. While we sat chatting, a pretty, good-tempered looking girl entered and was introduced to me as the wife of one of our Hampton boys, whom I found at work in Mr. Williamson's printing office, his trade learned at Hampton. Last year he gave good satisfaction, all tell me, as assistant teacher in the Government School, where he says with modest pride, "he used the methods Miss Hyde taught at Hampton." Not all have done as well as these two, but of eight girls who have returned to Yankton one only has relapsed to Indian dress and life, a poor one in Butterick's! Mary wore a clean calico. A bright tin basin hung on a nail, and outside the door I saw some clean wash tubs. Some lumber for a house which they will own themselves, lay near. It was one like that, costing \$50, the Agency says, but doors and windows being furnished by the Government. But "it will have a hard floor," the housekeeper states with pleasure. VOL. XIV

HAMPTON, VA., NOVEMBER, 1885.

No. 11.

### The School.

THE HAMPTON INSTITUTE, opened October 1st. Its enrollment November 1st, was 608, as follows:

In Senior Class	15
" Middle "	128
" Junior "	179
" Night "	187
Indian Classes	99

608

Number of officers, teachers, assistants and heads of departments, 72.

Although the school requires all promoted to the Senior class who had not previously taught, to teach for one year, thereby reducing the present Senior class to fifteen, from forty last year, the numbers are larger than ever before.

Two hundred and fifty six of the whole number are girls, 352 are boys; average age seventeen years. There are 137 Indians and 471 Negroes; this last year at this time. The quota of Indians for whom Government makes partial provision is 120, so that there are 17 to be provided for entirely by private aid.

About 200 applicants have been refused admittance, for want of room, and fifty have returned home on account of inability to pass the examinations. Only four girls and five boys from outside succeeded in passing the examination for the Middle class, although a large number applied. Fourteen girls and one boy from the Night school entered this class; examinations of night students for the regular classes show an improvement in the work done.

Students who have come from other schools made no marked advance on previous years. The standard of the Hampton school cannot be raised till its feeders do better.

The usual "weeding out" Jan 1st, after three months' probation, will reduce the enrollment to less than six hundred pupils.

### THE NIGHT SCHOOL.

From 7 to 9 o'clock, p. m., begins with 187 against 171 last year; 124 boys and 63 girls, who labor all day. Of these 51 (47 males and 4 females) were in the Night school all or the greater part of last year; these are chiefly young men working at various trades, for three years.

New pupils of the work class as a rule are much younger than those of two or three years ago, making better scholars but not always so valuable in the industrial department.

### INDIAN SCHOOL.

As already stated, there are 137 Indians, 86 boys and 51 girls. Of these six boys are in the night school, working all day and studying evenings; this is of their own choice and is a hopeful sign.

Thirty, 18 boys and 12 girls, are in Normal classes, with the colored students as follows: 3 Seniors, 4 Middlers and 23 Juniors. Ninety two, 58 boys and 34 girls are in the regular Indian classes; four, 2 boys and 2 girls, are in the "Training school" with young children of African descent from the "Butler school," two are post graduates pursuing special courses of study, and two are too infantile to attend regular classes.

Classified according to tribes, we have 84 Sioux, 7 Winnebagoes, 24 Omahas, 1 Arickaree, 1 Onandaga, 19 from the Indian Territory, representing six tribes, chiefly Pottawatomie

\* Thirty-eight Indians are in the regular classes.

and Pawnees, and one Pima from Arizona. The last company of 22 from Dakota are exceptionally good material; with few exceptions all the late reinforcements are hopeful. A larger number than ever before have come from Agency schools; we have less English to teach, and more general education to give; this is Hampton's true work for Indians.

The school has been organized quickly and with little friction; the staff was never so efficient and the corps of teachers is more able, more efficient and earnest if possible than ever. Through the energy and care of Major Boykin, a graduate acting as commandant through the summer, discipline and order have been well maintained among the 300 students of both sexes, remaining to keep up the industries on the ground; they have been a good nucleus for the fall organization.

The *Pastors' Class* with the same teachers as last year, has an incoming class of nine who do hard labor during the morning, go to their Bible studies in the afternoon, and the night school in the evening. The advanced class consisting of all the colored pastors of the place and several licensed preachers, numbers 10; in all 19.

### INDUSTRIAL DEPARTMENT.

#### THE FARMS.

The Home farm employs fifteen boys from the Night school who work all day and 37 Normal students who work two days in the week and go to school the other four. The Hemmaway and Canebrake Farms (550 acres) four and a half miles distant, employ twelve boys and two girls, who go to school at night, preparing, both as to funds and as to ideas, to enter the Junior class. This valuable estate managed by Mr. Chas. Vanison, a graduate, has been one of the most satisfactory and successful departments of the School; its record has been most creditable to the colored race.

#### HUNTINGTON INDUSTRIAL WORKS.

The *Steam Saw Mill*, first story, employs 20 regular night students and 16 who work two days a week. The outside hired force has been cut down and student labor employed in its place. The superintendent says, "I have as good a set as ever I saw."

Over two million feet of North Carolina logs were sawed last year and this year's prospect is fair.

The *Wood Working Shop*, second story, has 19 colored boys working steadily at their trades, four of them having finished their apprenticeship and receiving regular mechanic's wages.

This department has been very busy during the summer doing all the woodwork for the new church, on which good progress has been made, and considerable local business.

The school affords much increased facilities for learning trades. In 1884, the "Huntington Industrial Works" employed in all 13 boys, while now it gives occupation to 54.

#### ENGINEER'S DEPARTMENT.

This employs two Indians, one of whom has charge of the Corliss Engine in the mill, and six colored students from the night school; all of whom are doing well. As in all the shops, no apprentices are taken in this for less than three years. During the summer considerable steam pipe has been renewed, boilers overhauled, new apparatus put into the kitchen in Virginia Hall, and many general repairs made. Beside the regular force of

night students, four come into this shop twice a week. A large new boiler-house for the contemplated steam system, is nearly completed and a Corliss boiler is already placed there connected with the beautiful steam engine which has just been placed in the new L. of the Pierce machine shop. Both the boiler and engine are the generous gift of Mr. Geo. H. Corliss of Providence, R. I., who sent down a foreman to put it in place.

An elaborate survey was made last summer of the entire school grounds with the view of making the best disposition of our underground steam pipes and for insurance and other purposes. A pressing need in this connection is a steam fire engine to cost about \$4,000.00; the present hand engine is altogether insufficient, and infirm with age, being purchased second hand many years ago.

#### PRINTING OFFICE.

This takes no apprentices for less than four years; gives employment to 9 boys, 7 colored and 2 Indians, and has taken in 1 colored and 2 Indian students this year. The book bindery has been busy on general work and has supplied the school with copies of the Hampton Hymnal, one of which has been supplied to every student. The presses have been kept busy during the past summer in the printing of catalogues and other school work added to the job work of the neighborhood.

#### THE KNITTING ROOM.

Employs 15 colored boys every day and 4 additional two days in the week, beside six girls for the finishing of the mittens, who are paid by the piece, and have knit a thousand dozen pairs of mittens each month, since July 1st; all that are made are taken at a fixed price, by a commission house in Boston, Mass.

#### INDIAN TRAINING SHOPS.

The *Shoe Factory* employs 9 Indians and 2 colored students. Indian boys work half a day and go to school the other half, with the exception of two who work all day and go into the Night school, and the two in normal class who go to the shop two days a week. The shop does a large part of the work of the students. The new apprentices are doing well, and the shop is in good condition.

In the *Carpenter Shop* 2 Indians are employed all day, and 15 half a day, while 4 colored students work every day and 1 two days in the week. All hours at night. This department has put up the new hospital building which is approaching completion: the gift of "King's Chapel" Society, Boston. The superintendent reports better work and less loss of time than ever before.

In the *Harness Shop* there are two colored students from the night school, one of whom is foreman, and four Indians from the day school. Several sets of new harness have been sent to the northern market.

In the *Tin Shop* six Indian boys from the day school are employed. Contracts for 6000 pieces of tin ware for the Indian department are being filled.

The *Paint Shop* employs two colored boys from the night school, and two Indians. The summer work has been also minding the new girls building, making needed repairs in Virginia Hall, and repainting buildings generally.

#### WHEELRIGHT AND BLACKSMITH SHOPS.

These employ four Indians from the day school, and three from the Night school; also five colored boys all day,

and three two days each week. School and local trade furnish a moderate amount of work; a larger market is needed.

#### GIRLS' INDUSTRIES.

The *Sewing and Tailoring* department employs fifty-four colored girls from the day school, ten from the Night school, and two colored and two Indian boys at tailoring. The latter department has furnished eighty school uniforms this fall, and above 1000 pieces of shirts and underwear since the 1st of July, beside the regular repairing of the school.

*Laundry and Cooking Class.* Twenty-three Night class girls are employed all day in the laundry with details of day pupils amounting to 68 each, two days per week.

The remainder of the girls are employed in household industries. Cooking lessons are given to girls in the Middle year.

#### THE BUTLER SCHOOL.

This historical institution on the School premises, opens with 350 children, day scholars, from 6 to 14 years of age, and six teachers who are graduates of Hampton. It sends up 40 as a practice school for Seniors to the Normal School.

The total of teachers and pupils on our grounds is over one thousand souls.

#### IN GENERAL.

Through the industrial system students are all able to pay by their own earnings the cost of their board (ten dollars a month) and of clothing and books beside. There was charged to them the last year ending July 1, 1885 \$55,072 29, of this, there was

Paid in labor.....	\$ 44,085 31
" cash.....	4,780 66
In charity for personal aid	2,722 36
Debs to be paid in future	3,483 96

Of this last item there will be a loss of about one thousand dollars through the neglect to pay up.

Attention is called to the fact that charity aid for board, books etc., is but one twentieth of the amount charged to students.

The school itself is a heavy burden on charity; we say "maintain our system and we will train men and women to take care of themselves and help others."

For the cost of educating or tuition of each student, seventy dollars a year, we look to the friends of the Negro and Indian races; in other words, teachers must be supported, for students cannot do that. The school is an object of charity; the individual student is not. Fifty thousand dollars are needed annually besides aid from state and government. Receipts for annual scholarship at \$70 have been about \$25,000 a year. For the rest experience has taught us to look to donations of varying amounts for general purposes, and to legacies.

The institution is out of debt, its property is in good condition, and for another year commits itself to the kind interest of friends and the Providential care of God.

No reason for its support is so strong as that its ends are faithfully worked for and reasonably well attained; there has never been better ground for believing this than now.

The Annual Reports of the Hampton Institute will be sent this month to all contributors, whose attention is especially invited to the Treasurer's Report. It is hoped that it will be satisfactory to all.

Mr. Haygood, general agent of the "John F. Slater Fund," has made of his report for 1885, very interesting reading, and while his statistics do not, of course, cover new ground, yet many of his observations and conclusions are valuable, being based upon unusual opportunities.

For example, we have nowhere seen just such a summary as the following of the condition of the public schools for colored children in the South:

"Those who approve only the best schools will condemn these. They are not to be compared with the best public schools in the country; it would be unjust to all parties concerned in them to judge them by the highest examples. We should consider that twenty years ago there were no public or other schools for these people. These schools are in every respect better than the majority of men esteemed as reasonable expected, when the experiment began, to see in twice twenty years."

Most of the school buildings in the rural districts are inferior to those for the colored people in the rural districts and in the small villages are, as a rule, held in the church buildings of the colored people, and these are, generally speaking, better than the white people's public school buildings, and are located to suit the convenience of those who use them. The appliances are few and simple; the primary texts necessary in teaching the elements; cheap globes and charts are occasionally seen; they are generally given by some friend; they do not characterize the system. Neither is the use of the public schools for the whites. The texts used in the public schools of the Southern States by the children of both races, are those that are issued by the great Northern publishers, and are such as have the approval of experts and eminent authorities. The exceptions to this statement are so small as to be unappreciable.

Most important of all in an inquiry of this sort is the quality and character of the teachers themselves. The tenth census shows that there were in the United States in 1880, 16,800 separate schools for colored children; it also shows that there were 15,831 colored teachers. Of the schools reported for colored children in 1880, 16,418 were in the Southern States; of the colored teachers 15,488 were in the Southern States. These figures do not mean that in 1880 nearly 1000 colored public schools in the Southern States were taught by white people, but that many colored teachers were left out of the enumeration. The figures mean that, considered as a system, colored teachers teach the colored schools. The tendency to this adjustment is not peculiar to the Southern States; outside the late slave States there were, in 1880, 385 separate schools for colored children, and 346 colored teachers.

The history of education among the colored people during the last twenty years, and the facts now observable, lead to the certain conclusion that common schools for colored children must depend on colored teachers.

Mr. Haygood follows this with a very warm commendation of the work done by Northern white teachers in the schools devoted to the training of colored teachers and goes on to say,

"It is particularly worthy of mention that among the teachers engaged in these southern training schools for colored teachers are a number of colored men and women who have successfully prepared themselves for their work at the older and better schools established for their people in the South. Among these teachers are graduates of Hampton Institute, the Atlanta University, Fisk, Howard University and others."

The success of these colored principals and professors demonstrates the capacity of colored students to become the efficient leaders of education among their people when time and opportunity have enabled them to show what they can do. This is most important; for if it were proved that the race could not furnish its own educators it would be proved that the race could never be educated. But it has been proved that the negro race in the Southern States is capable of furnishing its own teachers. It is necessary, if this great movement to educate and Christianize this people is to succeed, if it is to be saved from total collapse, that the white people should, for a long time, not only furnish most of the money required to carry on the work, but most of the men and women who are to give it direction. The white people can continue in this work all the more hopefully when they see that a few of the colored race, taught in these schools, show capacity for educational leadership. That not a few colored people feel themselves capable of leadership, and evince undue eagerness (their instinct for seeking leadership is strong) to assume

its burdens and responsibilities will require patience, firmness and wisdom in those who have been the best friends and most efficient helpers these people ever had."

It is most encouraging to find that out of all his varied experience Mr. Haygood has drawn the conclusion that "the case of the Negro is a problem without any mystery," and we are heartily glad to be able to agree with him when he says:

"There are many grounds for encouragement. The percentage of illiteracy actually decreased among the colored people between 1870 and 1880. In no possible sense has the great effort to educate them been a failure; it has, judged by any rational test, been a marvelous success."

It has been a success if we consider how many of them have learned to read and to write; if we consider how much better they behave as free people than was expected in 1865; if we consider how steadily the hundreds of thousands of them make progress in true civilization; if we consider that they are beginning to appear on the tax books as owners of houses and little farms; if we consider what crops they make every year, in spite of a badly organized farming system; if we consider the marked advance in sensible preaching, and the earnest effort of the colored churches to raise the standard of practical morals.

More and more Southern public opinion approves the education of the colored people; more and more right methods of teaching them are coming in to use. The facts show that education tends to do for the negroes what it tends to do for people."

And finally, it hardly needs to be said that we are thoroughly in accord with the statement made at the close of the report:

"The negro youth needs what the white youth needs—knowledge, industry, morals. The schools at work in the Southern States are teaching him books, they are teaching him sound morals, they are beginning to teach him self-control. What he learns of one will help him to learn the others, and learning each he will begin to make greater progress in all good things. The history of the educational movement for the uplifting of the negroes is more encouraging than the growing interest in the work that is being manifested by the superior white people of the South. This growing sentiment is recognized by some who have the management of the higher grade schools for colored people in hand; Southern names begin to appear in the list of trustees and managers. It would be very wise, at this time, to increase their number."

The proof of this growing interest is abundant and conclusive. If the work is ever to be done as the needs of both races require that it be done, then the time must come when Southern white people cordially co-operate in the work. It would be as easy to develop a colony into a great State by the migration of a few thousands of people without births, as to permanently establish and successfully conduct a great educational work by supplies from abroad. Perhaps it may turn out that one of the best results of the John F. Slater Fund can accomplish through its management will be the fostering of interest in the work of educating the negro among those white people whose interest in his right education is greater than that of any other white people—whose interest in making of the negro a good citizen is only less than the interest of the negro himself in his own elevation."

THE death, on September 25th, of President Edmund A. Ware of Atlanta, is likely to be deeply and practically felt by the colored population of the South, and by their friends, North and South. Twenty years ago he went from his theological studies at Yale College to Atlanta in the service of the Freedmen's Bureau, and soon found that which was to be the work of his life, opening before him. Two years after his arrival in Georgia he set himself the task of establishing a school for the colored people, which should supply them with opportunities for a higher education than was at that time anywhere attainable, and the success of his undertaking is the best evidence of the soundness of his views. His methods were wise and practical, his energy and devotion untiring, while the unselfishness with which he made the many sacrifices which his work entailed and the quiet patience with which he endured the distrust and coldness of the whites about him, made his character particularly admirable.

We allude especially to this distrust and coldness in his case because the fact that he claimed for the Negro a capacity to receive something more than a primary education, made his position peculiarly difficult, and it was not until the experiment had been going on for some years, and his pupils were able to speak for themselves, that Mr. Ware's motives were understood or his work accorded the credit which belonged to it. Some years ago the Legislature of Georgia came to see the wisdom of assisting the school by a grant of money, and there are other evidences that its value is beginning to be appreciated by its white neighbors. President Ware did comparatively little work in public, and was perhaps not as widely known as he should have been, for, as an educator, and a missionary in the highest sense, he was second to none in the South. But upon and through the students who came under his wise guidance his influence has been great and far reaching, and it has been granted to him more than to most men, to see the fruition of his labors.

In nothing was his wisdom shown more than in the care with which he surrounded himself with able assistants, subordinating himself always to the interests of the school, and securing for it thus a strong hold upon life, so that even in the death of its founder it should feel no fatal shock, but rather perhaps, through the stimulated endeavor of its teachers and officers, gain a new source of strength. It is this, assuredly, that President Ware would have himself desired, and no greater happiness could have been given him, than to know that while the work as his work was a success, it was a success also upon a broader and more permanent basis than can be found in the life of any individual. That the future of Atlanta University will show that its founder's best work was in making for it such a basis, we do not doubt, and in this assuredly President Ware's strong and earnest nature has raised to itself a nobler monument than other men can build for him, however much they may desire to do him honor.

The New York Chamber of Commerce has erected, by voluntary contributions, a bronze statue of the late Wm. E. Dodge, a desecration of which we take from the *Evening Post*.

The figure, which was designed by J. O. A. Ward, represents Mr. Dodge in an erect position, bared-headed, his right arm resting upon two books that lie upon a short column, while his right hand holds a document, and his left hand lightly clasps the right. The idea is conveyed that he has just finished a speech, or has paused in its delivery. The statue measures, with its plinth, nine feet six inches in length, and weighs about 2,200 pounds. A drinking fountain, pedestal, and circular platform, with a semi-circular bench at the back, are adjuncts of the statue and have been executed in granite from designs by Richard M. Hunt. On the front of the pedestal is a lion's head of bronze, modelled by Mr. Ward, from which the water flows into a granite basin beneath. The pedestal, which supports the statue, stands upon the platform already mentioned."

The statue stands at the corner of Broadway and 35th street, and the ceremonies of unveiling, which took place on Oct. 22d, were particularly interesting. The attendance was large, representing the churches, the charities and the commerce of the city, and the quotation from the address of Mr. Abram S. Hewitt, which we give herewith, shows the spirit of the occasion.

Mr. Dodge was always a warm and kindly friend to the Hampton School, as he has been to so many other and similar undertakings, and the lesson of his life is for us made plain by our intimate knowledge of his liberal and intelligent charity. Mr. Hewitt said: "I began his career of usefulness as a 'boy' in a store, whose lot was by no means as easy as it now is, with the appliances of copying presses, telegraphs, telephones, and

with porters to do the heavy work of the office. By his diligence, fidelity and probity he made his way with slow but sure steps to the head of the greatest house in

his branch of business in the world, owing its growth and success mainly to his spirit of enterprise, his large intelligence, and his sleepless activity. He accumulated wealth without exciting the envy or ill-will of his fellow-citizens. He was the friend and earnest supporter of every beneficent public enterprise. He showed his public spirit by assisting in the building of canals, railways, telegraphs, and ocean cables, when it required courage and self-sacrifice to engage in what were regarded as desirable but hazardous public enterprises. He was connected with the public schools, and was the friend of popular education. He led an unassuming, Christian life, aiding missionary enterprises and building churches in the waste places. He was the promoter of temperance, and a munificent donor to all associations organized for the diffusion of knowledge and religion among the young, and especially among the clerics of New York, whom he regarded as his spiritual children, and in whom he felt a parental interest. He was a friend of the enslaved in this and other lands, and freely gave his time and money for the amelioration of their condition by means of colonization and other remedial agencies. He took part in every public movement in this city for better local government, and was a generous benefactor to the museums and galleries of art designed to refine and educate the masses. He tried to prevent the horrors of civil war, and, in consequence of his high character and patriotic impulses, he was elected by the Legislature of the State of New York as a member of the Peace Commission, which in vain attempted to bring about an accommodation, and prevent the impending conflict between the North and the South. When finally the death-struggle came, he entered heart and soul into every movement for the support of the Government. He was a member of the Union Defense Committee, and Chairman of the Committee of Conference with other cities to aid in organizing troops, equipping regiments, and forwarding supplies. His family nobly seconded his patriotic efforts, and one of his sons entered the military service, and returned at the close of the war with the rank of Brigadier-General. He was Chairman of the New York branch of the Christian Commission, which charged itself with the spiritual welfare of the troops. He took part in the formation of the Loyal National League, organized to strengthen the Government in 1865, when the Union prospects were darkest. He denounced from the steps of the Sub-Treasury the draft riots in New York, at the risk of his life and property, which he considered as a crime, so long as the Union was saved and his country restored to honorable peace."

"Subsequently his grateful fellow-citizens honored him with a seat in Congress, where he not only advocated sound financial measures at a time when error was rife, but resisted his own party in its reconstruction policy, predicting with remarkable foresight the lamentable results which flowed from its adoption. He declined re-election to Congress for personal reasons, but left on the community the conviction that he was in all respects a model citizen, a merchant as honorable as he was a business man, a man who performed his duties without fear, and lived a life without reproach. Above all, the merchants of New York felt an honest pride in his character, career, and success in life; and by them he was held in such repute and honor that for eight successive years he was elected President of the Chamber of Commerce of the State of New York, and in all movements of a public nature he was recognized as their champion and leader."

"Other men before Mr. Dodge have given life and fortune to good works, and have doubtless found, as he did, a full reward in the satisfaction of well doing. But they have no public monument to their memory. The encouraging feature of this event is that it owes to itself of length, the duty which society recognizes at length, the duty which the life and labors of such benefactors of the human race. But this monument and this occasion have even a greater significance and deeper lesson for those who remember how toward the close of his life, when he stood at the summit of his career, Mr. Dodge was persecuted, misunderstood, and maligned. It bears witness that in this age of general intelligence, with a free press, it is no longer possible for an honest man to be crushed by official oppression; enforces the fundamental truth, that 'government exists for the benefit of the governed, that public officials are the servants and not the masters of the people; that resistance to wrong is the duty of every citizen; and, above all, that the way to the world's enduring happiness is not through the triumph of the victor, but through the triumph of the just.' Who ever knew truly put to the worst in a free and fair encounter?"

# SOUTHERN WORKMAN

TWELVE PAGE MONTHLY.

Reduced to eight pages from July to October.  
Printed on the Normal School Steam Press  
by Negro and Indian students trained in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG, } Editors.

REV. H. B. FRISSELL, Chaplain,  
MR. W. N. ARMSTRONG,  
MISS ORA LANGHORNE,  
MISS ALICE N. BACON,  
F. N. GILMAN, Business Manager.

Terms: ONE DOLLAR a year IN ADVANCE.

Entered at the Post Office at Hampton, Va., as second class matter.

## The Southern Press, Both Sides.

The colored journals have been of late rather more than usually interesting, the political situation in Virginia having excited much criticism and expression of opinion. We therefore give them precedence, drawing attention to the very general evidence of enlightenment in regard to the true value of "parties."

Mr. Fortune, the editor of the *N. Y. Freeman*, has been spending some time in Virginia, and his observations and deductions, while not altogether free from a bitterness which somewhat affects their candor, carry weight with us as coming from an intelligent man, who has had an opportunity to see the inside of things.

"We discovered many phases in the politics of Virginia, during our recent visit, calculated to make a thoughtful man pause and reflect for a moment. We venture to say that the race problem in that commonwealth has progressed further towards a just solution than in any other Southern State, and that there are more helpful signs upon which to predicate a prognostication of future good results. It is fair here to say that this state of affairs is due largely if not mainly to the policy initiated and pursued by General Mahone."

The state of affairs in Virginia is simply this: It is impossible to say that every white man you may meet is a Democrat, or that every black man you may meet is a Republican. The coloring of the epidemics has utterly ceased to be an invariable index of the political creed of its possessor.

And we feel certain that the years as they speed into eternity will more and more complicate this state of affairs, until such time as it shall become so prevalent and common as to excite no comment whatever.

We maintain now as we have always done, that this is the normal condition which should obtain not only in the politics of Virginia and the South, but the entire country.

It simply requires a moderate degree of toleration and concession on the part of the whites and of intelligence and toleration on the part of the colored people to make this condition of affairs universally obtain.

The colored and the white people of Virginia and the South have a great deal to learn and a great deal to forget. Unfortunately the policy pursued by the whites of the South since the War, and the policy which the colored people have pursued as mapped out by their unscrupulous leaders have so complicated matters as to make the unravelling of the skein a task requiring the very highest statesmanship. This latter element has not up to a very recent date been pursued by either race. The Divine element of reason has been completely eliminated from the treatment of the problem, and savage passion and impetuosity have been the gauge of conduct and expression. Hence the "Bloody Shirt" business and the useless recurrence to that theme by politicians in search of an issue; hence the solidarity and boundless arrogance of the white people and the clannishness and gullibility of the colored people. That we are able to discern in the black obscurity some small ray of light is to be hailed with pleasure by every man who desires to see peace, concord and prosperity shared by every section of our common country and by every class of our very heterogeneous population.

One of the most striking things we came across in Virginia was the almost universal acceptance of the settlement of the debt question. Nobody cared to discuss the matter. And yet this matter cannot be honestly regarded as settled until Virginia has entered into a mutual and equitable

understanding with her creditors. The reference made to the matter by the Lynchburg convention shows that intelligent men take our view of the matter."

Mr. Fortune further says, in very direct language, that the votes of the colored race must in the future be appraised at a very different valuation from that which has been put upon them in the past. It is no longer, he thinks, a matter of sentiment, but "purely a matter of business."

"We are not looking for the friendship of the Democratic or Republican party. Friendship, in politics, does not amount to a row of pins. We have enjoyed the friendship of the Republican machine for twenty years, so that as an outgrowth of this sentiment that party has come to regard us as dependents and hirelings instead of loyal, devoted allies."

Politics is purely a matter of business. Each promise to give by any party is simply for value received. There is no such maudlin sentiment in the transaction as friendship any more than there is in negotiating a loan with a close-fisted banker. He lets you have the use of his money on good security and high interest. So it is with parties. They want votes and for these votes they promise through their platforms and their leaders to give certain values in return.

Now, what the colored people of this country want is justice—the same measure meted out to the Irish and the German elements of our population. They are weary of sentiment, sound and fury. Such nonsense amounts to nothing. The manhood and the natural and constitutional rights of the race are what we contend for. If the Democratic party want your votes it has only to proceed on the conditions here laid down to secure them. We don't want any friendship or lofty condescension from Republican or Democrat; we simply want a square honest deal, as men and as citizens based upon the honest vote it is our high privilege to control."

The *Virginia Critic* publishes the following letter, which, though perhaps a little obscure in style, still shows that the author knew what he meant, and that his meaning lay in the right direction.

"Every paper that one picks up now-a-days has something of Political Independence of the Negro. The question is a growing one, and so widespread is becoming the political conviction that unless something is soon done it will ripen into an open opposition. The Negro in the South is beginning to see the truth of the statement made by that gifted and philosophical editor of the *N. Y. Freeman*, namely: that 'the nightmare of party neutralizes all our efforts and bars the advancement of the race.'"

We are living in a new age, politically speaking, and under a new administration, and as the age is new and the administration is new, it becomes us well to adjust ourselves to the altered conditions of affairs. Then again our *interest* is in the South. Our friends, in the ordinary business of life, are found here. If we want favors done we must look for these favors among the people for whom we daily labor. Those scenes of bloodshed and murder will never more occur if the proper understanding is brought about in the Southern States between the two races. It is to our advantage as Negroes to look around us and cogly and calmly weigh the situation as it presents itself. Then let us act as best becomes us. We are only creatures of circumstances, too ready have we been to rush to every politician that has started up and called himself our friend. Such tendencies in us as a race weaken rather than strengthen.

Another fact is potent to my mind, it is this, that the more real interest a man has in a locality, the more readily will he adopt the sentiment of that community. We often hear men say, if I lived in such and such a state my politics would be different. We must learn to do the same thing and not spend our lives in a hopeless fight for political supremacy in a country where the white man will ever rule. We do stand much in our own light to oppose the wealth and intelligence of our section."

The *Critic's* editorial view is this; The purging of politics is needed in Virginia, and we will hail the day when the colored vote will so shape themselves as to wield a power. "The color line," the bugbear of politics, particularly in the South, is dug up by stump orators of the two contending parties to serve as a means to pluck the flame and power. Men of all grades and shades of society are all good enough to be a political dictator—to crack the whip of bossism over the least favored 'brother'—blame the color line is raised to the detriment of the colored voter. We abhor and condemn such claptrap and hope the colored race will

trample down the influence of all men who are ready to bring forth such an issue. The long night of darkness through which the American Negro has been wandering has begun to dawn into day and no stumbling block should hinder its progress. We will remain a minor factor forever, unless the race set aside men whose only desire is to elevate self. If we are citizens we must vote and act upon principle of right and justice and expect others to do likewise.

What will the color line issue profit the race? When bad blood is engendered in the heated political canvasses, who suffer the most? Whose blood is spilled? Whose widows and children go out into the public highways to beg their daily bread? Who is punished for the bloody acts committed? Who will prevent the repetition of the bloody acts? Answer these questions before you think of supporting men and measures that tend to bring about that diabolical issue 'color line.' We hope that young men who have had the advantages of education, will unite and that the gray haired sires who have toiled in vain will assist to put forward every possible effort for a union on matters pertaining to the interest of our people; stop the everlasting oppression in our own camps, and put the political bosses as far as we are concerned, thereby defeating the attempts of political culprits to use the race as a tool.

The *Virginia Star* exhorts its readers to stand by their old friends, and not to make a leap in the dark—on the principle that "tis better bear the ills we have, than fly to others that we know not of."

"Those who are ever ready to criticize and condemn our Republican leaders would do well to remember that the Republican party was always a nonentity until Gen. Mahone assumed the leadership of it. Let them remember that colored men were never before honored, and preferred as under Mahone's leadership. Let them also remember that the Republican party of this State was defeated and lost its power through just such senseless bickerings, fault findings, jealousies and vapors as those to which we refer. The entire population of Virginia is over a million and a half. The whites outnumber the colored by two or three hundred thousand. The entire voting strength of the State in round numbers is three hundred thousand. The white voters in the State outnumber the colored voters of the State about one hundred and twenty thousand. Now if we raise the race question, what is to become of us? While two armies are confronting each other it is high a time for dissections in the ranks of either? Can we not stoop to conquer? When the battle is over, the victory won, and our leaders do not show a disposition to be just, it is our prerogative to cast them down from power. But for the sake of all that men hold dear let us not quarrel in the face of the enemy and on the eve of battle. It is impossible that we should understand the motives of our leaders. Neither can they stoop to consult us about every step they take. We must trust somebody. And whom better can we trust than those who have already shown themselves capable by leading us to victory?"

The *New York Freeman* is not so much afraid of 'raising the race question' and in a very honest spirit recognizes the difficulties of President Cleveland's position and the good work he is doing in the line of party reform.

"President Cleveland, it appears, is determined to show, so far as his Administration is concerned, that the colored people of this Republic are citizens in the broadest sense, and shall have a decent participation in its honors and usufructs. We are compelled to recognize the fact that Mr. Cleveland has been, and is, much hampered in putting into practice the expressions of high regard for and interest in the race accredited to him in the early stages of his occupancy of the Presidential office, in the phenomenal absence of colored Democrats upon whom to confer honor and confidence. We should recognize this great obstacle in every movement Mr. Cleveland makes in matters affecting us. While, as we believed and said at the time of his taking office, Mr. Cleveland was disposed to treat the colored citizens of this Republic in a fair and magnanimous spirit, the partisan material upon which he was compelled to draw was marvellously small. The opposition of his party to the appointment or retention in office of Republicans, black or white, was recognized by the country at large as one of the obstacles in the way of President Cleveland in dealing with the colored people in the broad spirit of his inaugural address and in views expressed by him to various bodies of colored men who from time to time called upon him at the White House. But in this, as in other grave matters of policy, the President has shown himself equal to the plan he, had

outlined, and his party has shown a most commendable spirit of acquiescence in his policy as far as we are concerned.

The Democratic party is making history for itself which honest lovers of the race and good government can use to advantage when the time comes. When the colored people are taught that the Democratic party recognizes through its leaders that they have an honest right to participate in all the benefits of co-equal citizenship, and that, too, whichever party occupies the high seats of power; when the Republican party can no longer point to the fact that the colored man has nothing but injustice to expect except it controls the powers of government, then indeed will the Bloody Shirt argument cease to have point and effect, the color-line in politics will vanish like the mist at the approach of the morning sun, and the occupation of demagogues, quacks and tricksters, in at least that fruitful field of agitation, will be forever gone. May the good work go on, and may the race at large refuse not to accord to President Cleveland the full measure of credit for the work he has thus far done in our behalf."

When the *Charleston News & Courier* subscribes to the utterances of the *N. Y. Freeman* we may fairly feel that the day is not far off when the lion shall lie down with the lamb, and we can only the editorial above quoted from the latter and the following quotation from the former come pretty near to political unanimity.

"It is nonsense to say that there is any effort, or suggestion of effort, to revive 'the passions of the rebellion.' The people are heartily tired of misrepresentation and misgovernment, and it is just as important for them to show this feeling as to entertain it. The political light that is kept hid under a bushel is a very little use for campaign purposes. The light on the hill can be seen and recognized of all men, and the light on the hill, in the Virginia campaign, is the long line of its citizens who are riding so early toward the polls. Virginia has had a hard time enough, God knows, under the rule which Virginians now seek to shake off forever."

The *Memphis Appeal* gives us for our closing item an editorial which sounds as if the Thanksgiving Day now near at hand, might be kept South as well as North, coming to be, not, as in the past merely a New England, but at last truly a National, festival.

"The ice-pack has at last melted. The firm sunlight of patriotism, justice and intelligence has grown too warm for the ice-packs of sectional hatreds, and they are drifting down the stream and will soon be swallowed in the ocean of oblivion. Grant's last utterances did much toward warning into life a national brotherhood and unlocking the frozen rivers of patriotism. The ice-pack has given way, the mad passions born in war have crumbled with it, and from this time forward the stream of patriotism will flow on, binding the people together in a loving brotherhood. In hearts that have long been cold and heavy the light of a new hope has been kindled. In every section of the Union men are turning their backs on the sad past and looking to the cheerful future."

The signs of the times indicate that with the close of the canvass in Ohio, on Tuesday 13th instant, sectional hatreds will be buried out of sight forever. But now that all sections are not only joined together by bayonets, but by the still stronger ties of sympathy, affection, a common interest and a common destiny, no mind can comprehend the future greatness and grandeur of the United States of America. New States will knock at the door of the union for admittance and will add additional splendor to the republic. Never did a nation have such future. Patriotism has supplanted passion; the war debt will soon be liquidated; we are a people with all other nations, the envy of mankind, the hope of the poor and oppressed and the terror of tyrants. With a union of hearts and hands our progress will be steadily onward. In 1890 there will be 15,000,000 more people on our soil than there were in 1880. In three decades more after 1890, at the regular progress which has been made in the past, we will number 200,000,000 of people. The babe just born will not have reached middle age then. Hundreds of thousands of railroads will be built, and the far West will be occupied by the flow of immigration.

Where will the flood-tide be twenty years hence, now that the people of the South have been taught the friendship? There is nothing that can mar our high destiny, and what a country ours will be fifty years from now."

## SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

## The Pity of Slave Jail.

During a stay of some days in the pleasant little village of Chatham, I learned that my young friend Kitty Maurice, who is living there, was in the habit of visiting the jail every Saturday to read to the prisoners, and was well versed in affairs pertaining to that institution. I found of an opportunity to accompany her on her weekly visit, and about 6 o'clock on a lovely sunny afternoon we set out.

Kitty, who is a sweet, pure looking young woman, with a remarkable air of self-dignity about her, being dressed entirely in white, with a simple straw hat, carried a package of Sunday-school papers and a little book in her hand, and made a very agreeable picture of a philanthropist.

We went first to one of the stores in the village, I did not know why, until Kitty asked a young man standing in the doorway to go with us to the jail. I learned that this is one of her rules, as she is very particular about observing the proprieties.

The jail is a new, substantial and handsome building, in the centre of the place, set in the middle of a large yard and close to the Court House. It is one of the finest structures in the town, and there is nothing in the external appearance, which would at first sight indicate its character. As we approached the jail, Kitty discovered the jailor at a distance, and despatched another youth to tell him she wanted him. She has taught school here for several terms, many of her pupils being older than herself; and she seems to be looked upon in the village as a being of some superior order, who deigns to dwell among the wandering sheep of that fold in the capacity of shepherdess, and any of the men and boys of the place do whatever she bids them as if it were their bounden duty, and her orders could not be gainsaid.

The jailer came when called, for, and at once ushered us into the airy, well-lighted ante-rooms of the jail. Then he produced some ponderous keys and opened a heavy door leading into a great stone hall, with large grated windows on two sides.

An alley some four feet wide ran around three sides of this hall, surrounding a huge iron cage, with upper and lower stories, divided in cells about 6x10 feet in size, several of them containing prisoners. There were two staircases of iron, one leading to the cell occupied by women, the other to the men's division upstairs.

The place was clean, and nothing in the least unpleasant in the atmosphere. Water was piped into the cells, so that the prisoners could get it at will, and the jailer said once a week, the prisoners were made to come out, into the hall, one by one, and thoroughly bathed. They had room enough to move about, and there was as much comfort in the arrangement as could well be given to men closely confined. They had swinging beds, which could be put out of the way when not needed.

It was intensely warm and the prisoners looked very dismal, as their eager faces peered at us through the bars of the cage. Most of them were colored men. The jailer said their offenses were chiefly petty larceny and fighting in drunken rows, and always had more men than women, more colored than white. He did not think punishing people this way did much good. The same people often came back to him. The negroes were generally very ignorant. It was rare for the colored people who had had any chance for education to break the laws. One young man, who had been off to a boarding school, had stolen a pair of trousers and had been sentenced for 30 days in his vacation. The officer, who was a pleasant, cheerful looking young man, said with a smile, that this student who showed very poor results of education, "got his disabilities removed in time to go back to College the next term." This was the only case of the kind reported.

The Hampton students were generally very well spoken of by the white people.

A white man, old and coarse looking, had just been brought in, charged with robbing a house in the country of \$500. He was very rough in manner, but softened a little when Kitty in her gentle way talked with him and asked if he would like something to read. "A newspaper" he said a little less gruffly, and eagerly seized upon one she gave him.

We had been told a colored woman was in jail for killing a man, and when we asked for her, the jailer gave his keys to an old lane, simple looking black man, who had been following us round like a dog and talking all the time of Miss Kitty's sweetness and goodness, and told him to bring the girls down. I learned that he had been put in jail some months before for stealing something to eat, and was so entirely tractable, so anxious to do anything he was bid, that the jailer had kept him when his term was

out, as a sort of non-commissioned officer, and he was very useful in the jail.

When not obeying some order from the jailer, the poor old lame creature sank down on the floor in a corner, with an air of abject humility touching to see.

When given the keys he stumped briskly up the stairs, and soon returned with two young colored girls.

One of them was very black and had a heavy stupid face, and scarcely raised her eyes when spoken to. The jailer said she was charged with stealing.

The other girl, some fifteen years old, was about the color of a ginger cake, and had a bright pleasant face, and lively way of talking, just the sort of girl most southern ladies would like as a nurse or housemaid. She seemed much pleased to get out of her cell and have a chance to see visitors, and came cheerfully forward with some lace knitting she was doing in her hand.

It was difficult to realize that this lively looking child, for she was very little more, had committed murder and I could hardly bring myself to mention the subject to her. She was nothing loth to talk of it, however, and seemed to have no compunctions at all in regard to what she had done, considering herself the aggrieved party. She was eager to tell how it all happened. Said the old man she had laid low, had hired her with several other young Africans to work his tobacco patch, and had quarreled because they did not work fast enough to suit him. He had accused her of idling and struck her several times with a stout stick, and she had "picked up a rock and knocked him in the head; she did not mean to kill him, only to hit him because he had hit her first." The jailer said he supposed the girl would be discharged upon examination, as there was no malicious intent in the crime she had committed.

The girl when asked about herself stated with evident consciousness that her mother belonged to "Saint Houston" the great slave holder of the district, who had once owned three thousand of his fellow creatures and had immense landed estates in several counties of Virginia and North Carolina. As to her chances to learn, the girl said she had been to school a little, had begun to learn to spell and took very kindly to the suggestion that she might learn to read.

Having collected her audience, Kitty talked to them a little and then read to them for some time.

The fair young girl in her purity and gentleness looked like the image of white-robed Virtue, surrounded by these dark and gloomy faces stained with the record of crime and brutalized by vice and ignorance.

While regarding the scene with interest, I could not wonder why of all the people of the village, which contains eight churches, each having its pastor, with one or two assistant preachers to spare, it had occurred only to this young lady to carry the divine message of love and comfort to the "spirits in prison" and those who sat in the shadow of darkness.

The jailer said as a general thing he had no trouble at all with the prisoners, but recently he had had a very hard case, a young white man brought in from one of the eastern districts, who had been so violent and uncontrollable, he had been compelled to resort to extreme measures with him.

This prisoner, named Palmer, a strong and vigorous youth, in appearance a fine specimen of humanity, bore a terrible character and was, it seemed, an utterly brutal and depraved creature. He was arrested for horse stealing and the officers who committed him warned the jailer that he would have his hands full in trying to manage him. He had never been known to work a day in his life, had from childhood been a gambler, drunkard and outlaw. He was believed to have murdered his mother, though the evidence was not strong enough to convict him, the old woman having been found dead in her lonely cabin, the body lying between two beds, where she had been smothered. When first brought to the Chatham jail he had raged like a wild beast, had fought the jailer and other prisoners, and behaved like the savage he had been represented. Kitty Maurice had gone to the jail on her weekly visit, without having heard anything of this mountaineer and talked and read to the prisoners as usual. She had noticed a new prisoner, a great, fine looking white boy, who had stared at her with wondering eyes when she entered, had seemed dazed when she approached and talked to him, had drawn near to her as the bars of the cell would admit, thrown himself full length on the floor with his face pressed close to the iron and gazed at her without changing his position as long as she stayed. When she slid the jailer, Kitty met one of her cousins, the Deputy Sheriff, who said he had been looking out for her to warn her not to go to the jail on account of an outlaw who had just been brought in and that she must not think of visiting the prisoners while he was

there! It was this lion of the mountains who had laid down at the feet of the lamb!

The desperado continued utterly savage towards the men about him, and a culmination was reached when he used some out-rageously insulting words to a poor, plain white man who visited his poor husband in the jail.

The man roused to fury by the insult of his wife sprang at the outlaw who was in the cell with him, and a battle followed. The jailer and his aids were summoned, and it required the strength of four men to tie the young desperado who would probably have killed the other prisoner if he alone.

The other officers were called in and after consultation it was decided to whip Palmer severely. After this discipline they had no further trouble, the young savage keeping sullen silence until tried, convicted and sent to the penitentiary.

I wanted to visit the Alms house as well as the jail, but my short visit did not permit me to do so. With much that was discouraging, and which the school and ignorant classes. I heard of one case of faithfulness to filial duty that was gratifying enough to go into Ingersoll's paper, which is to record the good things of humanity instead of the crimes and cruelties.

Many years ago, a young white woman in Plevyville county, committed that most grievous of offenses according to the Southern standard, in giving birth to a child whose father was a Negro. The woman and her boy for many years led a wretched life, poor and outcast, deemed by all the lowest of the law. The boy grew older and reckless his condition, he seemed, like Ishmael, to feel that "every man's hand was against him," there was no friend to help him to rise. He suddenly disappeared and in the course of time his mother, old, infirm and miserable, was sent to the alms house. There she had lingered, ignored by her own people, forgotten by the world. Years had passed away, when a stranger, a young man, had come, the outcast boy, grown to be a vigorous man, appeared again in his native village. He had managed to become independent and had returned to seek his poor disgraced mother.

He took her from the alms house, rented a little farm near the village, furnished the house, established her in it, and provided comfortably for her declining years.

## Legend of Laleikawai.

Sometime since, Kamakan, one of the best Hawaiian historians, now dead, published in the *Kuokoa*, the native paper, the Legend of Laleikawai, of which Rev. L. Andrews said in the preface of his Dictionary, that many volumes more in the same quality might be published displaying the power of imagination of the Hawaiians and the richness of their language for expressing the nicest shades of love, hate, jealousy and jealousy. Like nearly all nations the Hawaiians thus had a sort of literature of a heroic age handed down from generation to generation.

The abstract of the "Kao" (story) is that an ancient King of Kauai at his marriage made an agreement with his bride that of their future children the boys should be preserved and the girls should be given away in marriage. His first child, a girl, was, by a family friend, hidden away in a secluded valley and grew up, under the name of Laleikawai, to be of superlative beauty; and was always distinguished on account of her superior nature by a rainbow bending over her place of residence.

At length a famous Soothsayer discovered, by divination, the facts about her and undertook to find her for a wife for the King of Kauai, the successor of her father.

By divination her guardian learned of this Soothsayer's search for her, and removed from Kauai to Oahu. The Soothsayer followed her and one evening with great joy beheld her rainbow arching over Koolau, and went to rest hoping to find her in the morning, but during the night her guardian was warned in a dream and fled to Molokai.

The Kauai King now accompanied the priest in quest of her. He got a glimpse of her rainbow one night from Oahu as it was bending over Molokai. But like the fabled pot of gold at the rainbow's end, when he reached Molokai she was not there, but her rainbow was to be seen on Maui. Warned again by a dream, her guardian descended from the Maui mountains to Kaula, Maui, to obtain a canoe. Laleikawai was here so careless as to let her veil a moment blow aside, and the natives of the region were amazed and enchanted by a glimpse of superhuman beauty. Her flight with her guardian continued to Lanai, to Ulupalakua, Hana, and at last to Puna of Hawaii. The chief followed along the shores of Maui everywhere attracting great crowds, following with admiration the power and beauty of his bodily form. Sailing in a canoe from Hana he landed at Kohala, where a great multitude of the Hawaiians people were gathered for games. He entered the crowd and

gave challenge to the strongest man for combat. Some of the people privately advised him to desist, informing him that the man challenged was Kohala's "pokela" best man, and that he would be killed. The chief however persisted and in the contest killed the "pokela."

At length early one morning with the aid of divination he with his priest reached the mauka edge of the woods of Puna and beheld the house of Laleikawai with the rainbow bending over it. He was bearing with him the most splendid of the famous feather cloaks as a wedding present. He suddenly exclaimed to his attendant, "It is all of no avail for us to go on." Let us return home. I have brought the most magnificent present to be obtained in these lands, the choicest of feather cloaks, but see, even the very thatch of her house is composed of such feathers. What is my cloak worth to her?

He returned to the beach, but soliciting the aid of the gods came back to witness the contest of the Lizard and Dog gods, and at last by the help of his celestial friends obtained her whom he had so long followed for his bride. After marriage she was sought by her other suitors, who sprang away to the Society Islands by her Lizard god, and at length was herself deified in the skies.

The very great value and efficiency of the Life Saving Service is probably hardly appreciated even by those of us who live directly upon the coast, and although the story of its work is as exciting as any romance, or often, alas, as any tragedy, yet there are comparatively few to whom its existence is anything more than a bare fact. The thoroughness of its organization and the fortitude and heroism of the men who stand always ready to risk their lives in the service of others, have achieved results of which modern humanitarian science has reason to be proud. The last report of this Service is more interesting than any of its predecessors, and we should like to attract the attention of our readers to the following notice of it taken from the *Popular Science Monthly* for October, especially on account of its bearing upon the question of Civil Service reform.

"Five stations were added during the year and the number of stations at its close was 201. Of these, 56 were on the Atlantic 37 on the lakes of the Ohio, the Pacific, and 1 at the Falls of the Ohio. The whole number of disasters reported was 430, endangering \$10,607,990 of property, and the lives of 4,435 persons. Of the persons, all but twenty were saved, and only \$1,446,586 of the property was lost. The number of vessels totally lost was 64. The Service has co-operated in scientific movements by assisting investigations in marine zoology, and by collecting 'singing-sands' for examination by Professor H. C. Bolton. The concluding statement in the summarized report, regarding the character of the Service's men, is very suggestive. It is: 'It is felt that seldom the history of organizations has a body of men been assembled so equal in qualification for the stern tasks set them, and so splendid in their efficiency.' That they can have such a character collectively is clearly attributable to their having been selected for their posts solely on professional grounds, without the slightest reference to their politics. The constant purpose of the officers in charge has ever been to obtain for station duty the ablest and trustiest surfmen. Previous reports of the Service have made apparent how difficult it was, for years, to limit the choice of these agents to the simple tests of their ability and trustworthiness, and how great and absolute a help in this regard has been the statute of 1876, peremptorily exempting the selection from political influences. It can be safely said that in no instance have the requirements of that statute been disregarded, either in spirit or letter."

## Horsford's Acid Phosphate.

## ADVANTAGEOUS IN DYSPEPSIA.

Dr. G. V. Dorsey, Piqua, Ohio, says: "I have used it in dyspepsia with very marked benefit. If there is deficiency of acid in the stomach, Horsford's affords more relief, while the action on the nervous system is decidedly beneficial."

## SILHOUETTES.

Where Some of our Money  
come From.

Here is another phase of the interest of the school, an interest pathetic indeed, always the sympathy of those poor in

These are a few of the many cases that constantly come up, showing us how great a responsibility lies upon officers, teachers and students to use wisely and well all opportunities which money so given may bring to and one connected with this school. There is something in such gifts as these that consecrate and render holy the whole work, and we may feel sure that this school has a warm place in the heart of everyone who offers upon its altar such loving sacrifice as this. God grant that the altar may be not unworthy of the sacrifice.

After this breathless and original account of "Columbers and his men," in answer to the next question "Tell what settlement were made," our young student comes back up for the second innings with the following:

"The settlement were made by Columbus and his men when they found America some said. If it was not enough to settle America they would send of after some to help settle America but it was enough to settle America so they all got together."

The following graphic description of Boston Tea Party must not be omitted.

"There was a ship that was sent in w tea and the ship was loaded and some of people went to by tea but they could not no tea and so the people told them that t had some tea coming and they should have none of their tea and it was a le time before that and they throw all the tea over and said they would drink no hu drink water and eat their meals with any tea and all their tea was thrown aw board that is all I no about this lesson and I have never read this lesson at schu, but I read it."

Our Broom Maker.

Friends who contributed toward the education of the blind man, Daniel Johnson, the trade of broom making may be introduced to hear what he has to say for himself after a summer of work at his new trade. He visited him to-day and found him at work in a large airy room in the main shop on the school grounds. His little brother was helping him by sweeping up littered brooms and making himself generally useful. Every morning the little brother leads his father over from Hampton to the school, stays with him during his work hours, goes about with him when he needs about selling his brooms, and leads him back to his home at night.

mal narrated a couple of the questions propounded. "Where can I find the *Apo chrypha*?" "Please Miss, do frogs have bones?" The natural history classes set the Juniors all at work on the *Apo chrypha* in trying to produce from our limited stock of books enough works on natural history to give the whole 120 of the Junior class an opportunity to read at least one of the interesting story. One of the favorite requests repeated again and again by students who have no pronounced literary tastes was their own is "Please Miss, will you let me call for some book fancied for its title alone as last year when a small book, of wondrous poetry entitled *Walden*, came gently to our first time since its arrival on the scene. In the early years of the library, into the light of day from its retired position on one of the shelves. This year the unsatisfied demands first for a book on "etiquette," then for a complete letter writer, and falling in these directions recourse was finally had to the *Apo chrypha* with the results giving rise to the curious question, "What year in connection, I believe, with the Natural History classes, for a book on the "hoppergrass and the crustacean grass." It is needless to say that the library was unable to furnish the desired

A VALUABLE REMEDY FOR GRAVEL.  
Dr. T. H. NEWLAND, Jr., St. Louis, Mo.  
says: "I have used it in diseases of the  
organs, such as gravel, and particu-  
larly gonorrhœa, with very good results.  
I think it a very valuable remedy in the  
above cases."

## Letters from Hampton, Graduates.

A CONSTANT NEED. ROUGH AND READY. OLD AND NEW. DARKNESS AND LIGHT. "WITH ALL MY MIGHT."

## A CONSTANT NEED.

The never ceasing appeal from our students for reading matter, papers, books, Bibles, hymn books, cards, pictures, any and everything that can be utilized in a school room, is and can be answered only in part. Good material of this sort is used literally to the last scrap by these young teachers, and our friends can hardly see us too much of it.

—Prince George, Co., Va.  
Jan. 31, 1885.

My Dear Miss C—: I received your circular some time ago and would have responded long before this but I have been too busy to write. You see by this heading that I am away from home. I came to this country in December to take a school; have taught two months very successfully. I have thirty pupils on roll and get an average of twenty-five, though I am only paid thirty dollars for an average of twenty. My children are fond of me and I think a great deal of them. Indeed I like my work ever so well. My health is better too than it was when I was at home. The school-house is an old log church, daubed with "nature's purest production," has four wooden windows that slide back to admit light, is situated on B—'s road in B—School District. Such is the rude description of my school-house and it is in the center of a dense forest. I live a quarter of a mile away at a place called "Edbanks" on Powell's Creek a branch of the James River. It is within twenty-two miles of Petersburg and nine of City Point, Va.

Mr. B—, the superintendent, comes to see me quite often and is much pleased with my manner of teaching. The last time he came to see me he asked me if I'd make a drawing of the school-house and grounds, and send it to him by the last of January. I did so and he was so pleased with it that he sent it to Mr. R. R. Farr, Superintendent Public Instruction, Richmond, Va., for the Superintendent's Conference that will be held there February 1st, of this year.

I hope to have something more interesting to write next time. I don't get any papers to read now, but I know it is my fault. Remember me kindly to all my friends and co-workers but accept my love for yourself. I will be thankful for any reading matter you will send me. I have organized a Sunday School also, which I nearly forgot to mention, and we have no papers or bibles, please send us anything you can spare.

Yours truly,  
S. E. B.

## ROUGH AND READY.

This picture of this little mountain settlement with its appropriate name which is "to last as long as the rock ribbed hills around it," is a good one. It looks as if the "rough" place had found a "ready" teacher.

—Virginia,  
February 20th, '85.

My Dear Teacher—: I often think of you as my most highly prized correspondent and I seem to neglect you as my least. But it is not so. I just neglect you until I get ashamed to write, thinking that you may improve or think hard of me for my long delay. Notwithstanding all this I write to you now trusting that you will receive this immediately.

I am now teaching at a place named Rough and Ready. I suppose from the roughness of the situation. From the appearance of the place, I think the country has an appropriate name which will survive as long as the rock ribbed mountains around it, as they do now. I have a school at this place, numbering at present 40 pupils only. There are a great many pupils around this place, but from the poverty which I see surrounding it, they are truly unable to come. I would not have my present number had not been for some special exertions I used to bring them out. My school-house is situated upon a hill and the nearest pupils have two and one half miles to walk every morning in the evening. It is hard for me to make an average, and the Board says if I don't make an average they will only allow me \$1.00 per capita for every one in actual daily attendance. It is no fault of mine that I fail to make an average, and they have no right to make a sacrifice of me for the negligence

of the patrons. I am now in a place that seems to be forsaken, therefore education and enlightenment are necessary.

Really the people are uncivilized and too much so to know how to behave themselves when in company, or at divine service. I labor harder here than I have at any place since I have been teaching. Heretofore they have had a teacher here who was unqualified for the work and the Board only paid him from \$12. to \$15. per month for his services. And you know sure as this ruins a school, consequently, it has taken me two thirds of my time to put the school in working order. No sooner had I got to the place than I found that no Hamptonians had ever been here, and upon inquiry I found that there had never been one here who had done the work of a good and efficient teacher.

The Sunday school closed the first of December until the first of May on account of bad weather, and children living so far from the church. Since I have been here I have organized a Debating Society in which all participate quite freely. I have the largest of my boys to debate every Friday evening on some easy subject. This is often called a "God forsaken place," by the lowest of spoken men, but it is not true, for I find some true Christians here who seem to know nothing else in the world but how to serve their Maker. There are some parents around here who have never sent their children to school, and with some of them I have prevailed and got them to send them out. I made an arrangement with the School Board, by which I can furnish books to indigent pupils, having them charged to me until I return them at the close of school. My school is very near out now and truly I am so sorry of it at all. I expect to be an agent for the Every Day Encyclopedia & Peck's Popular Dictionary this summer. The book is published by Thayer, Merriam & Co. of Philadelphia. They offer me a very good commission and the book is one I think will sell very fast.

Well I must stop before I go too far for your patience. I hope to hear from you. I would like to hear from you concerning the book. Do you think it will pay, or do you know of one that will suit me better? Please drop me a few lines concerning it.

I must close for this time; when I close my work here I will write you a long letter and try to compose it better than this.

I am yours with respect,  
A. T. S.

## OLD AND NEW.

The teacher who finds himself the victim of "complaints that he has departed from the almost obsolete practice of teaching children their A B C's," must remember that he has many fellow sufferers. The transition from the old to the new in education is not accomplished in a moment, or with a single effort.

Miss C—:

Dear Friend: My health has been so poor until very recently that I did not dare engage in teaching or anything of the kind. Manual or mental labor was required. Nevertheless I taught school privately, and I have no special cause to regret the fruits of my labor. One young man who came to me in July after leaving school, has successfully passed a regular course at the Normal School and has been out about three years teaching. Also a sister of this young man who came to me, is in the Senior class, and if nothing happens to prevent will graduate this term.

While it may not be quite the thing to speak so much in my own praise of what I have done, yet when parents and children come voluntarily and acknowledge the benefits derived, I only repeat their sentiment.

I feel that though I have never taught public school one hour, I have been of service in maintaining and defending its principles.

There are a great many people around here who do not fully realize the care and responsibilities of teachers; and they are ever ready to blame them because their children do not advance as rapidly as, in their judgment they ought. And also there are very frequent complaints that the teachers have departed from the almost obsolete practice of teaching children their A B C's.

I have at all times tried and believe I have succeeded in convincing them of the benefits to be derived from the new system, while in the old only one thing is accomplished and that the knowledge of the letter, under the new three distinct objects are in my judgment attained, viz: the eyes are trained to the appearance of these words in writing; second, the hand is trained to the formation of letters, and third, the mind is trained to the appearance of the letters. I do not mean to be understood by saying that I never taught in a public school, that I am complaining, because I do believe if I

were to make application, that I would be appointed to some field of work about as readily as any other applicant.

The schools have closed their public terms, and private schools are very liberally patronized.

I was much pained at the death of Miss L—but the burden of it was removed when I thought over the fruitfulness of her labors. I have a very pretty little hymn book she gave me on the day of my graduation, and it will be a very long time before I will forget the pleasant smile that accompanied the gift. The manner of the presentation was more than a thousand books to me, and that being my first and last meeting with her, being so favorably impressed, I believe those who had the pleasure of meeting her often, enjoyed the counsel of a true and whole hearted Christian.

General Marshall, like most faithful soldiers, felt that he was entitled to some rest. And may God's blessings be with him in his retirement at his pleasant home.

I am very truly yours,  
J. J.

## DARKNESS AND LIGHT.

We could ask no better illustration of the darkness which exists in some parts of the South, nor of the way in which the light must be carried into the thick of it, than is given in the following letter.

Stk mo, 20th, 1884.

Dear Miss C—: Your letter containing the sum of two dollars has been gladly received. You said that I could either give it to the School, or the Temperance Hall. I thought just at that time that the school was the more needy of the two, so I handed it over to Mr. R—, principal, who said that he would write and thank you at once. We were very thankful to be remembered and hope that, in time, your kindness will be rewarded.

I have my hands full of Sunday school work for the summer. Last month I was elected General Superintendent of all the Sunday schools of the S—Baptist Association. Of course there is no money in it at all for me. I accept it as a primary work and when I travel by railway the association or the Sunday school pays expenses. I have already visited four schools and introduced the International lessons. I have already been much surprised to see how far behind many of our young people are. On last Sunday I visited Zion Fair S. S. which is about 48 miles from here, and about nine miles from the P. R. railroad.

I found the people there generally opposed to education. Three Sunday schools met at that church to have a grand march. I knew the pastor and most of the teachers. I suppose there were about 300 or 350 children present. The parents and children listened very attentively to what I had to say, and seemed to be much interested. But after I had finished speaking about education and Sunday school work, etc., a young preacher rose, came before the audience and said: "Some people's always talkin' about education, education, get Christ in yo' hart and that is education enough." I don't want no Benedict University, (he thought that I was a teacher from the Benedict Institute of Columbia, S. C.) I want no institutes nor schools, I got 'my learnin' from Christ and you all must do de same."

He spoke in this strain, for about fifteen minutes, but I don't think his speech had much effect, for all seemed very anxious for me to come again. I was told by one of the teachers, that in that large audience of five or six hundred there was scarcely one young woman or girl who could read, and very few boys and young men. I had taken with me some papers and quarterlies which were thankfully received. They promised to be ready to begin with the International lessons next quarter. If you have any books or papers to spare please remember my work.

Sincerely yours,  
F. A. P.

## "WITH ALL MY MIGHT."

Day school, night school, Sunday school, Temperance work and a Christ-mas tree!

The motto on the wall of this school room must indeed be "With all my might."

—County, N. C.,  
Nov. 11th, 1884.

Dear Miss C—: I have just been made the happy recipient of your letter. Words cannot express how much I enjoyed its contents. I am busy now, but while the children are getting their lessons I will answer your letter. First,

I guess you would like to hear about my work. I am still in the field of labor as teacher and have been ever since the year of my graduation, which was in June, 1878. I have been teaching a portion of every year not only day school, but night school and Sunday school, and am doing all I can in the cause of temperance, and I have taken your motto "Whatever I do, I do it with all my might." I have been successful in every school I have taught, have the good will and love of both children and parents. My present school began in August and will close Christmas eve.

I like teaching better than anything I ever did, and with the Lord's aid I will continue the work as long as I see I am doing good. My school is quite a nice one, situated on a very pleasant hill.

I have so many things to tell you, I nearly forgot to tell you about my Christmas tree. I shall have one the evening my school closes, which will be Christmas eve, and if you will and can assist me, I will extend a thousand thanks to you. I have begun to hunt up nice pieces for my students to say, and I shall ask the parents and friends to help me with little useful articles to fill the tree. I will thank you for anything you shall send me.

May your pathway be an onward walk to Heaven.

I am your friend,  
L. T. G.

## FROM OUR "CELESTIAL" SCHOLAR.

About a year ago a young Chinaman, Lee Shek Wun, was sent here by the congregation of a Northern church to go on for a time with his studies, and obtain a better knowledge of the English language. Being very bright and interesting, with a remarkable memory, he won the regard of his teachers, who regretted that he felt himself obliged to leave school at the end of the term in order to earn money to send to his father in China, to whom he seemed much attached.

The following letter will, we are sure, be read with interest by the friends whom he made among both teachers and pupils, during his stay at the School.

114 Second Avenue, New York City,  
September 10th, 1885.

Miss R—,  
Dear teacher:

I was sorry that I never have any chance to write to any of you teachers, so now I must strive to write to you a few lines to let you know that I have been well here. When I first came back to Brooklyn and New York City, all my friends were glad to see me here again and invited me to stay there longer with them. I suppose you have gone home Connecticut or somewhere else, but I hope you and all our teachers are getting long well and have very good and pleasant time for the summer. Please remember me to the General of the Institute, and all Indian friends for their kindness to me in Hampton Institute, and hope the Indian friends make their Lent the Hand Club to be increased and multiply and beautiful.

I shall not come back to Hampton any more, but I never forgotten all my best teachers and General Armstrong and should remember you and all of them as my best teachers. And hope you all teachers get your blessing for have done so much God's work down there, and hope the Lord will bless General Armstrong and give him rest. I like to hear from you all teachers and with my best wishes for your welfare. Write to me as if you feel like, and please pray for me that I may live a good Christian life and fulfill the duty of my respective station in life.

From your scholar,  
LEE SHEK WUN.

### Indian Department.

ELAINE GOODALE, In Charge.

Regular Contributors:

HERBERT WELSH, Cor. Sec'y Indian Rights Association.

ALICE C. FLETCHER,

REV JOHN J. GRAYATT,

MRS. A. S. QUINTON, Gen'l Sec'y of the Woman's National Indian Ass'n.

REV. SHELDON JACKSON, D. D.,

JAMES MCLOUGHLIN,

JOHN G. GASMANN,

MR. HERBERT WELSH is in Dakota, agitating the Dawes' Bill for opening a part of the great Sioux Reservation to white settlement. The friends of the Indians are in favor of the bill, but the feeling among the Indians themselves is strongly conservative. A meeting of their representative men will probably be held in Washington this winter to hear and discuss the measure.

The general tone of Western sentiment on the Indian question is often misunderstood. Among the better class of men on the extreme frontier there is a healthy, practical feeling in favor of Indian education, progress and self-support. Mr. Welsh recently held, by invitation, a conference on the Dawes' Bill with the leading citizens of Pierre, Dakota, a thriving little city of 3,200 inhabitants and the terminus of the Chicago and Northwestern railroad. The whole spirit of the discussion was one of entire fairness and moderation, and there is no doubt that Dakota will work for the bill.

Bishop Hare makes the important suggestion that instead of the issue of rations and annuity goods by the Government, compensation to the Indians for their lands should take the form of small monthly cash payments. Men of practical force and experiences such as Agent McLaughlin of Standing Rock, strongly approve the step. The general use of money as a circulating medium would correct many abuses, create a demand for home industries, encourage the trades and foster independence and self-respect. Many if not all the Indians are ready for it, and little more can be looked for in the way of actual growth under the present artificial system.

#### School Work on the Reservation.

There are two opposite theories of Indian education. The one deals with the Indian apart from his surroundings; the other seeks to influence those surroundings. The one aims to benefit the individual; the other exerts itself to save the community. The hope of the one is in the forcible separation of the Indian children from Indian life; the desire of the other is to fit them for immediate usefulness in their own homes and to fit those homes to receive them. Will the mountain come to Mahomet, or shall we not rather bring Mahomet to the mountain?

The enthusiastic advocate of Eastern schools, dazzled by their size, their ample equipments, their splendid efficiency, the immense influence they exert over public opinion, is almost forced to a one-sided view of the educational problem. The system of Indian schools to be effective, must be complete. It must cover the whole ground. Not one Indian child in a hundred, or one in fifty, but every Indian child of school age must be in school. The bulk of this work will naturally and as a matter of course be done on or near the Reservation.

The disadvantages of the Eastern school, as a means of handling this vast unorganized mass, are obvious and very great. Distance is an immense obstacle. The work must be done at long range—its aim more or

less indirect—its shots made almost at random. It is work for the future rather than for the present; the abstract idea governs the half-knowledge of actual conditions; there is necessarily a loss of immediate application in the provision for distant contingencies. The larger cost of transportation, the disastrous effects of a change of climate, the appreciable waste of effort on a certain proportion of unfit material—all these must be taken into the account. The advantages of the Eastern school are equally obvious—broader, influences superior resources, and the command and support of public opinion. Its relation to the day-school in the camp or the boarding school at the agency should be as the relation of the University to the "district school."

A great many theoretical objections are made to schools on the Reservation. The greater part of them can be traced to the old established fallacy of a hopeless mass of barbarism impeding progress and subverting order. There is no such immense discouragement. There is on the great Sioux Reservation a large body of reasonable, orderly, well-disposed people; willing to grow, ready to learn, naturally truthful, generous, religious, and susceptible of good impressions. Many of them are already self-supporting, and all might soon become so. They are mainly ignorant and very poor—absolutely without money—but the state of their morals as compared with that of a poor white community is remarkably good. They are passing, as a people, through a natural healthful stage of growth, and require only a gradual and wise change in the unnatural conditions which hamper their development, to make rapid and united progress. We do not want to educate the children out of relation to this great general movement. By education on the ground, with daily reference to actual needs and probabilities, parents and children are kept in sympathy, and the influence of the children in their homes is a steady, natural growth. The much-talked-of danger to the children from surrounding home influences simply does not exist—not even in the proportion in which we find it in all our white communities. The danger of an over-consciousness on their part, an over-assumption of superiority and a corresponding indisposition on the part of the parents to be taught, is to a great degree avoided.

Among other imaginary evils laid to the charge of the Western schools are the likelihood of the children's running way and of indiscriminate visits from relatives and friends. In both instances these fears are unfounded. Truancy is checked at once by prompt and vigorous measures, and the visiting, which is easily kept within bounds, is a means of enlarging the influence of the school and establishing its power.

Not will it be safe to make any sweeping statement regarding the inferior quality of work in the Reservation school. Some of the teaching is very indifferent, and some of it is of the very first order. I have never seen more complete control, more tact, grace and personal magnetism, more delightful order and method with an equally delightful spontaneity, than I saw in St. John's school on an Indian Reservation.

The Mission schools, as a rule, are far better than the Government schools, simply because the Government does its work in a languid and perfunctory manner. There is literally no cause except failure to act, why an effective school system is not in force to-day among the thirty thousand Sioux. Treaty law provides a school house and teacher for every thirty children, and attendance may and should be made compulsory. School work at an Indian agency should not be under the direction of the Agent, who may appoint his own relatives, however incompetent; but there should be an organized effort to cover the whole field.

under a man who is strong enough to choose his subordinates and through them to work out a successful result.

#### A Word for the Indian Boys.

Could any of my friends see forty eager faces before them, a look of determination and ambition stamped on every brow, as slowly and carefully they listened to and repeated words dictated to them, as I have experienced, one would never say "Do you really think Indians can be educated?" Coming in the rude clothing of skins; leaving parents whom they dearly love; giving up bright hued garments, for our modern plain clothes; and sacrificing their long beautiful hair upon which they pride themselves for the school which the Great Father has given them, in order to make American men out of them; learning to eat strange dishes to do hard work at school and upon trades when they are accustomed to perfect idleness; do we realize what a complete change they pass through? Yet in spite of all these trials they are full of ambition and zeal!

In the Indian school at Santa Fe, that was organized this spring, the progress of our Indian children was remarkable. In two months the boys have taken eagerly hold of the industrial work, farming, carpentering and cobbling, learning not only to execute the orders, their respective teachers have given, but to understand them as well. In the school room they are equally diligent, rapidly learning the alphabet though not as quick in combining the letters into words. More especially do they pick up Calligraphy. During the period allotted for this not a sound—but the movement of the pen upon the paper—can absolutely be heard in the room. Patiently and with perfect accuracy they first of all trace the characters, and then almost as beautifully form them in the higher series of the writing book. Their power of imitation is wonderful. Calisthenics and Military Drill are consequently readily acquired.

To illustrate their perfect obedience, let me give you a little incident that occurred. The very first Sunday the Indians were with us, they seemed perfectly wild with pleasure, playing about under the large magnificent cottonwood trees in the midst of which our buildings are nestled. They would break off sticks from the bushes, and convert them into the necessary implement for the game of La Crosse, their favorite amusement. But it was thought best not to curb them at first, and so the second Sunday the same course was pursued. While the Superintendent was busily engaged with a gentleman a band of Mexican boys came to the walls of the grounds and challenged our boys to a game. In an instant they cleared a barb-wire fence, ten feet high, and were engaged in the exciting sport upon the bed of the river that flows by the grounds. In great consternation I ran to the superintendent telling him that they were outside the grounds, and would soon be in a fight with the Mexicans. He hastened to the schoolroom and rang the bell, then going to the fence beckoned kindly to them to come quickly. In less than five minutes after the first stroke every boy had thrown down his stick, freed himself from the noisy shouting crowd, entered the gate and was seated in the school room ready to receive the mild reproof that awaited them. With such tractability is there not a chance for us, to make good citizens of the Pueblo youth?

LILIAN VAUGHAN, LADD.  
Santa Fe, New Mexico.

#### An Indian Fairy Book.

There has always been a fascination for the ethnologist, and a romantic interest to the popular mind, in the half-explored field of American tradition and folk-lore. The editor of "The Enchanted Moccasins and other Legends of the general reader. Plainly he misses something of the just rendering and exquisite flavor of the original, which distinguish the more scientific labors of such men as Dr. Brinton and Mr. Leland. The stories in this book were originally compiled by schoolcraft; as "reinterpreted and developed" by Mr. Matthews, they do not appear to have much value except as a collection of aboriginal fairy-tales, charming indeed to children and winning an occasional glance from their elders. Their English editor's greatest fault is in the elaboration of style, which should rather imitate the Indian story teller's rare, cut rendering of

By Cornelius Matthews, G. P. Putnam's Sons, New York.

these grotesque fancies. Longfellow did better by some of them, and has made them classic in "Hiawatha." We give one of the shortest and simplest as an example of Mr. Mathew's method, and an artless illustration of the duties of an Indian wife. "A poor man, called Inna or the Wanderer, was in the habit of roaming about from place to place, forlorn, without relations, and almost helpless. He had often wished for a companion to share his solitude, but who would think of joining their fortunes with those of a poor wanderer, who had no shelter but such as his leather hunting-shirt provided, and no other household in the world than the bundle which he carried in his hand, and in which his hunting-shirt was laid away."

One day as he went on a hunting excursion, to relieve himself of the burden of carrying it, Inna hung up his bundle on the branch of a tree and then set out in quest of game.

On returning to the spot in the evening he was surprised to find a small but neat lodge built in the place where he had left his bundle; and on looking in he beheld a beautiful female, sitting on the further side of the lodge, with his bundle lying beside her. During the day Inna had so far prospered in his sport as to kill a deer, which he now cast down at the lodge door.

Without pausing to take the least notice, he gave a word of welcome to the hunter, the woman ran out and began to see whether it was a large deer that he had brought. In her haste she stumbled and fell at the threshold. Inna looked at her with astonishment, and thought to himself, I supposed I was blessed, but I find my mistake. 'Night Hawk' said he speaking aloud, 'I will leave my game with you that you may feast on it.'

He then took up his bundle and departed. After walking some time he came to another tree on which he suspended his bundle as before, and went in search of game. Success again attended him, and he returned bringing with him a deer, and he found that a lodge had sprung up as before, where he had hung his bundle. He looked in and saw a beautiful female sitting alone with his bundle by her side.

She arose and came out toward the deer which he had deposited at the door, and he immediately went into the lodge and sat by the fire, as he was weary with the day's hunt which had carried him far away. The woman did not return, and wondering at her delay, Inna at last arose, and peeping through the door of the lodge, beheld her greedily eating all the fat of the deer. He exclaimed, 'I thought I was blessed, but I find I was mistaken.' Then addressing the woman, 'Poor Marten' said he, 'feast on the game I have brought.'

He again took up his bundle and departed; and as usual, hung it upon the branch of a tree and wandered off in quest of game. In the evening he returned, with his customary good luck, bringing in a fine deer. He again found that a lodge had taken the place of his bundle. He gazed through an opening in the side of the lodge, and there was another beautiful woman sitting alone, with a bundle by her side.

As soon as he entered the lodge she rose, cheerfully welcomed him home, and without delay or complaining she brought in the deer, cut it up as it should be and hung up the meat to dry. She then prepared a portion of it for the supper of the weary hunter. The man thought to himself, 'Now I am certainly blessed.'

He continued his practice of hunting every day, and the woman, on his return, always welcomed him, readily took charge of the meat and promptly prepared his evening meal; and he ever after lived a contented and happy man."

#### Horseford's Acid Phosphate

ONE OF THE BEST TONICS.

DR. R. A. ATKINSON, Prof. Materia Medica and Dermatology, in College of Physicians and Surgeons, Baltimore, Md., says: "It makes a pleasant drink, and is one of our best tonics in the shape of the phosphates in soluble form."

### Incidents of Indian Life at Hampton.

The Indian Department begins the year with a larger number of pupils than ever before, 135, besides a baby boy and girl too young as yet to attend school. Thirty of these are in the Normal classes, twenty-two having just been admitted as Juniors, some of them graduates from the regular Indian classes, and others new arrivals from the West, but sufficiently advanced to enter at once on the Normal course. The advantage to Indians of thus studying and reciting side by side with an English speaking race is very great, so great that Mr. Standing of Carlisle once suggested that Hampton should take only those who could avail themselves of it, but for the present at least there is also call for classes where special instruction shall be given in English, as well as in the rudiments of book-learning.

Even in the Indian classes however, this year the large proportion of those who can speak and understand our language is quite striking. Some of our scholars have received careful training in the Mission or Agency schools in Dakota and Nebraska, and others, fresh from the wild cow-boy life of Indian Territory, have apparently had much intercourse with white people.

Six work all day at their trades and attend Night School.

The general spirit of the scholars is full of promise for the new year in their eagerness to learn and their docility under the restrictions of school life.

One of the Indian boys has been entrusted with the responsible duties of janitor at the Wigwam, and one of the girls, who graduated at the last Commencement is teaching in the Indian School.

### SAVINGS AND DOINGS.

Teacher—"The sun is 95 millions of miles from the earth."

Indian—"How you know that, you been there?"

Teacher—"No, but wise people who think about such things a great deal say so."

Indian—"Hm! white man good think, he guess, but he don't know!"

Teacher to boy who is talking Indian.

"English is good, nicht wahr?"

Boy—"What you mean nik var?"

T—"I mean n'est ce pas."

Boy—"What is that?"

T—"In Dakota Ci."

Boy—"Oh yes, English, Hm?"

Small Indian girl after a wholesome summer in Berkshire, "Oh yes, I can make beds and pies and cookies. I'm a real lady."

Studious boy—"Teacher, are we to bind Virginia?"

### FROM THE WEST.

"—is not friend, to us all the Hampton boys, because all of them are smart and do everything right, nothing bad."

"I wish I was home I'd eat some tame grape jelly."

### THE PANCY WORK CLASS.

Members of last year's class are busy now on Indian dolls and bead work to be sold at a Fair held by friends of the

School, but in about two weeks the regular work will begin, and many are anxious to "Talk only English" in order to deserve admission. It is an old adage that "Beggars should not be choosers" but we have ventured to trespass so far as to suggest in the letter in another column the things we most need.

The following letter speaks so eloquently for itself, that introduction of any kind, seems superfluous. No better witness to Mrs. Jackson's power and earnest use of it could be asked for than this Indian girl who has lived through the realities which stand as vivid pictures in "Ramona" and a "Century of Dishonor."

Hampton October, 15, 1885.

One day I picked up a paper and glancing carelessly over it, I caught sight of two letters which, though small and to a great many perhaps meant nothing or very little, are to me a great attraction. Those letters were H. H. I always have had a great admiration for Mrs. Jackson and although I have seen her only once I learned to love her through her works, especially "Ramona," which should be read by every Indian girl who can read. The Indian life told of in "Ramona" is so true and real that while three or four of us were reading it, it seemed as if she must have lived through what we had. Those two letters, H. H. will always be remembered with love and gratitude by Hampton's Indian girls and God grant that the resolves made on reading that book may be kept and lived out, that of living and working for our people so that the story of "Ramona" shall not be repeated. Although we miss her here it is a comfort to know she has only "gone before" and that she now knows the end and is at rest.

### Indians' Letters.

It was thought it would be interesting this month to let the Indians tell their own story as to how the summer has been spent, and extracts are given from letters received from boys and girls who were in Massachusetts among the Berkshire farmers, some who went West, and others who remained here.

Monterey, Mass.

My dear friend.

I was very glad to received your letter. I was asked us, how you like in this country, and when said well, I like it very much. The first we got here very hard time some us home sick. Sometimes I had walk on the hills, and when I did walk I think about my home and then came to me sorry. But always try happy, also my friends. I have seen then the other girls and boys, they are getting very well indeed, they are all like very much in this country, and always try to happy live here all I can. When you told me I last I had letter from you I try did it, and all want to do best way, and they said we are only stay here few weeks so we must do best we can, and let us try to good name. I think that is best way and I was very glad to hear that. I have done bay last Wednesday so I have nothing to do day before yesterday. But I think next cut oats about three pieces, but we had finish one, so we shall cut two more. I milk every morning, evening about four cows—first time I am very much weak but I like it now. The Monterey people they have prayer meeting Wednesday and Saturday so I went there every meeting. We have church about 11 o'clock, we stop 12 o'clock and then came to next Sunday school we start one until 2 o'clock. We have nice Sunday school teacher, very kind to us, talk to us.

I very glad to shake hand with you.

Lower Brule, Dakota.

My dear friend, I am at old home again and will tell you many things—first I must tell you how all of the girls and boys were when I left them in Chamberlain, they were all well then, and very happy some Indians were waiting there every day to welcome them, we had very nice trip. Mr. G. was very glad to say that the boys and girls did very well and they were pleased with it. I can not tell you how much the people care about to meet us, they have been waiting on the other side of the river even at dark night. They brought horses and wagon to meet them, they always cried right off, oh it was very hard, instead of see me in very glad

heart they cry every time. I have great many people come to see me every day. Sometimes they sit up until after 12. Last night I went to hear some people had a meeting. Mr. Walker is President, Owina is the Secretary, P. Councilor is a Clerk, Wannapi, a Treasurer, all the Christian young and old men came, together and held meeting and they invited me so I went. I wish you could be here to see what has gone on that night. Now I must tell you how my people came to see me and what they did. That day on Friday my dear old mother came from the upper river to get their rations and when they came my mother came to me and said, "my son, my son," and cried right off—and then my step-father did the same and after that man all the old men and young men and women came to me and shake my hand after that my mother and sister and sister-in-law all make a large supper for all those who touch my hand and it was a crowded people and had a nice time, then after that my brother brought a nice pony and I ride and back again and that is the only time I have to be alone.

I have seen all of the Hampton boys, P. A. is well now, but not very strong, he is doing well taking care of his home and settle down. J. T. is cow boy, he gets \$25 a month, P. C. is well and also Charlie he is very nice boy. Ida is well and is doing well help her old mother. W. is well and told me about his school, he said he like it very much, he has 30 children sometime, and on Sunday he hold meeting and the girls and boys dress Indian. "They are looked very funny to me," he said.

My people are to come together tomorrow and will have a large council and I shall speak and not only myself but also our Hampton boys.

I shake hand with all my friends:

Another boy writes of the council.

"About last two weeks ago all of the Hampton boys have went to call on us at the mouth White River. They told us to speak. So we did, all were done very nicely. Like a man bravely. Since my return I make speech to the people now. Both a large meetings. One was all the chiefs."

The Omaha man who is here with his wife went home this summer and returned bringing thirteen of his tribe with him. He writes of his trip.

Hampton, Va.

Dear Teacher.

I wanted to write to you just as soon as I got back to Hampton but I was very tired so that I could not do it. I got back last Sunday morning with thirteen Omaha children. We arrived all right. I think that you will be glad to see your Indian friends when you come. Phillip and his family were well when I saw them last. Eddie thinks nothing but Indian—Phillip has a good crop of wheat and corn and he has thirty-six acres of his land broken. His crops are very good. It was very hard work to get the parents of the children to have their children. I had to go around for three weeks begging for children, sometimes I had to go without my dinner. The Indians think they love their children too well to send them away. In about a week I had twenty-six acres of my land broken and the place where my house will be built is all ready.

Perhaps you have heard that Phillip's father's house got blown down by a cyclone. M.'s things were all blown away. They were away so did not get hurt.

One of the older girls who stayed in school and helped in the teaching, wrote:

"Everything goes on just as smoothly and the girls all seem just like so many sisters willing and anxious to help one another and do their best to talk English."

The new girls have fallen into their ways without any trouble. Winona is an Elder Sister's Lodge. I hope the peace and love will last and our Hampton home will prove one of our happiest homes. The boys and girls to teach very much. It seems as if I could not do enough for the classes.

MARGUERITE LA FLESCHE.

COMING HOME.

After spending almost three months in Massachusetts the word came one evening that we must get ready to come back to Hampton. We were very glad because we were to meet in Great Barrington. All except two of the girls were to meet us in Bridgeport. Of course we were not all real

close together and could not see each other often, so the thought was very pleasant indeed to think of meeting them on the coming afternoon. We took the two o'clock train and arrived at Great Barrington accompanied by friends in due season, so we had a real nice little talk and it seemed a long time since we had seen each other. The time seemed almost to fly after we arrived at the station, we were so busy talking with each other and our friends.

The train came and we had to say those two little words so hard to say sometimes which are "good bye," to our friends who had been so kind to us all through the summer. The train came and Mr. Frissell and we must go on board as he was to go back with us. There were seven girls and four boys, and I think there were some very sad hearts as well as some very happy ones. We waved our handkerchiefs and the train moved on its way to Sheffield where we met another of our number and then started for Bridgeport. We had a real nice time talking of our summer vacation and of the different things we saw and did while we had been separated from each other. We were surprised when Mr. Frissell told us it would be seven o'clock or after when we reached Bridgeport and it was almost that now, the time was so taken up since we got on the train. When the train stopped and we all got out and went into the waiting room, we were told the other train had not come which the girls would come on, and we would have to wait an hour. If seemed a long time but we were all contented and sat down, there were a great many others there waiting too. All at once there was a stillness among the girls and boys. I guess they were thinking how soon the others would come, and a friend who used to be at Hampton with us was to come.

At all once there was a stillness among the girls and boys. I guess they were thinking how soon the others would come, and a friend who used to be at Hampton with us was to come. At all once there was a stillness among the girls and boys. I guess they were thinking how soon the others would come, and a friend who used to be at Hampton with us was to come. At all once there was a stillness among the girls and boys. I guess they were thinking how soon the others would come, and a friend who used to be at Hampton with us was to come.

Then we had our supper and went to the boat as we had to go on Long Island Sound from Boston to New York City. It was raining a little but we did not mind, and once on the boat we all sat down in little groups on the seats and chairs near each other and talked until it was time to go to sleep, which we did before the boat started so that we need not be seasick. When we awoke the next morning we were in New York. We had our breakfast in the city, and then walked along until we came to a large building and there the door was written, "American Missionary Association," some who did not feel well staid here, and the rest went with Mr. Frissell to the post office and other public buildings. We went to the telegraph office, treasury, printing office, and saw a great many wonderful things, and different places, so that we were all very busy talking when we met our friends and went to the boat, we were a little tired but we had had such a good time we did not mind it, and while we were waiting we wrote postals to our mothers and fathers and to our friends in Massachusetts. On the wharf we met Mr. Frissell, and went aboard the Old Dominion boat "Seneca." The evening was so lovely, there was scarcely a cloud to be seen in the deep blue sky, and we were soon out of sight of New York. We went on deck until supper, and after we all came out again we sang hymns for a long time. The moon shone beautifully and the stars seemed to be brighter than ever before, and everything seemed so pleasant because there was not one of us seasick. Several ladies on board came and talked to us, asked about our homes in the West, and told us of the interest they had in the Indians and how much they wanted us to do for our people when we went back.

The next morning when we awoke it was lovely, about eleven o'clock we were in sight of our Hampton home and began to think who would see us first. We passed Old Point in sight of Normal School and went on to Norfolk where we bid good bye to Old Dominion and went on board "Lura," which took us to Normal School wharf. We gave them a little surprise because they did not expect us so soon in the afternoon. Three of the small girls were playing on the green and they were the first who saw us. At Virginia Hall the girls were very glad to see us, then we came to dear Winona, where the girls met us and welcomed us back again, and also the new ones who had come from the West since we had been gone. It seemed like home to get back again to Winona Lodge.

So now we are very busy again with our books and other work, and all are very happy.

JOSEPHINE BARNAVY.

from Omaha Agency, Neb.

### Horsford's Acid Phosphate.

INCORPORATED IN SICK HEADACHE.

Dr. FRED HORNER, JR., Salem, Va., says

"To relieve the indigestion and so-called sick headache, and mental depression incident to certain stages of rheumatism, it is incomparable."

Among the Dakotas.

Lower Brule is a sub-agency to Crow Creek, though somewhat larger. The ration report for the past year shows 1,407 Indians on the reservation. The small farm of ten acres supplied most of the food for the reservation, and is now planted in corn. This year they have cultivated 644 acres; 37 in corn, 12 in wheat, the rest in oats, potatoes and other vegetables. The Indians have 1,000 head of cattle and 1,000 of wire fence, and broken 60 acres themselves for next year's planting, besides about 50 broken by the agency team for those who do no breaking plots. The small grain raising is not profitable, and the Indians are doing well till the hail storm, which just before harvest time destroyed the entire crop over two-thirds of the reservation; five out of ten acres were lost. The hail was a great disaster and misfortune. The Agency farmer told me that about 150 acres more have been cultivated this year than were lost. It was a very successful year for the Indians, and the Agency farmer, capable-looking Irishman, who, the Agency farmer told me, is a very good man and is interested in it, visiting camp all around the reservation; living right

On the brow of the ridge overlooking the White River Camp we stopped at the two-story frame house of Chief Medicine Bull. On the beautiful terrace below stood the "Ghost Lodge" of a young brave who had died some months before. It was a large rectangular building with red and white stripes around top and base and down one side. Symbolic emblems also of the sun and moon and a buffalo standing guard at the door. The new brush fence surrounding it was extended at one point into a square enclosure, across which was strung like a hammock, a large animal skin, a porcupine skin, containing the "ghosts" of the dead, and the slain. As long as this is kept the spirit lingers near it. A tin can on the ground below the hammock is duly replenished with fresh

The educational advantages have not been sufficient, but Major Gasmann has used his whole strength into the work, and next October his new boarding school will open with accommodation for fifty boys and fifty girls in separate comfortable buildings and good school rooms. Here, as at Brule, there are more shops—tin shop, harness and shoe shops and a mill—are needed for the necessary repairs and work of the agency, as well as the employment of the Indian boys. These Mr. Major will ask for, and get if the Government continues its hitherto liberal

But "How can it pay to educate Indians," was the question, "when it is well known that they invariably go back to the blanket when they return home?" I have given Lower Brule's answer. This is Crow Creek's: Twenty-four students have returned to Crow Creek from Hampton. But one ever went back to Indian ways. Two have died. Seventeen are doing very well indeed, the rest fairly so. All are at work that have the chance. Eleven of them I saw myself and felt proud of them. Is that an answer.

H. W. L.

[From the Boston Weekly Advertiser.]

Twice the Indian Rights Association and its friends have stopped illegal and unjust claims upon the great Sioux reservation. The case of the notorious Sioux commission of 1882, and of the more widely known Crow Creek affair, tested and proved the power of the right men on the right side. The association's clear eyed leader and founder, Mr. Herbert Welsh, in the face of his signal success, sees that the inevitable movement of 60,000,000 of people can perhaps be guided, but not finally checked. To his mind, and to that of the broad, fair, generous men and women, for whom he stands, the so called Dawes Sioux bill drawn up by

Senator Dawes, approved by friends of the Indians and by representative Western men, is the best practical compromise between apparently hostile interests. With all Mr. Welsh's high enthusiasm, misallied partisanship, for the weaker side, he is a large enough man to see that the bill is not only all that we ought to desire, looking broadly, not at the Indian question alone, but at the country's best interests.

The Dawes bill proposes, in a word, to open about 11,000,000 acres of this reservation to white settlement. The Indians are to receive in return 26,000 head of cattle, and a sum of \$5,000,000 is to be kept in trust for them at Washington in a fund for educational purposes. All heads of families are to be placed, as rapidly as possible, on allotments of land in severalty and to acquire individual ownership in and complete title to them at the end of twenty-five years. Within that time the land is inalienable from the Indian. This sounds very simple and fair to our progressive Eastern friends. One point remains to be made. Under the terms of the famous treaty of 1868 this land cannot be sold without the consent of three-fourths of the adult male population. This consent is yet to be gained. Nor can treaty stipulations be easily set aside. The treaty is only existing law governing the relations between Indians and whites. It is the poor, deceived, defrauded Indian's sole protection, his only recognized claim upon justice. This claim has been recognized—violations of treaty law have been summarily and signally punished. The Sioux commission accomplished nothing because of its fraudulent purpose to disregard the treaty and obtain only the signatures of a few chiefs. The Crow Creek executive order was revoked because it was issued in defiance of treaty. Whoever commits himself to an opposite policy commits himself to lawlessness which is seen as such. Thus it is that this helpless and despised nation becomes an essential factor in a matter of national importance, and a collision takes place between the minds of the two races which is dramatic in its aspects and far reaching in its results.

Mr. Welsh spoke this morning to the Indian delegates of this convention. The little church was crowded with men in citizen's dress, some with long hair straying over their coat collars, and some with neckties, all with strong features and markedly attentive manner. The parliamentary order of the meeting, carried on in broken English and Dakota, was unbroken. The Dakotas, we were told, had at first displayed some impatience of rules of debate, but they now observe them so strictly that no minor point is allowed to be forgotten. The vote was taken by "hows," instead of by yeas, but the effect was the same.

It is not easy for the unaccustomed speaker to address an Indian audience through an interpreter. It interrupts the consecutive flow of thought and of language. It demands short, clear, crystallized sentences. Mr. Welsh admirably filled these conditions in making his remarks, and suggested some graceful comments on the figurative style of Indian rhetoric. "Many years ago," he began, "a man came among you whom the Indians called GUY HAT." He recalled in few words the noble work of his uncle, Mr. William Welsh, agent of the same tribe. He then spoke with the necessary directness of the Indian Rights Association, which he represents, and of its systematic and successful efforts in the same direction. He showed the Indians how able their friends had worked for them in securing the revocation of President Arthur's order and in removing the settlers. He led up with a good deal of tact to the difficult suggestion which he felt it devolved upon him to make, and did not hesitate to explain to the people that their friends could do nothing for them beyond a certain point, or without certain concessions. The substance of the talk was this: We think we can make the white men treat fairly for your land, pay you fairly for it; but we cannot prevent their getting a part of it.

Mr. Luke Walker, the native pastor at Lower Brule, made a short speech of approval and proposed a vote of thanks from the people. The bishop, however, with admirable delicacy and fairness, restricted the vote to a simple expression of good will to Mr. Welsh and his friend, unwilling to allow them in any way to commit themselves in a matter of importance. The Indians assented heartily in a storm of gutturals.

An Indian council is arranged for this evening, with an informal meeting of the clergy as a preliminary to fuller discussion. Probably very few realize the direct differences of opinion existing between Eastern and Western friends of the Indian, and but little effort is made to bridge over the differences. It is unfortunate that the somewhat dogmatic Eastern friends are able to air their views in the newspapers and elsewhere, while the missionaries and the agents toil hard and say little. If we boast a bright outlook, we cannot deny them as infinitely

greater experience, earned by hardships and privations which should gain for it our respect. There is a really impressive interest in Mrs. Burt's modest parlor—the parlor of a missionary's wife—where the little circle gradually assembles, and, as we study the intently earnest faces of the different faces, the elder ones heavily lined with responsibility, the younger beautiful with self-consecration; we instinctively pause upon the brink of a tremendous plunge into uncharted depths. There are dark faces here quite as interesting and even more pathetic than those of their colleagues, and the presence of the wives of a white and of a native missionary, together with the Eastern visitors, is graciously tolerated on this occasion.

Mr. Welsh states the terms of a proposed compromise between the white and the red man, as presented in the Dawes bill, with the concise force which is the result of complete mastery of the subject. There is a suggestive amount of deliberation about the few replies which are brought out in the line of time at our disposal. Bishop Hare, whose finely cut features, not more cordial than stern, nor more stern than cordial, focus the eye, evolves after a few moments' study a set of propositions to which he asks our assent. The first, to the effect that the unused lands of the Indian should be opened to white settlers, but not without due compensation and not necessarily all at once, calls out some discussion. It is suggested that it will require almost as much pressure to induce the Indians to give up a part as the whole of their unused lands, and that which will probably be eventually absorbed into one territory may better be parted with at once. A nice point is made by the bishop in reply to this objection. He says that some of the more far-sighted Indians perceive that if they sell only a part of their land at first, the remainder will become more valuable. They are not anxious to sell. They have a right to the advantages of delay.

Major Gasmann, the agent at Crow Creek, who knows a great deal about Indians and knows how to talk about what he knows, puts very strongly before us the unfairness and even the unlikelihood of coming to a conclusion in the matter without giving the several bands of the Sioux nation, widely scattered in territory, powerfully allied in blood and interest, an opportunity for consultation. The chiefs and representative men must meet at Washington or somewhere in the East for a great council. They must not meet on the reservation, for they would be overawed by the rabble; the chiefs alone must not argue the point, for chiefdom is no longer a synonyme for authority or influence. We don't get much help from this to-night, for the chapel bell which summons the council has long ceased ringing, and the pipes must have gone round the other outer circles several times already. The deepest impression made upon our minds as we sat out into the chilly evening air under the shelter of a magnificent Navajo blanket, is of a profoundly valuable conservatism, which is absolutely unuttered, almost unknown in the East. Here are men of trained and, in some cases at least of keen intelligence, whose lives are rooted in this work, whose hearts are bound up in it; and, for good reasons, they hesitate.

The office clock points to nine as we enter the agent's office, and an atmosphere fairly dense with tobacco smoke. The Indian tobacco, mixed with willow, has, however, a rather agreeable odor, and the picturesqueness of the Indian group reconciles us to everything. There is scarcely standing room now for Indians, but a quartette of armchairs are arranged to form a "ladies' gallery," and the old chief takes this breach of Indian etiquette very composedly. The dirty uncovered floors of the bare "council room" is packed with Indians, seated unmoved, cross legged, ranged in tiers one behind another, smoking interminably. The dim light of kerosene lamps and the lurid glow of the lighted pipes illuminate their grotesquely clad forms and swarthy faces. A few are leaning up against the sides of the room in rigid attitudes. The missionaries, the agent, Mr. Welsh, and his friend, and the ladies are ranged in semi-circles opposite. The half breed interpreter lounges against the opposite wall. The open doorways are crowded with standing forms. Suddenly Long Log gets to his feet, and opens the discussion. He claims the fulfillment of that pledge of friendship so easily made, so often broken. He enumerates some of the past encroachments and deceptions of the white man with the air of producing a grievance, but with the solemnity of one who cannot yet forget his people's injuries. White Ghost, the famous chief of the Lower Brule band, lays down the long and beautifully decorated pipe and his sombrero, what anachronistic "stovepipe" hat, and rises with dignified deliberation. He ceremoniously and with great grace of manner shakes the hands of those in the outer row of listeners. His speech is half patriarchal,

half statesmanlike, eloquently Indian, and he possesses wonderful charms of presence and delivery. His gestures are soft and expressive. Mr. Charles Cook, a thoroughly educated young Dakota minister, acts as his interpreter. He says: "I think that there is nothing so dear to us as the land we live on. I look at my country, and it is very beautiful. I see that it is in danger, and I look to you with hope. Why did I break my hand as you told us? I did these things that I might the more firmly hold my land and establish my children. There are many of my people at Standing Rock. They are poor. I want them to be placed here under my care, and when I think of these things I sometimes wonder if this reservation is large enough for us all. The other side of the river is barren. I cannot see where to drop a seed. This country is fertile. It belonged to my forefathers, and I want to gather my children here. Let the boundaries of my land be made settled. If this is done, I have no fear of the onward march of the white men."

An old chief from Cheyenne River says: "We have many children,—boys and girls. As long as they grow up and they will know all about the sale of the land and about money. They are learning English, and they will be able to talk to the white man. We want them to have something. We want to give them a chance."

Speech after speech follows, and we do not adjourn till nearly midnight, but so great are the novelty and fascination of the musical tongue and native eloquence of the speakers, so curious and impressive the scene, so important the question at stake, that we feel no fatigue, and unwillingly depart. How onerous is this great dramatic work! how English and yet how proud; how ignorant, yet how profound; deceived, but always knowing it; outdone, but never confessing it; poverty stricken amid great possessions,—the unfortunate; the superb red man!

ELAINE GOODALE.

#### Progress of the Fancy-work Class.

BY ONE OF ITS MEMBERS.

One of our very pleasant gatherings in "Winona" is that of the "Fancy Work Class" which was gotten up for those who would like to do some needlework in the morning until night every day.

The girls are taught to make table covers, bureau covers, splashes, tidies, mats, how to crochet, etc.

Proof of our firm English members did a very wise crazy work last year. Each made a bed quilt. Numbers of our visitors could hardly believe that the different colors were put together by the girls' own taste. The "Fancy Work Class" is not only a great help to the girls in their English, but they also derive from it new ideas how, when they return West, they can make things for their homes which will give much happiness and cheer to the fathers, mothers, sisters and brothers. As their plan has worked so satisfactorily they are anxious to help it. I was told that the first question asked was, "When is the Fancy Work Class going to begin again?"

As the number who desire to enlist in the "English speaking girls" is so large we fear our supplies, kindly sent last year, of white stuffs for table and bureau covers, etc., colored silks, and tambour cottons, as those are used more than any other, will become short, and if there is any one who wishes to "lend a hand" in the encouragement of English speaking, we shall be most glad of the help.

There is so much to tell of what the girls have done and made that it is almost impossible to undertake to tell all. But if you wish more information we give you a hearty invitation to come and visit the class where you will see for yourself what is being done.

Any materials may be sent to the "Fancy Work Class," Winona Lodge.

President Gates of Butler's College, member of the U. S. board of Indian Commissioners, delivered before the Social Science Association at its last meeting in Saratoga, an address entitled "Land and Law as Agents in educating Indians." We can do no more in the limited space our columns afford, than to quote the principal arguments which President Gates uses in support of his views, beginning with his answer to the question "What is an Indian?"

The most descriptive and accurate definition he considers to be, "A ward of the Government," and the attitude of the United States toward these wards, he characterizes at the outset as "disgraceful, a crying iniquity."

The condition of the Indian before the law puts a premium on crime, "and he comes to know law as prompt and swift to punish but powerless to protect him."

Land and law, President Gates looks upon, "as living forces now at work in the solution of the question 'What is to become of the Indian?'" for the white man's greed of land and the Indian's lack of law have been and still are potent factors in the problem.

In view of the fact that the past has been to say the least of it, a series of gigantic mistakes, that by "utterly neglecting to teach our wards the value of honest labor, we have pauperized them, while by injustice we have steadily demoralized them," and by broken promises have gone near to destroy their faith in us beyond the hope of resurrection, it seems as if it were time to try the effect of a different policy, and President Gates' view of this policy is that it shall include lands in severalty, and citizenship for the Indian.

If the Indians are to be lifted, as we believe they will be, to the plane of hopeful and happy citizenship, it will be by this blessed road of labor under equal laws, and such a man on land which he holds as his own by a personal title. This conviction, growing and welcomed among the Indians themselves, is the most hopeful augury for their future."

#### The Cholera in Spain.

From one of the Rev. William N. Gulick's interesting "Occasional Letters from Spain" we take the following account of the condition of the cholera stricken provinces of that country. Never can the results of direct disobedience to the plainly written laws of God, be more vividly illustrated than in such scenes as Mr. Gulick describes, and that the innocent must suffer with the guilty, heightens unspeakably the awfulness of the lesson.

Mr. Gulick tells us that the question having arisen as to propriety, or indeed possibility, of holding a Conference of the pastors and evangelists connected with the evangelical mission, at San Sebastian, during the height of the epidemic, it seemed best for him to visit the pastor of the church in Zaragoza to make some necessary arrangements and "to help comfort the people of the church." That such an undertaking was by no means without its dangers, may be gathered from Mr. Gulick's description of what he saw during the days spent in the midst of horrors which to us, safe at a distance, seem almost incredible.

"When the panic first seized the city, the great anxiety on the part of all who could not leave, was, naturally, to use such remedies as should prevent them from falling victims to the disease. Whether published as medical advice or whether merely a popular whim; the fact is that during all those days and weeks of alarm the general cry was that strong drink was the sure preventive—with the result that the taverns and the drinking stalls were swarming with the humble and the laboring classes, who worse than wasted their scant resources on that which though not so immediately fatal as cholera, but which the fires of vice which in Zaragoza run unattended upon the community much more loss and misery than the utmost ravages of the cholera.

It was also the popular belief that no vegetables should be eaten, but only, or principally, flesh, fish or fowl. The result being that vendors of the former found themselves deserted by their customers, to their dismay and loss, while the latter were sold at fabulous prices. Several of the most liberal of the members of the Zaragoza church are gardeners and vendors of vegetables, who by this turn of affairs have been suddenly reduced to the greatest distress, and just when their own families and the church most need their help.

As I approached Zaragoza by the railway which skirts the banks of the Ebro, I found myself in a third-class compartment in the midst of eight or ten young men going to stations beyond Zaragoza. They would be obliged to spend the night in the inn at the Zaragoza station. It was evident, in spite of their forced hilarity and boisterous bravado, that this was no pleasant thought to them, and it was solemnly and earnestly painful to see the expression of their countenances when I told them that I was going into the very city with the intention of spending some days there. I distributed among them some Gospels, and tried to talk with them, but they were too much excited to give much heed. They were all plying the Zaragoza remedy with which they were amply provided in leather bottles. Whether it was or not a safeguard against the disease that they feared it seemed to rob them for the moment of the dream of it, and they tumbled out of the train at eleven o'clock on the outset as if they desired to escape a station ring with their drunken shouts.

There were but few passengers for Zaragoza besides myself. The large hotel of the "Universe" was closed, as for dinner it had not had any guests. I went to another one of lower grade where I generally find at least thirty or forty guests. I was now one of six, two of whom were medical men who arrived in the same train with myself and two were army officers—one on the sanitary force—stationed in the city. It cannot be denied that this unexampled falling away of the travelling public, the deserted hotels and their closed doors visibly depressed the minds of those who noted it.

I found the pastor and his family and most of the members of the congregation in fair health. One good old woman who had been our cook in San Sebastian for two years, and who had but three weeks before returned to her home in Zaragoza, leaving two daughters with us in San Sebastian, was stricken with the disease the day before my arrival. We most feared the result, on account of her delicate constitution and her age. I was at her bedside several times one day and before I left she was out of danger. It is a notable fact that most of the cases up to that date had occurred in the gardens in the immediate suburbs of the city, and in the populous district surrounding our church where many of those gardeners live. It seems to be satisfactorily proved that the streams, fed by canals from the river Ebro, that water the gardens, running from one to the other, and in multitudinous branches traversing leagues of fertile and enriched soil, have been conductors of the cholera germ, (if the "germ" theory is the one to be accepted), and that the ravages of the disease all along the Ebro have been chiefly among those who have drunk from these streams. In one village near Zaragoza where the mortality was great, not a soul died who drank habitually the rain water from a cistern of a convent in the place. It is believed that in these more recent days the waters of the Ebro itself have become contaminated, and unfortunately the ravages of the disease are now far from being limited to the territory watered by the Ebro.

So far as the city is concerned it is difficult to imagine a condition of things in many respects more favorable for the development of every evil disease. It has a population of some 55,000—and is a city without sewers! A few have been built within late years, but are of limited extent. Each house, as a rule, is supposed to have two vaults: one for receiving the interior drainage, the other to receive the rain water that falls from the roof. The former is called the "black vault." Neither the one nor the other is stoned up, nor faced in any effective way, for the express purpose of allowing the waters to filter away into the surrounding soil.

Last April I was told by the owner of a house that had been occupied for fifteen years that the absorption had been so complete and rapid that it had never been necessary to empty by artificial means either of the vaults. Imagine the condition of the ground on which the city stands—from the time of Augustus Caesar absorbing into itself the deadly contents of the black vault.

The sanitary authorities of the city of Zaragoza seem to have adopted the theory of Dr. Koch, of Berlin, that as the cholera microbe is vitalized and develops under the influence of heat and moisture, it is sure, in time of the epidemic, not to water the streets. Generally during the summer the principal streets of the city are abundantly watered, markedly tempering the heated air. Now the great macadamized street of the *Casa* and the wide and beautiful *Paseo de Santa Engracia* have been left for weeks without watering, with the result that on the afternoons of Sundays and feast days when the populace is out on its promenade, and whenever the wind blows, the dust rises, penetrating every door and window that is not kept closed, and irritating the eyes and nostrils and throats of all who breathe the dust-laden air. I did not find the heat at all excessive for midsummer, but never in my life before did I experience such a sense of suffocation and of irritation of the respiratory organs. Even if the theory is correct that watering the streets would vivify the slumbering or torpid microbe, it seems simply marvellous that sensible men could think that it would be no safer to water the streets and so keep a large part of the germs under the feet than to let them rise in clouds into the air to penetrate the body of man through the mouth and nostrils where they would at once find the moisture that would develop them. To me the murky, yellow, dust-laden atmosphere seemed a pall of death over the unhappy city.

Our pastor said that during all the earlier days after the panic had seized the people excited crowds gathered in front of the house where it was known a case had been declared, and when the undertaker's coach drove away with a body they rushed after it as if fascinated by its dreaded burden. By degrees the excitement wore off and I saw but few signs of it. The city government

hired guitar players and street singers to traverse the streets playing and singing popular songs to keep up the spirits of the people—and they performed their mission so faithfully that at no night was I able to get any sleep for the noise of their music until after the noise of their music had ceased. Pious people also hired blind singers and guitar players to come daily to their houses, and, seated in the street doorways, to sing prayers for help to the Virgin, to Saint Joseph, and especially to San Roque the great guardian from plague and pest.

With all these influences operating, there was an undeniable something manifest and felt that would have told the most superficial observer that the great, busy and sturdy city was under a spell of strong and unusual and painful feeling, if not of fear.

One of the delegates, was the evangelist teacher of the town of Tauste, in the province of Zaragoza. When he left his home there had been there a few cases of cholera. On the seventh day, receiving word that the death-rate had greatly increased, he immediately returned home where he had left his wife and two children. He wrote to us that two children of his school had died of the cholera, and that in four days after his return there was hardly a house in town in which there was not a case of the disease. The population is about 5,500. The normal rate of death may be one or two a day. For either or ten days there have been not less than eighteen deaths daily from cholera, and there have been as many as twenty-five on one day. The bodies are heaped into carts and are piled together in pits to be buried. Provisions have run short, there are no medicines and no postage stamps and no body darts to go to the place with supplies. The last letter that we received from good Don Augustin was forwarded without a postage stamp, the postmaster writing on the back there were none in the place.

Yesterday we received a telegram from Zaragoza saying that Augustin had fallen sick with the cholera, and that the Zaragoza school teacher would at once go to help him and his family. We would have no later news, and we tremble lest the good brave and devoted man has fallen at his post. He was trying, as an evangelist and school teacher to work out the difficult problem of "self-support," and as sickness in his family had exhausted the little ready cash, his hands he had not written to me for a month before the conference, for the lack of money, wherewith to buy a postage stamp. Could our friends at home look in upon some of these noble men, as we do now and then they would see what would stir their hearts as they would be stirred by the sight of a case of vivisection. It is proposed to cut down by half the small yearly "grant in aid," made by the nation to this man. It would perhaps be less painful to see him snatched away into heaven by the swift hand of cholera, than to see him suffer what probably awaits him, if he lives and struggles on with his work as evangelist, teacher, and farmer—if the plans of retrenchment now proposed are carried out.

#### LATER.

The news comes that Augustin is better. The Bible woman of Zaragoza has gone to Tauste to help them through the crisis. There is a terrible panic in the place: husbands leave their wives when they fall sick, and the wives their husbands, and children desert their parents. No servant will approach a stricken house if it can be avoided, and the sick are left to die without care or consolation. We hope that the worst is now past, and the wife and children of good Augustin will escape the disease.

Don Carlos returned to Zaragoza last week. Two days before he reached home a member of the family of the owner of his house, living on the floor above his, sickened and died within a few hours. Our pastor's wife and mother being well acquainted with them, helped the family take care of him and accompanied the body to the cemetery.

The next day the wife of the pastor of the sister evangelist church in Zaragoza, a Swiss lady the mother of two children, who had been ill for a day or two, but who was supposed to be much better, suddenly became worse and before night was dead and buried. Don Carlos' wife attended at her bedside and followed her to the grave. Her afflicted husband conducted the funeral services, which were attended by most of the members of the two congregations and many others. It will be noticed that in Zaragoza no opposition is made by the civil or medical authorities to public funerals of those who have died from cholera, and public opinion is apparently not opposed to the attendance of even a large number of persons.

GRANADA, Sept. 2d, 1885.

"The news from Granada is heart-rending. The earthquakes during the winter impoverished many. When the cholera came instead of finding the authorities prepared with

some plan for combating it, or for taking care of the sick and for helping the poor, it seems that everything was in the utmost confusion. There was no administration. Everything broke down before the fearful panic. The rich fled from the city; the authorities in large part resigned their offices and fled; the doctors fled; and the unhappy city was given over to despair and death. The sick poor in some cases, he, two, three and four days without the help of any one—neither of relatives, nor of neighbors, nor of charitable societies, civil or religious.

The Protestant pastor, a man advanced in years and not in good health, has unceasingly visited the sick, who are chiefly Roman Catholics, and has bestowed on them the same personal care as on the members of his own flock, and in like manner they have died in his arms.

As I close this letter the disease has "pent itself in Granada—and the Archbishop finds it an opportune moment in which to bring out in procession the *Virgen de las Angustias* who dressed in costly robes (while the poor are dying for lack of food and of medicines), by her prayers, has brought the cholera to a close! Why did not the Archbishop bring her out earlier in procession, and so save the lives of the thousands who have fallen victims of the cholera?

Probably not less than 85,000 people have died of the cholera. Would that it could be said that the religious teachers of this Christian people had availed themselves of these solemn moments to direct them to Christ and to His Gospel for consolation and instruction.

The Indian conference held at Lake Mohonk on Oct. 7th, and the two following days, is reported as follows:

Electors: Judge Clinton B. Fisk of New York, President, Judge Strong of Washington, Vice-President, Major Kinney of the Hartford *Connecticut*, Secretary.

Dr. Rhoades, Phillip Garrett and Mrs. A. S. Quinton of Philadelphia, Dr. Lyman Abbott and Prof. C. C. Painter, Business Committee. An addition was made later of Hon. Erastus Brooks, Judge Strong, and Dr. Ward of the New York *Independent*. Rev. Drs. Kendall, Strieby and Harding, Membership Committee. The discussion was very general, and the following platform was presented:

"The Indian question can never be settled except on principles of justice and equal rights. In its settlement all property rights of the Indian should be sacredly guarded and all obligations should be faithfully fulfilled. Keeping this steadily in view, the object of all legislative and executive action should be the abolition of the reservation of the Indians, but the abrogation of the Indian reservation as rapidly as possible, the permitted diffusion of the Indians among the people, in order that they may become acquainted with civilized habits and modes of life, the ultimate discontinuance of annuities so promotive of idleness and pauperism, the subjection of the Indians to the laws of the United States and of the States and territories where they may reside, and their protection by the same laws as those by which citizens are protected, the opening of all the territory of the United States to their possible acquisition and to civilization, and the early admission of Indians to American citizenship. These objects should be steadily kept in view and pursued immediately, vigorously and continuously. The measures we recommend for their accomplishment are the following:

First—The present system of Indian education should be enlarged, and a comprehensive method should be adopted, which shall place all Indian children in schools under compulsion, if necessary, and shall provide industrial education for a large proportion of them. Adult Indians should be brought under preparation for self-support. To this end the free ration system should be discontinued as rapidly as possible, and a sufficient number of manual and industrial teachers should be provided, meantime, to teach them to earn their own living.

Second—Immediate measures should be taken to break up the system of holding all lands in common, and each Indian family should receive a patent for a portion of land, to be held in severalty, its amount dependent upon the number of members of the family and upon the character of the land, whether adapted for cultivation or for grazing. This land should be inalienable for a period of twenty-five years. The Coke bill, as embodying this principle, has our earnest

support, and is urged upon all friends of the Indians as the one practicable measure for achieving these ends.

Third—All portions of the Indian reservations which are so allotted should, after the Indians shall have selected and secured their lands, be purchased by the government, at a fair rate, and thrown open to settlement.

Fourth—The cash value of the land thus purchased should be set aside by the government, as a fund to be expended as rapidly as can be wisely done, for the benefit, especially, of their industrial and educational advancement.

Fifth—In order to carry out the preceding recommendations, equal provision should be made for the necessary surveys of reservations, and wherever necessary, negotiations should be entered into for the modification of the present treaties, and these negotiations should be pushed, in every honorable way, until the consent of the Indians be obtained.

Sixth—Indians belonging to tribes which give up their reservation and accept allotments of land in severalty, and all Indians that abandon their tribal organization and adopt the habits and modes of civilized life, should be at once admitted to citizenship of the United States, and of the States or territories where they may reside.

Seventh—During this process of civilization some representative of the United States government should be charged with the protection and instruction of the Indians. But all such officers should be withdrawn as soon as the Indians are capable of self-protection.

Eighth—We are utterly opposed to the removal of tribes of Indians from their established homes and massing them together in one or more territories as injurious to the Indians and an impediment to their civilization.

We thankfully recognize the growing interest taken by the legislature and executive departments of our country in the welfare of the Indian, and the increased desire manifested among our people, west and east, to do them justice; and our thanks are also due to the religious and philanthropic organizations which have fostered their interest and have supplemented the work of the government by their missionary and educational labors. But we believe that what has been done in the past is but a beginning, and that both government and individuals must do much more before the debt we owe to the Indians can be paid.

The *Pioneer Press*, a colored journal of West Virginia, published in a recent number an editorial by Prof. L. Cardozo of Washington, entitled "What shall we do with our Boys?" The reply to this question, by Prof. Cardozo gives it, includes a very appreciative notice of the Hampton School, the opportunity offered by which, the Professor considers to be especially suited to the needs of the colored people. He says:

"This is a very important question directly to all colored parents, and indirectly to all colored people."

I mean that 'we' in the heading of this letter should refer to colored parents.

Before the War it was the custom of free parents in the South to give their sons trades, and masters often had their young males slaves taught trades so as to increase their usefulness and value.

But we have noticed with regret that since the War the colored boys are not learning trades.

There are several reasons for this. In the North it is almost impossible for the colored boy to learn a trade; the rules of the trades-unions rigidly exclude them in many places; wherever a master-workman employs a colored man, the white ones will leave.

This spirit is being transplanted from the North to many of the large cities of the South.

But there is another reason that is more powerful in preventing us from giving our boys trades.

As soon as the advantages of education were opened up to us by the War, we all wanted to make our boys professional men—ministers, doctors, professors and teachers.

Such an ambition is, in many respects, very laudable, but it may also be, in other respects, very foolish.

A comparatively few professional men are necessary, and where young men show the proper qualification for receiving such education, and the determination to apply such knowledge to the benefit of their race, by all means let them be prepared for professional life.

But we are building from the top instead of from the bottom. Colored men now, as a rule,

occupy menial positions. There is nothing inherently degrading in such positions, still, it is the lowest round of the ladder. The next higher is the mechanic and artisan, and the next above the merchant or planter. These three classes support professional men.

The two classes of mechanics and merchants we entirely neglect to prepare our boys for. They must either be waiters or doctors.

We can certainly make them mechanics, and where we have the means, merchants. But it is especially as to the *means* of making them mechanics that I have written this letter. As to the *necessity* of doing so I hope that all parents will see that it is much more manly and independent than the position of a waiter.

As I have said in the beginning of this letter, it is almost impossible in the North, and very difficult in the South, to get a master-workman to receive a colored boy as an apprentice.

Whenever such is the case, parents will find that they can give their sons an excellent trade at Hampton Institute, Hampton, Virginia.

A detailed notice of the school system follows these remarks, with a hearty commendation of the ideas which it embodies, and a comprehension of them which we feel to be somewhat unusual. The "manual labor" feature of the School is so frequently misapprehended, even by the parents and friends of our students, that we are glad to have it put before them at its proper value by so competent a witness as Professor Cardozo, who believes that the "wonderful success" of the institution is due largely to the appreciation by its founders of the fact that "the Freedmen needed an industrial education more than a literary one" and to their ability to "combine the two, making the latter subordinate to the former."

The colored people of Vicksburg have determined to erect a \$50,000 MONUMENT to commemorate emancipation. The best monument they can raise is a colored one. Let them be a monument of what emancipation has done.—*Southern Christian Advocate*.

WHY SHOULD any man or woman living on five acres of land groan about hard times and the low prices paid for crops, when they can always sell poultry and eggs at profitable rates? That there is money in rearing poultry is demonstrated by the demand for it. The fact that we import into the United States over \$5,000,000 worth of eggs in a year, equal to \$125,000 weekly, or \$20,000 a day, is proof that there is money in the business. The fact is not to be taken as showing that the foreign trade in eggs hurts our home product, which is deficient and might be safely increased. It is a poor reflection for enlightened Americans, men or women, that they cannot keep a flock of poultry as well as a German or French woman can, and that we cannot help but suffer from the competition of any industrious foreigner. The large quantities of eggs consumed in this country every day are not all eaten or used in cooking. Several kinds of manufactures require large quantities, and they have to be forthcoming, cost what they may. It is very probable that in cold, wet years like this corn can be purchased at the East cheaper than it can be raised, but raising poultry and eggs always pays well. Raising poultry and eggs is really woman's work.—*Southern Planter*.

WEEDS should not be permitted to go to seed. What looks worse than to see in a grass field, among a growing crop, towering weeds, so flourishing that it is plain that they have taken the life-blood of the soil from the legitimate product of the soil. This year they take so much fertility! If let go to seed next year they will take twice as much and the owner of the land can realize the truth of the old adage, "One year's seedling makes seven years' weeding."—*Southern Planter*.

Hygeia Hotel, Hampton, Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 150 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth.

The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material factors being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the "sandy beach," but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

VOL. XIV.

HAMPTON, VA., DECEMBER, 1885.

No. 12

THE new Governor of Alaska reports its population to be 1900 whites and 7000 Indians. He says the natives are intelligent and anxious for the establishment of English schools for their children, who show much aptitude for study.

THE fair held in Boston by the young ladies of King's Chapel, in behalf of the Boys' Hospital, at Hampton Institute, we are happy to state was a success in all respects. The Indian work and curiosities, from Hampton School and the West, were especially appreciated—White Ghost's coat selling for \$30. The hospital is very nearly finished, and will be of great advantage to the boys.

WE are sorry to see in an Omaha paper that Agent McGillicuddy of Pine Ridge Agency, says that he has "been told that he is to be superseded at once." We trust it may prove that only his old enemy Red Cloud—enemy to himself and this people's progress—has told him this; in which case it is by no means sure to be true. Dr. McGillicuddy's removal would be a blow to the cause of Indian advancement for which he has so manfully worked.

BEREA College and Hampton Institute, founded by the American Missionary Association, were at its late annual meeting dropped from its rolls as having had for years a virtually independent existence. For Hampton we can say that the cordial and sympathetic relations it has always sustained to the Association will never abate nor the pride with which it acknowledges itself the child of this noble mother of so many noble charities. The annual report of the Association comes to our hands as we go to press. We will give a resume of its very interesting points in our next number.

THE two articles, by Helen W. Ludlow and Elaine Goodale, which will be found on pages 128 and 129 of our present number, giving accounts of Hampton's returned Indian students in their homes, and of the agency schools and other matters on the reservations, as seen by the writers, have been printed in attractive form in a little pamphlet, with a sketch also of the history of the Hampton school and its work for both races, by Mrs. M. F. Armstrong. This pamphlet will be sent on application to the editor, to any of our friends who would like to have it or circulate it where it will do good.

THE endowment of the Leland Stanford Jr., University of California, by Ex-Governor Leland Stanford and wife, is an event in the history of the state receiving their princely gift of an estate of three million five hundred thousand dollars. No nobler memorial to a beloved son could have been devised than this provision for the training "for personal success and usefulness in life" of generation after generation of the youth of the state. Co-education of the sexes, the highest grade of intellectual training for both; departments, richly equipped, for professional, scientific, artistic, mechanical and agricultural training, and a church under no sectarian domination, are in the plan of this true "university," and testify both to the broad views of its superbly generous founders, and the broad demands of the times.

A crayon portrait of Rev. Dr. Streib, of the American Missionary Association, for several years president of Hampton's Board of Trustees, will be hung in the chapel of the Normal School. It will be the work of Mrs. A. C. Squire of Brooklyn who has recently made for the Principal, a very successful crayon from a photograph of his father, Rev. Dr. Richard Armstrong, former missionary and President of the Board of Education in the Hawaiian Islands.

THE School has been happy to receive a visit from some of the faculty of the Norfolk Mission College. The institution is under the care of the United Presbyterian Church of North America, and its Board of Missions to the Freedmen, in Pittsburgh, Pa. Its design is to furnish a liberal education to the colored people and train missionaries for the home field and Africa. We are glad to hear that the school now in its fourth year, has been "crowded from the beginning," and has received nothing but friendliness and approval from the white citizens of Norfolk.

REPORT comes from the well known, faithful missionary, Dr. Sheldon Jackson, now United States General Agent of Education in Alaska, of serious trouble threatening the missions there, in the probable reappointment, through political influence, of an official already once removed with others on account of notoriously bad character. We hope that the case may be investigated and acted upon with the independent justice that has characterized so many acts of the present administration. The pressure brought to bear upon the appointing power by greedy office seekers is tremendous, and can only be overbalanced by an enlightened and vigorous public sentiment demanding justice more imperatively than parties demand places. The only way to create such a sentiment is to bring everything to the light. "He that doeth good cometh to the light." The side that courts investigation and appeals to the public is not likely to be the wrong side. We have a dominion now on which the sun never sets. Let the lovers of darkness learn that no corner of it is too remote for daylight to enter, and the public eye to watch. The nature of the persecution and hindrance already undergone by Dr. Jackson in his self-sacrificing labors, and the way in which it is regarded by respectable citizens are indicated in the following editorial from the *Daily Oregonian*, of Portland, Oregon, of Oct. 27th:

"Last May it was reported from Alaska that Rev. Sheldon Jackson, United States General Agent of Education in Alaska, had been indicted by a grand jury for misdemeanors in connection with his work in the industrial school for the Indians there. It turns out, as might have been supposed, that the whole proceeding was purely malicious. There are white men in Alaska who do not want any work done among the natives for their instruction or elevation. Especially they do not want the Indian girls instructed in morality and civility, and for this reason they are very hostile toward Dr. Jackson's work. When Judge Dawne arrived in Alaska he caused Dr. Jackson to appear before his court to answer to the indictments; but upon hearing them the court ordered the proceedings dismissed, since they were sustained neither by facts nor law. Dr. Jackson will go on with his work."

REBECCA HARDING DAVIS, in the November *Atlantic*, gives "Some Testimony in the Case" of the race question South: an interesting assortment of personal expressions from Southerners of both races and various classes and sections. She wisely makes no effort to manufacture a "public sentiment" from opinions whose distinguishing characteristic is that "every man looks at the problem from the standpoint of his own plantation, family or factory, and is positive that he of all men in the country sees it clearly and has found the answer." It is striking however, that in all the conflicting "testimonies" there are at least two common elements: first, that no one seems to want to go back to "the curse of slave labor," and second, that, whether favorably or adversely, hopefully or un- hopefully, the Negro is judged in the South by his relation to the industrial problems of the country. This is natural enough, of course, from the fact that he has always been its working man. But it is not only natural, it is, for the Negro himself, and his future prospects, a most fortunate circumstance. Work means wages; industry means comfort, self respect, respectability, progress; and while on his part it is equally natural that his social standing should most occupy his view of the situation, either as a gratification or a grievance, much the best thing he can do for himself and his children, much the best his friends can do for him, is to keep, and glory in, and make the most of his position as the workman of the South in her new, free, growing industries; to prove that he has learned the lesson which one of the most friendly of his critics whose "testimony" I quoted, believes he will have learned in another generation; "that a man's place, be he white or black, depends on the way in which he does his special work." This is a fact, whatever special inconsistencies may seem for a time to disprove it. Whatever of wrong and injustice may exist in the relations of the races will disappear the sooner, for the learning of the lesson. The Negro should feel that the greatest wrong that can be done him in freedom as in slavery is to keep him from self help; a greater wrong to keep him out of the work shop than out of the parlor. But this is a wrong that will soonest yield to right. It will pay best to put his endeavors here. How shall he do it? By seizing every opportunity he has to prove his fitness for the place. How shall his friends help him? By giving him the opportunities. To quote another "testimony." "The Negro is a voter, and the South is giving him an education which will enable him to defend himself against legalized tyranny." Why does she give him an education? Because he is a voter, and his ignorance is a danger to the country. He has less chance, as it has been said, to learn trades now in the South than in the days of slavery when there was no question of equality between the black and the white apprentice. But that cannot last. Why not? Because the great need of the South, in her new departure, is for skilled laborers, and the whites will learn something in another generation as well as the blacks; that it is cheaper and safer to educate her laborers at hand and at home, than to import foreign elements into her society. Already, while it is hard for a colored mechanic to get his training in a Southern workshop, it is not so hard for him to get employment after he is trained. No complaints of the kind have come from the journey-

men trained in Hampton Institute shops.

We know of Negro boss carpenters and master builders, even in the black belt of Alabama, with white men working under them. The Negro exhibit at New Orleans impressed more than one Southerner, as we have heard from their own lips. In another generation, we believe, if not sooner, there will be a great and steady demand for skilled colored laborers in the South, and it is for the Negro's interest to prepare for it. If there were as much need and use for Negro lawyers or professors of Greek and Hebrew, we should urge most of our students to go to college. It is not a question of ability but use. If a man pulling for life through the breakers should assure us that he had his violin with him and could prove himself a Paganini, one would say "what a fool you'd be though—stick to your oar." It is in this view that we urgently ask sustaining for the industrial training at Hampton, and at every industrial school for Negroes in the South. It is fortunate, of course, and no one will be more glad of it than Rebecca Harding Davis, that Hampton is not the only industrial school as she thought. Talladega, Atlanta, Tuskegee, Miss Austin's, and other schools have industrial and mechanical departments that need more than any other the fostering care of friends.

THE appointment of Hon. J. L. M. Curry, D. D., L. L. D., of Richmond, Va., as United States Minister to Spain, while it is a merited tribute to a man eminently fitted to represent our country at a foreign court, is a loss which cannot well be repaired to the work of the Peabody Education Fund which, as its General Agent, he has nobly served for the last ten years. The only comfort, as its chairman remarks, is that he has so thoroughly organized and set in motion its machinery that it can run for the present without any general agent "thus making it easier to do without him while all the harder to part with him." Equal genius and faithfulness only can accomplish this highest measure of success in any work, and both Dr. Curry has brought to his accomplishing the result, not merely by organization and attention to mechanical detail, but by rousing the enthusiasm of others, setting vital forces at work, creating public sentiment. He has visited every field, addressed legislatures, met school superintendents, talked to schools and popular audiences, established teachers' institutes, advised, instructed, sympathized, helped, inspired thousands with something of his own ardor; done what few could do to start the remarkable growth of Southern interest in education.

The report of the twenty-fourth meeting of the board of trustees, held in New York in October, contains many interesting statistics of this interest, in Dr. Curry's last report. He pays merited tribute to the energy and devotion of our Virginia State Superintendent, Hon. R. E. Farr, and the general spirit of the people which has long been awake. The summer Institutes for white teachers, at Staunton, Fredericksburg and Danville, and for colored teachers at Danville and Petersburg, were "marked by enthusiasm" and "gratitude to the trustees of the Peabody Fund, without whose aid, 1,514 teachers would have been deprived of most valuable instruction." Under the able administration of Dr. Rufner, and liberal aid from the Peabody Fund the success of the State Female Nor-

mal School at Farmville, Va., has been "phenomenal." Cheering progress is reported from all the ten states aided; its details would well repay perusal to any one concerned for the welfare of the country. Other interesting features of the report are the addresses of Hon. Robert C. Winthrop, chairman of the board, with tribute to its late distinguished member, General Grant, Dr. Curry's farewell address, and the historical address of Dr. Stearns, president of the Normal College, Nashville, on its fifth anniversary.

Rev. Dr. Haygood, the Southern friend and champion of "Our Brother in Black," addressing the Woman's Home Missionary society of the M. E. church in Philadelphia, says most truly that "the first thing is to know the needs of people whom we would help," and "to know people's needs, we must know them." Who better knows the colored man and his needs than Dr. Haygood? His genial estimate results from no lack of intimate acquaintance. Of his religion he says: "It is the best thing in him. To burlesque it is a cruel injustice and sin against God." Allowing that their religious emotions are out of all proportion to their morals—the morals of white Christians are far from perfect. To have good morals there must be instruction in righteousness; to have the highest morals there must be instruction and practice and the discipline of law through generations. But he is not atheist or infidel: his religion is your best ground of hope in seeking to lift him up."

Of his progress in education: "Never was a great and difficult task more magnificently attempted or more nobly carried on. Fifty million dollars have been expended—something more than half paid by Southern white people by taxation, the rest from the Government through the Freedmen's Bureau, and from the noble charities of the North. Nearly a million of colored people can read. Bad as the case is, the percentage of illiteracy decreases."

"But the most hopeful sign is that he begins to show some disposition to help himself. This is vital. In some places they keep the schools open beyond the public term. Only this week, a committee of colored men from Georgia visited me to seek advice in starting themselves a high school. I am to speak at the dedication of the Morris Brown College in Atlanta, started by the African Methodist church, officered by colored teachers, and its \$200,000 worth of property mostly given by their own people. The same church is pushing a college in South Carolina and another in Texas. At another established by another branch of African Methodism, a young colored woman trained in an industrial school in Alabama, has taken charge of the girls' industrial department. I was at pains to find out; she is competent to do this work. Many such illustrations might be given—just enough to encourage well-to-do white people to redouble their efforts."

"Their home life is poor and meager, but improving in comfort, intelligence, and decency, and I believe in morals also." The danger Dr. Haygood thinks is not so much in contentment with meager homes, as in discontent coming before they have acquired capacity for supplying wants which come into existence with increased intelligence. Not a few are "already in this case and it perilous." This true and important idea forms the key note of the Dr.'s very practical suggestions for the help to be rendered. "Skilled hands must go with educated brains if we are to preserve the domestic and social—I might add the moral, balance." Within the past two weeks, a young colored man, having completed the course in a New England college of high degree, returned to his home in a Georgia city. In "thirty-six hours" after his return (as he wrote me himself) he had concluded that there was no field suited to his education and ability, and within the same period, as he informed me, had declined the offer of a teacher's place in a colored public

school in that city and of a salary equal to that paid to some capable white boys who had just left college. Some of his notions came through his white classmates, others from long absence and alienation from his own people. To make him useful now, he must be educated over again—to dry out the sap and balance his brains."

The different record of some of the Hampton graduates who have taken the higher course after leaving Hampton goes to confirm the suggestion of Dr. Haygood's article that it is not what learning he got but the lack of the practical training he did not get which necessitates the uncomfortable process proposed for this truly unfortunate young man.

The good Dr.'s forcible word to those to whom Providence has intrusted the means of helping these people is "It is the right use of money alone that makes wealth respectable in the eyes of the dwellers in the high countries above us."

Rev. Charles L. Brace should be—and doubtless is—one of the happiest of men. Such thirty-three years' work for humanity as is shown in the last report of the Children's Aid Society of which he was the founder, must bring in anticipation the plaudits—"Well done, inasmuch as thou hast done it to the most of these."—The report proves that, though the vast population of New York city has increased 115 per cent. in the last thirty years, and though laws are more stringent, the police more efficient, and the provision greater for the commitment of children to reformatory institutions, there has been notwithstanding, through the beneficent labors of this society, a great diminution of children's crimes in New York, not only in proportion to population but absolutely. Thus, says the report,

"The commitments of females for vagrancy in 1884 were only 2,520 against 5,778 in 1857, and for petty larceny only 267, against 944 in 1857, though the population of New York has more than doubled. We can demonstrate an immensely increased school attendance in the city. And we can point to the fact—the special result of our work—that no homeless boy in New York need at this time be without a shelter where he can get a clean bed and a nourishing meal, nor without mental and moral training if he will take it, nor long without a good penny and hungry little girl need rove the streets and beg or peddle, but that shelter, food, and industrial education are ready for each, and, if homeless, a kind family waiting to receive her."

The great trouble is with the larger boys, hard to manage, but still harder to find places for at trades or on farms. A certain number of these have been successfully placed in Virginia; but great numbers are growing up to crime. Mr. Brace wants next to establish a "simple Farm School," for such near the city, where they can be taught the rudiments of farming, and then after a few months' test sent to places in the West.

"The annual expense of such a school, within thirty miles of the city, for a constant average of twenty-five lads and an aggregate attendance through the year of say 150 boys, would probably be about \$4,500, or say \$30 expense for each boy. It would be the means of absolutely saving these 150 young men from lives of crime."

Mr. Brace ought not to have to ask twice for such a benefaction. From the great number of interesting statistics of this truly Christ-like work, we take the following:

There have been provided with homes and employment this year:

Boys.....	1,889
Girls.....	1,000
Men.....	175
Women.....	107

Total..... 3,171

There were during the past year in our six lodging-houses 13,212 different boys and girls; 324,495 meals and 246,875 lodgings were supplied. In the twenty-one day and fourteen evening schools were 1,950 children were taught and partly fed and clothed, 816,730 meals being supplied. 3,140 were sent to homes and employment, mainly in the West; 1,613 were aided with medicine, etc., through the Sick Children's Mission; 4,395 children enjoyed the bene-

fits of the 'Summer Home' at Bath, L. I. (averaging about 300 per week) 3,991 mother and sick infants were sent to the 'Health Home' at Coney Island; 378 girls have been instructed in the use of the sewing machine in the girls' Lodging House, and in the Industrial Schools; \$7,276.41 have been deposited in the penny savings banks. Total number under charge of the Society during the year 38,311.

The total receipts of the year from all sources amounted to \$280,713.84, and the cash on hand on the 1st of November amounted to \$58,995.

#### The Women's National Indian Association.

"The Fifth Annual Convention of this Association was held, Nov. 14th, in the First Baptist Church, Philadelphia. A large number of delegates were present from various sections of the country, as were also members and friends of the association.

The Association designs to accomplish the following results:

First—To strengthen the public sentiment on behalf of justice to Indians, and to help secure their civilization and education, and the payment of debts to them under existing governmental contracts.

Second—To aid in securing needed new legislation, giving to Indians protection of law, lands and citizenship.

Third—To labor for the elevation of Indian women and homes, and the Christianization of tribes now destitute of Christian instruction.

The President's annual address referred to the labors of women in behalf of the Indians, and their pioneer efforts to improve the condition of that race at a time when public prejudices and apathy had to be overcome. Among the noteworthy signs of progress, was the attitude of Congress this year. She said the crowning shame of the nation was that, having robbed the Indians of all their rights, it thrust upon them the debasing influence of the liquor traffic. She thought the effort of the House of Representatives to put a stop to this evil, although so far unsuccessful, was a hopeful augury.

The educational aspect of the Indian question was considered, and the official action of President Cleveland relative to recent Indian troubles was favorably commented upon.

The Indian Rights Association was endorsed in its actions, and the necessity of a redistribution of the Indian lands with terms honorable to the Indians themselves, was strenuously urged.

The General Secretary, Mrs. Amelia S. Quinton, of Philadelphia, read her annual report, showing progressive work in various departments for the past year. The matter of memorializing Congress was touched on, a list of the subjects on which it had been petitioned being given. In a number of cases, it was said, State Legislatures had been memorialized. Over 450 meetings were held during the past twelve months, at which the Indian question was considered.

It was stated that the association now numbered 56 auxiliaries, located in 27 States and Territories, with prospects of new organizations and members.

Mrs. O. B. Ganse read the report of the Committee on the Western Secular Press. It was stated that interest in Indian affairs, as shown in this department, was everywhere increasing.

The Committee on Memorial submitted a statement through its chairman, Mrs. W. W. Crannell, of Albany, N. Y., showing that the resolutions recently endorsed by the association regarding Indian legislation, had been adopted by eight Legislatures during the past year.

#### INDIAN MISSIONS.

Mrs. M. L. Richards, of Providence, chairman of the Committee on Indian Missions in Churches, gave an exhaustive account of religious work among the American aborigines. The Missionary Society of the Methodist Episcopal Church, it was stated, supplied 23 teachers and missionaries; contributions during the past year, \$5,950; the

Society of Friends, 90 teachers and 8 missionaries, with contributions for 1884, of \$15,000; American Baptist Home Missionary Society 18, with \$30,582.19; American Missionary Association 69, with \$31,825.62; Board of Foreign Missions of Presbyterian Church 84, with \$32,224.55; Protestant Episcopal Missionary Society 69, with \$49,773.81; Presbyterian Home Mission Board 63, with contributions for 1884, of \$100,260.85; total teachers and missionaries, 467.

Mrs. Quinton read the report of the Missionary Committee, giving details of evangelistic work at the Indian agencies, as gleaned from correspondence of missionaries and teachers, and other sources. Amidst the toils and perplexities of the year there had been encouraging progress, as in the recent planting of a permanent mission in an Indian tribe, the Pawnees, numbering 1200 souls.

Mrs. Quinton stated in answer to a question, that the association aimed at doing pioneer mission work among those Indians who were as yet receiving no Christian instruction, being "intended as the handmaid of the various Christian missions by doing preparatory work."

Officers were elected for the ensuing year: Honorary President, Miss Mary L. Bonney, Penna.; President, Mrs. J. B. Dickinson, New York; Vice President, Mrs. J. R. Jones, Philadelphia; General Secretary, Mrs. Amelia S. Quinton, Philadelphia; Recording Secretary, Miss Sarah Newlin, Philadelphia; Treasurer, Mrs. Hannah Whitall Smith, Germantown, Pa.; Asst. Treasurer, Miss H. R. Foote, Philadelphia.

An Executive Board from different denominations was elected, and a number of additional Vice Presidents from different States.

After slight alterations to the constitution had been agreed upon, the line of work, known as "Indian Home building" was approved by the Association, and Mrs. Kinney was appointed chairman of a committee to have charge of such a department for the association.

Mrs. Crannell read a resolution presented by Mrs. Boardman, which eulogized the labors of the late Helen Hunt Jackson in the cause of the Indians. The resolution was adopted by a rising vote.

MASS MEETING IN ASSOCIATION HALL. A public meeting under the auspices of the Association was held at Association Hall, General Clinton B. Fisk, of New York, President of the Board of Indian Commissioners, presided. There were present on the platform 20 Indian girls from the Lincoln Institution and 10 boys from the Educational Home, who rendered some musical selections during the evening.

Miss Alice C. Fletcher, of the Peabody Museum of American Archaeology and Ethnology, recounted some of her experience among the Indians.

Rt. Rev. H. D. Whipple, D. D., Bishop of Minnesota, said that there was an idea among Christian men that the Indian was a degraded, brutal character, and a tradition exists on the border that "the only good Indian was a dead Indian." He discredited these theories, and said the Indian of North America was the noblest wild man on the face of the earth. Never had he met, he stated, an officer of the United States army or a civil officer who could mention where the Indian had been the first to break his plight.

Resolutions were offered by Rev. H. L. Wayland, D. D., "gratefully recognizing the recent action of the present National Administration in promptly defending the Indian lands from white intrusion; and petitioning President Cleveland and Congress to ratify once executed all existing treaty stipulations which promise the survey of reservations, education, citizenship, and lands in severalty to Indians." The resolutions were adopted as the sense of the meeting. Gen. Fisk being authorized to sign them, and transmit a copy to the President, Senate, and House of Representatives." A. S. Q.

# SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

Reduced to eight pages from July to October.  
Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG, } Editors.

REV. H. B. FRISSELL, Chaplain,  
MR. W. N. ARMSTRONG, } Regular  
MRS. ORRA LANGHORNE, } Contributors.  
MISS ALICE N. BACON,  
F. N. GILMAN, Business Manager.

TERMS: ONE DOLLAR a year IN  
ADVANCE.

The "Industrial South" and  
"Southern Workman" are  
gathered for One Year, \$1.25.

Entered at the Post Office at Hampton, Va., as second  
class matter.

## The Southern Press. Both Sides.

The State election being over, the more or less excited members of the various political parties are, as usual, regaining their equanimity, and there is, as yet, no evidence of any disturbance of friendly relations. It is curious to see how quietly the common sense of the people asserts itself, and one is more than ever inclined to believe in the general progress of humanity, when the fire of campaign threats and revilings ends in such smoke as this:

"Our suggestion that we should go to work meets with general approval. It is one of the serious drawbacks of our system of government that we are perpetually plunged into election excitements. Elections are good and necessary things, but too much of them, like too much wine, or too much oxygen in the air we breathe, imposes too great a strain on private interests, too much wear and tear on the machinery of government. As a measure of political, social, moral, and commercial health, we should cool off after the late arduous campaign, and make up by diligence in our several callings whatever may have been lost by the fierce excitement of the late campaign."—*Norfolk Landmark*.

And that colored politicians are not, even now, far behind their white brothers in realizing that the practical view of the situation is the peaceful one, is shown by the frequent occurrence of such items as the following:

"The election is over; and fair or foul we can not live upon its memories. Therefore, a truce to the bitterness and animosities engendered by it. We are all here, black and white together. We are each dependent upon the other. Then let us live in harmony. Let us beak and forbear. And let us study and work for the interest of each, and in so doing we will promote the best interests of Virginia, which we are sure we all of all colors, love alike."—*Virginia Star*.

The outside view in the South of the Virginia election is interesting, and we give an extract from a Newbern, N. C. paper, which is to the point:

"The defeat of Capt. John S. Wise for the Governorship of Virginia was the end of crooked politics, 'mixed' politics, free-booting and guerrilla politics—in other words, Mahometism—not only in Virginia but in the South.

It was also the end of the 'Solid South' in that the Southern people, no longer menaced in their civil and social relations by this spectre of corrupt demagogism, will no longer divide on sectional sentiment and class prejudices; but upon practical economic questions.

What is known as the 'color line' was undoubtedly broken in the recent election. The return from a number of counties in the 'Black Belt' is a convincing demonstration of this fact. But whether the dissolution of the color line is positive and permanent or merely temporary and reactionary will depend principally upon an effective fostering policy on the part of the Democrats. The political instincts and dispositions of the negroes are essentially gregarious and their 'locking' propensities will again assert themselves, unless an intelligent political discernment and an individual independence of opinion is carefully cultivated among them.

The Norfolk *Virginian* calls upon the colored people to remember that it is their attitude in every day life and not the exceptional incidents of a political campaign, which is of importance, and vouches for the readiness of the white people of the South to offer a helping hand whenever they see that it is likely to be accepted.

"The opinion THE VIRGINIAN entertained before election, regarding the duty of the colored people to themselves, has not been changed. We concede the race great possibilities, but freedom of body, without they show freedom of mind by intelligent action in discharging the duties and exercising the privileges of citizens, will be of as little worth to them in the future as it has been in the past. With a sincere interest in their success, we would persuade them to devote less time to politics and more of leisure hours to the acquisition of knowledge and preparation for the duties of life.

In South Carolina, this week, thoughtful and intelligent men of the colored race have been discussing the best method of improving their condition, and no one of the speakers suggested politics, or the cultivation of unkind relations with the white people, as the royal roads toward such a desirable end. The general sentiment seemed to be that they must seek to remove all existing causes for alienation between the two races, in the affairs of everyday life, which they have heretofore been so conspicuous in compelling. One minister—Rev. J. E. Haynes—was so extravagant in his estimate of prospective negro power in the United States, but concluded his address with this comparison: 'You see to-day what Parnell is doing for the Irish people. The same thing can be done for the colored men in the South. I say to you, go to the intelligent white men and say to them: 'Gentlemen, here we look to you to protect us in the enjoyment of them,' and I am much mistaken if we don't get what we are asking for.' There is wisdom in the spirit suggested, and we advise our Virginia colored people to try the prescription of this South Carolina doctor.

If the *Charleston News* is right in its facts as given herewith, there is no lack of work for helping hands from North or South, and that that journal has come to look upon the Sea Islands as a 'field for missionary work,' and to say of the colored population of these islands, that 'it is incumbent upon their friends, North and South, to look more closely after them than heretofore,' is certainly a sign of the times which needs no interpretation:

"The letter of our Beaufort correspondent, which was published yesterday describes a deplorable condition of morals and manners among the colored people of the Sea Islands. The trial justices are kept busy, it is said, hearing complaints and counter complaints between husbands and wives on the score of unfaithfulness, or in issuing warrants against young people at the instance of their parents for insubordination and general unfaithful conduct. Where the fathers and mothers set so bad an example the children will quickly follow, of course, and this fact will probably account for much of the crime and disorder which our correspondent has noted. Besides this, however, the colored people on the Sea Islands are for the most part of the lowest class of their race, and, as they herd together and keep beyond the reach of the influences which have elevated and enlightened their fellows in other parts of the country since the war ended, they have made little or no progress.

There is a wide field for missionary work in the region in question, and it has been greatly neglected, so far. What is most needed, perhaps, as our correspondent shows, is an earnest campaign against immorality. There is no lack of 'religion,' even in the most benighted districts, but it is unfortunately true that it is not always a kind of religion that conflicts with a low view of morals on the part of many who are regular church-goers.

Instances have been known, indeed, where preachers have been deprived of their charges for speaking plainly on this point, and in one case the offender was expelled without ceremony for 'insulting' his congregation by insisting upon a due observance of one of the Ten Commandments. If left to themselves the colored people on the Islands will sink to the lowest level of degradation in a few generations, and it is, therefore, incumbent upon their friends, North and South, to look more closely after them than heretofore.

As still stronger evidence of the spirit shown in the two preceding extracts, we copy the following from a prominent Southern Baptist newspaper:

"Rev. N. J. Wheeler, a prominent Northern Baptist, writes an article in the *Christian Herald*, of Detroit Mich., which might be read with profit by the Baptists of all sections and of both races. We produce the following extracts from it:

"But, as suggested above, one of the most encouraging features in this benevolent work is the increasing interest and co-operation of the Southern whites. Poverty with perhaps some coldness, born of their changed relations to their late slaves, has forced by the fortunes of war—kept the Southern whites for some years from engaging in this work. The teachers who went from the North were not cordially welcomed and encouraged by them. In some cases, the indiscretion of these teachers may have repelled Southerners. In others they seemed to be suspiciously classed with Northern adventurers who went South with political aspirations. But these prejudices are yielding to confidence, and the era of co-operation is dawning with its larger promise. No one who was present can forget the memorable scene in the old Oliver Street church, in New York, just after the war, when the delegation from the Southern Baptist convention appeared at our Northern Anniversaries. They had spoken and were heartily received during the day, and the evening was set apart for an address by Dr. J. A. Broadus. This prince of platform speakers had explained the impoverished condition of his brethren in the South, together with their sacrifices and struggles to repair the desolation of Zion, in words so frank and tender and eloquent as to captivate every heart. He asked his northern brethren to come to their help, and suggested that, as Northern Baptists had the money and Southern Baptists had the consecrated men to do the work, the Northern brethren should supply the needed funds and commit the general direction of the work to those who understood fully the needs of the field and were ready to cultivate it. The late Dr. Warren, the Secretary of our Missionary Union, followed in kind words. But when he came to the proposition of Dr. Broadus, he frankly confessed his own hesitation by the quotation: 'Lord, I believe; help thou mine unbelief.' Such a response came from the great congregation as showed that he had voiced the universal sentiment. Northern Baptists were ready to put their money into the work, but they also wanted a hand in it. And yet Dr. Broadus suggested a thought that must materialize before the great and urgent work can be accomplished. That is, the laboring arm must be worked by Southern Christians. From life-long association with the negroes they know them, and so know how to adopt means to the desired end far better than Northerners can. Then they live right among them twelve months in the year, and so do not have to work at arm's length, as do their Northern brethren. As New Yorkers can more effectively prosecute their city missionary work than could Christians from Boston, so their location gives the South Southern brethren an advantage in working for the elevation of the negroes which we cannot have. Ah! then, this awakes responsive chords in the souls and opens a new obligation to engage in the work, and are responding to the divine call to put brain and heart and purse into it. With all throughout our work, what they can in this most Christly way, progress will be made that will rejoice every heart, and a happy solution of the grave problem will be assured."

The death of General McClellan has been very generally and very generously noticed throughout the South, the feeling being, in the main, that expressed by the *Augusta Constitutionalist*:

"Since the war, McClellan has done all he could to heal the wounds of strife and to make the South feel that she was indeed welcome in the home of her fathers. And so, our people lament that he is no more, and pray that he may sleep well and rise in glory."

If there is any season of the year when it is permissible to take, and offer, an optimistic view of things, it is certainly in the weeks coming between Thanksgiving Day and Christmas. For this reason we trust our readers will share in the gratification with which we have read and now reprint the two following articles. The first, from the *Memphis Appeal*, is encouraging enough

to reanimate even a dejected member of the extreme wing of the Republican party, for even if, in defiance of our optimistic principles of the moment, we admit that the motives which impel the enthusiastic congratulations of the *Appeal* may not be entirely beyond suspicion, yet the fact of the success remains, and is just as promising as its Memphis promoters believe it to be.

"The unquestioned success of the first annual fair of the Colored State Association of Mississippi demonstrates the future possibilities of the Southern blacks. It shows that they have only to be true to themselves to be successful. The speeches delivered during the past week by Bruce and other colored orators show that the most cordial relations exist between the two races. The success of this colored fair marks a new era in the history of the colored race—an era full of promise to the blacks and the future prosperity of the South, for whatever contributes to the elevation and the material prosperity of the blacks redounds to the advantage of the whites and the whole South. The colored people of Mississippi have developed a laudable ambition, and for the future both races will keep abreast, in the march of progress. They will move in parallel columns but both races striving to reach the same goal—the common prosperity of all. If the people of the North could see the amount of money contributed by the whites to organize this colored State fair; if they could have seen the display of military and civic pomp which for the first week has enlivened the occasion; if they could have seen the facilities furnished by the whites for pouring into Jackson the colored population from all parts of the State; if they could have heard the speeches made by both whites and blacks, and witnessed the perfect and unalloyed harmony that existed between the two races, they would hang their heads in shame at the falsehoods by which they are deluded. This fair has been controlled exclusively by the colored people. The whites have had nothing to do with it save to furnish the money for the premiums. They did not participate in the ceremonies, only when invited; and the variety and excellence of the exhibits shows the future possibilities of the colored people. Heretofore they never attended Jackson except for political purposes. But now they have concentrated at the capital of the State to promote their material interests. It is hoped from this time forward that they will continue to advance until they become the rivals of the whites in all that constitutes a perfect civilization."

The second article, from the *Augusta Constitutionalist*, is of weight only as showing that the South of to-day not only accepts but demands expressions of loyalty from its press, which twenty or even ten years ago, could have been printed only at the risk of the writer's life.

"The President's proclamation for thanksgiving is indeed a model document of the kind. It is simple, terse, comprehensive and not lacking in the fervor that makes even dignity benign and reverent. It should be hearts of his countrymen, irrespective of race and creed and party. The touch of humanity in it makes indeed the whole world kin."

Let us reflect on the fact that though commercial depression of a certain kind has rested upon this country, it has been insignificant, indeed, compared with the distress of other lands. Here, too, we have the blessings of abundant crops, of peace within our whole domain, of liberty obedient to law, no great standing armies, no social convulsions, no pestilence. Behold how fearfully smitten and apprehensive and down-trodden are many of the countries and peoples beyond the sea."

Verily this is a domain of plenty, of freedom, of beneficence; and, instead of complaining, there should swell, over all the land and far out into the lakes and the oceans and the gulf, a grand *Te Deum* of praise and gratitude to the Giver of all Good who has so smiled upon and favored us above all other nations.

As an echo of the President's proclamation, and in advance of the day set apart for returning thanks to the Almighty, we have felt it a most pleasing duty to utter these sentiments, which must rise, like incense, in the hearts and homes of men and women, whether dwelling near the bleak Canadian border or by the balmy zone of St. Augustine, by the coast of the Atlantic or the murmur of the Peaceful Sea."

## SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

## John Brown.

Mr. F. B. Sanborn has made a most valuable contribution to American History and to human annals in his life of John Brown. The name of the martyr-philanthropist is dear to the hearts of millions of colored people, who know little more of John Brown than that he lost his life in the effort to free the slaves of Virginia. The picture of John Brown is found on the walls of many a humble little cabin; whose unlettered owner reverently repeats the name of him who shed his blood for the freedom of the black man.

Mr. Sanborn's book should be studied with care by the American people. If John Brown had not done a great work for humanity, the story of his life would be one of deep interest and furnishes much that is worthy of admiration and imitation.

The narrative begins with some account of the Brown family, the first of the name in this country having landed at Plymouth in 1630 from the famous Mayflower.

Owen Brown, John Brown's father, who was born 1771 and died in 1855, wrote for his children a history of his life, which is printed in full by Mr. Sanborn, and is quaint and simple but forcible style gives a fine impression of a character strong and true, an excellent type of the American of his day. John Brown also wrote a sketch of his life, a few months before his sorrowful close, for a little boy, the son of his friend Mr. Stearns.

Both these narratives show the trials and hardships endured by the pioneers in our land, which seem almost incredible to us in these days of comparative ease and luxury, but doubtless served to develop the qualities which have given the Brown family world-wide reputation.

John Brown was born in Connecticut in 1800. When he was five years old his father moved to Ohio, then a wilderness, "full of wild beasts and Indians."

In his first long journey he aided an older boy, adopted by his parents, in driving the stock taken to the West, and from that time was made useful in any household. He relates that at twelve years of age, he drove cattle a hundred miles alone, and should have been ashamed if any one had thought he needed help.

He learned various trades, and useful arts, as was necessary for the children of the pioneers, but had very little opportunity for mental cultivation, and in early life little fondness for books. The biographer relates that John Brown, "a true Yankee, tried his hand at every sort of lucrative business that offered, and was farmer, land surveyor, lumber dealer, post master, wool grower, herder and master of race horses, stock fancier, land speculator, wool sorter and soldier."

Although full of energy and possessed of a most vigorous mind he lacked judgment, being restless of advice and bent on following his own will.

At twenty years old, he married a woman of strong and earnest character, who died in early life, and a year after his death married a second time.

The first wife had seven children and the second thirteen, and in the care and training of this large family, many beautiful and tender traits of their father's character were brought out.

Many of John Brown's letters to his family are models of their kind, and the excellent manner of expression, always forcible, always full of simplicity and earnestness, are very remarkable for a man who had so little opportunity for schooling.

In the midst of this hard struggle to maintain his large household, his heart always burdened with the sorrows of an oppressed race, he writes, "The care of our own families is the pleasantest and most useful business we can be in."

"A man can hardly get into difficulties too big to be surmounted if he has a foothold at home."

Two days before he was brought to die upon the scaffold he writes to his young children, "Do not be vain and thoughtless but sober-minded. Nothing can so tend to make a life a blessing as the consciousness that your life and example bless and leave others stronger." "I beseech you all to live in habitual contentment with moderate circumstances and gains of worldly store, and earnestly to teach to your children and children's children after you, by example as well as precept."

John Brown dates his interest and affection for colored people from childhood when he saw a little colored boy near his own age badly used. This sympathy grew with his growth and became the ruling idea of his life. Like the Master he served, he literally gave himself to the cause he loved, and his name should always be held in reverence by the colored people of America, for

"no man could do more than lay down his life for his friends," and John Brown was faithful "unto death."

The story of his devotion to the slaves of our land extends over a long and eventful period of our national history. That portion of it which regards the struggle in Kansas is so terrible, so blood-thirsty and ferocious that it sounds more like a record of savage warfare than a contest between parties in a civilized country in the 19th century. One can but shudder at the sickening story and turn with horror from the recital.

To the Virginian, and especially to those old enough to remember the stirring events of the winter of 1859, the mention of John Brown's Raid will always awaken thrilling recollections. How clearly I can recall the outburst of astonishment, horror and indignation that filled the land when the telegraph sent over the country the news that a "body of abolitionists" had taken Harper's Ferry, taken possession of the arsenal and were arming the slaves for insurrection!

Mr. Sanborn gives a graphic account of the attack and defense of the rash band who with their lives in their hands had come into the land of bondage to set the black man free.

The narrative of the capture, trial, condemnation and last hours of John Brown are of surpassing interest.

I think no figure in human story is grander than John Brown, vanquished, captured, hounded, but the patriot's children, knowing that an ignominious death awaited him, yet calmly, sweetly, patiently, with the loftiest bearing telling to all who came about him, the lesson he had striven to teach the nation, of freedom for the slave.

It is said that "Socrates died like a philosopher, but Jesus Christ like the son of God," and in reading of the magnificent courage, the heroism, the patience of the Christian slave, it seems that the spirit of the Saviour of mankind and the heathen philosopher are combined.

John Brown's attempt to destroy slavery by attacking Harper's Ferry, viewed from a practical standpoint as to direct results, seems the wildest and most impracticable scheme imaginable. It is evident that neither he nor any of his party understood either the slaves or the white people of the South. Frederick Douglass, who was a southern man, had been a slave, and knew the land and the people, showed the impossibility of success for such a plan and refused to have anything to do with it.

If John Brown, who so unselfishly, so bravely sacrificed his life for the Negro, could have lived four years longer, how could he have wondered at the aspect of affairs in the land he sought to purify from the stain of slavery. Vast armies collected in the South, the dogs of war let loose, white men from the North and the South battling over the vexed question which had long troubled our nation, and the patient, faithful slaves everywhere protecting the wives and children of their masters!

Unnumbered cases occurred where the slave who had been the companion of his owner from childhood, followed him to the field, stood by his side in battle, if he wounded him he went to a place of safety, if he were killed, tenderly laid his remains under the sod, and went back to the old plantation where both had been born, carrying the arms which had been used to fight for slavery! I remember a Negro as black as jet, who sat looking with anguish at his master dying in a wayside hospital, and when all was over and the soldier had been reverently laid to rest, the black man fastened a little silver cup to the lock of the gun he had carried hundreds of miles, shouldered the worn knapsack and started back to the North Carolina home, "to tell me mis'ar young master died, so she could come and git him."

Reading this story of John Brown's life and death, a sorrowful tale full of instruction for mankind, revives old memories and stirs my heart to its depths, as I live over again the scenes of those anxious days.

In thought I am carried back to a night in that dreary winter of 1865, when our land was clothed in sackcloth and ashes, when there was sorrow and mourning in every household.

My father and his brothers, loving the Union for which our forebears had shed their blood, willing to give up slavery, unable to go as our neighbors went, in allegiance to the new Confederacy, had been proscribed, threatened, driven from the land of their birth. My sister's husband, a brave young soldier who loved the "stars and bars" and had fought valiantly for the southern cause, had gone with his comrades, we knew not when, and each day we dreaded to hear that he had fallen as many of the brave and true were hourly falling in those dreadful times. My two young sisters, one almost a child in years, the other with an infant in her arms and I, the head of the household, but twenty-three, were alone in the dear old

homestead that had sheltered our happy childhood. How strange and lonely it seemed then, as we three gathered in one room fearing every sound, dreading one moment the arrival of "Yankees" who were not far distant, the next the attack of guerrillas we had been told were hovering near, making divers threats of destruction to the "Union people" who had dared to linger in the southern borders.

How we clung to each other, and to our precious little war baby, the gentle little girl so innocent in her smiling winsomeness, so unconscious of the dark shadows which pressed our hearts.

Our only comfort was in the faithfulness of our servants who had been so kind and loving to us in all the sad and weary days of that melancholy winter.

We had locked the doors, and taken what precautions we could, and worn with anxiety I had fallen asleep, when my sister woke me, telling me in trembling tones, that she heard a strange voice and the sound of wheels in the yard; our cook, on whom we relied as a tower of strength, had opened her door in the room just below us, and whispered consultations were going on, which she was sure portended danger to us. How helpless we all seemed as I looked at the frightened faces of my sisters, and the sleeping baby in the cradle we all hung over, as if we must protect her whatever befell us. We listened and waited until the suspense grew intolerable, and then I wrapped myself in a shawl and crept noiselessly to the basement stairs where we could hear every word spoken in the servants' room. My heart stood still as I recognized the voice of our cook's brother who was once a gentleman, like some distance from us, and had often visited his relations in our family.

The man was urging his sister to take all she wanted from the house and come with him. His master had sent him to "refugee" but he had turned his horses' heads to the North, and meant soon to be in the land of freedom, where he would also carry her and her mother, but she must make haste, gather up all she wanted and come quickly, they could reach the Yankee camp by daylight.

I strained my ears for the answer, shivering with excitement and fear until I feared I should betray myself by my agitation. "No," said the familiar voice of our good faithful Amy who lisped a little. "I loves my young ladies an' Mith Nelly's baby an' mother an' de captain begged me to take keer on 'em all when dey went away, an' dey th' giv' me all de family thilver an' everything to keep for 'em an' I th' giv' to th'at they here an' look after 'em, an' take keer of master's children till he come back. You kin take your team an' go 'long if you got a mind to."

How I thanked God and thanked Amy for her loving words. I did not stay to hear more, but crept back to my terrified sisters, brought smiles and tears with my report and we all went quietly to bed and instantly to sleep, trusting to the kind and loving soul we knew would never betray us.

Does history tell of any people so patient, so faithful as the southern slaves? Is it not our duty to love them, to remember *for ever* the story of their true faith in the hour of trial? And now that Providence has made the slave our fellow citizen shall we not help him by every means in our power to become worthy of the vocation to which he is called?

Let us do justice to the friend of the slave, who if visionary and fanatical in his methods, was like Christ, in that he gave his life to help the sorrowing, suffering race of man, and while,

"John Brown's body is mouldering in the ground,  
Let his spirit be marching on!"

Rev. I. B. HARRISON, whose letters on the South attracted so much attention some years ago, and who has recently done such good work in aiding the effort to preserve Niagara Falls and the surroundings for a public park, comes to us now with a fresh subject of interest.

In a series of vigorous letters he describes the picturesque and beautiful Adirondack region and asks the attention of the public to the importance of preserving its forests to posterity.

The Adirondack district is not only a place of great interest to the tourist and all lovers of nature in one of her wildest and grandest moods, but the State is also of great value in her effect upon the water-ways of New York.

It is amidst the romantic scenery of the Adirondacks that John Brown, the martyr-philanthropist of America lies buried, the place of his rest having been selected by himself.

Our nation, reckless in its youth and extravagant of its wonderful resources, has reached a point when its law-givers should imitate the old world, and put a stop to such folly as destroying scenes of beauty

that will attract the travellers of the earth to view them.

And the attention of Congress cannot too soon be given to the preservation of the sources of the water supply for our great manufacturing interest and the thirsting multitudes of our busy cities.

## The Blue and the Gray.

BY A YOUNG VIRGINIA GIRL.

HARRISONBURG, VA., Sep. 20th, '85—

Dear Southern Workman:  
Thinking your readers might be interested in a short account of the visit of the Union Veterans to Harrisonburg, I have taken the following notes:

On Friday last, Sept. 18th, the citizens of Harrisonburg prepared to throw aside the last traces of sectional feeling and give the Union veterans the warmest welcome possible. The stars and stripes waved over the whole town. The court-house where the welcoming speeches were to be made, was not only gaily decorated, but even the trees in the yard were wrapped round with red and blue.

The special train was due at 9 p. m., but did not arrive until 10 p. m.

There were about a hundred and seventy in the party, including fifty ladies. The camping grounds are near Winchester, from which point they made excursions, in the Valley, everywhere, they said, they were warmly welcomed and hospitably entertained.

They were escorted from the depot by the Harrisonburg guards and the Eshman band. Their first duty and pleasure, in the words of a Union officer, was to lay flowers on the graves of their fallen comrades, in the quiet cemetery, which the ladies of our small town had provided, that our brave boys might sleep their last sleep peacefully in the soil they loved and fought for so nobly.

Then the band struck up "The Star Spangled Banner" and to the same national song the Blue and the Gray" marched together to the court-house, where the Mayor, Mr. Pendleton Bryan, made a warm and graceful address with a reply by General Rhodes. Judge John Paul then made a few very appropriate and touching remarks, after which the crowd dispersed to visit points of interest. There was a photographer with the party who seemed much pleased with the small "dricans" who followed the veterans with almost as much enthusiasm as if it had been a show procession. What higher compliment could be desired from little Harrisonburg Africans? He made groups of all he saw, and as they stood showing their teeth with pleasure at the compliment, he was charmed with his studies.

The ladies were as much interested at seeing a colored baby, about two months old, as we, who have been brought up among these, would have been at seeing an Indian papoose.

At about two p. m. there was a lunch in the court-house yard, where tables loaded with delicacies were set, or at private houses where they stood waiting all day for the refreshment of our guests.

During the day we made several pleasant acquaintances, as several ladies took an early lunch with us. Mrs. Y., a Vermont lady, seemed much interested in the Negro problem, especially in the elevation of their religion above the shouting, visions, etc.; Sunday's excitement, forgotten in every day life. She seemed to think education a most important factor in this work, in that no mind fully awakened can be long without feeling the necessity of Christ in every day life as a help against temptation. The conversation turned to the colored public schools. Mamma wanted to send for a grand-child of an old family servant, who had been taught by her aunt, a graduate of the Hampton school, to repeat the blood curdling poems she recites so dramatically, and to work long sums, etc., which seem marvelous in a child who had been to school but a few years. However, our guests wished to witness the rifle match between the veterans of the 1st Mass. and 2d Va. regiments, and there was not time to send for her.

The contest was quite exciting. The prize was disputed, but next day a telegram was received awarding the laurel to the Harrisonburg guards. The reward was a small silver cannon with gold wheels.

At 4:30 p. m., the train left amid loud cheering for the boys in blue.

H. M. D.

## Notice.

Any schools, Sunday schools, or individuals, willing to help some of our graduate teachers to make Christmas a happy time for their scholars, can be furnished with names and addresses by sending a postal card to Miss A. E. Cleveland, Poughkeepsie, N. Y.

Substantial help and much pleasure were given in this way last year by northern friends, and it is earnestly hoped that many who read the SOUTHERN WORKMAN will respond to this appeal.

## SILHOUETTES.

BY ALICE M. BACON.

## An Afternoon Ride.

A November day in Virginia is very different from a November day in New England, and Virginia is not by any means a loser by the comparison. The sun shines brightly through the cool soft air, the water gleams blue and sparkling in the sun-shine and the breeze. Roses are in bloom in the gardens, the woods are a blaze of red and yellow set off by the sombre greens of pines and live oaks. A brief visit to the North with its leafless trees, barren fields and flowerless gardens is enough to fill one with a sense of gratitude for our Virginia November. There is nothing melancholy about the autumn here. In the North, when the autumn comes, all living things seem to prepare themselves for the months of silent endurance that the winter inflicts. The northern winter is an enemy, too often an enemy that gives no quarter, but chills and kills, without mercy, everything that it can seize in its icy grasp; but the Virginia winter comes as a friend bringing to all living things a rest from growth and toil, a coolness after sultry heat, a life giving frostiness and freshness after the drought and lassitude of summer. The northern winter is like death, the southern winter like restful sleep, and as the winters differ so also do the autumns. In the one autumn we see the sadness and solemnity of a preparation for death, in the other the gentle quietude of preparation for sleep, and so when in Virginia we ride about and look out upon "the happy autumn fields" the keen pleasure from the fresh air, the damp odors of the woods, the gorgeous colors of the trees, is mingled with that vein of sadness which runs through all our enjoyment of the glorious New England fall.

Perhaps some of my readers would like to accompany me on a ride through the country one of these bright, cool November days. The horses are brought to the door directly after afternoon school, and we are off just as the students are marching over for their weekly drill in front of Virginia Hall. The brass band and the advancing columns of the battalion have an inspiring effect upon our horses. Two dance aside, and in their efforts to escape from the companies of boys, cause a panic among the girls who stand in observant groups along the walk. Once safely past these objects of terror, our horses start a brisk run, and we are soon out of the gate and off the school grounds. A lady on horseback is met, a very frequent sight in this part of the world, as we soon discover. All the Negro population smile approvingly and duck their heads to us as we pass. Sometimes a surprised or complimentary remark greets our ears. The prancing impudence of my little sorrel causes many a smile, and sometimes even an exclamation, as "Look at that horse," "pears like she's 'gine to fly," or "I reckon dat horse kill you some day," this latter remark from an old man, who pails in each hand and a bundle of sticks on her head, whose personal appearance and flapping garments had sent poor Daisy flying out of the road without regard to trees, ditches or other obstacles. We enter the village of Hampton we go slowly, for the street is narrow and blocked with vehicles of every description; then, as we come out of the business street into the side streets, the Negro cabins, whitewashed, fenced and huddled closely together, grow vocal with the yelps and barks of many curs, who according to their age or prowess, bark or snarl from behind their fences, or rush out at our horses' heels, regardless of the severe threats of future punishment proceeding from the human occupants of the cabins. We escape from this annoyance by a quick canter, curly headed children in all shades of bronze running out of the little gates with rolling eyes and gleaming teeth to watch our horses go by.

Once out of the town, the level fields stretch out all sides of us, broken here and there by masses of woods, the borders red and yellow against a dark background of evergreen. The corn is still standing on the stalks, but all the plummy glory of tassels and blades is gone, flat for the cattle, and the stalks stand bare and leafless, holding a bunch of ears alone midway from the ground. The hedge rows are one tangle of vines, trumpet creepers, woodbine, cabbier, climbing and twisting over the fences and low bushes that border the road, and glowing now in their autumnal coloring. Tall red grasses droop gracefully here and there, and everywhere, a shrub covered with fuzzy nebulous white down grows scattered over the fields. A party of small pickaninies by the roadside carrying the family marketing among other things a flat black bottle, dangling by a cord, seem searching the ground anxiously for something; as we pass, the largest of the group, a boy of nine years perhaps, accosts us. "Say, Miss, you isn't see no five cents on de road, is you?"

Poor little things! They have been sent to the store, and coming home with their purchases have lost their change. A scolding, perhaps a beating awaits them at home, and so we leave them trudging disconsolately along searching the road with anxious eyes for the missing five cent piece. Now the road turns into the woods, and our horses' feet fall silently on the pine needles. Coming toward us through the shadowy vista we see a picturesque group: a steer cart with three long haired frowzy steers harnessed abreast, and in the little box on wheels that creaks and rattles slowly behind them, a white haired, ebullient patriarch with his wife and family, filling the cart to overflowing. Why either harness or cart holds together is a question that would puzzle an expert in physics, for the harness is made of old ropes, bits of cloth, anything and everything that a Negro cabin can produce, and the cart creaks and rattles in such a way that no one unaccustomed with its ways would dare trust himself in it for a moment. But a man who can afford to drive his family about the country in a cart drawn by three steers is a capitalist and is to be looked up to and respected by all his poorer neighbors who drive only one. With a benignant smile and wave of the hand, the driver of the old team greets us, and all the little folk in the floor of the cart turn their heads to look after us as we canter along.

Once out of the woods, we cross a short stretch of open country and soon find ourselves on a level headed with the Atlantic breakers booming at our feet. Sand dunes sparsely covered with coarse grass are at one side of us, the limitless expanse of blue ocean on the other. Here is the place where our horses to take that good run for which their souls have longed ever since we started, and so laying the reins on their necks we let them out, and for a few moments everything is forgotten in the simple joy of the rapid motion. The breakers roar and tumble at our feet, the cool soft air from the sea stimulates and exhilarates us, and the strong limbs and elastic bodies of the horses we ride seem for the time to be our very own. For pure physical delight is there anything that can surpass a good run on a good horse with a hard white beach for a track, and the winds and the waves for company?

But there are people on the beach ahead of us and we must curb our impatient steeds and assume a more dignified and missionary like pace. A little fishing tent, half hidden among the sand dunes accounts for the motley company of men, women and boys who are engaged in some mysterious operation (pretended with fishing), which involves ropes, nets and boats, and the occasional services of the whole group, with much shouting and laughing on the part of all engaged. Farther along we pass an old man with a crawling steer cart, in search of drift-wood for his cabin fire.

And now a few gaily dressed white people attest the nearness of the Hygeia Hotel. The line of sand dunes on our right disappears and the low line of stone work crowned by green turf that takes its place is the outer wall of Fortress Monroe. Through the openings in the wall, we look into the mouths of the canals, and on our left, out in the water, picturesque but useless, lie the islands of the Rip-raps with its unfinished, ungratified fort. Now we strike into a road leading off of the beach, and soon emerge on to the shell road that runs from Fortress Monroe to Hampton. Just as we reach the government bridge, our attention is attracted by the evident surprise and delight of an old colored woman seated on a slow moving cart. She is arrayed in an old blue army cape, and a man's straw hat, and is smiling in such an affectionate manner that we smile and how in return. As we come within speaking distance, her smile breaks into words and laughter. "Why you isn't!"—here her utterance is broke by an irrespressible chuckle, which finally asserts itself as an unmistakable "Ho, Ho." The paroxysm over, she tries again. "Why you isn't been way round de creek, is you?" On our reply that we have, she breaks out again into laughter, but gains sufficient control over herself to call after us as we are getting out of hearing, "I reckon youse mighty smart riders."

Homeward we ride with the sunset glow shining upon the water. In the dim distance we are aware of a smile walking leisurely along under an immense overshadowing hat-brim, the smile growing more and more radiant as we approach it, and recognized by our experienced eyes as the "Butler grin." As we come quite close, the boy beneath the smile proves to be Henry, the pride and pet of the Butlers, named in honor of the General who built from government funds the cruciform building of the Butler school.

As we reach the school grounds, the bell is ringing for supper. The students are assembling in their companies in front of their dormitories for roll call; the great buildings

are lighted and their many windows shine cheerfully through the gathering twilight. Sounds of song and laughter are in the air, and far away across the creek the young moon, as evening stars gleam gold and silver through the rosy afterglow.

## A Visit from Aunt Betsey.

When I came out of school this morning I found Aunt Betsey sitting upon my front piazza, patiently waiting for some one to let her in. A queer little bent figure scarcely large enough to carry the big basket which she brings over weekly for supplies, she tottered to her feet as I drew near and smiled; the childlike, innocent smile that somehow softens one's heart at once.

"Well, Aunt Betsey, how are you getting along?"

"Is mighty 'ol' honey, I certainly is" is the reply, though the cheerful smile seems to restate that being "mighty 'ol'" is a matter of small importance to her.

The door once open, Aunt Betsey comes in and plants herself by the fire, while the business of filling, or partially filling the big basket, is being attended to. She gazes about the room with considerable satisfaction while her poor old bones take their ease in a comfortable chair. At last her eyes rest upon the gray hearth rug.

"Is dat an animal, honey?"

"Yes, Aunt Betsey, that's a goat skin."

She ponders awhile over the information, then makes another conversational venture.

"Pears like dat must a growed in de back country."

"Yes, that came from away cross these here."

"Dat is so, honey, I thought it growed in de back country. Pears like dat animal must eat a body up ef was roon' yer."

"Oh that wouldn't eat any one Aunt Betsey, it was only a goat. You've seen goats, has you?"

"So I has, honey, so I has! An so dat aint nuffin but a goat!" and Aunt Betsey looks at the rug with slightly diminished respect.

After this, conversation flags for a little space, until, the order on the commissary written and the small bundles placed in the depths of the large basket, Aunt Betsey shows symptoms of getting ready to depart.

"How is your daughter, Aunt Betsey?" I ask by way of saying something.

"She's on 'y jest to'able, honey, jes to'able, honey, jes to'able. She got a right smart lot o' chillens and grand chillens to look out for."

"Has your daughter grand children, Aunt Betsey?"

"She has dat, why honey, de white folks as knows says I'se mo'n eighty years ole," and the infantile smile spreads all over the little brown face with delight at my expressed surprise.

"How is your daughter, Aunt Betsey?" I ask by way of saying something.

## Natural History at Hampton.

Probably there are few things that are at the same time so hard and so interesting to teach at Hampton as the Natural History. It is hard because it is taught to large classes, and without a text-book, and because it comes at the beginning of the junior year, when the students have had little training of any kind, and have no idea of scientific method. But the fact that their minds are so young gives a special fascination to the work of teaching them how to notice and how to read.

The students devour the books with avidity. They must be selected with some care, for everything in print is law and gospel to the Hampton student, and he insists that a bat is a bird "because it says so in the dictionary," whatever the teacher may say to the contrary, until she shows him from a larger dictionary that a bat is a "chiropterous mammal." This gives him peace, for the word *chiropterous* is one not dreamed of in his philosophy, and when the teacher tells him the Greek words from which it is derived he decides that he may as well respect her after all. But he does not always accept her word when it opposes his cherished superstitions. When the lesson was about cats, one boy said that the shape of a cat's eyes changed with the moon, being round when the moon is full, and narrow at the first and last quarter. The teacher explained that this was not true, but that the pupil was round in the dark and narrow in the light, and then said "Don't be discouraged, but tell us what else you know about cats." Whereupon he rose and calmly remarked—"I am not at all discouraged, for I know it to be the fact." There are some curious applications of Biblical lore to science, as when some one raised the question whether snakes have feet, and a boy said impressively, "Snakes do not have feet, because it says in the Bible, 'upon thy belly shalt thou go';" or when a skeleton was being exhibited in class, and a boy demanded "where the spare rib came from that Eve was made out of."

But some of the most interesting things are found in the examination papers which the students write about once in two weeks. The first set of papers this year spelled the word "mollusks" in twenty-five different ways, among them "mules," "moules," and "moules." Even the word *thorax* appears as "thorax," "thorax," and "thorax." One boy, when he takes physiological, talks about the "hood wessels," the "win pipe," and the "brunical cords." Another who has picked up somewhere the word *thorax*, airs it whenever he has a chance, in the two forms "thrac" and "throax." The physiological gentleman mentioned above undertakes to describe the skeleton of a horse with the following result—"The skeleton of a horse is pricable, the vertebre that goes strait down his back they have no collar bone. There kneec is there rist there elbo is in leg. And he is ugly altogether." One of the girls dismisses the same subject in this summary way—"The skeleton of a horse is all bones," and another elucidates it further thus—"The skeleton of a horse he look booney that is he is booney and his legs are long."

Some of the papers bring woe to the teacher's heart. When the nature of the diaphragm has been repeatedly explained with great care, it is discouraging to have it appear as "a large muscle in the neck," "seven vertebrae in the neck," "the place where a word gets stuck when we don't open our mouth wide enough to let it out," or to read "the diaphragm is generally covered with hair."

A question about the internal economy of a cat elicits such answers as these: "The internal of a cat are the organs which join the intestals to gather. The diaphragm separates the intestals from the body; The external organs of a cat has a heart in the chest, in the upper part,"—and from an Indian boy: "The cat is a have always small organs when it is young an older too just is same." The *geth* of a dog are called by one student "clers, inciers, molders," and by another "molars, insiers and quinnious." A dog's claws are said to be "intrastible," and his eyes are "not too large nor too small but they are of a medium size." The hoy whose "intessals" are quoted above enumerates the members of the Dog Family thus: "the tiger, leopard, fox, wolf, lynches, the eyes are of a grayish color," and says that ungulates "grasp on to things by their mouth, they are very locomotive."

These are some of the funny things that happen, but the work is not all a joke. Many of the students are doing serious and admirable work. No one who sees their rap attention when the lesson is specially interesting and their eagerness to learn new names and new facts, can doubt that they are in earnest or that it is worth while to teach them.

### Letters From Hampton Graduates.

FROM THE "STEELE ORPHANAGE," IN CHATTANOOGA. A NOBLE CHARITY GLAD TO SHARE IN ITS WORK. FROM AN HONEST DEBTOR. A PLEASANT LITTLE SCHOOL IN THE WOODS. NOT AFRAID TO TRY. THE EDUCATION OF TRAVEL. TEACHING SELF HELP.

One of our last year's graduates, who has found a worthy field of work in Mrs. Steele's noble charity for orphans in Tennessee, writes thus appreciatingly of it, and of a contribution sent from the Hampton Sunday-school.

FROM THE STEELE ORPHANAGE.  
Chattanooga, Tenn. Oct. 26, 1885.

Dear Schoolmates and friends: I have received a letter from Mr. Frissell, and enclosed in it was an order for \$10.00 from your Sunday school, for the Steele Orphanage.

I think it is useless for me to say we were made happy by it; for when you think of so many children who cannot do anything for themselves, but are dependent on others, you may know they are proud of any gift. Perhaps you would like to know something about the work in which I am engaged. I have been employed in the Home since the 12th of August, and must say that each day I derive new pleasures from my work. There are now about fifty-seven children here. The number increases very fast. We have from babies six months old, up to fourteen. You can see what a large family there is. You may wonder what we do with so many children; how we keep them from fighting, stealing and other bad things. Of course it is hard to train them at first and to get them to leave off their bad habits, for some come from wicked families; but as the saying is "where there is a will there is a way." We have prayers morning and evening and school five hours a day; the rest of the time is devoted to work. You know we take time to eat.

There are eight ladies who are engaged in this work, six white. (Miss Bertie Holland, an ex-student of Hampton, has charge of the cooking, and the boys' dormitories. I now have charge of the mending and have two of the older girls who do the ladies' washing. They are learning to wash nicely. I can now trust them with the washing, for they will rub until the piece is clean. They are taught, that "To serve God, we must do everything as unto Him." I do not mean to say they are perfect in any way, for they have much to learn.

They sing grace before eating, and you will be surprised to know that the verses sung are the ones that are sung at Hampton. They know how many books there are in the Bible, and can name them; they also know the Commandments. They know great deal about the "Story of the Bible," for it has been read through to them three times if not more, and they can tell who gave the book to Mrs. Steele. They have also had the "Story of the Gospel" read to them. The good that these two books have done the children, is seen now, and I hope more will be seen in after years, when they become men and women.

They attend the Congregational church; I must say that they behave nicely. They don't turn around to see who comes in or who goes out, but when they come home they can tell what the text was and where to find it, also what hymns were sung. In the afternoon they go to Sunday school in the chapel here at the Home. In the evenings they have Bible readings.

As I have told you that some come from very wicked families, I will tell you that I was never more surprised in my life than when some of the children said they had never heard about Christ before they came to the Home. Just to think, in the eastern part of Tennessee, in this large city where there are quite a number of educated colored people! Some think the work too low for them to stoop and do it. Children were dying on the streets from neglect until dear Mrs. Steele took her hard earned money to put into a home for these children, and she had taken the first step, some kind people helped, until the children are now made happy. They very seldom fight, for they are taught, that it is wicked.

The matron has gone on her vacation, and in her absence I have charge of two babies. They are very dear little children; one of them, its mother threw away, left it on the door steps of a family in the city. It is the pet of the Home.

Forgive me for writing so much, but I feel so interested in my work. If I could see you and talk to you I could tell you better. I don't feel, as one of my schoolmates wrote to me about my work, "Sorry that I have such an humble place of labour," but I thank my Heavenly Father that He has given me this field. I have found out that true happiness is in making others happy, and my happiness can not be told, in making so many little hearts glad.

Mrs. Steele is now in Massachusetts, but I know she will send many thanks to our kind Hampton friends. I will advise, you dear students, to improve each moment, for you will regret the time you have lost at school when you go out into the field of labor, as I have. May God's blessing rest on you all, and ever remember the children in the Orphanage.

I will enclose a note written by one of the girls twelve years old. It was written to me. She is a good Christian girl as can be seen by what she wrote.

Yours gratefully, A.

Dear Miss Annie: I am trying to be a good girl. Sometimes I talk in school but I am going to try not to. We had a Bible reading last night and it done me so much good. I want you to pray for me. It seems hard to get along without doing or saying something wrong. I am sorry for what I have done. This is all.

Good by, your loving friend, C.

FROM A WORKER AT TUSKEGEE.  
One more Hampton graduate, who has completed a further course at the Westfield Normal School, having joined the corps at Tuskegee, writes as follows:

Tuskegee, Ala., Nov. 3rd, 1885.

Dear Miss C: Your circular is just received. I am glad to see that you have not forsaken me.

I was graduated from Westfield in June. I spent the summer in working for Tuskegee at the North, and came here in Sept. I was surprised to find such an excellent school built up by young Hamptonians. Hampton is well represented in the corps of teachers, having ten out of fourteen. The prejudice is not near so bad as one would think it would be in Alabama; it is not so bad as represented.

The Negro in this State has not improved his opportunities. He has been dormant too long, and as a consequence finds it too much of an exertion to take that which belongs to him now.

I have visited the country twice; that is the old plantations. I find the Negro is but little better to-day than he was twenty years ago. This mortgage system of farming is killing our people here, and they never will amount to anything until it is done away with.

Our school is very full; in fact we have more than we can comfortably accommodate. We have 225 pupils now, and are constantly receiving applications for admission. Every week we have to refuse worthy young men and women who want to come and work during the day, and go to night school to prepare themselves both mentally and financially for next year's work.

Many of our students are ex-ministers and teachers. We have three ex-members of the State Legislature in school; several married men. Our students' ages run from 15 to 40 years.

I find the pupils very studious and eager to learn. As a rule, they are very poor. Most of the young men are paying their own way.

I find several Hampton students in the State. Among them is Dr. C. H. Dorsette, who is doing a flourishing business in Montgomery. He is considered, by both white and colored, one of the best doctors in the State.

I enjoy my work very much, especially my Sunday school work.

Cordially yours, C.

FROM AN HONEST DEBTOR.

The excellent spirit and sense of honor shown by the majority of those of our students who graduate, as some are trusted to, in debt to the school, is very gratifying and creditable. One such writes from her pleasant little school house in the woods:

—, Va., Oct. 20, 1885.

Dear General: As you know, I owe \$13.00 and some cents on my schooling, and promised to pay it this month, October, as expected, by this time, to have taught one month. Owing to illness, I have been unable to carry out my plan, and have just opened school, I am told by the trustees, that I can't get any money until Christmas, but just as soon as I can I will send the sum.

As soon as I found this out, I thought it my duty to write you about it. Sorry I cannot attend to it now.

I have a very pleasant little school out in the woods about six miles from home.

The school-house is a large log house, with three windows, a few benches, one stove and a small black-board in it.

The children are anxious to learn something, and the parents will work hard day and night to send them to school. I don't think I will have any trouble teaching object lessons instead of "A B C," as the people here seem to think whatever the teacher suggests is all right. They have neither church nor Sunday school, but I hope soon to start a little Sunday school.

I am proud to say I got my sister in the night school at Hampton, this fall. Some thought, as she was getting older, I had better try to keep her in day school, but as I had been there a work student, I knew the good of it. I have one more sister to send that way, and if I had a dozen more, and could, I would send them as work students. Wishing you great success this term, I am yours very gratefully. C.

APPRECIATION OF THE NIGHT SCHOOL.

NOT AFRAID TO TRY.  
We congratulate our "Hampton graduate," and are "not afraid" that he will continue to succeed.

—Va., Nov. 15, 1885.

Dear Dr. W: I trust you are well, and enjoying the pleasant autumn. Having been blessed with good health and a nice boarding place, the part already past, has been quite agreeable to me.

Sept. 15th, I was appointed principal of what is called "The Graded School of Well. I am sure a smaller name would do, but however, I shall continue the story. I was told by several persons that it would be impossible for me to teach the advanced pupils, they had completed algebra, grammar, history, geography, and had studied music two terms. They said: "A Hampton graduate can't teach that school, and if you don't want your feelings hurt, by finding pupils higher than you are, I advise you not to try it." I told them I was no coward, and would take all due credit to them, I should make an effort to teach the school, regardless of anyone's advice. I further stated that those pupils who were my superiors ought to be teaching.

On the 16th of Sept., I began to teach, having one assistant: Mrs. —, who had opened school the previous day while I was at home. Mrs. — is well experienced as a teacher, and is a great help to me.

I have examined every new comer, and as yet no one has passed a satisfactory examination in arithmetic, beyond long division; in geography, beyond the "earth is round like an orange or a ball," in grammar, beyond, "every sentence must begin with a capital letter, and end with a period;" or in history, beyond "Columbus discovered America in 1492." There are about five who can read music in C, and I being able to read in any key, also to perform on the organ, am ahead of them, and having my evenings for study, am able to remain ahead of them.

I shall do all in my power to bring the school up out of self-conceit, endeavoring to teach them to think. I have on roll one hundred and thirty-five, and prospects for the future are favorable.

Yours respectfully, B.

THE EDUCATION OF TRAVEL.

We are glad when our students recognize and can enjoy the advantage of varied forms of education.

Dear Miss C: N. C., October 30th, '85.

I hasten the reply, before I, like some others, shall be guilty of a breach of politeness, by waiting for a more convenient season. The past summer has been a very pleasant one; while enjoying the benefits afforded by a long rest, change of scene and air, I have had a wide scope for sight seeing. It has long been an earnest wish of mine to visit the North, so, with economical management, I saved enough from my salary to enable my acceptance of an invitation to spend my vacation in York-Penn. I stopped in Washington in order to see the many public buildings, and other places of which I had read so many descriptions; not any however conveyed half the pleasure, really afforded. My next stay was in Baltimore, with my class-mate Josie L. She is favored with an amiable family, and they made my visit one of congenial enjoyment. In both cities I met a number of Hampton friends, and as you may readily infer, the meeting with old and dear friends added largely to my enjoyment. York is situated near the mountains, and noted for its healthy locality. My friend's husband is a studious minister, and possesses a large library of valuable volumes, so with a quiet house and plenty of instructive reading matter, I made good use of my time.

These advantages, and the meeting of old and new friends made this the most beneficial and pleasant vacation I have ever spent. It is indeed a grand privilege to be permitted to travel, if only a short locality. The most thoughtless observer can not fail to derive some benefit, for his perception is developed and his thoughts naturally will cover a broad area. In reply to your questions, I am a member of the Episcopal Church and a teacher in the Sunday school. Our minister the Rev. C. O. Brady, who is colored, has lived in Boston, and until last year, one of his friends there, a wealthy lady, gave presents for our Sunday school Christmas tree, but she is dead, and we do not have them any more.

I have been teaching since Nov. 1881. My first school was in Virginia. This term will be the fourth in the Graded School in —. Our schools have a larger attendance this year than ever before in their history. I think the increase is largely due to the attractive appearance of the buildings. Our school has been repainted, new shutters put up, and where needed, stoves put in. The teachers have decorated their rooms with pictures, so now our school presents a most cheerful appearance. "We have more pupils than we ought to have in order to do our duty, but I do not complain, trusting that good may be the result of patient toil. Hoping you may write me when convenient. I am with best wishes.

Yours truly, L.

TEACHING SELF HELP.  
The most valuable lessons at Hampton are those that form character. We rejoice when our students so well acquire the lesson of self help that they try to impart it to those who come under their influence.

—Va., October 19th, 1885.

Dear friend: Your favor came to hand a few days ago. You kindly figured the length of time I have taught since leaving Hampton. (I left '82) I have taught sixteen months; I have taught six months; and one of six months, while I have worked with all of my power, still all I have done seems very weak indeed, when I look at the work that must be done. My last place was about 200 miles from home; a school built by the Northern friends. It is a very complete house costing \$1,500 with a big bell on it; and it has all the school furniture needed. This house is rented every year by the Board, and as soon as the public schools are ended, the friends carry on the same school two or three months longer. So the children have a good chance for learning, and they seem to have enjoyed it. This school has been taught by several of the Hampton graduates, namely Mr. Daggs, Davis, Stokes, Kelsner and Green. I found it well on its feet. Some of the pupils had almost completed what is allowed for the school. I mean had gone over it several times. I had one class that I thought would do Hampton credit. My middle class, I don't think could be beaten. A white lady from Philadelphia was present with Mr. M. and Dr. C. on my examination day, and the lady said the "spelling, grammar, and arithmetic classes couldn't be beaten." She said "she had come all the way from Philadelphia just to see that school." Mr. M. is one of the trustees. He said that as far as he had seen, the school couldn't be beaten; but stated he couldn't tell thoroughly unless he was to examine from where they commenced at the first of the term. I told him he would find them perfect in it, they had gone over. My school was not so full as usual on account of so much sickness; and the people have had three years bad crops, so that some were not able to send their children. I thought several times to ask some of my teachers as I had seen done by some of the graduates. Then it came to me it was time for my people to help themselves and not depend on others so much. If I were in a place where I could not see a man take a drink and where women never used snuff and tobacco, then if they seemed to need aid for their children I could call on my friends to aid them. But when I see them spending their money for such things, I cannot beg with an honest heart for them. In some places I find the colored people doing finely, but in other places they are doing themselves little or no good.

I can say to you I think I shall never leave the field until I become unable to do my duty as a teacher. I feel greatly the need of more improvement and I cannot see my way and how it shall be done. My pay is so poor, I cannot buy the books I need to improve myself. But every year those I have to lead are coming higher and higher. I wish I had the chance of getting a place at the end of my term where I could work in the day and go to school at night. If you knew of such a place, please let me know. I am not teaching now, I shall commence as soon as I find a call. I didn't have any Christmas tree. As the children were more in need of books and clothes I couldn't demand one from the parents. I am glad to say I have always found the white people friendly wherever I have been.

I cannot thank you too much for the kind words you have said over and over, and I shall be one if God help, you may count on a faithful son and a dear lover of old Hampton, and my gratitude shall be a burning flame toward my Hampton teachers.

Yours respectfully, W.

# Southern Workman.

JAMES MCLOUGHLIN.

JOHN G. GASMANN.

SENATOR DAWES makes an able appeal for the destitute Chippewa Indians whose lands have been overflowed by the reservoirs now building at the headwaters of the Mississippi. It seems that the commission appointed to assess their damages awarded the Chippewas a gross sum of \$10,000 and an annual payment of \$2,000. This yearly award has never been appropriated, and 1500 Indians are at the point of starvation.

IN A LETTER to the *Morning Star* we have the following remarkable statement: "The police system is a forward move and is fast growing to be one of the features of the Agencies. Among the Indians it is counted an honorable calling, the distinction of being permitted to bear fire-arms not being without its weight." The fact is that all the Sioux are well armed with rifles, and, further, that this Indian police have actually been put at a disadvantage in this respect by the singular order of ex-Secretary Teller, who chose in disarmament, not the people, but the police, leaving them only their revolvers with which to inspire terror among cow-boys and Indians armed with Winchester of the most approved pattern. Dr. McGillicuddy, of Pine Ridge, alone of all the agents has retained his rifles, simply because he would do so or disband his police force at once.

### What May We Hope For?

We await with anxious interest the development of the policy of the administration in regard to Indian affairs. The President has been warmly and deservedly praised for many of his official acts in defence of Indian rights. In regard to the Oklahoma and Crow Creek lands, he showed not only that he meant well, but that he had the wisdom and force to do well. His proclamations commanding the evacuation of Indian lands by unlawful white occupants have done much to vindicate the outraged dignity of the law, and to show men who believed the Indian to be practically without protection, that, after all, they may in this view be mistaken. Such people in the future will enter less confidently upon unscrupulous schemes to rob the Indian. But what will be the policy of the administration in a matter of hardly lighter import—the appointment of agents and their employees? Already a large number of changes have been made in Indian agents. Fifty per cent, we un-

derstand, have been displaced. Of the wisdom of such changes in most instances, we have not the knowledge which will enable us to form an accurate judgment. But in some cases we cannot but deplore the change, and we are forced to believe that the grounds of action were of a political and partisan nature, and not a wise and well-guided desire for the advancement of the Indian and the greater efficiency of the service. Political partisanship is the deadly foe of the civilization of the Indian. It is a principle absolutely hostile to that which should hold good in the management of the Indian office, sound business judgment, enlightened by a thorough knowledge of the needs of the Indian service. Men should be appointed to serve as Indian agents, not because they have been good political workers in this town or in that county, but because they are fitted to perform the work for which ostensibly they are appointed and paid. Ability, integrity, and experience, so far as the latter can be obtained, are the requisite qualities, not only in an Indian agent, but in every employee of the Indian service. In no department of Government work are the principles of civil service reform more needed than in the Indian service. It is of vital import that agents who have done and are doing good work, should not only be retained, but that their hands should be made strong and their influence increased by the cordial sympathy of the government they serve. Believing this to be a cardinal point in the confession of faith of true friends of the Indians, we await with deepest interest the action of the administration in relation to the agents of the Sioux Reserve, a most important part of the Indian country. Regarding the work of these men, we believe that we are intimately informed, and in the light of such knowledge as we possess, we declare unhesitatingly, that it is a matter of critical importance as to whether certain of them are retained or removed.

H. W.

### Agents Gasmann, McLaughlin, McGillicuddy and Wright.

If the administration earnestly desires the civilization of the Sioux people, let the men whose names form the above caption be retained. They cannot be held if the cries of partisan spoilsmen are to be heeded, nor can they be dismissed if the welfare of the Indian is considered. If their resignations are called for, a deadly blow, in our opinion, will have been struck at the budding civilization of the Sioux. Agent Gasmann is a man of high Christian character, of wisdom and patience, of many years experience among the Indians. He has brought his people safely through severe crises, which would undoubtedly have had a different, and far less happy termination, had it not been for his tact and firmness. The marvelous patience shown by the Indians at Crow Creek, under the galling injustice to which they were subjected, was largely due to this agent's wise counsel, and to the influence which his character exercised over them. When affairs were at fever heat, any act of resistance upon the part of the Indians to the encroachment of the whites, would have brought on an armed conflict that must have ended in terrible disaster to the Indians. Both the government and the people owe to agent Gasmann a debt of gratitude that the threatened danger was averted. He has pursued a patient and dignified attitude under a continued fire of reckless calumny, from those whose schemes were frustrated by the revocation of President Arthur's executive order. The excellence of his work for his Indians is manifest to all who visit his agency. But it is rumored that he holds his position by an uncertain tenure. Already his chief clerk has been superseded by a gentleman who has

had no previous experience in the duties which his position requires him to perform. Such a change must necessarily prove a grave embarrassment to the agent. We sincerely trust that this change, which we cannot but think ill-advised, does not presage one of a still more radical and disastrous nature—the removal of Major Gasmann himself. It is hardly likely that an attempt will be made to displace Major McLaughlin, the present agent at Standing Rock. He is a Democrat and a Roman Catholic. His backing is very strong and he fully deserves all the support that he receives. By native ability, by tireless industry, fired with a warm sympathy for his Indians, he has achieved his present success. He has diffused his own energetic and active spirit into the slow Indian blood about him, until his reservation is bright with signs of unwonted life and movement. We rejoiced as we journeyed over it.

Agent Wright has wrought a great change in the Rosebud reserve since we visited it two and a half years ago. The crowded camp about the agency is no more; the monotonous beating of the dance and feast drum, which was constantly heard there, has ceased, and the people have begun to scatter out upon the fertile bottoms that skirt the creeks, and to take the first steps toward farming and civilized life. School houses and mission chapels, the latter built by the Episcopal church in response to the call of the Indians, are springing up in these new communities. The glimmer of the coming dawn already streaks the night that has so long blackened over these people. To Agent Wright is the credit of this change principally due. He is the best agent, without question, that the Upper Sioux band of Sioux have ever had. Will the Department retain him and so foster into maturity the life which he has begotten?

Of Dr. McGillicuddy, the agent at Pine Ridge, we have often spoken in terms of the highest commendation. We have just visited his agency, for the second time, and we shall therefore speak of him again. Of all the Indian agents, who come within our knowledge, for executive ability of a high order, he is most conspicuous. He is a western man, and a courageous autocrat, stationed at a post where wise autocracy is essential to success. He has it true, been bitterly and pertinaciously attacked, but the attacks made upon him have emanated from disreputable men whom he has removed from the reservation, from the hostile and non-progressive element among the Indians, and misguided enthusiasts in the east, who have become the mouth piece for those, who, if they had the power, would arrest all civilization among the Sioux. We believe that those who are living at a distance fail to comprehend the nature and importance of the struggle which is going on at Pine Ridge. It is an irreconcilable conflict between barbarism and civilization, between the old authority of the chiefs on the one hand, an authority which means idleness, pauperism and savagery, and the authority of the government on the other, which means order, progress and civilization. Dr. McGillicuddy and the majority of the Indians who are favorable to civilization are arrayed against Red Cloud and his followers, who, as Spotted Tail formerly did at Rosebud, keep up the old Indian customs and dances, refuse to send their children to school, and strain every nerve to check progress among the people. Both parties anxiously await decisive action on the part of the government, which will reveal its purpose and decide who is to be victorious in the contest. The downfall of Dr. McGillicuddy will gravely imperil it if it does not completely overthrow the remarkable work which he has begun and developed among the Ogallala Sioux.

Will the Government, wisely recognizing his abilities and services, retain him, or must he, too, go? H. W.

### Our Native American Literature.

There are probably few persons acquainted with the fact that we possess anything worthy the name of "literature" in the native American languages. To most the title of "Aboriginal Authors and their Productions," would seem an absurdity. Dr. Brinton's success in this neglected field will prove a revelation.

His study of the literary faculty in the native mind, indicated by a vivid imagination, a love of narrative, and an ample, appropriate and logically developed vocabulary, throws light upon knowledge which we already possess. We acknowledge the Indian's figurative powers and gift for storytelling, but we learn with some surprise of his literary productions in the English, Spanish and Latin languages. Dr. Brinton gives a partial list of these as an "easy test of the faculties of the red race in this direction." His labor is, however, mainly directed toward the study and preservation of works in the native languages, under the heads of narrative, didactic, oratorical, poetical and dramatic literature.

In these primeval records, the narrative portion is the most abundant, and is probably the earliest form of sustained discourse. The "Walum Olum" or Red Song of the Delawares, and the Iroquois "Book of Rites" are among the remarkable examples of native productions which have been preserved to us. Aboriginal calendars and maps display considerable knowledge and ingenuity.

"The love of the American Indian for oratorical display," says Dr. Brinton, "has been commended upon by almost all writers who have studied his disposition." \* \* \* Yet in spite of all that has been said about the native oratory, we are in a very inadequate position to judge of it correctly, and this because we have no accurate reports in the original tongues of their speeches. Translations, more or less loose, more or less imaginary, we have in abundance; but, for critical purposes, they are simply worthless."

He also says some judicious things about the Indian songs. "The earliest and simplest poetry is nothing more than modulated sounds; it is not in definite words and hence is not capable of translation; it is but the expression of feeling through the voice. Perhaps this first is also the highest expression of the aesthetic sense. The most admired canticles of to-day drown the words in a wealth of vocalization, and the meaning is lost. \* \* \* These principles must be borne in mind when we apply the canons of criticism to the poetry of the ruder races. It is not composed to be read, or even recited, but to be sung; its aim is, not to awaken thought or convey information, but solely to excite emotion. It can have a meaning only when heard, and only in the surroundings which gave it birth."

This is not, however, true of all the American poetry of which we have record. "The first European who wrote about the songs of the natives of America, who was none other than the witty and learned Montaigne, paid a high tribute to their true poetic spirit. The refrain of one, supposed to be addressed to one of those beautiful serpents of the tropical forests, reads thus:—

"O serpent, stay! stay, O serpent, that thy painted skin may serve my sister as the pattern for the design and form of a rich coat, which I may give to my lover; for this favor, may thy beauty and grace be esteemed beyond those of all other serpents."

"I have had enough to do with poetry," comments Montaigne on this couplet, "to say about this that not only is there nothing barbarous in the fancy but that it is altogether worthy of Anacreon."

With this quotation we lay down the book, which deserves reading at the hands of all students, whatever their specialty.

D. G. Brinton, Philadelphia—1882.

sober." Of the boys, two are at the Government school, one is in charge of his shoe shop, teaching four apprentices his trade. The other two work as they have opportunity.

This completes the list of Hampton's returned students whom I saw. I heard from in Dakota. Of the four young men at the Menominee agency in Wisconsin, three of whom I talked with, two have not done continuously as well as they might but for the temptation to drink, though both have worked well at times. One other has always been industrious. One, who completed the normal course at Hampton, one of its first Indian graduates in '82, I heard teach three classes very successfully. It was far better work than I have heard from some white teachers. I felt proud of our Hampton boy.

Two or three questions remain to be answered. "If Eastern education is so effective, why not send all the Indian children to Eastern schools, and give up those of the agencies? Why not, at least, keep all who go East, and never return them to the dangers of reservation life?"

To the first question the sufficient answer is, you can't; the bulk of the work will always have to be done in the West. Of the 45,000 Indian children of schoolage, it cannot be expected that over five thousand can be educated off the reservations; perhaps not over fifteen hundred east of the Mississippi.

As for the second, you would not get any children with the consent of their parents for such a purpose, and, if it were possible, would it be desirable? The love of Indian parents for their children is the strongest—it seems to me the best—trait in their character. Call it animal instinct if you will, it is the strongest hold one can have on them. It seems to me, rather a divinely appointed means of grace and progress into better things. There are those who will yield to the temptations of camp life—some would fall before those of civilization—others, but the influence of those who take a bold stand for the right, like young Medicine Bull at Lower Brule, or who live simply honest, industrious lives, as so many of our returned students have been able to do, cannot be calculated. And, it seems to me, there is a reflex influence for good in such a life for others, that a life of mere consideration of one's own advantage will miss. The day school and boarding school fight among them have an influence upon an Indian community as real as the English school house has on an Eastern one, far less in degree—then all the more needed. It is an important fact also which should be well understood, that the conditions of life on the reservation are so far changing under these and other influences that the returned student does not return to one howling waste of barbarism, but finds a progressive party, to which he can ally himself for support and association, even among his own people: a progressive party, in the minority, but active and increasing in numbers and strength.

"Then why not educate all in the West, and save transportation?" The answer to that is easy too. In the first place, there are not such facilities in the Western schools, especially for normal and industrial training—as Eastern ones afford, even counting out the great educational influence of travel and contact with Eastern civilization. If there are such facilities, there is a reflex influence for good in such a life for others, that a life of mere consideration of one's own advantage will miss. The day school and boarding school fight among them have an influence upon an Indian community as real as the English school house has on an Eastern one, far less in degree—then all the more needed. It is an important fact also which should be well understood, that the conditions of life on the reservation are so far changing under these and other influences that the returned student does not return to one howling waste of barbarism, but finds a progressive party, to which he can ally himself for support and association, even among his own people: a progressive party, in the minority, but active and increasing in numbers and strength.

"We have schools here at the reservation," but it is not advisable for him to attend, as they are not as good as the public schools and, being constantly in the midst of the tribe, he would unavoidably would grow up full of Indian notions. He aids:

"I have been among these Indians for three years and have reached two conclusions: First—These Indians can be best civilized by educated teachers of their own.

Second—Those teachers must be educated outside of reservation schools such as those with which I am acquainted."

In the second place, the education of Indians at Eastern schools is needed, to educate white public sentiment at the East. While there is no thinning out of the Western schools, and every child brought East is a clear gain in Indian education, this impulse to Eastern public sentiment has done more than anything else to help the general cause of Indian education and civilization. Every school at the agencies—government or mission—has felt its lift. As it has been put, "It is not too much to say that every child on the reservations has shared indirectly the benefit of the Eastern schools."

Then there is

#### THE HEALTH QUESTION.

It is serious; and I was surprised to find generally that the diseases which make it so, while they are laid to the charge of contact with white civilization originate, are most prevalent and fatal among the pure bloods. On reservations where—as on most—the births exceed the deaths, further inquiry brings out the fact that most of the births are among the half breeds, most of the deaths among the pure bloods. The large majority are the descendants of the early English, Scotch and French fur traders and explorers who married Indian wives, the first two being considered generally the best ancestry. The facts are interesting. The Indians are increasing on the reservations, but like our foreign elements they are being absorbed in to our common population. The Indian problem is likely to disappear in the next century for want of a distinguishable Indian race. The last Stockbridge Indian claiming pure blood died six years ago. The white Cherokees, Choctaws and Creeks of Indian Territory are other illustrations of this prospect.

Scrofula and consumption are the great scourges of all the tribes; even the half breeds are to be means exempt. This is, in a great measure, the result of improper and insufficient food and disregard of the commonest laws of health. The change to civilized life is no doubt trying

to constitutions thus predisposed to disease. But there is no use in lamenting over that; the change is inevitable, and it only remains to help them pull through it. Every Indian child and youth whose constitution can be improved by proper care and treatment, and instruction, helps to save for better things a race which, without all its weakness and wildness, possesses traits which would make an unworthy addition to the sum of American civilization. *Hampton, Va., Nov., 1885.*

#### Does Civilization Civilize.

BY ELAINE GOODALE.

Public sentiment is ready for a long step forward on the Indian question. We of the East have been dealing with the individual—his time we began to deal with the masses. The capacity, the brightness, the lovable traits, the general hopefulness of the Indian children, have been demonstrated by the schools over and over again. It is time now to rise above the old superstition that Indian life is a hopeless mass of barbarism and to recognize the hopefulness of the Indian community—the inevitable change, transition, growth, which exist to-day on an Indian reservation.

The political outlook has always been the one most dark and depressing. Here, first among selfish interests, the old unsettled dispute about the ownership of land becomes a crisis and a struggle. It is an unequal struggle at best. The great Sioux Reservation blocks the path of progress. After two unsuccessful efforts to gain possession of desirable land by unfair means, the Dawes' Sioux Bill, the result of careful statesmanship and wise philanthropy, bids fair to be accepted by the country as a reasonable compromise between the necessities of civilization and the rights of the Indian. This bill, which passed the Upper House last winter, and will be brought before Congress during the coming session in a slightly modified form, breaks up this vast territory into six smaller reservations and opens a broad highway between the civilization of Eastern Dakota and the Black Hills. It provides for the purchase by the Government of some eleven millions of acres, and its sale to actual settlers at the price of 50 cents an acre. From the proceeds is retained the Indians are to receive in installments 26,000 head of American cattle and the remainder will be used as a permanent fund for educational purposes and to furnish industrial aids, at the discretion of the Department. Provision is also made for the individual Indian to homestead and take up land in severalty.

The Indian Rights' Association, which aims to influence legislation through public opinion, and has gained some unexpected victories over scheming politicians, is working for the bill. Mr. Herbert Welsh, who acts for it, has been on the ground this Fall with the three-fold object of preparing the minds of the Indians to treat for their land, sounding Western sentiment, and securing, if possible, the cooperation of the Territory; and obtaining from men of experience suggestions, as to minor changes in homestead, etc., which are to be submitted to Senator Dawes at his own request. There is no doubt that Dakota is strongly in favor of the bill, and that the Indian matter to obtain the signatures of three-fourths of all the Indians, without which it cannot become a law. At all the councils which Mr. Welsh has held and which he attended on the reservation, mission, chapel, Indian lodges, in the parlor of the missionaries and in the open air, this conservative feeling has been strong and strongly expressed.

The remarkably intelligent community of about one hundred families which has gathered about St. Stephen's Mission on the Cheyenne River reserve, showed most appreciation of the cause. One of their leading men called twice upon Mr. Welsh to obtain further information, and requested an abstract of the bill. He was then the more deliberate consideration of the council, which was immediately drawn up and presented to him by the missionary. The Dakota clergy, an interesting body of earnest and thinking men, fully realize the urgency of the situation, and in private, strongly advocate the bill. But progressive ideas on the land question are subject at times to strange misunderstanding, and they will be forced to use their influence with more or less reserve and diplomacy. It is thought that a council of leading men among the Dakotas at Washington will aid in impressing the importance of this step upon the people. To gain their voluntary consent to the Dawes bill really means that they shall be taught to realize that they cannot permanently hold any surplus lands, and that individual use of land and an individual title to it, is their future protection. This is an immense advance in thought to be expected from a people no further on in civilization than are thousands at Pine Ridge, Rose Bud and Standing Rock.

Many, however, are ready for it. There are hundreds of Indians on almost every Agency, living on and cultivating the land, who ought to receive titles, properly protected for a certain number of years. An official survey is greatly needed, and allotments should be made at once to all who desire them. I saw most striking evidences of general progress in civilization at the Mission settlement before the reservation was established. The Cheyenne River Agency. Six years ago these were wild "blanket Indians," now they are living in comfortable log houses, cultivating farms of from five to fifteen acres each, cutting from one to several hundred dollars worth of hay, wearing citizens' clothing, and most have accepted Christianity. They are nearly self-supporting, receiving only one quarter rations, and some stay at home and follow the plow rather than make the three-days journey necessary to draw their rations. I found them neatly dressed, in neatly kept and well-furnished homes, with well cared for children. It is universally the case that the worthless Indians and "coffee coolers," as they are called, hang about the Agency and are lost to the out of sight of the ration house, while the industrious and enterprising settle out on good farming land at highly inconvenient distances from the centre of supplies.

As an instance of the discouragements which these people meet with in the struggle toward independence, I should like to tell a little story of the efforts of these St. Stephen's Mission Indians to raise wheat during the past year. They were already cultivating corn, potatoes, and raising a variety of remarkably fine garden vegetables, and Mr. Swift, the missionary, was determined to get them to advance a step and produce the one important crop. He "preached wheat," as he told me, with vast persistence for a number of weeks, and believing that example is better than precept, broke a few acres and put in the crop himself. The seed and necessary implements for the Indians were promised by the Agent, who also agreed to send up a farmer to instruct them how to prepare their ground, and later to harvest the crop. After repeated and trying delays, 100 bushels of seed arrived, late, on the 15th of April. But there were no harrows. Mr. Swift lent his harrow and two men constructed rude affairs of brush, and the wheat was all in the ground. The skies smiled upon the enterprise, and every one of the twenty Indians who engaged in it had a bountiful harvest. Now the real difficulties began. There were no reapers to cut the wheat—not even cradles—and after repeated appeals Mr. Swift received a letter from the Agent, (which, curiously enough, he neglected to sign,) authorizing him to employ a man with a reaper from the other side of the river, to cut the Indians' wheat. Finding that these white men asked exorbitant prices, he used his own mowing machine instead, and hired Indians to run it. By this means the operation cost about half what it would otherwise have done. Nevertheless, when the bills came in, the Agent declined to be responsible for them, and the missionary found himself some twenty-five dollars out of pocket by the transaction.

Meanwhile the "Assistant farmer" who was supposed to instruct these Indians in agriculture, had not made his appearance, and no one in the settlement knew how to bind or stack the grain. The indefatigable missionary finally learned to bind and taught the Indians; and the wheat was stacked, not in very workmanlike fashion, "but as well as we knew how." To me, those top-heavy stacks of wheat which I saw in many an Indian corral, were eloquent of obstacles overcome. Yet all this labor seems likely to have been spent in vain. The threshing machine repeatedly promised by the agent has not arrived, and apparently will not arrive. The Indians look upon wheatraising as a farce, and unless timely help comes, will receive a serious check in their brave efforts toward self-support.

Other questions of political significance are the gradual reduction of rations and the advisability of making annuity payments in money instead of in goods. On the Great Sioux Reserve we can study the ration system in all its stages. At Santee the Indians receive no food whatever except for the old and infirm and for school children. Most of the Missouri River Indians have had their supplies diminished in proportion to their supposed capacity for self-support. The Indians at Pine Ridge and Rosebud still receive very large rations, and the Agent at Pine Ridge thinks that the beef ration ought to be diminished forty per cent, and the ration of beans and other cereals increased twenty per cent. The Indian is naturally a carnivorous animal and it is civilizing to give him a greater proportion of vegetable food. Dr. McGillycuddy, who is known as one of the ablest men in the service, believes in cutting off luxuries, such as sugar and coffee, from the idle and improvident, and in discriminating against them in every allowable way by which they may be shown that it is for their own advantage to go to work.

There is, I think, no doubt that the plan of issuing small monthly cash-payments to heads of families instead of annuity clothing, would work well, at least among the more advanced bands of Sioux. These Indians need to learn the use of money and they cannot get much further on without it. Shoes, tinware, and harness should be made and sent mended by the boys who have learned to trade at Hampton and Carlisle, and the Indians, with a little money in their pockets, would become customers instead of pauper beneficiaries, greatly to the encouragement of their self-respect. They will now sell or exchange an article which they do not happen to want, far below its real value, in order to get something which they do want; an abuse which would correct itself under the new system.

The extension of our criminal law over the reservation was nominally accomplished by Section 9 of the last Indian Appropriation Bill. The wording of the Act, which leaves it an uncertainty whether the Territorial or United States courts shall take cognizance of Indians' crimes, has however prevented it from going into effect. No appropriation was voted to cover the expense of trial in the Territorial courts, which would accordingly decline to proceed in such cases. Two instances of offenses under this new statute came within my knowledge during my recent stay on the reservation.

A few days before I reached Lower Brule, an Indian named Handsome Elk shot another Indian dead and stole his daughter. He had not been put under arrest, and was roaming about in a spirit of apparent defiance, saying that he hoped they would not send a white man after him, as he had never killed any white man yet and should be sorry to do so. Six weeks later I was at Pine Ridge. There I heard that a fortnight before the Moon had attempted to kill Cut-Meat, shooting the horse behind which he took shelter. Cut-Meat was unarmed.

Agent McGillycuddy, with characteristic efficiency, had instantly taken up the matter and made it a "test case" to try the operation of the new law. The man was brought before the Court Commissioner and sent to Deadwood, where he is held for trial in January. It is, however, still an open question whether he can be tried in either court, and the wording of the new Act should undoubtedly be amended during the coming session.

The educational problem, than which nothing can be more important, was studied by me in the light of all the Agencies. A curious sort of logic seems to prevail regarding Government schools among the Indians. It is said that they are not doing their work perfectly,

and consequently that we don't need any more of them. The truth is, that the system of Reservation schools is not a system at all, but a series of disconnected experiments. The Agent should not have entire responsibility for the school work at his Agency, not so much because he is likely to abuse his trust as because the schools need more time, thought, attention, than he can by any possibility give. I saw the wives and daughters of Agents holding positions in the schools at three out of the six Agencies which I visited, and it was my impression that they were in every case fully as competent persons as could probably have been found elsewhere. But the schools lack a head—they want comprehensiveness and method. I was greatly struck by the complete isolation of the various Sioux Agencies. A homogeneous people, closely interrelated, are broken up into a collection of petty governments. In some instances the Agents have never met, and are almost wholly unacquainted with one another's methods of handling their common difficulties. The schools on the great Sioux Reserve should bear some relation to each other as parts of a whole.

I visited six Agency boarding schools, four of which impressed me as very creditable; in two the discipline and general management were particularly fine. The inferior teaching is the weakest point. These positions offer few inducements to first-rate teachers.

The school of the Benedictine Fathers at Standing Rock was the worst taught and most generally depressing that I saw. It seems unfortunate that such a blot should be found upon the otherwise admirable work at this Agency. Dr. McCuddy's large school at Pine Ridge, which, when complete, will accommodate two hundred and fifty children, connected with an excellent farm of twenty-five acres, and new training shops which will employ twenty-five apprentices, is the most thoroughly equipped and effective Government school on the Reservation. There is ample provision for industrial training for boys, in which these schools are commonly deficient.

The day school in the Indian village is, to my mind, the most important and the most neglected point in the whole field. Its contact with Indian life is closer than that of any other, its influence is great and ought to be greater than it is. It is difficult to realize the isolation, the remoteness, the scattered centers of civilization, perhaps forty miles distant from the agency and sixty miles from the railroad. The solitary teaching alone—or it may be the brother and sister, or husband and wife with the outside world. Their little world is the scattering camp of tepees and log houses—the one-story school house with living rooms attached, the only frame building in the settlement, except there be a mission chapel as well. Sometimes the Government teacher is the only missionary on the ground.

It may easily be seen that the benefit of all this to the community is not to be measured by the average attendance in school or by the proficiency of the children in mental arithmetic or the Third Reader. It is their other object lesson in civilization. The neatly kept rooms, the neatly dressed teacher, the regular hours, countless details are seen and studied and more or less unconsciously imitated. A new element is introduced into their lives, which they but half comprehend, yet cannot help understanding that it is for their good and to desire it. No doubt at first there is the expectation of some actual visible advantage, rather than an intense thirst for knowledge. This is surely fair. The school children ought to be the best dressed and the best fed as well as the best behaved children in the village. To this end, soap and water should always be provided in a well kept and convenient place, clean face and hands and well brushed hair demanded of every child. The women of the village ought regularly to meet and sew for them with materials furnished by the agent from the stock of annuity clothing. The lunch and coffee and hardtack which is usually given at noon should be prepared and served by the children themselves in such a way as to be an important lesson in itself. On stated days in the week or hours in the day, there ought to be regular sewing classes and other simple industrial training. Certain of these things are done more or less systematically; there should be perfect system. Nor can it be too strongly reiterated that rules for the management of these schools cannot be laid down at a distance. There must be frequent and competent inspection, encouragement and criticism to insure successful results.

I have spoken of the inevitable influence upon Indian life of the camp school. The outside work which may be done depends solely upon the interest and energy of the representative of civilization. Several of the teachers told me that the women of the camp came to them to learn to make "raised bread." This is really an important step. The fried Indian bread, made very light with baking powder, although palatable enough when fresh, is unwholesome stuff. A capable little school mistress on the Rosebud Reserve, whose children showed very plainly the effects of their training, had many strong holds upon the people. She visited the sick, gave out medicines, got up occasional entertainments, and "when I had an assistant, taught a class of young men in the evening." It is a great advantage, by the way, that the workers should be two, and whenever the number of children in school will warrant it, an assistant should be given. There is no time to be lost in fulfilling our promises to the Sioux, and establishing good day schools under competent general supervision, in every Indian village.

I have touched upon some of the demands of the political situation, which seems to me comparatively clear and by no means discouraging. The missionary field is full of inspiration and hope. The difference between the two is too often the difference between the grudging allowance and the loving gift, the cold sense of duty and the eager spirit of self-sacrifice. Whatever is mechanical or mercenary or dreary in the Government work of civilization becomes generous, warm and spontaneous in the labor of the mission. The mission boarding schools are undoubtedly of a far higher order than the Government

boarding schools. The Congregational Church, a pioneer in the field, has the large Normal School at Santee for its educational centre, under Dr. Alfred L. Riggs, son of the veteran missionary. A feature of the work here is the strong missionary spirit and the stress which is laid upon the training of native workers. The children learn to read and sing in their own tongue as well as in English.

Bishop Hare's plan in establishing the Episcopal schools has been to have them small enough to be thorough, homelike and widely scattered for the sake of wider influence. St. Paul's School, for boys, at Yankton Agency, Hope School, at Springfield, Dakota, for boys and girls, St. John's School, for girls, three miles above Cheyenne River Agency, and St. Mary's for girls, originally at Santee, now rebuilt on the Rosebud Reserve, admirably fulfill these conditions. Springfield is a small town just outside the Reservation, and its spirit of good will toward, and substantial encouragement of this Indian school are a convincing answer to many unfounded accusations of bitter prejudice on the part of the border people. The establishment of more such schools in well-selected frontier towns would undoubtedly be a wise policy.

Mr. and Mrs. Kinney's school at Cheyenne River is a complete model—thoroughly practical and amazingly attractive. The girls do all the work of the house without servants, under the direction of Mrs. Kinney and her assistant, and the work is perfectly done. The teaching is of the finest order and the discipline so good that one is not conscious of any discipline at all. The atmosphere is that of a refined and loving home. The success of the school among the Indians may be inferred from the fact that there were eighty applicants this year, when only forty can be admitted, and this in spite of the unwillingness of parents to part with their girls. I cannot leave this part of the subject without referring to the high and lovely qualities of the women of the Episcopal mission, a large share of its wonderful success. There is no other influence in the work so controlling as the influence of motive and personality. This mission is fortunate in its Bishop, and the Bishop is happy in his workers.

Perhaps enough has been said to leave the impression that the children who graduate from Eastern schools are not the only "civilized" Indians, that Reservation life is not wholly savage or inert, and that there is sympathy and opportunity and encouragement for the students who go back to their homes to reinforce the progressive movement among their people, already strong and abundantly hopeful. Does civilization civilize? That is the real question. If we have anything better to offer to the Indian in the place of what he has now, the instinct of self-preservation and the higher instincts of the Divine nature in him will teach him to grasp the good gift. The day of experiment in Indian civilization is over—let us have the effectual work.

—It is more than wicked—it is stupid to doubt the result.

#### Incidents of Indian Life at Hampton.

Nov. 10, 1885.

The past week has been one of going and coming in our Indian School, and the scenes have shifted rapidly from grave to gay.

The Monday evening Study Hour for the Indian girls ended in a shower of tears, as they presented a farewell token of their grateful love to Miss Mayo, a graduate of the Normal School, and then for five years their faithful, self-sacrificing friend and teacher, who was to return to her home in Raleigh, N. C. the next morning, to be missed alike by teachers and scholars. Not only has she carefully trained these Indian girls in the details of housework, but with rare tact has seemed able to put a sort of inspiration into the most distasteful drudgery, so that as one of them expressed it once, "When we begin to scrub, then we begin to sing."

Tuesday afternoon the long school wagon bore away eleven of the pupils to the Washington boat, to return to their homes in the West. Their names, and the Agencies to which they return, are as follows:—

Annie Lyman	Yankton, Dakota.
Zallie Rulo	Santee, Nebraska.
Lawrence Industrious,	Standing Rock, Dak.
Agnes Red Eagle,	" "
Louisa Long Girl,	" "
Joseph Ellis,	Lower Brule,
Ellen Ellis,	" "
Earnest Lushbaugh,	Pawnee, Ind. Ter.
Joseph McClair,	Ponca,
Amos Foreman,	Delaware,

Annie Lyman came in Dec. '79 with Major Andrews, and Zallie Rulo in the fall of '81, when Gen. Armstrong brought on a large party from Dakota. Last year she was a Senior in the Normal School, and one of the speakers at their graduating exercises in May.

Thursday brought us Emma Falls from Mass. The little Indian girl who went to Great Barrington two years and a half ago, has shot up into a tall maiden, bearing strong testimony to the moulding influence of a happy Christian home. Strange to say she has almost entirely forgotten her mother tongue during her absence.

Friday we welcomed back Miss Goodale, Saturday Miss Ludlow, and Sunday morning early, Miss Howard, from their Western roamings, all full of enthusiasm over the charms of Dakota scenery, and speaking well for its air and fare. With the latter came a party of seven, viz—

Sarah Walker,	Fort Berthold, Dakota.
Susie Nagle,	" "
Thomas Goodwood,	Standing Rock,
Charlie Pretty Flute	" "
Jack Blue Boy,	" "
Carrie Elbow,	" "
Katie Running Girl,	" "

The first three are old scholars who have returned for a further course of study.

One of the new boys has been in a carpenter's shop at the Agency and made an excellent record, but he was very anxious to learn English. Marking off an inch on his carpenter's rule he explained that he not only wanted to know how to measure thus but to know the English of it.

Their escort was struck with the contrast in the two boys as to the objects which especially attracted their notice on the journey. One showed quite an Indian excitement and interest over any sort of machinery, while the face of the other would light up with a glow of pleasure over a beautiful bit of scenery.

The two new girls arrived hatless, after the fashion of the plains, but have remarkably sweet, strong faces, and are very promising. The father of each is not living, but their uncles, who take a warm interest in them, are among the most prominent braves on the Reserve, one being a chief, the other a captain of Police.

The evening of that eventful Sunday found our girls gathered in their Winona Chapel to listen with a hush of pleasure and interest to two of our Dakota travelers, as they told of the progress they had seen among Indian women and of the schools where Hampton girls are teaching. It was with glad hearts we gave thanks for the safe return of our friends and sought for a loving benediction upon the new comers.

#### Did the Indians Appreciate?

Letters, telegrams, newspaper slips! With what a rush they came, full of congratulations from the civilized world to Major McLaughlin on his reappointment. Surely a man's heart must quicken with pleasure at such earnest, such warm appreciation of the work he has done for the Indian. And this Indian, this mysterious being, this stumbling block in the way of grasping white men, this perplexing question to our great and wonderful government, did he appreciate the labor, the thought, the love, put forth for him and his people by this "Father"? Let me try to show you a council held in one of the largest storehouses on the Standing Rock Reserve when the news reached there. Go with me into the great room, soon to be filled with annuity goods to gladden the red man's heart, now crowded from end to end, from side to side with groups, which numbers of these same red men must always make picturesque. Now their stolid faces are lighted with a brightness which makes the visitor forget the usually so attractive blending of the civilized and uncivilized in their dress, and to wonder what can have caused this unusual excitement in these unexcitable natures.

Their eyes directed to one end of the room, draw ours there too, to see the Agent who has left his office, that he may sit down with his children and receive their congratulations. One hy one the chief men, not necessarily chiefs, but boss farmers, men of influence among the tribes, the police, that element for good and power on the Reserve, come forward to speak for themselves and the people.

Chief Gaul with a smile, seldom seen on his proud solemn face, tells of "good hearts" because this "Father" will care for them for four more years, of the success they hope to make of their farms and stock, with him still to guide and teach them. He adds, the smile gone now, how his people had feared the Great Father would send a new Agent, in which case some of the men would have gone to Washington to beg the "Great Father" not to take from them the man to whom they looked to make their future like their white brother's present. They would not have gone with empty hands: one man's corn, another's pony, beaded articles, precious with memories, even the beloved "Pipe of Peace" had been held ready to be sacrificed for necessary funds. Then "How!" "How!" came in hearty tones from all parts of the room, and was echoed by the crowds pushing, in quite a civilized way, through doors and windows; not a dissenting voice in that assembly.

Antelope grasps his Agent's hands and after a long shaking and many a "How" and smile, turns to the crowd, saying, "The Great Father has told the truth; he said a better man will come to you. Every Father has been better, and now we hope this best Father will go on being better." No speech is received by the Agent or his "children" with more "How's"—the Indians' assent and approval than this. Now two young men come forward and with much ceremony, crown their Agent with an Indian headdress, a felt hat to which are attached many valuable eagle feathers, and which, with the friendly smile and encouraging words ever ready,

Through the long afternoon the pipe of peace passes from one friend to another, the smoke is dense in the room, the twilight deepens until, but for the rays of the setting sun streaming through the western windows, you cannot distinguish the different figures crowding around the Agent for the hand-shaking indispensable to a council.

And as we see the pleasure and deep feeling in all faces, and reflected in the Major's own as he exclaims: "This is best of all!" I feel that the question "Did the Indian appreciate," is answered.

Standing Rock, Nov. 1885.

G. H.

DIED, at Hampton Institute, Nov. 26th, of tuberculosis, Edith Yellow Hair, aged eight years, from Cheyenne River Agency, Dakota.

Ever since she was brought to Hampton a year ago, little orphan Edith has endeared herself to all by her winning ways as well as her rare beauty. But it was early evident that the little waif would not be long in our care. Inherited delicacy, increased by lack even of such care as her Indian mother could have given her, soon developed into fatal disease, and she fell asleep on Thanksgiving day, leaving us not unthankful that our Good Shepherd had so soon and gently gathered the lamb in his arms.

DIED Nov. 18th, at his home in Hampton, of consumption, Moses Moody, graduate of Hampton Institute of the class of '78 and one of her most faithful graduate teachers.

Ever since his graduation, this young man was the main stay and comfort of his widowed and now childless mother, who has been a helpless invalid for the last six years. Sitting in a lonely room in the little home which his loving labors provided for her, and to which he came to die, she waits, cared for by sisters and brothers, but longing for the summons to the home where husband and children have gone before her, where none shall say I am sick—where God himself shall wipe all tears from their eyes.

#### Can Indians Fill Places of Responsibility?

For the Southern Workman, by H. F. Minahan.

The above question is answered in the affirmative by the fact that an Indian and his wife have been for several months in charge of a part of the Forest Grove Training School at Forest Grove, Oregon, since the main part of the school has been removed to Salem, Oregon, 50 miles distant, where a new site has been obtained and new buildings have been erected. There are now 36 children at Forest Grove, but the average number for the past six months since the school has been in charge of David Brewer, (a Puyallup Indian) is about 50. The work in the school room is under the direction of a white teacher, who is at the school only during school hours. The management of the school in all other respects has been and is run entirely by Indians.

The grounds, walks, dining room, dormitories and all other parts of the buildings are models of neatness. The children are well dressed and neat, and seem happy and contented.

Mr. Brewer's wife is a person of uncommon executive ability and adds to her other good qualities the ability to play well on the organ. Mr. Brewer was one of the first pupils that came to the school and has been advanced from one position of trust and responsibility to another, until he was selected from a force of fifteen employees (all white except himself) as the best fitted to assume charge of the school. If it were not that there are so many hungry white persons who want the salaries paid to Government employees in the Indian service, at least half of the positions could be better filled by Indians than they are now filled.

#### How an Old Lady did Missionary Work.

For the Southern Workman, by H. J. Minahan.

Mrs. Taylor lives at Forest Grove, Oregon. She is one of the earliest settlers and created the plains in a wagon. The Indian School is adjoining and partly on her farm. While on a visit to the school recently, I called upon her also. As usual she talked principally

about the Indian children and the Indian school. She seems to know every child personally, and it seems to be the constant desire of her heart to do something to make them happy. In her apple house, which she said belonged to as many different Indian boys, having been earned by doing some chores for Mrs. N., and stored in her apple house for the keeping. It did not seem to have occurred to her that her own fruit might disappear along with that of the boys since the door was not kept locked and the boys were allowed to go in and out without being watched. Unconsciously the old lady was giving them practical lessons in industry, frugality and honesty, and above all, that there is something in the human heart that goes out after the helpless and dependent.

#### Medical Report.

GEN. S. C. ARMSTRONG.

Dear Sir: The seven Indian students who arrived Nov. 8th, were examined by me on the following day. But one has any sign of scrofula and but one gives evidence of delicate lungs. Three of the party are old students who have previously had a good health record at the school and who have borne their return to Dakota little without detriment.

Yours very respectfully,  
M. M. WALDRON, M. D.

#### Acknowledgement.

TUSKEGEE NORMAL SCHOOL, Tuskegee, Ala.  
To the Loyal Party Committee and the Faculty of the Hampton Institute, the H. V. and A. Institute, Vacation 1885—Greetings:

DEAR FRIENDS,  
We thank you for your kindly letter of the 11th inst. which conveyed to us your friendly greetings and information of the result of your generous effort to help us in the work of furnishing Alabama Hall. In writing this letter of thanks we are fully sensible of the fact that this is only one of the many helpful things for which the child, Tuskegee, is indebted to the good giant, Hampton.

The best return we think we can make is to assure you of the real progress of the school in the direction of what we believe to be the truest and best.

Hampton and Armstrong are names that are familiar to every pupil who has been here any length of time, and in naming the two rooms, as you suggest respectively, the Armstrong room, and the Hampton students room, we will be giving them names that are not meaningless and unsuggestive to the students.

We are glad that our appeal met with a hearty response from the Indian students, and in our own behalf and the behalf of the students of the Tuskegee Normal School, we thank them for their share in your gift. We have lately received a donation from the young ladies of the Framingham State Normal School to be applied to furnishing one room in Alabama Hall.

We were disappointed in our expectation of being able to go into Alabama Hall at the beginning of this session; and although we have a larger number in attendance than ever before at the beginning of the session, we are compelled to crowd ourselves again into Porter Hall, and the uncomfortable shanties that we have used hitherto. We hope, however, to go into Alabama Hall next month. At present, aside from the poor make-shifts which we have in Porter Hall, and the furniture we can have made in our carpenter shop, we have nothing towards furnishing Alabama Hall except in the three rooms provided for by your and the Framingham donations.

With all good wishes for each member of your committee, each one of the Faculty, and each student and friend,

Very sincerely yours,

OLIVIA A. DAVIDSON.

In behalf of the Tuskegee Normal School.

#### Correspondence.

TUSKEGEE NORMAL SCHOOL, Nov. 18, '85.

Ed. Southern Workman: Beginning four years ago with 30 students and 1 teacher and a yearly appropriation of \$2,000, (since increased to \$3,000), we have at present 225 students in Normal School and 145 in Training School and 17 teachers, 9 of whom are Hamptonians. From the church and small shanty in which we began, we have grown into Porter Hall, a large three story building, with basement, and Alabama Hall, a large four story building built of brick made by students. Besides these we have half a dozen smaller buildings.

Our industries are learning, carpentry, painting, printing, poultry-raising, sewing, laundry work, brick-making and plastering. 700,000 bricks have been made for "Alabama Hall" and other purposes.

Any one would be surprised to go through Alabama Hall and see the neat and substantial wood work that has been done by the students under the oversight of Mr. W. C. Brown, the foreman in the carpenter shop. Most of the wood work and all the plastering have been done by the students.

The farm, which heretofore has not had justice done it, because of the farm manager Mr. H. C. Ferguson's having to give so much time and attention to the brick yard, and the building of Alabama Hall, is being more closely looked after. Now that he is relieved from this, he is improving the farm in a way to make it more valuable. The ground is being manured, hill sides ditched, fruit trees, strawberry plants, grape vines, etc., put out, and leaves and muck hauled in for manure. While there has been a material growth, this has not been our highest aim. There has been a real growth in the character and work of our students. Many have become strong Christians. This is our highest ambition—the end to which all our energies are directed.

Our Financial Report will be sent out within a few days to our friends and contributors.

#### SCHOLARSHIPS.

With the increase of facilities, there has been a corresponding increase of expenses, for which there is no provision. The faculty has decided to appeal to the public for aid in the form of scholarships. The students are barely able to pay their personal expenses, to say nothing of tuition.

The cost of tuition of 225 students for a year at \$50 each is \$11,250.

The tuition of 94 is provided for as follows:  
Total annual appropriation ..... \$3000 00  
From John S. Slater Fund (pledged for this year only) ..... 900 00  
From "Peabody Educational Fund" (probable) ..... 400 00  
From "Woman's Home Missionary Society of Boston," (pledged for this year only) ..... 405 00

Total ..... \$4705 00

For the remaining 131 students, for whose tuition no provision is made, the school asks scholarships or donations of \$50 each.

Without these scholarships the school will be forced to turn away a number of worthy young men and women who are too poor to pay for an education.

B. T. WASHINGTON.

#### Mrs. Steele's Orphanage Burned.

See a Charleston paper.

About 8:30 a. m. yesterday, Nov. 22, as some gentlemen were driving into the city, they discovered a fire in the roof of the Steele Colored Orphanage. They at once gave the alarm to the inmates, who were in the chapel engaged in the morning service. As soon as it could be done, the fire companies were notified, but the great distance, and the absence of fire plugs in that locality, prevented them from saving the property. The flames soon spread to the other buildings, and the three were soon one solid mass of fire. The entire Orphanage was consumed, with nearly every article of furniture, bedding and clothing. A few minutes the fifty-four orphans who were inmates, were left without food, clothing or shelter. Eight of them were taken to the city hospital, but as it was not large enough to accommodate all the orphans, they had to their relief and took them to their homes.

During the day the children were visited by numerous citizens, prominent among whom were Hon. H. C. Evans and wife, W. S. Marshall and wife, Xen. Wheeler and wife, and J. F. Loomis and wife. All took an active interest in the loss and expressed not only their sympathy for the unfortunate children, but kindly provided material support in the way of food, clothing and other necessary comforts.

The Steele Orphanage was first designed by Mrs. Steele, of Revere, Mass., who on a visit to this city sympathized with the colored orphans in their destitute condition, and purchased a piece of ground of the East Tennessee railroad between the Carolina line streets, where she erected a house of eleven rooms. It was a two story frame building. This was the beginning. She then went from place to place to gather up the colored orphans. She soon discovered that the building was too small and she erected another containing nine rooms; and afterward added another for cooking and eating purposes. The number of inmates had increased to fifty-four. Means were procured for education, qualified teachers were employed to take charge of that branch of the institution, and others to look after household matters. The county and city have aided in keeping them up, while the citizens, both white and colored, have responded to the calls for help. When Mrs. Steele had gathered the institution she returned to its behalf in some of the Northern States. The institution is said to have done great good since it was founded in the way of providing for and educating children, and serving in many instances as a reform school.

Its loss will be heavily felt, and it is hoped that steps will be taken to rebuild it at once. The orphanage was donated by the founder at a cost of several thousand dollars. But one of the buildings was insured, and none of the furniture or beddi g, clothing or other fixtures—nearly the whole of which was lost.

Hampton graduate who was assistant matron in the Home, and whose form in interesting description of it may be found on page 126, now writes of herself a daughter, also a Hampton girl: "Bertie and I lost everything except the clothes we had on. Do you think I will be possible for me to get another diploma and certificate of scholarship? Both were burned and every book I had."

#### Report of the Austin Industrial School for 1884-'85.

Looking over the year's work now that it is completed, I have a sincere feeling of thankfulness. It was begun under great discouragement. The salary for two teachers was entirely unprovided for. We had no money for running expenses, no place large enough for our work, and we owed one hundred dollars on the lot purchased the year before. The city school had grown so large that it was not only necessary to give up my room in the Austin Building, but also the shop and kitchen which were built on the school lots. For them the Board of Education paid me five hundred dollars in city scrip, which was sold at 10 per cent. discount. With that money I built a larger shop with a small room adjoining on my new lot. There was also on the premises an old house, in which Uncle Jeff and Aunt Nancy had lived and died, and which was entirely unsuited for school purposes. We used it last winter for cooking and kitchen garden classes, although the chimney would not draw, the floor was open and cold, and no amount of scrubbing, white-washing and insect powder could make it clean and wholesome. It is now torn down, for fear we might be tempted to use it again, and with the hope that a better place will be provided for us.

The Board of Education has given us three hundred dollars for one teacher's salary, and all the coal we needed. Parents have shown more interest in every way. The children have attended regularly, and there has been almost no trouble in regard to discipline and government. More articles, made by the children in the shop and sewing school, have been sold than in former years; and the fact, that after all expenses have been met, there is a small balance in the treasury, proves that our many friends have not been unkind of us.

Since September 1st, 1884, \$2,917.24 has been received. Seventy dollars of that amount was given for special purposes and was used as designated. Twenty-six dollars was given by colored people in Knoxville for our new building, and is in the hands of the treasurer, leaving \$2,821.24 to be accounted for.

In a short report like this it would take too much space to give details of expenditure. Accurate accounts are kept and are open for inspection.

In the sewing school they have made 329 garments and sold 284.

The smaller children have placed two quilts, one of which the larger ones have quilted and finished. This school increases in usefulness every year. The garments made are sold for the price of the material in most cases, but sometimes at a nominal price merely, because giving away is not desirable. With thanks to those friends who send us cut and basted work, we hope for a continuance of this help. Having only one sewing teacher, it would be impossible to do all the cutting and basting for three hundred children.

In the cooking school the children have made two batches of cake, rolls, and 165 loaves of bread, with yeast for raising the same. They have also cooked two simple dinners for little parties of ten. Our accommodations have been so uncomfortable that we have only been able to combine this class with the little housekeepers, and none of this work has been done as well as in past years, or as we intend to do it when we get the new building.

The carpenter shop has been a complete success. The boys have done good work, have attended regularly and been easily governed. It may be interesting to know what they have made. Our plan has been to have each boy make two articles of a kind; the best one was kept in the shop and, in most cases, sold; the other the boy had for his own. Their ambition was thus stimulated to do as good work as possible. Dr. Haygood and others visiting the school have expressed both surprise and satisfaction at seeing small children doing such work and learning to be thorough in workmanship.

On the lathe the boys have made: Two rods and twenty-four rings for curtains, two car wheels, thirteen mallet handles, eight rolling pins, eight table legs, eleven bats-

twelve rollers for towels, rods for clothes horses. They have also made 114 packing boxes, 256 rulers for city schools, 4 blackboards, 94 sleds, 105 picture frames, 54 benches, 32 boot jacks, 41 wind-mills, 52 beds, 43 toy safes, 1 churn lid, a little bedstead, 4 clothes horses, 4 door frames, 2 book cases, 30 flag sticks, 80 blocks and cubes, 8 billies, 24 kite winders, 2 cutting boards, 2 quilting frames, 7 toy houses, 4 moulding boards, one chair, 2 pistols, 4 swords, 2 hatchet handles, 4 wash stands, 14 window buttons, 28 mortise and tenon joints, 2 crib rockers. And they have done repairing on the premises and some painting.

The Sunday School was necessarily removed from the Austin School to our little sewing room, adjoining the shop; consequently the attendance was much smaller than in former years. We seldom numbered over thirty. The closing exercises were interesting, as we had a union of Sunday Schools in a flower festival. Six dozen growing plants were given away; we had recitations, singing and addresses, and twelve books were presented for regular attendance, to members of our own school.

The Austin Industrial School has now become an incorporated institution, under the name of the Slater Training School. Its Trustees are:

Rev. Dr. Humes, of Knoxville, President. Mr. E. E. McCroskey, Knoxville, Vice-President. Miss Isa E. Gray, Boston, Treasurer. Miss E. L. Austin, Knoxville, Secretary. Mr. W. S. Mead, Knoxville, Mr. C. Seymour, Knoxville, Mr. A. S. Jones, Washington, D. C., Hon. R. B. Hayes, Fremont, Ohio.

Our plan of work, as expressed in our charter, is to carry on a manual training school for colored children in Knoxville, Tennessee.

We need a new building, with accommodations for our growing work. Twelve hundred dollars has been subscribed by citizens of Knoxville, for this purpose, and more money will be raised as the work goes on. I can appeal with confidence to those who have done so much for us, since I can show good work already done, and the natural growth of any enterprise which is necessary in the progress of a people. Our school has done much in the line of manual training, as well as in the advancement of the people among whom we labor.

I cannot close my annual report without expressing my thanks to the Board of Education and Superintendent of Schools for their hearty support and encouragement during the year; also for the vote of the meeting of July 11th, by which \$300 is appropriated to the Slater Training School for the ensuing year, to the Trustees of John F. Slater fund for \$500, which pays the salary of the carpenter; to Dr. A. G. Haygood, for his words of kindly approval and hearty support and to our faithful teachers who make the school what it is. They have done with patience and cheerfulness in the cold and discomfort of the little old house, into which so much of it has been crowded during the past year.

To our good friends all over the land, especially to the children who, by their home-fairs, Christmas and Easter gifts, have helped us so generously, I return most hearty thanks. We are going into a larger field and to better work; we shall need your interest and your money, and I feel very sure that you will give both to the Slater Training School, until the school board of the future takes its work into the regular plan of the daily public education.

For that consumption we are working, and that end we shall always keep in mind. That it will come speedily seems probable. For there are few schools which are more liberally recognized by those among whom they are working, or which can show more growing public sentiment in their favor. This feeling is spreading all over our united land, and we number our subscribers this year from both North and South, and our friends from Maine to Louisiana.

Our new building will cost \$50,000 if built of wood; from \$25,000 to \$30,000 if of brick. It is necessary, if we are to carry on our work with any efficiency, money may be sent to the Treasurer, Miss I. E. Gray, No. 20 Mt. Vernon St., Boston Mass., or to Mr. E. E. McCroskey, Knoxville, Tennessee.

Articles sent to me should, as far as possible, be sent as freight and not by express. From the Eastern cities they may be sent via Norfolk Steamer, East Tennessee Railroad. EMILY L. AUSTIN, No. 88 Patton Street, Knoxville, Tennessee. JULY 20TH, 1885.

#### Thirteen Months in 1885.

APPARENTLY impossible—but true nevertheless. There are fifty-two weeks in a year. One day in each week is devoted by all good housewives to the laundry and cleaning, or fifty-two days in each year. By using *James Pyle's Pearline*, this work can be done in *one-half* the time, or in twenty-six days—thus saving a woman twenty-six days of the hardest kind of work. A trial of the article will prove this—surely it deserves a trial, being harmless to fabric or hands.

Harrison Phoebeus, Proprietor.

Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth.

The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT TUBS, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material levers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° in spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed. The delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

# Southern Workman

## AND

### Hampton School Record.

VOL. XV.

HAMPTON, VA., JANUARY, 1886.

No. 1.

FOR the fourteenth time, the SOUTHERN WORKMAN wishes its readers a Happy New Year.

WANTED—Subscribers.  
WANTED still more. Readers.

We are happy to say that we are not without an encouraging and increasing number of both subscribers and readers, but like "Oliver" we ask for "more"—not for our own sakes, dear readers and subscribers, but that we may be increasingly interesting to you and useful in the great work in which you and we have a common interest and responsibility.

THE STATE NORMAL SCHOOL at Farmville, Va., under the able charge of Hon. W. H. Ruffner, LL.D., is about beginning auspiciously the second term of success.

We commend to special attention the letter on page 8, from Thomas Wildcat Alford, one of Hampton's most intelligent and faithful returned Indian students. Written not for publication, it gives an inside view of the condition of things on his reservation—not unworthy the consideration of any who find the final solution of the Indian problem in a wholesale banishment of all Indians to Indian Territory. Those who have made extended visits there, agree with him that the evils and difficulties he mentions are not confined to any one agency. They find also in the climate of that Territory, conditions which increase the dangers of disease and intemperance specially menacing the Indian. The protection of law, the influence of secure homes, education into free Christian citizenship—these are the only solution of the Indian problem. Before we will give them these, to push them once more from their homes at the point of our bayonets, break up the attempts at improvement many have begun to make, and force them anew to the ordeal of unwelcome change and uncertain conditions—this is a strange way to hasten and economize in the work before us.

We are glad to hear that the Colored Orphan Home in Chattanooga, founded by our friend, Mrs. Steele, and recently accidentally destroyed by fire, is to be at once rebuilt, "on a better basis"—to wit, of solid brick, on larger foundations, and contributed to generally by white citizens of Chattanooga, as well as Northern friends and the colored people themselves.

We have received the second number of the *Bulletin* of Atlanta University, a neat little four-page monthly. It shows a picture of the Knowles Industrial Building, a gift from the estate of Mr. L. J. Knowles, of Worcester, Mass., to the University's "Mechanical Department," which has been in operation two years. Twenty-five hundred dollars are asked for to secure complete outfit for this noble aid to industrial training, whose "practical outcome" is announced to have proved "already highly satisfactory." The *Bulletin* contains also a tribute to the University's lamented President, Mr. Ware, for whose sudden death—a loss not only to the University but to the whole cause to which he gave his life—we have already expressed our deep regret and sympathy.

THE recent Prohibition victory in Atlanta is a victory for the cause of temperance in the whole South, in the whole country. Virginia temperance lovers thank G. d. and take courage. It is not only an encouragement—showing that the thing can be done—but a lesson—showing how to do it. The wisdom of separating the question utterly from party politics is apparent. The effect of standing together on a common platform of work for the common good, is healthful to the honest and respectable of all parties. The effort to intimidate ignorant voters with the fear of being remanded to slavery was but very partially successful. The effort to frighten intelligent ones with the cry of "sumptuary laws," and "Democratic bulldozing," after the fact, will be still less so, and is far less clever. "Bulldozing" is a strange translation for local option, and "license" for liberty, in a republic. The true statement is that made by England's venerable Archbishop Farrar, who crossed the ocean to tell us, "The drinking system dooms a large part of the British and American people to slavery." The last word which I would say to this great nation and to every individual in it, would be the dying words, spoken by the eloquent and holy Ravingnan: "We fight in the battles of the Lord."

FOR one more year the SOUTHERN WORKMAN has endeavored to justify its name and its reasons for being; with what success its readers must say—and some of them have said much to our cheer and encouragement. At the commencement of the year, on the suggestion of some of our good friends, it added to the name by which it has been so long known to them, that of *Hampton School Record*, not as expressive of any change in its objects, but as more descriptive of its chief one. The growing recognition of the work of the Hampton School, as being of national breadth and importance, creates a demand for information of its details and results. In meeting this demand, the SOUTHERN WORKMAN has no narrower or uninteresting field. Twice a year, in its November and June numbers, the beginning and end of the school term, it gives full descriptions of the condition and working of the school in its various departments, academic and industrial. Every month has some representation of its work for both races. There is no lack of interest, lively and pathetic, in the columns that reflect the "Humors of the class-room," and the "Indian life at Hampton." The monthly page of "Graduates Letters," is full of unaffected, vivid pictures of the life and labors of the young teachers Hampton sends out every year to work for their people. They answer at first hand the questions constantly and rightfully put as to the practical results of the work, the outlook of the race and the relations of the races.

But the SOUTHERN WORKMAN's field is not limited to school rooms large or small. Its aim, like the school's, is to do what it may to promote that mutual acquaintance between races and sections which means mutual sympathy and common progress. In our Indian Department, under editorial charge of Elaine Goodale, will be found letters and contributions from Indian agents and missionaries, and such experience on Indian matters as Miss Alice Fletcher, Mrs. A. L. Quinton and Mr. Herbert Welsh. Valuable official information containing the very gist of the answers

sought by many eager questioners, is unearthed from its grave in Congressional documents and presented in readable form, with now and then letters and reports from returned Indian students, and from visitors to the reservations. Miss Bacon's "Silhouettes" and Mrs. Orra Langhorne's "Southern Sketches" give the local coloring which is always attractive, in their stories of life around the school, and further South, among our brethren in black and white. Educational news and papers are reviewed. The page of extracts from Southern papers, edited by Mrs. M. F. Armstrong, is as far as we know unique, at least in the scope and fullness of its representation of the spirit of the South in the press of all attitudes, white and colored. Our editorials discuss the various matters within our field, as they appear from Hampton's point of observation, with such response as we are able to make to the questions and suggestions sometimes sent by inquiring friends.

Such being the SOUTHERN WORKMAN's plan, and its realization such as our readers know, are we justified in asking their practical aid to help it carry out its aims to a degree still more commensurate with their importance, by widening our circle not of subscribers merely, but of intelligent acquaintances and readers?

THE President's Message receives general approbation, and most justly. It has throughout the ring of honesty and clear thought, and the stamp of practicalness—a business man's view of things. Especially is this true of his remarks and suggestions on the Indian question. "It is useless to debate on their wrongs and as useless to indulge in the heartless belief that because their wrongs are avenged in their own atrocious manner they should be exterminated. They are properly called the wards of the Government, and it should be borne in mind that this involves on our part efforts for the improvement of their condition and the enforcement of their rights." The ultimate object of their treatment should be their civilization and citizenship. The only question is as to "the means to be at present employed toward the attainment of this result." The variation of their wants and desires and condition should be regarded. "The disposition of the agents and the manner of their contact with the Indian have much to do with their welfare." "The history of all the progress which has been made in the civilization of the Indian will, I think, disclose the fact that the beginning has been religious teaching followed by, or accompanying secular education." Most practical and excellent we think is the novel suggestion that the Indian Bureau, overburdened already with the general oversight and details of the establishment, "should be supplemented by the appointment of six commissioners, three of whom shall be detailed from the army—and all of whom shall be selected from those interested in the Indian question and who have practical ideas upon the subject of their treatment;—these commissioners to be charged with the duty of a careful inspection from time to time of all the Indians under care of our Government with the view of discovering their exact condition and needs and determining what steps shall be taken on behalf of the Government to improve their situation in the direction of self-support and complete civilization. The

power and function of these commissioners should be clearly defined, though they should, in conjunction with the Secretary of the Interior, be given all the authority deemed safe and consistent to deal with the question presented." The President believes that such a plan would contribute to economy and safety of the frontier, "as well as save the nation from the imputation of inhumanity, injustice and mismanagement." It is a very happy part of the idea, we think, to associate the army with this commission. This is not "transferring the Indians to the War Department." But, as we have often said, we see no reason why the knowledge of and sympathy for the Indian which can be found to a marked extent among army officers, should not be enlisted with that of the Interior Department, and both with that of private citizens, in the cause of humanity and justice which concerns the whole nation.

The President recommends the survey of reservations still undefined, and restates the Executive action in the Indian Territory an! Crow Creek questions.

A notable omission in the Message is that of any consideration of the question of national aid to education, and indeed of educational interests in general.

THE BURNING of the American Missionary school building in Quitman, Georgia, was one of those hysterical deeds of barbarism which hurt longest and most severely those who are held responsible for them. A civilized community cannot afford to bear the imputation, and hastens to throw the blame on those who have no character to lose. The neglect of any efficient effort to help save the property, the cheer that went up when the walls fell in, the atrocious slanders and libels upon the character of the missionary teachers, before and after the fire, and the general indifference to the sufferings of women and children turned into their streets at midnight by the murderous torch of the incendiary, are facts which the citizens of the little town will find it difficult to rid its reputation of, long after they fully discover how desirable it is to do so. There are those who will mourn and those who will rejoice at the implication that the South has not gotten so far away from race prejudices and sectional animosities as some have supposed. We have been charged with a too optimistic view of its position. The fact is that we are not surprised by the occasional outbreak of a spirit whose existence we have fully recognized, but we believe none the less fully in the existence of another spirit in the South: a spirit of progress, of good sense and good feeling. The very fact that the mayor and other leading citizens of Quitman have formally denounced the outrages, offered rewards for the incendiaries, and requested the A. M. A. to rebuild "on a better basis," shows at least their recognition of the demands and power of public sentiment. If it shows nothing more, this is promising of progress. The desire to seem always precedes the desire to be; as the evolutionists tell us the desire for ornament always precedes the desire for clothes in the savage. But does the desire to be always follow the desire to seem? Well, when it does not, so much the worse for the savage, and we believe that whatever "better basis" the mayor of Quitman was

thinking of, there is a basis for hopeful work, broader ideas, and progressive civilization, steadily forming in the new South. And not the least cheerful view of it, we believe, will be found among those who are doing the work and bearing the burdens of the transition period, with its temporary discouragements, or even martyrdoms.

The thirty-ninth annual meeting of the American Missionary Association, held in Madison, Wisconsin, in October, was one of unusual interest, and its report in the December number of the Society's magazine is full of encouraging statistics. Especially is this true of the report of the work in the South. In church work, the 95 churches of last year have increased to 112, a gain of 17, or three times the average yearly growth. Their condition is reported as very encouraging. Their membership has increased by 1,127, of whom 883 have been received on confession of faith. Their contributions toward their own support have increased by more than 12 per cent, and their benevolent contributions by one third. Extensive revivals of religion are reported from many of the churches and schools of the Association, notably at Talladega, where, with but one exception, every student was included among the converts. The eagerness for education continues. The schools are crowded. The special point of interest in the educational report is the increasing apprehension of the importance of industrial education. The committee on education "heartily and emphatically recommend that the whole practical side of training be made more and more prominent, and especially that self help and self support to the last point possible be everywhere and by all means insisted upon. The Negro needs this kind of training for the saving moral force that is in it for himself and his descendants. He needs it also for the opportunity in life it opens to him, and the South requires it for the sake of the physical development that comes through diversified industries." "There is an experimental character about industrial training so far as aptness developed, which, in the opinion of the Committee, should lead the Association to proceed with great care in its selection of men and methods for this Department, but we do not therefore say it should proceed either reluctantly or slowly." The Committee "agree to report to the Association the settled conviction that this line of education is demanded by the Negro and Indian." According to Rev. Albert Bushnell's address, "the prevailing, though not universal, sentiment among those having most experience in the Society's Southern work is that every A. M. A. institution should have its industrial department adequately equipped; that, could this be done without curtailing its other work, the Society would multiply its usefulness." Atlanta, Macon, Talladega, Tougaloo, Straits, Fiske, LeMoyne and Howard Universities, ask for appropriation, to establish or enlarge industrial departments. Fifty thousand dollars judiciously distributed among these, and lesser institutions of the Society in the South, would make possible the systematic industrial training of 1000 colored youth. The beginning of industrial education for the Indians in the schools at Santee and Osage are commended.

The Association has expended for church and educational work among the Indians in the past year \$41,283.75, incurring therein a debt about equal to the increase of the expenditures of this year over last for Indian education. This increase was more than 67 per cent. The Committee is unanimous in the opinion that this increased expenditure should have been made, and commends the appointment of a special Secretary to bring this work to the attention of the churches. Dr. Shelton forcibly asks: "What excuse have we that Sixty-eight tribes of American Indians on our western plains have nothing done for them by the Christian church? What excuse have

we that among the 9000 Dakota children, living almost within sight and sound of our church, 8,000 are untouched by Protestant Christianity?"

An interesting branch of the Southern work of the Association is that among the poor whites of the mountain regions of Tennessee, a territory of 100,000 square miles, with four million white inhabitants, neglected thus far by capitalist and educator. Encouraging successes are already reported. In Scott Co. there were, three years ago, twenty-seven saloons and only two Sunday Schools; one held in a tent, the other in a blacksmith shop. To-day, through the labors of the A. M. A., there are twenty-five Sunday schools and only three saloons. Nine churches have been recently organized under this Department of the Society, three reporting congregations of 250 and over; of a much larger number of reports from forty, many of which have an enrollment of from one to two hundred; a goodly list too of day schools, including Williamsburg Academy with its 203 pupils.

In the Chinese work, the year has been one of extreme difficulty—difficulties from the Chinese persecutions of the converts, and especially from the American persecution of the Chinese. There has been a consequent decrease of 400 in the number of enrolled pupils. But the A. M. A. "fights to win, not to back out." So it has opened three more missions and four more schools, paid debts and increased the forces especially for preaching to the Chinese in their own tongue. Results appear already. By the side of the decrease in the total enrollment is shown a positive increase in the average attendance of the schools, as well as in the number of Chinese who have ceased from idol worship.

Dr. Strieby's address on "The Look Forward" sums up with his usual eloquence the work before the Society and the nation in three various lines. In the Indian work he considers the share of the Government three-fold: 1, to keep faith with the Indians; 2, to break up tribal relations as fast as possible, give them land in severity and protection of law; 3, to give them powerful aid in preparing the Indian for these changes and carrying them out wisely. To this end, the Government must found, or aid in supporting, schools for the education of every Indian child in the nation, a task certainly within the range of speedy and easy accomplishment.

There are only about 40,000 Indian children of school age, and of these nearly 15,000 are already in school. The rest can be provided for in the next four years. And Dr. Strieby has reason to believe that the President of the United States is ready to signalize his administration by a vigorous effort in this direction. With the Executive thus ready, it only needs the prompt and liberal action of Congress, and Congress only needs to hear the voice of the people in determined demand for that action. That the Indian will improve if he have the chances is proved by the statistics which show that, between 1868 and 1884, the Indians doubled the number of their dwelling houses, more than doubled the number of their children in school, cultivated, tripled their produce of grain and vegetables, and multiplied thirteen fold the number of their horses, cattle and sheep. The church must do its part, which is to furnish the base of religion to the Indian civilization. For the Negro there must be fair play, education and Christian manhood. The look forward reveals dangers that stir our activity, and encouragements that stir our enthusiasm. We stand beside the Indian, suspicious, but ready to believe; the Chinaman, persecuted, but patient; the Negro, ignorant, but ready to learn. We of the South who are sore with past memories, hampered still with race prejudices, but generous and increasingly ready to meet in a fraternal spirit the issues of

the hour. Above all, we stand in the presence of God who is much more ready to bless our efforts than to punish our neglects. Let us then hasten our efforts and speedily bring in the Son of Man to his dominion and glory in America."

The report of the Finance Committee calls for contributions this year of \$30,000 to cancel the debt, \$300,000 to keep up the present operations, and \$45,000 to enlarge them to meet urgent needs—in all \$375,000, or something more than \$1000 a day. When Dr. Blake applying the parable of the Good Samaritan to the incurring of the debt, asked if the churches would say "whatsoever thou spendest more, when I come again I will repay thee," the enthusiastic applause pledged the audience to the answer. If, as Mr. Cable forcibly suggested, Christians would go into missions as a business, the work would be accomplished.

The reports of Secretary Lamar and Commissioner Atkins are voluminous and full of interest and suggestion. They show, as the Secretary remarks, "a general state of peace and order, and considerable progress in work among the dependent and helpless Indian people." The removal of the hostile Apaches of Arizona—a band of less than two hundred including women and children—to the Indian Territory or some other point more controllable by the available military forces than their present extensive reservation, is recommended. Attention is called to the fact that with the exception of this small band of Chiricahuas, the main body of Indians of the San Carlos reservation "have for many years been credited with peaceful conduct" and are "quietly engaged in the cultivation of their farms." At the rate of their improvement this year, it will be only a year or two before the Apaches, the wildest tribe on the continent, will be self-sustaining. The disturbance among the Southern tribes was found to be owing to the "oft recurring cause of short rations," and a murderous assault of white men on a party of Indian men, women and children, sent by their agent to hunt to keep them from starving. The trouble among the Cheyennes and Arapahoes of Indian Territory having been quieted by the removal of the cattlemen and herds from their lands, "a marked improvement has begun, fifty have taken up farms, and a general disposition to go to work is manifested." Attention is urged to the "potentially anomalous condition" of the 900 Pueblo Indians of New Mexico, who having, to their sorrow, been transferred with their land from Mexico to the United States in 1848, have no assured rights either as citizens or Indians—only to be taxed as one and cheated as the other. As for the "Mission Indians" in California, the Commissioner says "I give no details of the wrongs and sufferings of these Indians because they have been fully set forth in the report made by Mrs. Helen Jackson and Mr. Abbot Kinney published a year ago, and also in the report of the Senate Committee. Unless something is speedily done for their relief, nothing but starvation and extermination await these people who, by the treaty with Mexico, were received on an equal footing with other citizens of that Republic." The injuries to the rice fields of the Chippewa Indians by the construction of the reservoirs at the headwaters of the Mississippi, the depredations upon Indian lands and timber in Indian Territory and elsewhere, the over-reaching and other difficulties in the logging operations of the Menomonees in Wisconsin and Chippewas in Minnesota, are urged upon the attention and legislation of Congress.

In spite of all drawbacks, and of the fact that "fully half the Indians of the United States, exclusive of Alaska, have as yet declined to commit themselves to the life of the farmer," "the acreage of land cultivated by them has steadily increased for several years past, amounting this year, exclusive of

the five 'civilized' tribes—to 248,241 acres, an increase of 18,473 acres over last year, with preparation for still larger increase." The Commissioner justly regards this as "among the hopeful signs of Indian progress; another is the more slowly growing desire for lands in severalty." "The Commissioner reports that up to the present time there have been issued to individual Indians 11,073 patents for land, and 1,260 certificates of allotments for which no patents have yet been issued." The Winnemages, seeing the good effect of the allotment system secured by Miss Alice Fletcher's noble efforts for their neighbors the Omahas, are anxious to follow their example in all respects.

Reports are quoted from many agencies of the excellent character of the Indian judges, Indian Police and additional farmers.

In regard to "Indian traders," the Commissioner dryly remarks "their appointments are made with a view to benefiting the Indians, not the trader." This is certainly the ideal view of them, and its realization will be greatly helped by the Commissioner's intention to print lists of goods and prices to be submitted to the agents' approval, and that of the Department."

The favorable statistics on education justify the Commissioner's request for an "increase of considerably more than \$100,000 in the school appropriation for next year." There are now reported on the reservations, 86 day and 84 boarding schools, besides 23 contract schools, (mission schools partly supported by Government) and off the reservation, 4 industrial training schools, including Lincoln and the Indian department of Hampton. The total capacity of all the schools is 9,943; total average attendance, 8,691; cost to Government, \$887,276.02. The Commissioner well remarks, "It is cheaper to give them education with everything else found for them by the Government, than it is to fight them, even if the loss of valuable human life were left out of the question."

The policy recommended is "persistent pressure towards giving up tribal relations, and taking land in severalty, and ultimate citizenship. Even for the tribes in Indian Territory, the idea of a sovereignty within a sovereignty must ultimately give place to American citizenship for all within our borders. But this must be effected carefully with judicious consideration of the varying conditions and stages of development, allotments must be carefully protected and made inalienable, education in English and industries maintained, and the protection of law extended over all the tribes." Secretary Lamar with great frankness avows that more careful study of the case has constrained him to give up as impracticable his first favorite idea of collecting all the Indian tribes together on two or three great reservations. "The policy of change and unsettlement should give way to that of fixed homes, with security of title and possession, and the civilizing forces already at work be pushed forward on the lands they now occupy except only on reservations whose lands are too sterile or destitute of water to be fit for either agricultural cultivation or pastoral pursuits."

The Secretary's plan of creating a commission of six, including three army officers, to inspect and report upon the needs of the Indians, has been adopted by the President in his Message, as reviewed above. Secretary Lamar earnestly urges also, "the policy of securing the cooperation of those religious and philanthropic societies which have for many years labored for the Indians, and have devoted within the last few years alone two million of dollars to the purpose." He cordially acknowledges his high appreciation of their aid and that of the Christian ministry, and recognizes the Christian religion as the chief instrumentality through its influence on character, morals and aspirations, to lift the race to a nobler destiny."

As the Secretary well says, "It is civil-

## The Southern Press. Both Sides.

The prohibition movement which has taken such an interesting shape in Atlanta, is eliciting many comments from the Southern press, and in its effects at least, is not going to stop where it began.

The New Orleans Christian Advocate says:

"As we go to press the great contest in Atlanta is being decided at the ballot-box. In the free exercise of their rights as citizens the qualified voters of the 'Gate City' and of Fulton county will say whether or not the matchless evil of the age shall be vendicated in their midst. The prohibitionists have made a gallant fight, and deserve to succeed. Senator Colquitt, ex-Congressman Felton and Hon. W. B. Hill, sons of the late Ben Hill, have led the forces of reform assisted by the pastors of the city. Sam Jones, Sam Small, Dr. Haygood, and others. They represent the better classes of both races and the people who eminently give respectability to a community. If victorious in the struggle, we may expect the movement to spread with greater rapidity over the Southern States. Other communities will catch inspiration from his triumph and organize for the overthrow of the rum demon. But if defeated, the brave battalions will pick their flints and renew the onset. At this writing all the indications point to a glorious victory. May Heaven grant it."

The New Orleans Picayune objects with some strength of expression to the views of the Chicago Tribune from which it quotes as follows:

"Political prohibition being a form of coercion or bulldozing, is naturally suited to the intolerant South, where the majority always tramps out every vestige of opposition. The clergy, controlling a homogeneous native and illiterate people of this temper, and with their demands backed up as an 'economic necessity of the times by the whole landlord class, will be able, if necessary, to make even the Democracy of Georgia and other cotton States take their stand as a political prohibition party."

To this the *Picayune* retorts, and as this is no mere newspaper war, we give the article almost entire:

"The very plain and evident facts, that prohibition is making rapid headway in every part of the South because it is discovered to be productive of the greatest welfare to every class of the population, and because it is kept wholly apart from politics, and left to stand on its own proper ground, are not sufficient for the Tribune, which would have been unhappy had it let pass such a flagrant opportunity to explain to its constituency that prohibition is an invention of Southern Democratic bulldozers. The Tribune would have us to understand, having tramped out every vestige of the Republic as carpet-bagger, is now exercising himself on the Republican whiskey-seller. Or do we fall to comprehend the Tribune's drift? If the Southern market for whiskey should be destroyed, what would the Tribune's Republican subscribers do for a living?"

But while the Tribune would have us know that the Democrats to-day are doing the prohibition work, it is emphatic in its explanation that he is pushed to it by the clergy. The clergy represent to the mind of the Tribune all that is backward and unprogressive. It declares that the church has great control over the people of the South, and the clergy can dictate politics to

the laity in a manner unknown in the North. It observes that free-thinking and agnosticism do not flourish south of Mason and Dixon's line. It asserts that the blacks and whites alike are mostly members of churches and take to the orthodox creeds. It elegantly asseverates that "they prefer the gospel with the bark on, always favoring such preaching as that of the Rev. Sam Jones." In short, we do not know which most to admire, the Tribune's hostility to the South, or its antipathy to religion. We feel half inclined to take its word for the matter, and ascribe the success of prohibition at the south partly to the Democracy of the South and partly to the religion of the South."

The Norfolk Landmark, starting with the same text, takes what it believes to be a long look ahead, and gives its readers a word of caution as to the future:

"The 'temperance movement' in Georgia is bound to lead to great exasperation and a prolonged contest in Atlanta, which would be a small matter were it not for the fact that a 'boom' seems to be imminent in other Southern States. We have profound respect for temperance. We desire to see the morals of the country above reproach; but when sumptuary laws are brought into use the political arena it becomes alarming to us. The South. And for this reason: As soon as we begin to put up 'temperance' tickets in Presidential elections we shall have such a division of parties as will throw us back into the hands of the Radicals. This is a consideration that should not be lost sight of, and we commend it to our readers in ample time for them to think over at their leisure."

The waking up of a people to the value and beauty of work is a curious thing to see, but possibly it is only those who have had personal experience of the darkness of the days before the waking, who can appreciate such words as these:

In a letter recently written by Bishop Hugh Miller Thompson, of Mississippi, speaking of the Agricultural College at Starkville, he tells us what he saw some of the students doing at that institution: "I have just seen what I consider the most hopeful sight so far visible to my eyes in Mississippi—fifty or sixty young men—white men, of course—with hands and hooves in the soil digging potatoes and planting strawberries at eight cents an hour. They were not tramps, nor bores, but scholars and gentlemen—sons of our best people—and were learning many things of vast promise to themselves and Mississippi, in this close and practical acquaintance with its soil!"

"The institution is filled this year to its utmost capacity. There are, I believe, 375 students. I was struck with the admirable discipline, the independent and self-respecting bearing of the young men, the military alertness, the courtesy of manner to the professors and to each other."

"I saw the young men upon parade, in their 'mess hall' at the substantial supper, in the chapel, in the plain, anti-luxurious quarters, and at their work, as I have described, in the field and the dairy—saw a half hundred, with axes on their shoulders, returning from clearing land, and did my own thinking about it all as a sort of a new era wherein labor is honorable and intellect goes with tools and brains to guide the hands."

And that the "new era" is not for one sex alone is shown by more than one experiment like the following:

The new Industrial College for women, at Columbus, Miss., has over 300 students. Every one of the girls, in addition to receiving a text book education, is being fitted with some trade or profession. In four or five years, Mississippi will be the richer by 300 competent, skilled work-women. They will be an honor to their State.—*Picayune*.

There is enough of truth in the following letter, written to the *New York Freeman*, to make its heading, "Is Life Worth Living?" really and painfully suggestive:

Ready and commensurate employment for our schooled young men and women is the uppermost of all questions with us. The elective franchise is only incident thereto, and the vote should mostly be valued as an expedient to that end. And I mean this for the Negro of the North and West as well as the South. The caste which closes the doors of factories, shops and other industries in the Negro's face, in all sections of this nation alike, is more deadly and damning than the denial of the right to vote or the

emoluments of office. For, to have and enjoy the right to attend school with the white youth of the first white families of New England, the Middle States or the Western States; and to be permitted hotel accommodations, unrestrained with this same class where one is able to meet accounts, becomes the greater parody upon 'equal rights,' when the rank and file of our element—not even those who were educated—cannot be thus associates of the forge, at the work-bench, in bricklaying, in the cotton mill, nor anywhere else where the making of an equal living is involved. In this, I say, the North and the West are as guilty as the South; and, to repeat, it is our chief hurt. It does well to graduate in Massachusetts Academies, but it is another thing to be compelled to barter in St. Paul or porter in a store in Philadelphia, because nothing else is open to you.

The race, social and political, is decidedly in a very chaotic state. And to remedy this profitable and permanent enterprises must be open to them. No other thought, save that of our God, should be allowed to take precedence in mind and resolves. The political bubble has burst, and the race's inflated dreams of the Utopian have gone to the dark bosoms of other absurdities. We are rid of all our former hallucinations regarding politics as the patent medicine of elevation and independence. The inflexible rule of the mammon worshiping American is dollars or their value; and he has reached the place where elections and votes are used mercilessly to that end. Politics are divested of their mystery and stand shorn of all their intoxicating features for the masses of the race. For the reason that "it has not paid them," they refuse to love "as of yore." And, too, it looks as if the American heart is no longer quickened, as in the past, with a sense of the value of the materializing to freedom to all. But, as Canon Farrar said in his great sermon on "A nation's ideal" delivered in Chicago the other day, "America is in the chase for the glories and wealth. And in this chase, of course, victory is for the strong. Hence every man for himself, and the devil take the hindmost one." So, being chained to this surging mass, the Negro, as best he can, must gallop with the gang and avoid the crash that would follow should he remain an inactive looker on. As Wendell Phillips advises, he must learn to practice lessons of hard-heartedness toward men and their political policies whenever and wherever they run counter to his present or future interests, no matter what their friendliness and favor in the past might have been.

The greatest trouble with the colored American, after all, I fear, is his sentimental and emotional nature. With all his hardships has not come some practical lessons of stoicism so necessary to confront an unemotional and brutally inclined race.

Moncure D. Conway, a Virginian and an old-time anti-slavery man, says of the result of the elections in Virginia: "The commanding fact now is that the Virginians have been saved from political slavery by their former slaves. The rejected stone is now the head of the corner on which real Southern freedom must be built."

In connection with this the *Norfolk Virginian* says:

It is creditable to the Democratic leaders in Virginia—and to the press of the State—that the sentiments avowed toward the colored people have not in the least changed. This is suiting actions to words; this is the observance of good faith, and will convince a large majority of dark skinned doubting Thomases of the error of their political ways. It is a good omen, too, to find that the most intelligent colored men anticipate beneficial results to their race from the election of General Lee. In chronicling the result, The People's Advocate, ably edited by a colored man who was in attendance on the Negro Convention held in Lynchburg in September, has this to say upon the subject:

"By the election two of the co-ordinate branches of the entire government are in the control of the regular Democracy—executive and legislative—the first time since 1872 that this party has had such control."

Fitzhugh Lee has an opportunity to write his name in the hearts of the colored people of the State by so shaping legislation that the material interests of their will suffer; that there will be no decrease in the number of public schools; that their educational institutions receiving State appropriations are still to be encouraged and protected; that a benign public sentiment will accord more and more to the Negro that share of public and private consideration to which his merits entitle him."

The colored people will not have long to wait for evidence that in all reasonable and rational ways their welfare will be advanced by the great Democratic party of Virginia and the Union:

We take from the *Memphis Appeal* a letter which draws attention to a fact whose far-reaching importance can hardly be realized except by those who are in actual daily contact with the colored race. No better work can be done for the colored people at present than that of teaching them how to live decent, cleanly lives, and to this end a knowledge of hygienic law is essential. The following article shows very forcibly what the present condition of things means:

Some time since an important leader in the *Appeal* drew attention in general terms to the high relative death rate of the colored people of this city. I trust you will permit me to notice certain points which a more minute discussion of the published statistics of the past year suggest to me as worthy of public recognition. Figures tell truth; the larger the collection of figures the more exact and nearer to the truth is the probability of the conclusion arrived at in any given inquiry by the statistical method. Fairly probable results can, however, be obtained by the study of even moderate amounts of figures. Taking, therefore, the sixth annual report of the Board of Health of the city of Memphis, as exact in all its comprehensive details of mortality, arranged in tables according to age and sex, for successive months of the year, it is startling to observe how certain groups of people consider themselves upon the attention by their portentous significance. If the mortality table for the different ages be dissected, it will be found that the death rate of colored infants under one year is three times that of the white infants, calculated on a population ratio of twenty white persons to eleven colored. But we find a still further increase in the relative proportion of deaths when we consider those occurring between the ages of one and five years—it is three or four colored children to one white. Considering now the number of deaths between five and fifteen it is seen that the death rate as calculated also shows a ratio of four to one. After that it begins to decline, and were it not for the seeds of disease latent in the systems of those not already killed off by the frightful conditions which determine such a high mortality in childhood, the decrease would undoubtedly prove to be more rapid. As it is, the relative death rate from fifteen to twenty-five has fallen four, as seen in the previous decade, to two and a quarter; while for adult life, including both sexes, the calculated ratio is that of one and a half deaths among the colored people to one among the whites. The key to this extraordinary state of affairs is easy to find. Turning to the tabulated deaths per month for sex we find that the colored adult male has, man for man, almost as good a life as the white citizen, his calculated death rate being only eleven per cent. higher, whereas the colored female shows a calculated death rate 300 per cent. higher than that of the white female!

The death rate of early childhood still clings to the colored woman through youth to maturity, and it does not need the eye of a seer or even the special experience of a medical man practicing among these people to perceive that want of training and want of education are the most potent factors in the production of such a death rate as that touched on above. Women who do not know how to take care of their children, or who are too careless or too hasty to do so, naturally do not take care of themselves; and as a consequence the prospective as well as the actual mothers of the rising generation tend to the establishment of a weaker race than that which the circumstances of this case would determine under more favorable hygienic conditions. Therefore, let them be taught. It is the duty of the citizen, as well as of the philanthropist, to take notice of such a state of affairs and to look out for its remedy. The custodian of the public health need not be told that a high death rate of one part of the community inevitably, in time, reacts upon that of the remainder. The dark race, before the opportunity was afforded it to congregate in cities, was almost entirely free from the range of consumption; now in Memphis their death rate from consumption is two and a half times that of the white population as calculated for equal numbers. Can not something be done in the way of the inculcation of a practical hygiene of even the most elementary principles, whether through private instruction of district visitors or through occasional lectures from the churches, which would not derogate from their dignity and usefulness by occasionally addressing themselves to the presence of the bodies as well as the souls of their supporters? *Salus populi suprema lex.*

Respectfully,  
JOHN M. PURDON, M.D.  
University of Dublin.

### An African Philanthropist.

### An African Philanthropist.

Every now and then through the winter, a strange looking figure has appeared upon the porch of our little house. He is a black man, with a long, white beard, and a white, neatly dyed, sure to attract attention from all whom the sound might reach. To one unaccustomed to the country, this strange gaunt, bearded, and long-haired figure, dressed in much of the same old-fashioned garments of odd shape and many of the same old-fashioned materials, his head surmounted with the remains of a venerable black hat that he is tightly grasping in his right hand, is a sight that is not altogether comfortable to the eye. He is dressed in a long, dark, buttoned frock and loud dress coat, and he utters a low, hoarse, discordant voice, would convey the startling impression of a lunatic escaped from an asylum. But to the ears of the natives, he is a familiar figure, and he is not unusual, and the people here, therefore always calls all the neighbors around him, as they see that his presence is noticed, his eyes subside to a

Buttermilk fresh an' coo-ool,  
 Jus' from de poo-ool;  
 Vinegar too-oo-oo,  
 For pickles 'twill do-oo-oo;  
 Here's eggs and butter-r-r-  
 An' hens in a flutter-r-r;  
 Pay me to-day-ay-ay,  
 An' I'll trus' yer ter-morrer-r-r;  
 Dem I has truss  
 I knows ter my sorrer-r-r-r.

Uncle Rafe's wares are good, and his queer ways well known, so he is sure to be surrounded with a crowd of customers, and with whom he chaffers and wrangles, and having disposed of his load, he will often come into the store, and if we seem to have time to talk, as is but too often the case, will compositely seat himself and discuss matters and things in general. Uncle Rafe is a source of endless amusement to me, with his mingled shrewdness and simplicity, and I often wish for an artist's touch to transfer his remarkable figure to canvas.

## A CANNIBAL FATHER

[illegible]

He considers himself a great improvement on his savage father, and relates with a somewhat deprecating manner, the cannibal stories his father told him: how they had been used to stealing fat babies in Africa from the other tribes, and cooking them "like we all cooks shoots here;" and how the old man would dwell upon the daintiness of human flesh as food, declaring that no other meat compared to it, and that every portion of the human frame was good to eat except the heel, which although it had been tried in every way, whether boiled, roasted, fricassee or poached, was always tough and uneatable.

that Uncle Rafe states, with an air of mystery: "After his father's death, when he had been buried in the old plantation graveyard beside several other Africans who had come on the ship with him, 'a north man' came along, opened the graves and took out all the skulls of the dead people and carried them away." Presumably this was some devotee of science, but the object of this performance is incomprehensible to Uncle Rafe, and when alluding to it, his voice sinks, and he utters a dreadful groan, having exhausted himself in speculation doomed never to be satisfied, upon the subject of the "lost property."

BEQUEST OF HIS PROPERTY.  
 Kate has no children, and has

Uncle Rafe with all his relations, whom he describes in opprobrious terms as "mean, ungrateful, low-life free niggers," the last epithet being supposed to convey unto the depths of obloquy.

Knowing he had great pride in his little farm, he told him one day what he meant to do with it when he died. Uncle Rafe drew himself up, straightened his dilapidated head gear, pulled down the remnant of a cloth vest patched with leather, and said with great solemnity: "Mistus, 'I is stowed much 'flection on dat, an' 'I is decided to 'qeach my property, when I dies, 'zeized an' 'possessed to de public free school system of Virginia." This was a very important statement of a native-born white brought to our shores by a native-born savage, himself unable to read or write, so imbued with the spirit of our institutions that he had developed into

a full-fledged philanthropist! I was roused  
by the reflections into which Uncle Rafe's  
startling announcement had plunged me,  
by my husband, who is always extremely  
practical, and whose acquaintance with the  
mire is of quite recent date. "Say, Rafe,"  
I remarked my spouse, "have you ever paid  
for that land you own?" "No," was the reply.  
"Given with some hesitation, 'I isn't paid fur  
it yet, but I paid some on it, an' 'spects I  
pay fur it." "What's the land?" "The trees  
an' the buildin' de house, sartin' out the  
trees an' improvin' de place, we ain't nudder  
had a chance to pay fur de lan'." "Is your  
house finished?" "No, 'spects it's nigh  
fin'ish, but de last time I saw you de  
house was not finished." "No, sah," said  
Uncle Rafe, regretfully. "I can't say as it's  
nighly fin'ish, but de house is nighly  
fin'ish, 'spects de house an' de  
after a while. We ain't got no chimney to  
cut an' de winder frames ain't cut, an' de  
holeh in de roof is de less de  
stove pipe run through one an' de  
holes, whar we is gwine to have a winder  
after while, an' we hangs a hole in de  
pane over de stove, but de house is  
made, but it ain't never got de lock an'  
de hinges fur it yet."

Seeing irrepressible smiles upon our faces Uncle Raft continued, nor at all ruffled in temper, "Now Mas' Tom, now mistress, you is a-laugh'n' at dis ole nigger, I sees you is. Well! 'praps you mought think de place wasn't much, an' it aint much for quality; but dem niggers what claims kin wid me, howsoderdevet you nebbber hears of me a han'ler arter dem, day, wants dat place might be bad; an' I is a gwine to give it to de school; unles I bin keep dem outen it anyhow!"

After all, human nature is pretty much the same everywhere, and it is to be feared that Uncle Rafe is not the only philanthropist who has desired to benefit the public chiefly to disappoint grasping relatives.

A Virginia Colored Farmer,

BY ORRA LANGHORNE

This morning as I sat looking over the neat printed SOUTHERN WORKMAN, our cook, a faithful and respectable colored woman, who had lived with us for several years, announced that Mr. Langhorne had been "niggered." A moment later my husband entered the room with a colored man clad in rough, well-patched garments, and having the dull, bashful expression of the colored negro. "After he has been 'niggered'," he said, "I have been 'niggered in' to borrow again from Liza, a strangely dignified mulatto man with a pleasant, respectful aspect, who had been agreed upon to furnish the party. The white people, came followed by another country darkey who walked open mouth and eyes, and a tall, dark awkward boy appeared behind him in the doorway, so that the whole party, to the surprise of Liza's statement, and arose in some surprise to receive the A delegation.

My spouse explained that the first contract was Colston James who wished to take his house from him, and did with a very emaciated air, holding tight to the seat of the chair, as if he feared it might get away from him, and looking diffidently about him. The second was the case of this son. He promptly produced one of the contracts. Colston Langhorne makes with his tenants, and his request, proceeded to read the paper. The first would be tenant, and the second would be the tenant, the sentence pronounced upon him. While I was reading, the property listed intently and the property listed occasionally responded. "I am," he explained, "the owner of the contract to Colston and take him kindly, enquiring as to his ability to pay rent, what his occupation had been, and what provision he had made to provide for the different applicant as he served, and he talked with much more intelligence than would have been expected from his uneducated appearance. He had a fine, broad face, and lived on a farm, working crops on his own, and could refer to several well-known persons in an adjoining county who would vouch for him. He said he had no more words to say. He knew "eatin' and drinkin' fire-wood come high in town," and he had made comfortable provision for his family. He had arranged for the country to send him a cargo of wood, and he had brought with him a colt of his own raising, well broken to ride, and he intended to haul the wood to the station. He said he had no fears of being out of food and fuel for several months to come. The contract sounded very reasonable, he had no objection to it, but he signed his mark. "I will," he wrote. After the terms was satisfactory disposed of, the contract signed by Colston James making the mark, our little colored boy, in admiration

[illegible][illegible]

took very cheap. He had bought 90 acres of  
 mostly in woods, good land too, \$10  
 per acre. He could sell it now at \$20  
 acre, but he did not want to sell it. He  
 acre, but he did not want to sell it. He  
 had built his own house, a good comfort-  
 able house it was. Agents were always com-  
 ing with things to sell, and he bought \$100  
 moved to farm house. Now he had got  
 crops of peaches and apples; this year's  
 was very good and they had plenty  
 fruit. His wife had always been a very  
 help to him in everything, and he had  
 and kept everything comfortable  
 about the house. He had his own  
 and this year they were milking  
 and a good deal of butter. Usually  
 put in the winter bacon had been a very  
 present season had been a very bad  
 for hogs, cholera had killed most of the  
 raised in his neighborhood, he had  
 ten himself and he had a few to buy  
 him. He had raised some wheat  
 plenty of corn and tobacco. His to-  
 brood would bring him between three  
 dred and four hundred dollars for his  
 way of dry goods and groceries.  
 ally poor, but there was a country store  
 the post-office near him, and he had  
 little things from the city, and he  
 do so. He had a few children and he  
 now to work and look out for  
 slaves. His elder boys had gone North  
 were made in New Jersey. He  
 could make better money here, but  
 him, and one of them had  
 cently been at home on a visit. His  
 children had gone to the free schools  
 the two youngest: girls, had a good  
 and still. His elder boy had a good  
 to them. Their book learning was often  
 to him, they helped him to make  
 tions and wrote and read letters  
 the city, and he had a *Weekly Ad-*  
 He took the paper for it in one of his  
 the civil, and found it very useful in kee-

him informed about the markets. His commission merchant, Mr. Payne, also took care to let him know what was necessary on that subject, always sending him a postal when tobacco was selling high, so that he would know when to bring his crop to town. Once in a while he went to Danville but he preferred Lynchburg.

It was pleasant to see a man whose early life was passed in slavery, so comfortable and cheerful a citizen in middle-age. Although evidently very shrewd about business, his interest was not wholly absorbed in his own affairs, but extended to the interests of his community. He spoke approvingly of the free schools, which he thought were of great benefit to the poor, and of much satisfaction to the people, and of the good character of the officers. He said the congregation had recently put up a new building, which when completed would cost \$7,000. The preacher was a good industrious man, who worked whenever he found job, and was grateful for a hundred dollars given him annually by the church people.

Uncle Josh, who is evidently an observant and thoughtful person, I was sorry to find, did not consider the treatment of the negroes in the South as one of the very encouraging features of the country. He said that many people who are growing old in the North are inclined to be severe in his judgment of young people. He said the young negroes did not like to be treated as slaves, but the old slaves who had been trained to labor and whose habits were fixed before freedom came to them, were the only class that were contented. He said that the older negroes worked much now—on the farms and in the cities—and were inclined to vagrant and thievery habits. He said that the younger negroes were inclined to be idle and to have thievery habits. This country had great quantities of woodland and of late years profitable saw-mills had been taken up. He said that the older negro men, who hired their hands at big wages, generally paying \$1.00 or \$2.00 a week and board. This industry had many colored men to leave going to the farms and to the saw-mills. He said that the negroes had fine wages, but he could not say that the saw-mills had any good rats. He thought they were injurious; the men who were employed in the saw-mills did not save anything and did not intend to do so.

running foot race, severe upon the colored woman, said as a general thing they were disposed to be idle and shiftless, a great many of the young ones were left to starve. These women were not given to any useful training, but she did not like these days; comparatively few of them went into service with white people, it would be much better for them to do so, she was improved in her mind, she had learned to read, but they did not want to learn. All they thought about was getting the price of cheap calico dresses and running about the city and country in search of cheap calico and cheap calico against it. He called it a snare and a delusion, an invention of the Great Enemy of man. He seemed to think if there were any way of putting back the price of calico, there would be some hope of reformation and progress for the colored woman, otherwise the prospect was very discouraging. He referred with sadness to the strong useful cotton, which was being worn by the women of the cheap, sleazy calicoes worn now, and portrayed the scorn with which the African damsel of to-day regarded the serviceable garment in an old generation. He confirmed herself closely to cotton goods; it was evident that if she had been worn to indulge in the reprehensible cheap calico over which he mused that he could bear, he

When Uncle Jacob had given a full account of the colored people of his district, he was enquired about the white citizens, and, too, his remarks displayed shrewd observation and clear insight. He thought the white people looked among the old aristocracy any day, but cheering. They were getting poor and poorer. They had never learned to work and few of them were bringing up their children to suit the new order of things. As a general thing they knew little about management, and, having little left but land, too many of them were heavily in debt, and had little prospect of ever putting to extricate themselves.

doing anything to extend the  
The whites, who were poor  
considered in much more  
condition. Formerly great numbers  
had been here hangers on to the large  
tations, and lived by underhanded  
with slaves and led a life of idleness  
ence. Now all this was changed.  
in employment as overseers on the p  
evidence was as good as white folks  
and if they depredated on their neigh  
they were pretty apt to get caught  
seeing was prey to avarice. If a planter h  
management on his farm, he  
not after the fashion of old times, w  
about with a big whip; the hired whit  
had to work alongside of the black  
man. The free schools of the State  
children and the white folks were  
up their heads with other  
in these latter days.

## SILHOUETTES.

BY ALICE M. BACON.

## A Rainy Day at the Butler.

A gray December day, warm, rainy, foggy, and a Monday morning. The level fields stretch out before us, alternately brown and green, and the straight white road gleams wetly as it points as an arrow to the Butler School. As we walk along with flapping waterproofs and dripping umbrellas, we meet here and there Normal School students in all stages of wetness, from the well protected swell, with umbrella and rubber coat, to the Indian fresh from his reservation, running along with down-dropped head and upturned collar and no other attempt to protect himself from the prying rain drops. The horses that we see have a depressed aspect, the very dogs are too wet to be anything but friendly, and even the indefatigable Bruce shows little enthusiasm over his morning walk and runs along with a stick in his mouth and his long hair dripping, doubtful whether it would not be better if we would both stay at home by the fire on such a day. Poor fellow! he has left his breakfast for the walk and now the walk proves to be not all his fancy painted, and his thoughts are doubtless reviving, as he runs dutifully along carrying a stick, to that delicious plate of bones, that Fred or Shunka or his arch enemy, the barn dog, is probably at this moment enjoying. Through the rain and mist the buildings of the Soldiers' Home loom up in a most imposing manner. Beyond the plowed fields at our right, a little break in the clouds allows the sun to gleam to fall upon the mist and glorify it for an instant so that the whole scene is transformed and the ordinarily prosaic landscape looks like some mysterious vision wrapped in the shifting veil of gleaming mist. Then the break in the clouds closes over, the rain comes on with redoubled energy, and the vision is gone. We are back once more to a damp, gloomy, pleasant everyday world and close up to the sheltering wings of the Butler School.

The doors are just opened and a motley procession of pickaninies of all sizes and colors is filing to the building. Just stop and look at them a moment. A pathetic procession truly, and though we laugh at their jolly faces and curious old garments, it is a laughter that has in it a touch of sadness, for we can never see these children without seeing the pathetic as well as the funny side of them. Hardly an umbrella among them all, here and there the pale possessor of a gossamer waterproof mingles with the less fortunate crowd, but for the most part the children are sent out into the rain with very little protection. One or two blue army capes with red linings add a touch of color to the scene; there are old shawls among the girls and old coats, evidently adapted with not much alteration from garments intended for their elders, and worn until the lining sticks through and the cuffs are fringed and the whole garment is a curious patchwork of all colors that would vex the soul of a crazy quilt artist with envy and despair. The boys, in their ragged caps or the outer garments, as accident or the fortune of their parents may decide. Five small urchins absorbed in a game of marbles, are so oblivious of all besides that even the ringing of the school bell does not rouse them, and a special summons has to be sent to bring them in. Their little jackets are soaked, their feet half covered by their ragged shoes, are muddy and wet, and the rain is running down their bright little faces, but they seem to have none of that longing for shelter from the storm that sends chickens to their coops and dogs to their kennels on such a day as this.

The head gear in this procession is worthy of notice. As the children troop in they take off from their heads the various hats, capes and hoods which they have been wearing. Let us look at the different hoods and see what we can find. Here is an old soldier cap of which very little is left but the visor. The back looks as if a rat had gnawed it, and through the holes in the crown any amount of weather might find its way unmolested. A little red hood hangs next to it, soiled and torn but regarded by the child to whom it belongs as her most precious possession. Here a broad brimmed white straw hat hangs beside a red worsted hood, for a head covering once obtained is worn in season and out of season as long as it can be made to stay on the head. Several pretty tan O'Shanter's are trophies from last year's Christmas celebration, and were the gift of northern friends of the school. Here a poor little hat with a rule of piece of crumpled cloth, shows the effort that has been made to conform to the customs of the world. There is no one possibility of their freedom that seems to the colored people more of a privilege than this possibility of showing by mourning garb, their respect for a deceased friend. Denied to them in slavery, they avail themselves of the opportunity of their freedom to wear the somberest of somber garments if their

pockets will allow it, and even the very poorest will scrape up some how or other a bit of material for a black ribbon to decorate the hat when occasion demands.

The small drummer is standing solemnly at his place. At a signal he begins to beat his drum, and the children emerge from their various school rooms and take their places in line in the big hall. To-day the lines are very variable in length. At the right of the platform are the large boys and girls, and their lines stretch across the length of the hall, but to go toward the left the children constantly diminish in size and the lines in length, for the little ones cannot brave the weather as the older ones can. As the drum stops let us peep through the open door a group of wet faces. The late comers dare not come in, for the rule is that those who are late must wait outside until the opening exercises are over and the children have marched to their respective school rooms. So there they stand dismally in the rain, but for once the teacher takes pity on them and motions them to crawl with relieved but shame-faced expressions and take their places in the ranks.

Then the simple opening exercises begin, exercises in which all the children have a part. First the children recite the 19th Psalm in unison and with remarkable distinctness though the voices are low and soft. Then the little heads are bowed while they repeat the Lord's Prayer. Then a clear sweet voice starts a familiar hymn and all join. Perhaps they do not know or understand what they are singing, but to us there is an indescribable pathos in the intent dusky faces and the sweet childish tones, as they repeat the burden of their song:

"Whit'na than snow, yes whiter than snow, Now snow me and I shall be whiter than snow."

Then the children march out to their respective rooms and the great hall is left empty, the outer door is opened and a little girl's come in, in a hesitating manner and wait in the kitchen garden room until Miss H. is ready to attend to them. They stand in scared, expectant attitudes, looking out of the corners of their great black eyes at the visitors. Miss H. comes up, and soon the messengers appear from the school room, bearing the cards of the late or absent ones. More late children come dripping in, and silence reigns while the names of the children are called.

"What makes you so late, little girl?" Miss H. asks, as she hands her the card. "I donno Miss, s'posed I didn't start early enough" is the answer, given with a smile and sidelong glance at the amused visitors. "Benny what makes you so late?" asks all those four on your card? and Miss H. hands over a card with a long line of fours on it. Benny looks up with an injured air. "Had to go over to de Home for some clothes" he answers in justification of to-day's tardiness.

"Rosina, why are you late to-day?" as a little mite with her hair standing out in eight or ten little tails on her head comes to the front to receive her card. Rosina wriggles and twists and looks embarrassed and eyes the visitors helplessly. "Come Rosina, why were you late?" Miss H. reiterates. Rosina's head drops lower and lower, her finger creeps into the corner of her mouth and she replies in an awestruck whisper loud enough to be heard all over the room "I had a pain in my stomach." Then, the murder being out, she laughs and Miss H. laughs, and we laugh, and all the children laugh as if a pain in one's stomach were a very good joke.

"And what made you late to-day, Ananias?" as a sturdy, jolly-faced boy comes up to take his card. "Please Miss, I had to go de Fort wid some clothes and den de boat, done blowed and I was late" replies Ananias whose only means of reckoning time is by the boat whistle.

At last the children are all attended to and sent back to their rooms and on the kitchen garden table lies a great pack of cards of the absentees, about half the school are kept at home in weather like this for lack of the necessary protection. They are sent out of doors. But there are children in school to-day who have walked three and five miles over the muddy country roads. They would rather spend their day at school than at home, and the punishment that can be given them is to tell them that they can not come back to school for a day or a week or whatever time seems necessary for disciplinary purposes. The show is over now, and we paddle home through the mud and rain thankful that we have plenty of india rubber protection from water and mud, and that we have only a quarter of a mile instead of three or four miles to walk. Bruce travels on ahead barking with joy at his release from the restraint of school and the prospect of looking up his deserted breakfast, only to find when he reaches home that his cherished bones have disappeared and that he is himself so wet and muddy that he can't com-

into the house. Let us hope that Bruce is the only one who has failed to get some pleasure from this rainy day visit to the Butler.

## A Few Applications.

Every Tuesday and Friday at 12 o'clock the office of the business manager of the school is crowded with boys waiting patiently for orders on the different departments for various articles of which they stand in need. When a boy has an account with the school, the method of drawing money, obtaining clothing, shoes or anything else that the school can supply is to send in a written application to the business manager. These applications are carefully looked over, and then on Tuesday and Friday the boy gets his answer and an order for the desired article, if it is thought best that he should have it, and his account warrants the expenditure. The application is filled out on a printed blank.

The modes of address in use among the students are varied. At the beginning of the blank below the dotted line left for the date is another dotted line left for the name of the business manager and on the next line the word "Sir" printed. Some of the students begin their application

"Mr. B— Sir."

Others with a view to being more polite and respectful, insert the word "Dear" or "Kind" before the printed "Sir." Others feel thinking more perhaps of the articles desired than of the manner of address begin

"Mr. B— Please Sir"

A variety of arguments are adduced why the order should be granted. Here is one.

Mr. B. Sir

Please give me an order on the Industrial Room for a cap and two night shirts, I have money in the treasure. I don't no how much about eight dollars I think

Yours truly,

Here is an application from an Indian boy

"Mr. B— Dear Sir,

Please give me an order for repair of shoes and I want new pair of shoes too, and I ask you for a new pair of shoes but you didn't give me and may be you think that I have a good new pair

A somewhat pathetic application is the following.

Mr. B—

Dear Sir Please give me a order for a vest there are some in the industrial room that has been there some time they are some old ones that has been in their on hand some time

Yours Respectfully

When the application is one for money the applicant is expected to state what he wants to use the money for. Among applications of this class here are a few selected specimens. The first is from an Indian boy.

"Mr. B— Dear Sir,

Please give me an order for uniform pants undershirt and 50 cents I want buy some pencil and cake

Your truly

"Mr. B— Sir

Please let me have 45 cts. for church and Sunday-school

Mr. B.

Sir please give me an order for \$2.00 for to pay for my shoes if you please.

Yours truly,

The spelling in these applications is various. There is no common opinion in regard to the way that the word pants shall be spelled or even whether its form shall be singular or plural; "pance" is a favorite spelling as is "bruch" of the word brush. One boy asks for a "boddle of ink" another for an order on the "industrious room." The following application or rather interrogation is rather funny.

"Mr. B—

Sir: please let me have one pair of shoes number seven, and a trunk?

Here is one where the usual order of address is reversed.

Dear Sir

Mr. B— Please give me a veste

The signatures of these applications are even more various than the style of address. Some merely sign their names with no preliminary form, others sign "yours truly," as

in some of the cases already quoted. One boy closes his note

"Please oblige me yours truly friend" Others sign "respectfully," or "respectful," one "yours respectfully friend." The form and manner of the application is undoubtedly a matter of considerable thought and care to many of the boys and is to them a useful exercise in the proper statement and address of business letters, so that in looking over the piles of them that have to be looked over and filed one is more surprised that so many are neatly and properly written than that mistakes and misspelling occur in a few.

## The Work in Natural History.

As some of the mistakes that have been made in the Natural History classes appeared in the SOUTHERN WORKMAN last month, it is only fair that the other side of the story should also be told. There is an other side, which tells of most earnest and faithful and successful work. Some of the students are mischievous, and some are careless, but they all mean to do well, and many of them are achieving results of which they and their friends have every reason to be proud. Probably there are few schools in the country of the same grade as Hampton in which the students have acquired in two months more of the true scientific spirit as the Juniors have gained here. The improvement in their work during this short time has been really surprising. Mistakes are steadily growing fewer. Scholarly work is growing to be the rule. Considering that they have no textbook, the familiarity with scientific words which many of the students show is remarkable. Here is a specimen from an examination paper—the description of an ox's eye which was shown in class:

"The eye of an ox has three coats. First the sclerotic coat and cornea, second the choroid and iris and third the retina. Those coats are on the outside of the eye. Inside there are three parts, the Vitreous Humor, the Crystalline Lens and the Aqueous Humor."

Another examination paper gives the following description of a Ruminant's stomach:—"The stomach of Ruminants is complex. It has four compartments. First the rumen or paunch. Second the reticulum or honey-comb bag. Third the manyplies. Fourth the rennet or true stomach. The food is first bitten off and taken in the mouth, then it goes through the oesophagus into the paunch and then it passes into the honey-comb bag where it is made into little balls. These are taken up into the mouth where it is thoroughly masticated. Then the food is swallowed the second time, and passes into the manyplies, where it is strained and then it goes into the rennet or true stomach, where it is digested by the gastric juice."

Here is an answer to a question which called for a description of the different kinds of fore-limbs found in mammals, about which the class has studied. Two or three mistakes in spelling have been corrected. "The fore-limbs of the whale are nearly extinct or disappeared, there are more than three phalanges in the fingers of some of them. The fore-limbs of a bat are a long wrist elevated to the centre of the leg and the metacarpals are joined together to form the cannon bone. There is but one toe and that is set down in a hoof. It has three phalanges. The cat's fore-limbs are so arranged that it walks on its toes. The bat's fingers are very long and are joined together by a sort of skin, the thumbs are short and have hooks on them. In the arm of a man the bones are separate not joined together to form one bone. The elephant has five toes on each of the front feet, some call them hoofs, other elephants have four toes or hoofs on the front feet. The camel has two hoofs worn together so that in walking over the sand he will not sink in."

This is not perfect, but it is given because it shows such a genuine appreciation of the spirit and method of Comparative Anatomy as is rarely found in a beginner. The same thing is found in other papers.

The librarian says the students are to be especially commended for the earnest and intelligent work which they have done in the library. The supply of books on Natural History is far from equal to the demand. Some excellent compositions on different animals have been among the results of this reading.

The future of our work looks at present very bright. We are just starting a Museum of Natural History, which the students are going to build up themselves, and which already has the promise of some valuable gifts from friends outside the school. Two rooms are now being fitted up, one to serve as Museum and Recitation room, and the other as Laboratory. The country about Hampton is rich in zoological specimens, and if the students are as wide-awake and faithful in collecting them as they have been in studying, the organizing of a good local collection will be only a question of time.

MARY A. JOHNSON.

## Letters from Hampton Graduates.

FROM A HAMPTON SINGER. TEN YEARS A TEACHER, AND STILL A LEARNER. A SUNDAY SCHOOL WORKER. BEATING HIS OWN RECORD. A CALICO PARTY. FROM TWO UNDER GRADUATES. TEACHER AND PREACHER. A BUILDER OF CHURCHES. A TRIBUTE TO HAMPTON. DELIGHTING IN THE WORK. FROM ANOTHER UNDER-GRADUATE.

FROM A HAMPTON SINGER.

One of the band of Hampton students, who helped "sing up the walls of Virginia Hall," and who has been adding to the music of life by good work in the school ever since that chorus disbanded, writes in cheerful tune of his experience, as follows:

—Va., Oct. 13th, 1885.

Miss —,

My Dear Friend:

I waited last year until I was ashamed to write, so I am determined to do better this year, with the hope of retaining at least a small portion of your estimation and friendship.

I am still at my old post of duty, having just commenced my fourth session, and I realize that there are many advantages in remaining at a place three, four or more years. I have not the trouble of getting acquainted with my pupils every session; I can start my classes at the beginning of a session just where they stopped in the previous session, instead of having to turn them back, as is frequently the case in taking charge of a new school; I can keep up a little correspondence during my vacation absence with some of my pupils, and they are all glad to see me back again—and a teacher who remains a long time in a community and wins the confidence and respect of the people, has an influence over them which is highly important, besides gratifying to himself. I realize all this, and feel very glad that I have been able to stay here so long. My school work, I think, has been satisfactory to all parties concerned. Most of my pupils have made progress corresponding to my fondest hopes, and not one has failed to make headway of a greater or less degree. I had expected two of my pupils to enter Hampton this term, but the past season being a poor one, their parents are unable to let them go. Several others are able to pass the required examination, but are under the age necessary to become students at Hampton.

My object is to get as many of my pupils off to higher schools as possible, Hampton, of course, being my choice. The home influence is generally bad, in some cases, tends greatly to bedim the lustre of six hours in the school room; so, if the children can be taken from home and kept under a strict discipline and good influence of a school like Hampton, there is hope of their being completely weaned away from the old home training in three years.

I will not tire you with what may be of only ordinary interest, for you get so many letters like this. Hoping you are very well, I am, truly yours, W.

STILL A LEARNER.

It is good showing for a teacher when his successive certificates rise through successive grades. Through all the cares of active teaching and working for the support of a family, to make such a record, is a cause of congratulation and encouragement.

—Va., Oct. 9th, 1885.

Miss A. E. C.,

Dear Friend:

Your circular was received yesterday, and according to your request I give you an early reply. I am thankful to say that I am quite well, and am ready to enter upon my usual work. We have been assigned to our schools for the coming term. Mrs. C. is appointed to teach the school near our home—this school which I have been teaching. I have been appointed to teach one that I have taught before, eight miles from my home. I will have to board, and come home once a week. It is too far to ride. I am about to enter my eleventh year as teacher. I expect to make it my profession. I seem to be successful in the business, I like it. I have never taught in any other county in this State, nor in any other district in this county but this one. I am the oldest teacher (colored) in this district. I have taught under every board of teachers and superintendents that have been appointed since the public schools

have been in operation. You may judge from this that I had not been a successful teacher I would not have been employed so continuously. When I first started I began teaching under a second class certificate, but now I hold a first class one. There is but one more step upwards, and that is to obtain a professional certificate. I shall get that soon. We shall begin teaching on the 12th inst.

With many kind and good wishes,  
I am yours truly,  
C.

A SUNDAY SCHOOL TEACHER.

The work of the colored teacher is not confined to his district school. Everywhere our Hampton graduates go they find plenty to do outside their school rooms, for their people. To establish, lead, or teach in the Sunday School is a frequent and important part of their mission. One such faithful worker writes:

—Va., March 28th, '85.

Dear Friend:

I received your letter, and I am glad to know that you still remember me. Teaching has been my work ever since I left H. I have taught in three counties.

The school I now have numbers on an average 200 scholars. I have two assistants. I have been married one year and four months. I have worked in Sabbath School regularly since leaving Hampton, and am now superintendent of a large school. In my first teaching, the trustees were very careless about my money, and my health being bad, caused me to contract debts that took me a long time to pay, but now I am clear, and I hope very soon to square myself at Hampton. I shall be glad to get any reading matter that Miss Trites may send, and will be pleased to acknowledge the same. My work here is very hard, because I must do a part, and a large part of the parents' work, that is, to train the children in things that they ought to learn at home. But I have made teaching my work, and shall continue while I have strength.

Hoping to hear from my dear friends through you.

I remain, yours respectfully, Q.

BEATING HIS OWN RECORD.—A CALICO PARTY.

A later letter from the same hand, written at the beginning of the fall term, gives an encouraging account of the year that is past. We trust that the calico party was a success for the autumn days:

—Va., Sept. 3d, '85.

Dear Miss C—;

I don't remember whether I wrote to you or not; if I did not, it was my intention to do so. I received those papers, and read with much interest the account of the Negro school. I have taught ever since I left Hampton. This year I teach here again. I had quite a success this year; the examiner said the school stood 100 per cent. better than last year. There are in this town 200 scholars. I have nearly 200 in school. The great trouble here is, the people have no clothing for the children, and they must go on in ignorance. I have quite a nice Sabbath School, but I want to increase it. Two of my teachers can sew. They say if I get some material, they will make me some gowns for them, and also teach them how to sew. I will now state to you my plan to see what you think of it. I have set apart a certain Sunday for all of the scholars to bring five cents; with it I am going to buy some calico, and get some little dresses made, and go to see each parent; those who will promise to let the children come if they need clothing, give them what I can spare; the other, My Sunday School needs papers. When you have anything of the kind, please remember me.

I remain your scholar, Q.

TEACHER AND PREACHER.

Many of Hampton's under graduates are doing excellent work. From one of the most successful, a teacher and preacher, and builder of churches, we have the following good report, and tribute to Hampton's influence:

—Va., Oct. 14th, 1885.

Miss A. E. C.:

With great pleasure I do now reply to your kind letter which reached me last night.

I am an under graduate of Hampton School. I left school in the winter of '74 for class. I was then a member of the Second class. I have never been back to finish up, from the fact, I could never find the time and money to do so.

I taught public school five years after I left Hampton. I have taught in Augusta, Rockingham and Page counties.

I have been ordained to the work of the Christian ministry nine years; during that time I have built two churches, received into my churches something over four hundred members, have carried on large and flourishing Sabbath Schools, and married over one hundred and fifty couples.

I am thankful to-day that I have been generally successful in my work, both as a teacher and preacher. I now have charge of the First Colored Baptist Church of Lexington, Va., with a membership of 620, and a meeting house and parsonage worth \$7,200.

I also at this time have an independent school under my charge, which is doing well. I am married, and have five children.

I really love Hampton School, though I was there but a short time, still it did me good; and I have left its influence ever since I left there, ten years ago.

I wish to be remembered to the General and teachers.

I shall be glad of any reading matter that I can get. I have not many books. I shall also be thankful for words of encouragement and sympathy, as well as any other help in whatever shape it may be.

The colored people here are doing tolerably well generally, and are buying good homes pretty fast.

I must close. I have already been too lengthy, for I fear I am boring you in reading so much uninteresting matter.

Yours respectfully, H.

DELIGHTING IN HER WORK.

From another under-graduate, a young woman, doing good work in which she "delights," we are glad to have this interesting account:

—Va., Oct. 13th, 1885.

Miss A. E. C.:

Dear Friend:

Your letter has been received. I was glad to know that I was still remembered. It reminded me that one year ago this month a letter came to me from you, and I laid it by, intending to answer it at my earliest opportunity, but the time passed away so swiftly, I was actually ashamed to answer it, but I have concluded this time not to put it off, but to answer immediately.

I have taught eight public school sessions since I left Hampton, and am about entering the ninth. I have so far met with very great success in the schools that I have taught. I never have any trouble in obtaining a school, and delight in the work of trying to be of some use to my race, however small it may be.

Down in this part of the State, teachers meet with very little encouragement from any one. The superintendent examines you; the school board will tell you at what places they want you to teach, and many times you will have to look out for the school room, benches, and everything else that is necessary. Sometimes there is no one to manifest any interest whatever, not even the parents. But through it all I feel that some good has been accomplished.

The colored people here are preparing a very good school room this year; of course it will be used sometimes for other purposes, but I will be better than any we've had. I might go on to tell you a great deal about the schools down here, but it may tire your patience. Suffice it to say, that the eight sessions that I've taught I have done what I could for the benefit of my pupils.

I should be very glad indeed to have some reading matter sent to me; it is something hard to get hold of here, and would be I should be very glad to have some maps and charts for my new school rooms. I always have not for the day scholars. Please excuse my many mistakes. I am not a graduate—only an ex-student. Hoping that I may hear from you again,

I am respectfully yours, M.

FROM ANOTHER UNDER-GRADUATE.

Hampton's army of 600 graduates is not unworthily seconded by as large an army of under-graduates who, while waiting to be able to finish their course, or for some reason unable to finish it, teach what they know—often with excellent success. With a view to this

fact, instructing in the practice of teaching begins now in the middle year of the course at Hampton. It is a good thing when the young man or woman gets the idea that whether the school course is completed or not, education, and study need not end with school days. An under-graduate, who has got this idea wrote as follows:

—Va., Oct. 26th, 1885.

MISS A. E. C.:

DEAR FRIEND—Your highly esteemed letter was received a few days ago, and I assure you that it afforded me much pleasure. I often think of the kind words which you spoke to me at Hampton, and especially of the advice you gave me when standing at the chapel door a few nights before my departure for this country. I am teaching the same school that I taught when I left Hampton in 1880, and have taught it every session since. You will probably be surprised when I say that I am the only colored teacher in the county who holds a professional certificate and receive \$35.00 per month. My school is considered by the superintendent to be the best in the county. I don't say the above with the intention of receiving any applause, but because I believe you wish to know what the students of Hampton are doing. The Hampton graduates are said to be the best trained teachers in the State. (I regret that I am not one), and the demand for them is greater each year. Our School Board wanted three for this district, and asked me to write for them, as I don't say could not get them. A few Sundays after I left Hampton in '80, I opened a Sunday School in my school house, which has been kept up ever since. And now we have a library of more than one hundred volumes, consisting of Bibles, Testaments, Catechisms and Hymn books. I had almost forgotten to say that I was married last year, and am now farming in connection with my school. I cultivated this year 70,000 tobacco plants, and made about 7,000 pounds of tobacco, which will be worth from \$7.00 to \$15.00 per hundred. The cost of making, \$300.

From the above you will easily understand the magnitude of the work which I am doing. When I was at school at Hampton, I threw away time which I have had since to lament, for consequently when I left school I was deficient in many respects. There was no use of despairing, so when my term in the school room was done, I went to my room and took up my books, determined to master them, with a resolution I have never before possessed. I soon found out that I needed new books for references, so I purchased Webster's unabridged dictionary, revised edition, Rollin's Ancient History, Ferguson's history of Rome, and many others, but these I would not be without for five times their cost. There is much expected of the Hampton students; the eyes of all who have contributed to educate them are upon them, and it depends upon their actions whether the Hampton Institute will continue to receive these contributions. Now, let every one of us consider himself a leader of a host, on to the standard of good citizens and Christians, and let us teach by example as well as by precept.

I close by hoping that God will bless the labor of your hands.

Yours respectfully, W.

JAMES PYLE'S

PEARLINE

The Great Invention, FOR EASY WASHING.

IN HAND OR SOFT, HOT OR COLD WATER.

Without Harm to FABRIC or HANDS, and particularly adapted to WASHING of all kinds of goods.

No family, rich or poor, should be without it.

Sold by all Grocers, but beware of vile imitations.

PEARLINE is manufactured only by JAMES PYLE, NEW YORK.

DENTISTRY.

DR. T. H. PARRAMORE,

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton, at the office on King Street, opposite Barnes' Hotel.

REV. SHIELDON JACKSON, D. D.,

JAMES McLAUGHLIN,

JOHN G. GASMANN,

THE RECENT REMOVAL of Major J. G. Gasmann, Indian Agent at Crow Creek, is a loss to the service which we sincerely hope may not be followed by serious results. The Government undertakes an important responsibility in the appointment of his successor.

THE INFLUENCE of the Indian Rights Association is widening. A meeting was held in Northampton on the 6th inst., at which President Seelye, of Smith College, presided. Addresses were made by Dr. Seelye, Mrs. Bond and Mr. Herbert Welsh. The house was filled, many persons standing. After the meeting a Northampton Branch of the I. R. A. was formed, with Dr. Seelye as President. Fifty-eight members joined. A similar mass meeting was held at Easthampton in the evening. About 800 people were present. After the meeting an Easthampton Branch was formed with 48 members signing.

THE PRESIDENT'S ANSWER to the delegation from the Lake Mohawk Conference was in effect a question: "What is the immediate thing? What should be done now?" He asks if we shall "give them more schools and more farmers, and keep up the Reservations until the Indians are better prepared to take care of themselves, or stop it all, and deed the lands to the Indians." The demand sounds like an evasion. Immediate steps can be taken, and ought to be taken, for the ultimate dissolution of the Reservation system. The process cannot but be slow. In the meantime there is no excuse for neglecting our present obligations to the Indian in the way of education and the general encouragement of progress. Our own observation does not entirely confirm Dr. Abbott's theory that "the Indian never has learned civilization on a Reservation, and never will."

#### The Indian or the Railroad?

An early and animated discussion in the Senate followed the reading by title of two bills for right of way through the Indian Territory for two railroads, which was referred to the Committee on Railroads. Mr. Harrison, of Indiana, moved to reconsider the vote for the purpose of referring them to the Indian Committee, on the ground that it was primarily a question of Indian rights. This brought on a considerable debate, in which Mr. Harrison was ably supported by Senator Hawley and Senator Dawes. The motion to refer the first of these bills to the Indian Committee was carried by a vote of 30 to 27. On the ground that the second bill was one which had been reported by the Railroad Committee last session, who were already in possession of all the facts, Mr. Harrison consented to allow it to go first to that committee, with the understanding that if they reported it favorably to the Senate, it should then be referred to the Indian Committee also.

There is no doubt that Mr. Dawes takes the broad view when he says that the large question, "What shall be done with the Indian Territory?" should not be complicated by mistakes in minor points which affect the minds of the Indians. He also deserves to be quoted for the astute remark that "there is

often as much in the way you deal with an Indian as in the substance of what you do with him!"

#### A Spoiled Indian.

There is no doubt that the once famous Sitting Bull is sadly spoiled. Agent McLaughlin writes that "Since his return from his recent trip with Buffalo Bill's 'Wild West' Exhibition, he is a great nuisance. He is inflated with the public attention he has received, and has not profited by what he has seen, but tells the most astounding falsehoods to the Indians. He tells everybody he sees that the 'Great Father,' in his interview with him, told him that he was the only *error* Indian of all the Sioux; that all Indians must do his bidding; that he was above his agent, and could remove the agent or any employee when he chose, and that any Indian who disobeyed him or questioned his authority must be severely punished. Also that all Indian dances and customs that have been discontinued should be revived, including the Sun Dance. As he is working against our schools and tries to influence others, and is very pompous and insolent, it may be necessary for me to adopt stringent measures with him, and that in the near future. His influence, though very limited as to number of followers, is at the same time, from his arrogance and aggressiveness, very pernicious."

This is a humiliating picture, and offers a suggestive warning to injudicious friends of the Indian. Poor Sitting Bull and his followers have, it is true, been made a mere vulgar show to gratify the public curiosity. An Indian is, however, peculiarly susceptible of flattery, and the most well-meant attention and kindness may very probably turn his head. Instead of learning modesty among the wonderful scenes of the white man's achievements, he is apt to flatter himself with the proud thought that he is of sufficient importance to be honored at this distance.

An Eastern tour is, indeed, occasionally of advantage, as in the case of White Ghost, who is more friendly toward progress than he used to be, and seems to have brought home with him no worse results of his visit than a tall silk hat and an agreeable complacency of manner—which last, perhaps, he may have had before! The danger, however, remains; and stringent measures will have to be taken before long, lest the Indian of the future be a spoiled Indian.

#### A Civilized Apache on the Indian Question.

The following is part of a letter written by a young Apache Indian, now living in Chicago, who says that he was reared in a grass hut among the wildest tribes of Arizona:

Now let us turn aside from history and its incidents and look at the future. I do not believe the child of nature is so degraded that he can not be lifted to a higher level. It is but a short time since our government considered this nation worthy to be protected and educated. In regard to their education, it has been a success. We must take into consideration two schools, one on the frontier, taught by cow-boys, miners and soldiers, the other in the east, taught by Christians. Both of these testify to their success. If the former are to be a specimen of learned and good moral character, and are to be placed in the front rank, is it not better that they return to their original customs? The Eastern schools have done more for the noble red man than the others, including soldiers, miners and cow-boys. These schools are under Christian influence. Their teachers have correct ideas in regard to the Indian question, without any doubt. They have substituted war for war-paint, the hoe for the bow and arrow, decent clothing for a wild attire, enlightenment for ignorance, and taught the religion of the living God instead of that of idols. Indians in their natural state are ambitious. With them honors lie in victories and brave acts. There is no one who is not looking to the chief of the tribe, wishing to be like him. Experience has proved that the Indians can be made to realize that *greater* honors lie beyond the brutal acts of his forefathers, by being educated to

earn his bread. The aged submit to teaching and send their children to school.

If the desired end is to be accomplished, give them justice; give them Christians instead of war men, agricultural implements instead of arms; make them feel that they are free, as when their natural state, and not fenced in by the points of bayonets, as they are at the present time, and treat them as a friend not as an enemy, so that they may know the land where their forefathers trod is still free.

I leave this subject, looking for the time when the grasp of the white man's hand shall be greeted, not by a hot battle, and the occasion consecrated by smoking the pipe of peace.

Let us hope, while the rays of enlightenment still fall athwart the dark question of the past.

CARLOS MONTEZUMA.

#### The Dakota's Conception of God.\*

In studying the habits of new Biblical races and more clearly still in the great ethnic religions of the world, the fact of a never-ending longing after God, "if haply they might feel after God and find Him," clearly shows itself. The method followed in this feeling after God is often dark, tortuous and misleading—at times almost hiding the One groped after. Yet in the history of the world God has never allowed Himself to become wholly obliterated from the hearts of His children. No matter how low in the scale of humanity, how ignorant, how corrupt, how superstitious a certain race may become, this never-ending longing after God—an inextinguishable fire—is the one great characteristic of their souls and hearts which distinguishes them from the brute creation, and forever stamps on them the wondrous truth that "God created man in His own image."

With the red man's usual fate of being misunderstood and misrepresented, of course he has not been spared the assertion that his conception of the Deity is polytheistic—in short, that he believes in no God whatever.

These two assertions are not true at all. An axiom in geometry is a truth so simple, so plain, so primary, that it does not require a demonstration. It is a self-evident truth. That the Dakota is a being possessed of strong religious tendencies is such an axiom. The truth of it is so manifest as to require no demonstration. We can simply repeat the axiom, and say that the Dakota is a naturally religious being. His faith in a Supreme Deity is almost unbounded. His belief in things pertaining to God and his own soul is somewhat vague and confused. Yet his recognition of a Power higher than himself (who is the Creator, Governor of the world) is intertwined with his very existence. Such an extraordinary and anomalous being as an atheist is unknown among his brethren.

The Dakotas has no special code of morals, nor any well-defined system of theology—yet, almost from his infancy, the Godward proclivities which are inherent in him begin to show themselves.

As he grows in age, his religious nature becomes more and more developed, apparent and positive. In a way, almost inexpressible, this religious tension lasts unbroken throughout "all the changes and chances" of life until he reaches the grave. According to him, Wakantanka (the Great Holy) is the creator of the world and "all that therein is," both visible and invisible. Wakantanka is All-Wise, All-Seeing, All-Caring, All-Powerful, All-Just, All-Loving—existing from eternity to eternity. His Deity, therefore, (though dimly conceived), is none else than the God of Scripture, who "inhabits eternity."

The Hindoo has a curious cosmogony which supposes the "globe to rest on an elephant, the elephant on a turtle, and the turtle on nothing at all." The Dakotas, on the contrary, believe the world to be in the palms of God's hands—meaning thereby, that he governs it with such a perfect system of laws, so near and intimate, His watchful care over it, so great His love, that He may well be said to hold the universe in this way: just as through intense love and tenderness the gentle mother holds her helpless babe in the palms of her hands and caresses it.

The laws that govern the world he looks upon as emanating from God—indeed, they are parts of His very Being. For this reason, the mysterious forces of nature he reveres, inasmuch as he believes them to be manifestations of God's power, and thus potentially to be the Deity Himself.

It is thus that his "unimpaired mind sees God in clouds, and hears Him in the wind."

I once saw a Frenchman, in the midst of a grand and severe thunderstorm, reverent-

ly lifting his hat, prayerfully looking up to heaven, or humbly casting his eyes to the ground. This he repeated as each thunder clap was heard, shaking the earth.

On putting to him the query, "Why do you do that?" he answered: "That is God's voice which you hear from the thunder-clouds. When I hear His mighty voice, I tremble and fear because of my sins. I lift my hat to show my reverence for Him."

It is precisely with such confessions as the above that the Dakota sees his Deity in the clouds, and hears Him distinctly in the thunderclap.

This is the same God that David of old had in his mind when he said:

"It is the Lord that commandeth the waters; it is the glorious God that maketh the thunder. The voice of the Lord divideth the flames of fire; the voice of the Lord shaketh the wilderness; yea, the Lord shaketh the wilderness as Kadesh."

Not unlike the Noman, the Dakota sees God in the mighty cataract, the huge tree, the prominent rock, the sun, moon and stars. But he does it for the same reason as the one already given. They are potentially God, inasmuch as they are His handiwork. They show the depths of His wisdom, His power, His greatness, His image, His very Being.

But because he shows honor, and seemingly offers gifts to them, the red man is thought to believe in "Gods many and Lords many."

"Bowing before so many things in nature, why is he not a polytheist?" has been repeatedly asked. The native answers: "I do not worship these things!" They make me think of God. On the spot where I am thus reminded of God, I worship Him through these as media."

There is but one God and no other. These I call simply Wakan (not mysterious), because they are the manifestations of God's power and nature. Him alone I call Wakantanka (The Holy One—the Great Holy, the Chief Holy—the supreme Holy God).

Thus he scornfully rejects the charge of polytheism, and strongly asserts his belief in monotheism. His motto, like the Indian of the old world, is "One God and no other." While the red man there are several theories as to the origin of the human family. One is the following:

After the creation of the world, animals, etc., Wakantanka (The Great Holy) created three beings and immersed them, one by one, in a pool of wondrous purity and clearness. The first came out with a fair complexion. The peculiar reddish bottom of the pool is disturbed through the first immersion and the water is slightly colored. The second creature is immersed and he comes out with a reddish complexion. By this time the second layer of the bottom (dark mud) is stirred up. The last of the three now enters, and emerges with a complexion dark and rough.

I am sure none of you will doubt that the red man strongly believes in a life beyond the grave.

His conception of the future state is simple and of the most comforting nature. For instance, he holds that when a man dies his spirit forthwith goes to the Spirit World.

The Milky Way he calls "Wagagi-tacanku"—that is, the Spirit's pathway. Every soul must follow this on his journey to the Spirit World.

As to the location of this blessed spot—the spirit's home—the red man has no definite idea; but his imagination is vivid, his faith strong enough to make that happy abode a glorious reality.

Is not this a conception approaching the "Paradise," the "Abraham's bosom" of the Christian?

Curiously enough, according to the red man's theory, no spirit is immediately blessed with the beatific vision; when that shall be granted rests with Wakantanka.

Awaiting that day, all must remain in the "home of the spirits"—the red man's intermediate state.

And so, after all, instead of having no idea whatever of God, or being at best only a degraded polytheist, the red man, on the contrary, has a strong faith, Wakantanka (the Great Holy); and ever confidently cries out "there is but one God and no other."

His conception of the Deity, when properly analyzed and understood, is not a shocking one, after all.

As to the strange people who came here from some cradle-land of monotheism, are intensely religious. To be sure they serve their Creator in a false way—yet it is because they have forgotten the better way. The truth is they erect their altar "To the Unknown God."

For this reason the Christian minister can easily do what he craves and contend in the Deity into the right belief of the True God. Furthermore, he can build upon their inherent religious nature, and say to them as St. Paul did to the Athenians at Mars Hill:

"Whom therefore ye ignorantly worship, Him declare I unto you."

\* Part of an essay read at the graduation exercises of the Seabury Divinity School. By writer, Charles B. Cook, of Yankton Agency, is a Dakota Indian, a graduate of Trinity College and of Seabury.

### Incidents of Indian Life at Hampton.

*Small Indian Girl*—(looking at a somewhat dilapidated but noisy little clock): "Oh, its old, but its doing!"

The very suggestive old song—"Twenty froggies went to school," was one of the hits of the evening at our last "Literary" meeting in Winona.

The editor was invited to partake last evening of a very delectable "prize" cake, carried off by one of our girls for the best marching on Thanksgiving night.

More than fifteen hundred Christmas cards, contributed by about a hundred friends, have been sent from Hampton to returned students and to Indian missions and schools in the West.

Miss Park has opened a pleasant studio above the carving room in the Industrial building, where she takes charge of the Indian painting. Native talent in this direction is highly appreciated by visitors.

The latest *furore* in the Fancy Work Class has been the knitting of "wristers" for the boys, and few are so unlucky as to want these comfortable and becoming additions to their winter wardrobe.

We had brief visits last month from two of our Hampton boys: Thomas Miles, who graduated in June, on his way to study medicine at Dartmouth College, and George Bushotter, to take up a theological course at Alexandria,

### From the North.

A boy who is spending the winter in Massachusetts, writes: "I have good time all the time, and then sometimes I shingle the house, that is, I like it very much. I go to school in Monterey, but I don't like very well because all white boys. Then I remember Hampton every day. I plowing last week, that's all I did this time." And again: "I wish you would send me a Geography and a reading book. Now I will tell you about what kind of work I do. I chop wood and feed horses and cows, and sometimes I help Mrs. T— in the house. I am like a girl, because I wash dishes!"

### From the West.

One of the Hampton girls, who is in the Government boarding-school at Crow Creek, writes: "I was very glad indeed to hear from Hampton. I am going to tell you I am very well now, and I am going to tell you we have one nice teacher, his name is Mr. Wells. All the girls and boys write and read all the time, and the girls all wash dishes and sweep and make bread and sew."

Another writes in Indian: "I always remember Hampton, and some days I am very sad, and when you came I was happy, and after you went home I was sad again. I want to go to school here, but I cannot. My mother does not like to have me go."

One of the boys writes: "When I received your letter I am very so happy, and sat up one hour and read your letter. I hope I shall see you next summer in Dakota. \* \* \* This time I never look back at Hampton because too much authority for me. I am so glad every day because I ride every day."

### "Music Hath Charms."

Teaching the Indians music was at first a venture, but a thorough trial has resulted in introducing it into the regular day school with very gratifying results.

The rudiments have been mastered in a very short time, clearly proving that with a fair test the Indian will "hold his own" in music as well as in other branches.

The power to sing and play the organ by note will, I believe, be of great value to them in their western homes, and

especially in mission work. We have several Indian girl organists, and one boy that could now play a church service through, and this as the result of only about one and a half terms of short lessons. My experience shows me that they compare very favorably with white people, and that if given equal opportunities, the Indian can be especially useful in this part of education, and be of great assistance in the mission work among his people. R.

Two of the musical Indians write as follows: HAMPTON, Dec. 16th.

*My Dear Miss G—*  
I am going to write a few lines to you today and tell you something about my taking music lessons. I like music, and like to hear when anyone is playing on any kind of music, and always wish I could play on organ or piano; and this year I am taking music lessons, and I like it ever so much to study. Mr. Rathbone is our music teacher. There are several other girls taking music lessons beside me, and all seem to like it.

We have an organ in our Assembly room, and practice there every day. We all have a special time to practice every day, about half an hour each: mine comes every afternoon at half-past four to five. And every Monday morning Mr. R. comes over and hears us. And every week he gives us a new lesson, and if we do not know our lesson, he lets us take it over again until we know it! I only wish I could learn how to play hymns, but I hope I will some time if I study little harder than I did before. Now I will close my letter.

Your sincere friend, R. M. M.

HAMPTON, Dec. 17th.

*Dear Teacher, Miss G—*  
I will let you know about the little music lesson. I have been learning music lesson last summer, but I have not learned much. I have taken twice a week, and I like it very much, but I do not know much yet. I hope I will learn very quick or nicely; and because I like to sing hymns or anything else sing I like very much; that is reason I take this music lesson.

Now this time I have an organ in my little cottage; so I have been playing most every hour night or day time, but it is hard for me to understand these things. I cannot correct my hand position, and sometimes I cannot find out long time before I playing on organ what note I am going to play next place. But I always be careful what I have to play by notes, because I do not know much, just I know seven of the letters in music, F, G, A, B, C, D, E. So I know them, and I follow them, too. I always try to learn my best I can, so I learn very slowly, but I hope I know little better next time, because I have practice every day and night.

I have a very nice beautiful organ in my little cottage; this organ is about 52 inches high, and wide 42 inches, and new, too, so I love so much my organ. I can play little, some of the hymns; sometimes some gentlemen or ladies like to hear what I have to play on organ, and I do myself, too, and so I hope somebody like my organ because it is pretty. That is all I have to tell you. I hope I know better next time.

Your true friend, B. C. B. B.

### Life in the Wigwam.

Family prayers at the Wigwam are just over; a verse of a familiar hymn has been sung—one line, at least, of which expressed an evident truth, "For I forget so soon."

Fifty attentive faces are turned toward the Commandant as he mentions that he has been informed that the movements through the halls of the inhabitants of the Wigwam are accompanied by noises more suggestive of a gentleman's residence; that the explosion of their exuberant spirits had broken Sunday; and that the good of the community and of the individual called for discipline for any one found deficient in self-control.

Some five minutes later in the hall, Three young Indians linked together by encircling arms are pulling a boy in one direction, while three more pull him in another with as much hilarity as the occasion calls for.

It is only an affectionate parting for the night, although the boy in the middle seems likely to part for all time. Line must be upon line and precept upon precept. Letters from departed students, and the lives of many present, give ample evidence that memories may grow strong enough to hold what is taught, and that patient instruction is by no means thrown away upon them. J. V. V. S.

### The Story of a Picture.

There is an interest in comparing these unlike accounts of the same picture, written for a school exercise by the members of one division.

I see a hen and a dog; the hen had a nest in the barrel and had some eggs in the nest. The hen left her nest and went out, and the rat try eat the eggs. The hen saw the rat; she is running back, but the rat did not move; he is try eat the eggs. The dog is running to help the hen. The dog must be a good dog to help.

I can see a rat, the rat eating, the rat is a very bad rat, too much stole eggs, the hen run very fast, and he can fly I think, but I think the hen he cannot fly far. The hen is very good to eat, I think so, and also the eggs. Some of the good things they made is cake, and very good to eat. I see a dog, the hen can run very fast, he has four legs, and also has two eyes, one mouth. I think the dog is good to eat. You think so? Yes, very good, I guess.

*Story Hen.* I see a hen run to her nest in the barrel. I think she is very sorrow because broken her eggs. The rat he thinks nobody see me, but Dash and him run, and after him I think. Dash kind old hen, because help him. The black old hen he went out and pick up some crumbs. And the rat he went out of the hole, get it her eggs. The hen is very quick. And running very quickly. The rat he has a very good thing. Because eat too much. I think the rat it will be kill. She kick him two with sharp spurs.

A hen has a nest in a barrel. She laid some eggs in it and went to walk to get something to eat. I think a rat came to the eggs and was going to eat all the eggs up, but the hen sees the rat, so she have to run to her nest. The dog running to help the hen, too. Poor rat! I wished I saw the hen and dog so I could kill the dog and hen.

Oh, see, the rat is in the hen's nest. Will it get an egg? Is this the hen that left her nest? Yes, this is the hen. She is a big black hen. Will Dash help him? If the hen sits on her eggs she will hatch out little chickens.

*The Eggs Story.* I can see the eggs in the hen's nest. I think those eggs are good to eat when they hatch and grow to be good hen. There are ten eggs in the nest. I can see basin and rat. I think the rat like to suck the eggs inside. The rat has long tail. I think he did not hear that the hen runs to her nest. I think the dog will help her. The dog will run after the rat. I think he will not catch her. I know the rat will run very fast when he see the dog and the hen. I can see a house. I think that is barn, where the cows and horses stay. I see some hay there. The dog's name is Dash. I think that is a good dog, because he will help the poor hen. I can see few hay and fence. I think the dog is bark very loud. I can see a basin. I think some water in it. The hen likes water.

### From an Indian Graduate.

SHAWNEETOWN, I. T., Nov. 13, 1885.

Miss C.

*My Dear Friend:*

Your circular letter to hand. Please accept my thanks for it, and also for the papers that you so kindly sent some time ago. I have been intending now for ever so long time to write you, but some way or other I could not muster enough courage to take up my pen and proceed. There has been and still is busy times with us as a family, and demands of our young chief, whom we have named Pierrepont. He is quite pretty—dark handsome eyes, and as to the color of his hair, no one seems to be able to say for certain so I send with this letter a line bunch of it. By saying "a little bunch," I do not mean to be understood that he has none to spare, for he has a good stock left. He is

very large for his age, healthy and fleshy and we take a great deal of comfort in him.

Now as to my work at home and my regular work, I have much to say about it. I have much to relate, and have much to produce discouragement. Yet when these two causes are weighed in the balances of my past experience, the conclusion is that there is more to cause joy than discouragement. One of the sure evidences of progress that Christianity has made in the past of the country is an organized church composed of Indian converts, with few exceptions, and a church building which has been just dedicated, and the cost of which is \$958.69. Eight hundred dollars of the amount was paid by the Society of Friends, and the rest, \$158.69, with very few exceptions, was made up of subscriptions from the Indian converts who are members of the organization, and the church business and other work connected with such organizations is now carried on by them under the direction of the missionary. All this is due to the untiring efforts of our late missionary, Rev. F. Franklin E. Elliott, and naturally the necessity which has compelled a change in missionaries here and deprived our meeting of the faithful services of our dear friend and his family, is cause of deep sorrow of heart to us, his children begotten in the Holy Spirit, knowing that the work so blessed to him must be retarded thereby for a time. But we trust that our Father who hath by him begun this good work among us, will by him be sent to perform it. We welcome our friend, Dr. Chas. W. Kirk, who has been sent by the Society of Friends, as successor to our late missionary.

Our prayer, charming in the middle of the week are being fairly well attended; also the Sabbath School, including, as it does, many of the children from the Government school, in which I am teaching. I hope that the Sabbath evening meeting, which has just been commenced, will attract some who would not otherwise attend at all. While all this good work is going on, there are other forces at work in opposition. One of these vices must be deplored is the peddling of whiskey in defiance of laws of the United States Government, demoralizing the Indians as it does, with not only the whiskey, but by the example of lawlessness set before them by their pale-faced brothers. The latter are all sorts of outlaws and fugitives from justice, who congregate here from all parts of the United States; and such being the case, I suppose no one can expect anything better from them. The United States Indian Agent here is powerless to execute the law—the very thing for which he is placed here to do. He has no force to call on for that duty—the most important branch of the Indian service and the most indispensable to the welfare and peace of the community. We heard some days ago that the Commissioner of Indian Affairs passed through this country and stopped over one night at the Agency, but who would learn the true and real state of things in any place in that short length of time? But we hope he had some glimpse of the condition of this agency from the lips of some one, and that better things may be expected in the future.

This is but a faint representation of some of the difficulties that Christianity and Indian civilization have to encounter, and I don't believe there is a single solitary agency in this whole Territory that is exempted from such grave difficulties in some form. Yet, it is strange to say, in the face of all these, the government at Washington and the people of the United States wonder why the Indians don't become civilized as fast as they ought to. This question is very hard to answer in the city of Washington and in the States generally, so as to convince people, but here it is an easy matter.

But now my letter is too general; I must bring it to a focus. Now, in regard to my people, the Shawnees, though deserving but little to be mentioned in relation to Christianity and progress, I am glad to say that now they will probably soon receive their certificates of their land in severalty; which they took some ten years ago, but unfortunately, the certificates were not issued, on account of defects in the "Allotment Roll." The chiefs and head men are still opposing the idea of taking allotments which they already occupied; and refused some time ago to take any action in correcting the Allotment Roll, which had to be done before the certificates could be issued; so we fore, being authorized to act in the premises by the Department, took it up, and corrected and properly certified it before the United States Indian Agent, to whom the annoyance of the chiefs, so now the roll is in the hands of the Department, and the certificates will be issued on that. There are only a few of us who have consented to receive them, but I have reason to believe that a great many will when they see our certificates of our land.

With kind wishes to you, in which my dear wife joins, I am always gratefully, friend,  
W. M. ALFORD.

## Western Sentiment on the Indian Question.

PIERRE, Dakota, Sept., 1885.

The pretty and phenomenally prosperous town of Pierre—in western parlance cut down to *Pier*—is the present terminus of the Chicago and Northwestern Railroad. This promising city lies at the foot of a noble valley miles in extent, between the bluffs of the river, and commands a vast and exhilarating prospect. It seemed almost too suggestive that, as we descended to the platform, dusty and di-heveled, and as usual somewhat preoccupied with our gurgles of the peculiarly American strains of a brass band should announce the arrival. It was a relief to discover that this was no premeditated tribute to our importance but that the citizens of Pierre were celebrating that day with civic pride the first trip of their first street car. The coincidence, gave, however, a cheerful and festive air to the proceedings, as we took up our shawls and hats and fell into step, keeping time to the music which followed us down to our hotel.

Here, again, we were almost overcome by the size and magnificence of things. A few rods away stretched the pathless prairie; three or four scattered stores, splendid with plate glass, lined the broad plank side walks; the great hotels, airy and empty, the rooms had quite an air, and the manner of the proprietor was most impressive. The new street car in front, in all the freshness and glory of its nickel trimmings and red paint, bore the imposing legend, "Pierre City Railway Company, No. 1." Our parlor was handsomely furnished in conventional hotel parlor style; the dining rooms of stately size, with many windows, and the tables looked somewhat deserted. The menu included duck and venison, and everything was good, down to the *café noir* and the cheese.

Pierre, Dakota, has grown with western audacity from a frontier town of fourteen saloons and five stores to an ambitious little city with 3,200 inhabitants and all the modern improvements. The East Pierre, the "old town," a mile away, has a really good business street sloping a little upward to the pretty new court house at its head, built in somewhat ornate style of the native brick, which has a pale harmonious coloring peculiarly attractive. A street near the river, where there are some rather fine trees, would make a beautiful pleasure drive, and should be laid out to that end. Higher up, along the bluffs, only the line of upturned sod marks the future street corner, and rows of newly transplanted cottonwoods predict urban success. There are succeeding rows of houses built or in process of building. We went over one unfinished house, exceedingly well planned, and outwardly charming in the natural color of the brick. We looked at the great new reservoir, which is still in the hands of the workmen. Conspicuous on the hill is the Presbyterian College, a square solid looking brick building which has already twenty students.

Fresh from the remote, inert, almost alien life of an Indian reservation, we can but admire the restless push, pluck, daring and display that have made this place what it is—no mere colossal advertisement—but a perfectly open and allowable business enterprise. The irrepressible question in wide-awake Pierre, as in all the border towns, is, "When will the reservation be opened?" It is as well that the East should know that this question is handled right here on the western frontier, where the division is sharpest, the conflict most keen, with growing fairness and respect. There is a painful interest in studying the contrast between the two banks of the river; the treacherous Missouri, with its unknown currents and sandbars, the only visible barrier; on the east bank, the sharp, practical, selfish, intense, money-making, speculating, aggressive American; on the west, the reluctant, inert, proud, dependent, helpless, irresistible Indian. On this side flaunts the crude, attractive, ambitious little city, on the other lie the vast, barren, lovely, useless solitudes.

Mr. Herbert Welsh, the untiring exponent of Indian rights, met to-day, by invitation, the leading citizens of Pierre, to discuss the Daves Sioux bill for opening the reservation. The interview, if not important, was at least significant. A delegation of representative western men, who are in some sort typical Americans, get together in the parlor of the Wells House to approve a measure which commits itself largely to our philanthropic and to accept and white co-operation on philanthropic grounds. There is a striking similarity of type among them: the ruddy, clear-shaven complexion, the clear, grey eye, the prominent nose, the fluent business man, appear and reappear under slight disguises.

Mayor McClure opens the discussion with commendable readiness and tact. We concede, he says, the interests of the Indian Rights Association in the reservation—an

interest both pecuniary and humanitarian. We acknowledge the rights of the Indian. Here is an opportunity for mutual concession. Our future depends upon the country west of us. It is not land we want, but communication with the Black Hills.

Mr. Welsh replies with his usual happy union of the conciliatory and the direct. He speaks of the inextinguishable law of progress, of his sympathy (which is genuine), with the great onward movement of the people. "The end we propose is just; the only point is the method by which we may gain that end. We opposed the Sioux commission of 1882 because of the means it employed, which were more than questionable. We are in favor of the Daves bill as a fair measure, and shall work to secure its passage, and what will be more difficult, its acceptance by the Indians. You are aware that according to the treaty of 1868, the signatures of three-fourths of the male adult Indians will be required to make the bill a law. I have recently met the principal men at all the agencies which I have visited, and put before them as strongly as I knew how the advantages to be gained by them and the policy of effecting a compromise. It has been suggested that it may be well to change somewhat the form of the compensation offered—to make it more attractive. Cows have been so often promised, and fail to appear, or appeared only of inferior quality, that the Indian has come to regard the cow, I believe, as a sort of mythical animal." Mr. Welsh speaks of the interests of Chamberlain, the terminus of the Chicago, Milwaukee and St. Paul, and recommended the changes proposed by Editor King of Chamberlain. They desire a better frontage on the river, including the whole of Brule County. The bill presents Chamberlain with American Island for use as a city park, and Pierre would like Farm Island for the same purpose. The island lies directly opposite the city, contains about 1,500 acres, 250 of which make a fine natural park.

Mr. Templeton enthusiastically suggests that no minor changes ought to be made which would endanger the success of the bill. President Blackburn of the Presbyterian College remarks that in choosing a location for the college the immediate opening of the reservation was contemplated. Parents usually send their children East to school. An Indian department is under consideration, and several Indians have this year made application to enter the college. Mr. Welsh speaks of the important reflex influences of Indian education in border towns, and instances the success of Bishop Hare's "Hope School" in Springfield, Dakota; of the school at Albuquerque, New Mexico, and others. It is proposed that an opinion be prepared for the Indian Rights Association by the men of Pierre in regard to the Daves bill and the establishment of an Indian school in Pierre. A circular letter on the Daves bill is read, to be sent by the Pierre Board of Trade to members of Congress.

In reply to questions as to the means used by the Association in gaining political ends, Mr. Welsh effectively illustrates by an account of the signal success arrived at in the case of the starving Piegan Indians, through personal letters from constituents who were influenced directly by the Indian Rights Association. The way to influence legislation is through public opinion. The Association wants justice for the Crow Creek settlers. Mr. Welsh mentions a clause in the bill, proposed by Senator Daves, which provides that all genuine settlers have a prior right to take up claims on the lands which they have improved, when these lands shall have been thrown open, and that if these claims exist on lands which are not thrown open by the bill, Congress shall repay their loss. It is generally agreed in Pierre that something should be done for the settlers.

Little credit is given to rumors of probable political influence affecting the measure. "It is said that the Democrats wish to turn emigration to the south, but Randall, Holman, and other leaders of the house and of the party favor our movement."

It is moved and carried that resolutions be drawn up expressing the sympathy of border men with the policy of the Indian Rights Association. The general impression is strong that in spite of King's bluster (politely termed *radicalism* out here) no opposition is to be expected from Chamberlain, and there seems to be no doubt that Dakota will work for the bill during the coming session. The harmony of the conference is perfect and a good impression seems to have been made all round. We are all more or less selfish, but it does not follow that we are unscrupulous. It is probable that the average western man has the best interests of the Indian quite as much at heart as has his prototype in the East, where the urgent pressure of business necessities is comparatively unfeeling.

—In Hartford Courant.

## Among the Dakotas.

From the Boston Journal.

Sitting in the summer twilight at the door of the mission house at Crow Creek, talking over the day's adventures, an Indian mounted policeman dashes up to the gate: "Boat whistles, Major!" A scattering of the quiet group—a race for the Major's pleasure—a distracted catching up of scattered belongings; the policeman sent galloping ahead to keep the boat, which was not expected till the next day; then, a three-mile drive, rapid over the prairie, slow performance through the dim, grape-scented thickets; red lights glow between the trees, and we reach the landing to find the minister tied up for the night. We finish our talk on deck; the traveller is commended to the captain's care; good nights and good byes are said, and I am—

not off but on. The next sunrise finds us actually afloat on the Missouri. Five days and nights from Crow Creek up to Standing Rock. One might be half way across the Atlantic on a slow line. But instead of the unvarying circle of sea and sky, there is the interest of novel scenes day after day; ever changing shores, bluffs of every fantastic and beautiful form. Lovely wooded bottom lands with meadows smooth as a lawn. Now we stop below a timbered bluff to take in wood. Under the dark boughs an Indian, in scarlet leggings and blue blanket, sits statue-like on his horse, not for the finishing touch he gives our picture, but that he is the interest of novel scenes day after day.

Mr. Wells speaks of the interests of Chamberlain, the terminus of the Chicago, Milwaukee and St. Paul, and recommended the changes proposed by Editor King of Chamberlain. They desire a better frontage on the river, including the whole of Brule County. The bill presents Chamberlain with American Island for use as a city park, and Pierre would like Farm Island for the same purpose. The island lies directly opposite the city, contains about 1,500 acres, 250 of which make a fine natural park.

Mr. Templeton enthusiastically suggests that no minor changes ought to be made which would endanger the success of the bill. President Blackburn of the Presbyterian College remarks that in choosing a location for the college the immediate opening of the reservation was contemplated. Parents usually send their children East to school. An Indian department is under consideration, and several Indians have this year made application to enter the college. Mr. Welsh speaks of the important reflex influences of Indian education in border towns, and instances the success of Bishop Hare's "Hope School" in Springfield, Dakota; of the school at Albuquerque, New Mexico, and others. It is proposed that an opinion be prepared for the Indian Rights Association by the men of Pierre in regard to the Daves bill and the establishment of an Indian school in Pierre. A circular letter on the Daves bill is read, to be sent by the Pierre Board of Trade to members of Congress.

In reply to questions as to the means used by the Association in gaining political ends, Mr. Welsh effectively illustrates by an account of the signal success arrived at in the case of the starving Piegan Indians, through personal letters from constituents who were influenced directly by the Indian Rights Association. The way to influence legislation is through public opinion. The Association wants justice for the Crow Creek settlers. Mr. Welsh mentions a clause in the bill, proposed by Senator Daves, which provides that all genuine settlers have a prior right to take up claims on the lands which they have improved, when these lands shall have been thrown open, and that if these claims exist on lands which are not thrown open by the bill, Congress shall repay their loss. It is generally agreed in Pierre that something should be done for the settlers.

Little credit is given to rumors of probable political influence affecting the measure. "It is said that the Democrats wish to turn emigration to the south, but Randall, Holman, and other leaders of the house and of the party favor our movement."

It is moved and carried that resolutions be drawn up expressing the sympathy of border men with the policy of the Indian Rights Association. The general impression is strong that in spite of King's bluster (politely termed *radicalism* out here) no opposition is to be expected from Chamberlain, and there seems to be no doubt that Dakota will work for the bill during the coming session. The harmony of the conference is perfect and a good impression seems to have been made all round. We are all more or less selfish, but it does not follow that we are unscrupulous. It is probable that the average western man has the best interests of the Indian quite as much at heart as has his prototype in the East, where the urgent pressure of business necessities is comparatively unfeeling.

welcome and hospitable invitation to spend the night. The mission building stands near his house; as yet only a church, used also as a school house, and a small building which last winter housed twelve girls. The association was just about to put up another building, for which the money had been given, to accommodate, with dormitory and school rooms, fifty girls. Government will help the enterprise with an appropriation of \$150 for each; one of the good results of the wave of interest started at the East. It seems an excellent location for the school. The girls will be taken chiefly from the Cheyenne River Agency, and the Missouri, which the Indians around there are afraid to cross, will keep them more within bounds than if they were nearer home.

Of the twenty-one Indian families that entered claims here in 1879, when the land was made public domain, but seven remain in possession—a poor showing. Mr. Riggs, however, declares that it is not a failure. He says he remarked to the United States Receiver who was sent out to take the entries, that if half held on for the five years required to "prove up" and get a title for their homesteads, he should be glad. The Receiver replied that he might well be, for that was a higher proportion than holds among the white settlers. The white race has the good fortune not to be on trial for life with judgment depending on isolated cases. The homesteaders were among a number originally sent over, as I have since been informed, by General Harney, in 1867, because, having been scouts, etc., among the whites, they had learned and desired to cultivate their land, which the wild Indians would not let them do peacefully on the west side. Mr. Riggs moved over among them and started a mission. In '72 or '73 the land was made an Executive reservation by President Grant and continued so till '79. It was then thrown open for settlement by the Indians, by their treaty, having "squatters' rights" of first entry. Then the pressure of white settlers crowding in around them began, with persuasions from their friends on the west side. After five years of reservation life it was again a new departure. Not knowing or appreciating the value of their land, one after another was induced to relinquish his claim for a price that seemed to him a good price, usually a worked out pair of horses, a harness eight or ten years old, an old wagon, and \$40 or \$50, up to \$350 in money. Mr. Riggs says that those who have gone are doing better on the reservation in their farming, &c., for their experience on the east side; that some regret their folly, and he employs three, as teachers at his mission stations there. The lesson of the experiment seems to be that, to protect Indians on lands in severalty, they should be made inalienable from the west. The last five years are the hardest, in their ignorance and inexperience—their lands an irresistible temptation to many about them. If they could hold out by themselves for five years, the let-alone policy might do for the rest.

I went to see the homes of some of the surviving "fittest." The best were those of Yellow Hawk, who has 15 acres under cultivation, and Spotted Bear, who has 25, with more broken, part rented and the rest in hay and timber. Both have large, comfortable log houses, very neatly furnished and kept. Their children of school age, and those of another of the homesteaders, are all at school in Philadelphia, Santee or in the mission school near there.

The next morning Mr. and Mrs. Riggs set me across the river in their canoe and the Terry kindly stopped to take me up. So on to Cheyenne River, where I had time, while the boat stopped, to drive with Maj. Swan and his sister-in-law, who is a teacher at the Government school, up to the agency over roads flooded at several places up to the hubs of the wagon wheels by a cloud-burst the night before. I was glad to look very thoroughly over the Government boarding school house. It is for boys alone, accommodating fifty to seventy with a farm of 80 acres worked by the students under the agency farmer. Quite a number of the boys were remaining through vacation to carry on the farm; yet—not to compare with other agency schools—I believe I must say that it was the most absolutely neat boys' school house that I ever saw anywhere. Everything shone with cleanliness from kitchen to dormitories. I was interested to learn that all the housework was done by the boys themselves, who also help in the washing and doing the ironing "as handsomely as any woman," said their enthusiastic teacher. In the pleasant, well-fitted school room, the pictorial representation of the next day's Sunday School lesson was neatly drawn on the black-board in colored crayons by one of the pupils. The rules for English speaking are very rigorous, and the teachers claim great success in carrying them out.

The girls are taught at the Episcopal Mission School, which had 38 last year. It has been for seven years under the very successful charge of Mr. and Mrs. Kinney, and is

### "While She Lived, She Shone."

Deeply sympathizing with our friends who mourn the loss of this light from their home, and grateful, with them, for its clear shining, whose beams were shed even as far as Hampton, we rejoice with them in the rays that fall from the higher sphere where she lives and shines.

"In this city, 10th inst., Mary, daughter of Henry Wilder and Frances Eliot Foote, 21 years, 1 month, 4 days.

It is seldom that God calls to his own peace and joy a sweeter or a stronger soul than that of this dear child. We call her child, for she was one in purity and simplicity; but she was a woman, nay, a perfect saint. In strength of endurance, and in the victorious and unflinching bearing of her heavenly Father's will.

Bright and lovely are the memories of her childhood. She was full of delight in God's beautiful world, and brought joy and sunshine to all who loved her. She grew sweetly and naturally, as God's flowers grow, and hers was a constant growth. More and more, she became the companion and friend, the loving and careful sister, filling each relation of life earnestly and simply. So great was the outward charm of brightness and of sweetness that few, perhaps, fully realized the deep strength which lay beneath. Such constant thoughtful helpfulness can come only from true dedication to God's service—a dedication which made her ready ever to give up the work she loved to do for Him and for his children, with unquestioning faith. In her weakness, it was given to her to serve others more than is often permitted to one in full health and strength, as the plan of building a hospital at the Hampton School (which has been long near her heart, since she saw its need in a visit to Virginia last spring) has just been carried out to completion by her friends in King's Chapel. I reply for her sake.

Without a single murmur, with a wonderful serenity and peace, she surrendered one thing after another, through months of unwavering courage and patience—

"He means this moment's need, I leave the rest; And always trusting shall be always blest."

Her love for her friends, her keen interest in all that befell them, and her delight in the service of her fellow-creatures, were never far from her heart. Such a day was her twenty-first birthday (November 6); yet she said at its close "I have had a very happy birthday with so many loving friends." "Simply thankful," she murmured to herself at another time.

All this was not merely accident of a sweet and sunny nature; it was a victory. The secret of it was in her perfect acceptance of God's will and in her child-like trust. To one who loved her best, who was praying to bear the pain in her stead, she said, with an expression upon her face never to be forgotten, "You must not say that it was sent to me, and not to you." And her last words on the closing morning of her bright young life were, "Sunshine, sunshine all the time." Surely, it is true of such a life, though its light has passed beyond our sight—

"I may not, if I would, return  
Into the dark, or cease to burn  
My spark of light divine;  
For he that by his laws  
The sacred oil, he surely will  
That I should shine."

—Christian Register.

It is perhaps hardly possible for New Englanders, who have received the "public school system" as a legacy from their fathers, and to whom opportunities for education come almost as a matter of course, to realize how great are the changes which the abolition of slavery produced in the South and Southwest, in the conditions upon which the industrial development of a majority of the people of those sections depend.

The stimulus of the new order of things is felt nowhere more strongly than in the impulse given to the desire for education, especially among a class who, in the past, have known little or nothing of its value. No history of the "New South" would be complete which did not include the stories of the schools which, under the beneficent laws of supply and demand, have sprung up during the last few years in regions where the foot of the school-teacher had never trod, and where even his would be pupils, his existence partook of the nature of a myth.

A noteworthy instance of the sort of work which is being done, and of the conditions which make it possible, is offered by a school in one of the west-

ern counties of Missouri, of which a description has lately been given in the *Boston Transcript*. Ten years ago the Rev. John A. McAfee started a "common school" in the town of Lott, Mo., with seventeen students, not one of whom had any visible means of defraying the cost of their education, if we except, that is, their willingness to work. The writer in the *Transcript* says:

Ten dollars a month is necessary for the support of each student, and many cannot pay that, the amount being paid by gifts from churches or individual friends of the college. Colonel George S. Park of Lott, Ill., gave land, a stone hotel, barns, sheds, etc., and President McAfee adopted the scholars into his family, and, with his wife, has ever since sustained the kind, watchful relationship of parent to his rapidly increasing flock.

To provide clothing, food, fuel, books, teachers, he had no wealth—but yes, he had, not the conventional coin of the realm, but the true riches of energy, ingenuity, courage, perseverance and a faith that could bring water from the flinty rock or manna to the ground.

This last item must be taken *cum grano* also, as the fact is that during their first winter, which followed the great grasshopper invasion, when nearly all the hard-earned products of their farming were destroyed, they subsisted for long time on turnips and water, with an occasional diet of cabbage. This was a time of great hardship, and the heroism of that little band is only equalled, not surpassed, by the Pilgrim Fathers, whose early suffering on our barren coast gave to this land an unflinching consecration.

At the time of the "meat famine" the meat gave out, and for two fine months there was no meat to be had. The bread, however, was not so scarce, and the "meat famine" was not so severe as the "bread famine." The bread was made of "corn" and "flour." This was made "thick" like the "witches' broth" in Macbeth. There was no butter, never any kind of "dessert," no nourishing combinations of "meat and eggs." Sometimes cornmeal, varied the fare; there was coffee and always sorghum syrup, made on the farm. The last was palatable, and enables many a dry morsel to take the final "leap in a dark," but it was an unhealthy article, daily consumption. Right here let me say I never heard the slightest complaint "from any student at the leanness of the board, or the necessity for work or exposure in those trying times."

Such a cheerful manly set—one third of it women—it would be hard to find in another town on this globe. They knew their father, President McAfee, did for them the very best possible. They had fair notice at their entrance into the family what to expect, and if health failed and zeal to pursue, they could step out and make room for others longing for the privilege. Not many would leave, however, for at the start they were taken on trial for three months, and having stood the test they generally continued. The purpose of the college is to give a thorough classical training of as high a standard as the best Eastern colleges, and only those are taken into the college family who propose to go through the whole course. The faculty consists of nine instructors, every one of whom is enthusiastically devoted to the work.

There is a lack of apparatus for teaching the natural sciences, and of books of reference, etc.; but there is some material of this sort. Three societies afford means of literary culture and the acquirement of facility in public speaking. There are also societies for Missionary, Temperance, and Young Men's Christian Association work.

President McAfee, at the daily chapel services, gives most helpful and interesting and rich expositions of Bible truth. He is a fine singer and the inspiring leader of a hearty volume of praise, such as is most delightful to hear. He is a wonderful man, profound in scholarship, of wide experience, quick of utterance; at one time springing up the embers of prosy fact, with a humorous poke; at another, touching the minor chords of pathos with tender hand, or riding furiously through the themes of indignity on his war horse of righteous indignation, or standing in humble reverence before the manifestation of Divine sovereignty.

The young men attend to the cooking, housework and laundry work for themselves and brother students. The young men are farmers, linemen, carpenters, painters, glaziers, makers of brooms and bricks, the material for the former being raised on the farm, and the mud for the latter dug from the surface thereof.

The young men have built for themselves a four-story dormitory of wood, and are to give just five years' work to the formation of a large brick building for class rooms, chapel, etc. After the cramped quarters in which they have assembled this seems like magnificence, but it is five years off, and meanwhile they will have to sit two deep.

There is something stimulating in merely reading of such things as these, and it is impossible but that the answer to such an appeal as this work makes, must come, when the need is known and appreciated.

THE Annual Report of the Commissioner of Agriculture for the State of Virginia, which has just reached us, ought to be in the hands of every farmer in the State. The subjects treated are all of importance and are handled with a conciseness which is worthy of imitation. They are as follows:

Commercial fertilizers, their value and modes of application. Ensilage in silos and in the open air. Grape culture and wine making in Virginia, with statistics of European vineyards. Hog Cholera, Sheep and grass, with an interesting notice of some foreign varieties of clover. Sweet Potatoes with special regard to keeping them. Seed distribution, and the Report of the State Chemist.

Taking them in their order as above, we propose to give a resume of the conclusions arrived at, believing that there are some among our readers who will be glad to get them even in this condensed shape.

Of commercial fertilizers Mr. Harrison says, that while their use is still largely experimental, he thinks it safe to lay down one general principle, viz., "That fertilizers of all kinds, and phosphates especially, act best where there is plenty of vegetable matter in the soil." In combination with cow peas and grass, compost heaps made with farm manure, leaf mould, or any similar substance, and phosphates are strongly recommended, and in all cases he admits that commercial fertilizers should be plowed in from three to seven inches.

Attention is attracted to the new system of packing ensilage in the open air, under a weight of 2000 pounds to the square yard, with only a plank covering, or with a shed on two sides to prevent its rotting. French and English testimony is all in favor of this.

Mr. Harrison considers that everything indicates the great future of Virginia as a grape growing and wine making state, and says "It is a mistake to suppose as some do, that only the hilly country is fitted to the vine. The vineyards of the Gironde, (France) referred to in the subjoined article, are many of them and indeed the most celebrated, planted on alluvial land, a sort of sand and gravel spit composed of detritus washed from the hills and mountains above by the river Garonne. Without doubt there are many choice sites for vineyards in Tidewater Virginia, perhaps some time the vine will be of such excellence as to gain almost untold value to the coming vineyard." Much information is given in regard to the planting and care of vines, and the varieties most in demand.

A few suggestions are given in regard to silk culture, but we are inclined to think that the profits of this business in the middle Atlantic States have been a good deal overrated.

Hog Cholera is reported upon as being still a vexed question, the causes uncertain, and the remedy unfound. Some general experimental results are given, but no practical conclusion is reached. We think that Mr. Harrison does not lay sufficient stress upon preventive measures. Hog cholera most certainly arises from the same causes as the cholera of human beings, and the remedies are at hand in the one case as in the other. It is usually a simple dirt disease, and cleanliness in food and surroundings and an effective quarantine system are the preventives.

Sheep are looked upon as a very valuable and safe crop, and Mr. Harrison inclines to the English view, viz., that they are indispensable to good and profitable farming. When properly managed in moderate numbers, there is very little risk and a steady market.

THE vastness and variety of the agricultural resources of the South are only just beginning to be appreciated by those who should be the first to develop and profit by them, but in nearly all the Southern States there are evidences of improvement in this respect, and we are glad to quote the following from the *Charleston News and Courier*:

We have already sketched out some of the reasons why a practical and thoroughly competent College of Farming should be had in South Carolina. There is no need, perhaps, to multiply argument and suggestion, but we remind our readers that Gen. Stephen D. Lee, whose knowledge of the subject and whose interest in the welfare of the South will not be doubted, says emphatically that, if our system of farming is not changed, our boys will lose their lands in fifteen or twenty years, and that these lands will be owned by strangers who are educated in the improvements of the modern farm, where knowledge of the science of farming and improved labor-saving implements enable them to farm profitably.

At a College of Farming the students should be taught the principles and theories of agriculture in the class-room, while the studies of the class-room would be illustrated by the practical work of the garden, the farm, the barn and the dairy. It is not sufficient to teach merely what is called theory. The man who teaches agriculture or horticulture in a College of Farming should be able to show by his work in the field that he can put in practice what he undertakes to teach.

There is an agricultural department in the South Carolina College at Columbia, and farming is taught practically to the colored students at Claflin University. We are not able to say what has been accomplished at Columbia this year. But there is no question that the means are available for giving the farmers a suitable and proper college. The means are to be found in the proceeds of the Agricultural Land Scrip which was given to South Carolina for such a purpose. There is no dispute, we imagine, about the conditions on which South Carolina accepted the scrip. The sole object of Congress was to give assistance to the States and Territories which should "provide colleges for the benefit of agriculture and the mechanic arts." Upon this fund the farmers and mechanics of the State have the claim. It belongs to them, so far as it is required for the maintenance of an Agricultural and Mechanical College, which shall be such in fact and reality, and not merely in name. The general election in South Carolina takes place next year, and the farmers hint that they will then make themselves felt, if they fail now to make themselves heard. They are a power in South Carolina when they are in earnest, and their difficulty will not be so much in obtaining the assistance of the politicians as in escaping the consequences of too much help. The politicians have not hitherto given much thought to farmers and farming, except about election time, but they will be ready to jump on the agricultural wagon at short notice. There will be no lack of advocates of a College of Farming, or, taking the name generally used, an Agricultural and Mechanical College, for South Carolina—next year, if not this year.

The following item from the *New York Freeman* is a pleasant acknowledgment of a wise liberality which neither began nor ended with this gift to Tuskegee, and we are glad to see prominence given to that which is certainly a marked feature of the Tuskegee work; viz., the unanimity of purpose and harmony of action which from the outset have had so much to do with the success of the work:

The readers of the *Freeman* will be glad to note the increasing faith of white philanthropists in the executive ability of the race. Two generous and wealthy ladies of Boston have just made a donation of \$7,000 to the Tuskegee Normal School, at Tuskegee, Alabama, to be expended as the officers of the institution think best. In this institution may be noted another sign of progress; while there are seventeen officers and teachers, all colored, there is the most complete harmony and unity existing among them. Each has his department, each his work, and all bend their efforts towards the common end—the uplifting of the Negro race. From the principal down, each officer and teacher takes as much pride in the affairs of the institution as if it were owned by him or her. The school started a little more than four years ago with one teacher and thirty students, and has grown up to two hundred and fifty students, thirty-seven teachers, and almost without exception harmony has existed from the beginning. Mr. B. T. Washington, principal of the school, was in the city during the week.—N. Y. Freeman.

# Southern Workman

## AND Hampton School Record.

VOL. XV.

HAMPTON, VA., FEBRUARY, 1886.

No. 2.

THE SOUTHERN WORKMAN is sent gratuitously, as a rule, to all contributors to the school. Some of these friends show their valuation of it by sending a subscription for it. Others know read it and circulate it for others to read. Some perhaps do not have time or inclination to read it, and would as lief not receive it. If this happens to meet the eye of any of the latter class, will they kindly let us know in order that we may send, their copy elsewhere. We assure them, however, that we have been glad to send it, and would much rather they should keep it and read it and give it to others whom it might interest. Our desire is of course for readers, and our hope is that those who read one number will want to read another.

WE ARE GLAD to report a pleasant account of Maj. Andrew, the newly installed Agent at Crow Creek. We hear that he is "a man of education and culture," and that "both whites and Indians" are favorably impressed. The loss of Mr. Gasmann cannot but be felt, yet we may hope for success under the new administration.

THE AMERICAN MISSIONARY Magazine for February gives its usual interesting reports from the field, and enumerates as the "wants" for the coming year, a steady increase of income to keep up with the growing work, additional buildings for its higher educational institutions, more meeting houses and ministers, help to educate missionaries for Africa, funds for establishing industrial departments, and ten thousand new subscribers for the magazine.

THE LADIES' ASSOCIATION of Park Congregational Church of Brooklyn enjoyed last summer an excursion together on the Old Dominion line of steamers to Norfolk, and thence to Petersburg, Richmond, Hampton and Fortress Monroe, and Norfolk, with some glimpses of old plantations in visits to friends. Mrs. Louise Smith Squires, as historian of this very sensible and delightful tour, has written a light and chatty description of it, which is published in an attractive volume, which she calls "Sketches of Southern Life." It is fully illustrated, and dedicated to the Ladies' Association, who will find it a very pleasant reminder of their trip. Their example might well be followed in other churches, with results of harmony and good fellowship more than from a year of church socials. A chapter of the book is devoted to Hampton—a good part of it to the Normal School.

REV. DR. HAYGOOD pays high testimony to the influence of Atlanta University students in the temperance contests in Georgia. He says: "Let all men and women who have care for the education of the Negro in the South know this: the strongest prohibition force among the colored citizens came from those who had been taught in the colleges for colored people in Atlanta. Time and again, since the election, well-informed gentlemen in Atlanta have said to me, 'These college-taught men and women stand by us.' This attitude was a magnificent indication of the efforts that are being made to educate the Negroes of the South. He gives great praise also to the colored pastors of Atlanta, without whose firm stand the cause of prohibition would have been lost."

THE ANNOUNCEMENT in the *Freeman's Journal*, the prominent colored newspaper in New York, of a woman's department is interesting and significant of a growth of family life and culture which is hopeful for the race. This is among other interesting extracts from Southern papers chiefly, on our third page.

OF LIKE import is the attractive little volume, "A Treatise on Domestic Education," recently published by the Rev. Daniel A. Payne, D. D., LL. D., the venerable senior bishop of the African Methodist Episcopal Church, and President of Wilberforce University. It is dedicated to the "Thoughtful Fathers and Anxious Mothers of Every Race," but especially designed for and of especial significance to those of his own race. Written in a sweet, fatherly spirit and persuasive style it is full of excellent counsel and suggestion on the conditions, and necessity and methods of training children, the relations of domestic education to the church, the State and the school; the fathers' and mothers' work, the special training of girls, the divine command, and the divine promise, Christian graces, and sacred songs. The work closes with half a dozen hymns original to the Bishop, set to music by two young ministers in the church. They are intended to "aid Christian parents in their dedication and the dedication of their children and homes to the service of God." Like the rest of the book they are of a sweet and devout spirit. We would be glad to see the little volume in every new home that is set up by Hampton graduates, and in every home of the race, and we commend it to our readers. It is published by the Bishop, whose address is at Wilberforce, Ohio.

AT THE LATE CONFERENCE of the Methodist Episcopal Church, South, held in Austin, Texas, a communication was read from Rev. W. C. Dunlap, of Atlanta, Geo., Commissioner of Payne Institute, setting forth a proposition for the establishment of such institution for colored students. Bishop McTeir, presiding, called the attention of the Conference to the proposition, and urged it upon Southern Methodists. Bishop Payne—whom he (Bishop McTeir) had ordained—had said that if the Southern Conferences would raise \$15,000 to establish the institute, he would raise \$25,000 to endow it. Bishop McTeir said that he had himself given \$50 to the good cause, and meant to give another \$50. The Negro had waited on him a long time, and now he wanted to do something for him. The matter was referred to a committee.

THE FOURTH ANNUAL REPORT of the Tuskegee Normal School of Alabama, shows even more than ordinary progress. The new "Alabama Hall" a large four-story brick building, has been completed sufficiently for occupancy, and a small two-room cottage for boys. An additional teacher has been employed on the donation of the Woman's Missionary Association of Boston. The school's first class was graduated last summer and has been doing good work among the people. The industries have been more satisfactorily operated than ever. An instructor in carpentry has been added to the corps of teachers and under his management, that industry has taken on new life. The bricks for Alabama Hall were made by the students, and a large number sold.

The farm, printing office, and girls' industrial room show like activity. In all the industrial branches the students do the actual work under direction of competent foremen. The principal, Mr. Washington, remarks that "three things are accomplished through the work system: 1st, the student is enabled to pay a part of his expenses in labor; 2d, he learns how to work; 3d, he is taught the dignity of labor." As at Hampton, there is a night class for some who have no money at all, work all day for a year. The school now in its fifth session has 215 students, and 17 teachers and officers, of whom eleven, including the principal, assistant principal and treasurer, are as most of our readers know and we are always proud to say, graduates of Hampton.

THE MEETING of the National Conference of Charities and Correction held in Washington in June, 1885, was not only the largest, but in many respects the most important which has ever been held in this country. Nearly all the Southern states having for the first time made an adequate showing, and while many of the Reports are still confessedly incomplete, there is a marked improvement upon former years.

In the volume before us the division of subjects is approximately as follows; more than sixty pages are devoted to the consideration of Insanity, embracing eight papers from experts. An equal amount of space is given to Preventive Work, with nearly as much to the kindred subject of Reformatories. The subject of Charity Organizations also claims about sixty pages, and is followed by briefer paper upon Idiocy, Prisons, the Police Uniform Statistics, Immigration, Pauperism and Crime. It will be seen that a large proportion of the allotted time and space was given to the three first mentioned subjects, viz. Insanity, Preventive work, including Reformatories, and Charity Organizations, and it would be impossible to find more interesting reading than is furnished by these papers which embody the experience of men and women who, without exception, are authorities in their respective fields.

While the depths of human ignorance and sin are measured, yet also the heights of human love and wisdom are reached, and the glory of the one irradiates the darkness of the other. It is difficult not to be enthusiastic over such work even when it comes to us only in pages of dry statistics. But when it is vitalized by the eloquence of personal inspiration its value becomes unlimited.

Methods of work for the criminal classes, for the diseased and disabled, for children, in short all state and philanthropic reforms, require such study as men give to science: microscopic, analytic unprejudiced, incessant and eager.

But more than this there must go into all work which is for human beings rather than for humanity, that "soul-force" which is beyond analysis. Nothing in all these reports is more striking than the increased value put upon the personal element. In Insane Asylums it is the response of the individual patient to the individual nurse or physician that is looked for, with criminals in prisons or reformatories it is surprising to find how much a single man or woman can accomplish when the most complete machinery has failed—and above all with children it is, in a way, a revelation to see how little can be done without motherhood or

its close imitation. Again and again, in regard to the initiation of some new system the criticism is "it cannot be pronounced successful until it has been tested by the removal of Mr. B. or Mr. C.; it is the man or the woman who is carrying it."

Our space of course permits no details, but it is evident that the value of such a conference as this lies in the possibilities which it offers for getting at the experience of individual workers, and it is no less than beautiful to witness this coming together on this common ground of Jew and Christian, Northerner and Southerner, scientist and theologian.

THE DEDICATION of Morris-Brown College in Atlanta, on last Thanksgiving Day, marked an era in the history of the colored race in America, of which they may well be proud. The dedication address of Rev. Dr. Haygood was full of earnest sympathy and wise counsels. "There are facts connected with the founding of Morris-Brown College," he said "that lend to this occasion an almost unique interest. It is substantially the work of the colored people themselves. Less than one thousand dollars I am told of the whole amount was contributed by white people." Dr. Haygood truly said "What underlies the gift of all this money and the collection of it is something rarely significant and hopeful. It means that it is in the colored race in this country to be self-sustaining. It means they can plan and carry out plans for themselves and make investments of money and toil for the education of their children." With earnestness measured by his friendly sympathy, the Dr. added his counsel founded on long experience as an educator and President of a college, to "found their college on the Bible; to not try to go too fast—to keep out of debt; to do the work that the people who come to this college need, shape its plans by the real wants of its people, not by the supposed wants of some other people."

THE article in the December *Andover Review* on "The Freedmen's Children at School," by Prof. Bumstead of Atlanta University, has many interesting and excellent points. He protests—vainly we fear—against the unmerciful negro caricatures in which so many newspaper artists and humorists indulge, as not only cruel to a sensitive people, trying to rise to respectability and self-respect, but misleading to those whose sympathy and help are so important to them in their struggle. It is quite true as he says that the personal appearance of the pupils in the freedmen's schools is a constant surprise to visitors. Again and again has such feeling been expressed at Hampton on watching our young men and women or marshalling to some class dinner or other social entertainment. The exclamation is common: "I expected to be amused. I have been surprised and touched. How well they appear, with what unassuming grace and dignity, and pleasant, unaffected manners, and how many really attractive faces!" The large proportion of white blood among the pupils is noticed, larger no doubt in those schools that draw chiefly from the cities. And he is entirely true in remarking that contrary to the popular impression, "in regard to the comparative ability and character of those with mixed and those with unmixed blood, no theory can be framed that will not encounter the most conspicuous exceptions." Men's and mor-

al strength and weakness cannot be predicted by the complexion. In accordance with the examples Prof. Bumstead cites, was an investigation made at Hampton some years ago, when a review of ten consecutive anniversary programmes showed that the platform "honors" distributed only according to scholarship and character, taking all together had been as nearly as possible evenly divided between dark and light hued candidates.

From these facts and that of the aptness in their studies manifested by these children of the freedmen, Prof. Bumstead justly argues that on the score of native endowment there is no reason for giving them a different education from the whites. Their special needs he tells us are found in their special limitations which he forcibly enumerates; their nearness to a past of slavery preceded by a longer past of barbarism, their consequent want of the inheritances of civilization, mental and moral discipline; the lack of good home influence, disgust with labor as associated with degradation, and general inability to perform any but the rudest forms of unskilled labor commanding only the lowest wages. He further speaks of the temptations to misuse the immense advantage over the mass of their own race which even a little education gives them; the dangers of self-conceit, display, extravagance and ruin resulting from this low standard of self-measurement to which they are restricted by the only associations open to them, shut out by the same restrictions from many facilities of mental and moral improvement open to the white community about them.

From these special limitations, Prof. Bumstead argues that the freedmen's children "need the deepest, broadest, and highest education which the money, brains and personal devotion of Christian people can secure for them," beginning at the earliest possible age with the kindergarten and ending with the college and professional school. The novelty of his plan is in the recommendation that all these desirable sources of instruction should be combined in one "University."

Atlanta University would probably be the best point for such an experiment, being already well established in public confidence and usefulness, and having, as Prof. Bumstead says, a number of these departments already in development or in embryo. It would have the advantage also of the working enthusiasm of the advocate of the theory, and we wish him success.

We believe, however, in the greater success and usefulness of separate institutions, to carry out separate ideas, and meet separate needs. It may indeed be a business necessity for some time to come for a freedman's college—especially if there are many of them—to have a preparatory and primary department; but it is fortunately not necessary for a high school or normal school to have a collegiate department, and it can, we believe, secure more thorough equipment and do a better work without one.

We only regret that Prof. Bumstead while recognizing the lack of skilled labor and the disgust for labor as associated with slavery, as among the serious limitations of the Negro, and including industrial training in the plan of his "university," should seem to cast a slur upon any "friends of that most excellent work the industrial training of the freedmen's children" and write for any of those "children" to read, "the lingering prejudice that desires to keep the African race in a perpetually subordinate and semi-servile condition, joins hands with the short sighted utilitarian spirit that sees no good accruing to the race from anything which cannot be immediately turned into bread and butter, and both cry aloud in favor of instruction in industries to the exclusion of the humanities." We know of no school that favors industrial training alone for the freedmen's children. If by the "humanities," Prof. Bumstead means the dead languages, and a collegiate curriculum, Hampton excludes them

from her course simply because she has chosen a different work and, as she believes, the more important—not the only—work for the Negro, viz: to supply his most serious and extensive needs: the need of moral strength gained through self help, of a training of head, hand and heart that shall fit him to take care of himself, and teach the children of his race; and the need also of a chance to work his way to such a training, if he comes to Hampton with grit, wit and fifty cents, as some have who are now useful and prominent leaders of their people.

It would be sad indeed for the white race as well as the colored, if "the character and intelligence" necessary to protect it from the "rank growth of a shoddy aristocracy," or "an excessive spirit of materialism," could be "only developed by long and thorough training in colleges and professional schools." The glory of our "New England ancestors" on whose example Prof. Bumstead would model our work for the Negro, was the common school and the spirit of industry and independence, still more than the colleges to which some of their sons went, and often found their best training in the necessity of working their way. It is not the bread and butter simply,—though that is an item not to be ignored in this world—but the manly and womanly spirit of earning it for one's self—the spirit of self-help—that underlies the theory of industrial training at Hampton. The race needs all kinds of instruction of course. The less we have, the more we need. The only point is—what to get first, and how to get it. Training the intellect is not training the moral character necessarily. If I have no house I want a whole house. But shall I get my paint and shingles before I get my frame or dig my foundation? We believe with that prince of educators, President Garfield, as he told our Hampton students, in almost his last words on earth, that the lesson for their race is to learn the meaning and the glory of free labor. God's first college course for mankind was in the sweat of thy brow shalt thou eat bread—a curse that held the blessings of constant growth and development.

After all, the question is one of practical results. Welcoming her army of graduates, young men and young women, as they return once in three years, watching closely their course meanwhile in their varied fields of labor, Hampton needs no other confirmation of her principles.

The consolidation of *The Industrial South* and *The Virginia's* is what we think, a matter for congratulation to the readers and editors of both papers. The former journal has been for some time a growing power in the State, and under its present able management, deserves what we understand it is obtaining, a rapidly increasing circulation. The South needs live newspapers, as it needs live men, and every such newspaper should be welcomed as an evidence of progress. Their existence pre-supposes a demand, and a demand for good journalism is always a hopeful sign, for the press, being dependent upon the general public, can not be much in advance of its supporters, and the successful editor is simply he who knows best how to cater to the taste of his subscribers. Therefore, on all sides, the success of such a paper as *The Industrial South* is deserving of hearty recognition and we trust that its editors will find their new departure in every sense a profitable one.

THE SEVENTEENTH ANNUAL REPORT of the State Superintendent of Education of South Carolina presents an encouraging view of the progress in the schools and the public interest in them. In many places the school fund has been supplemented by voluntary contributions or local taxation to improve the schools or lengthen the sessions. A protest is made against the "cruel policy which requires the school to be opened during a period which ends three months and begins twelve months

before the school tax can be collected. It is unbusiness-like for a great commonwealth to convert her employees into her creditors. Teachers are obliged to dispose of pay certificates at a discount of from 10 to 25 per cent., a loss which benefits neither the State nor the school, but only the money lenders. Sometimes the session is shortened to meet it, thus transferring the loss to the children." The Superintendent urges upon the General Assembly to enact measures to pay up the year's tax lost in 1876, and to place the Educational Department on a business basis, the State being "no longer in the impoverished condition in which the revolution of 1876 discovered her." Successful State normal institutes have been held, for white teachers at Charleston, and for colored teachers at Aiken, the former was largely attended. The latter had a small attendance, "not from lack of interest, but from the shortness of the school term, and the heavy discounts on pay certificates. The seventy two who did attend showed great appreciation, and received much benefit." Mr. Rodenbach, Principal of the Schofield Normal School, where the institute was held, acted as its principal. He was assisted by Prof. E. A. Ware, of Atlanta, Prof. Chadbourn, of Massachusetts, and four ladies, among whom was Miss M. J. Sherman, a teacher in Hampton Institute. Miss Sherman's specialty was methods of teaching English grammar, literature and composition. Her interesting report is given in full. She speaks highly of the teachers and the interest manifested, saying, "I should not neglect to mention the marked degree of intelligence and general information manifested by most of the members of Division I and II. The colored teachers of South Carolina may well be proud that one at least of their number has already taken her diploma as a graduate of the Chautauqua Literary and Scientific Circle. Division III was slower but anxious to make the most of the opportunities."

Prof. Rodenbach's report says: "Under Miss Sherman's lightning handling of her subject, grammar became a revelation. During the recitations of Miss Merrill and Miss Sherman frequent knowing glances of delight among the students evinced the kindled interest in these important subjects." Miss Merrill's subjects were history and geography. Miss Thompson's of Atlanta, the model school, callisthenics and writing. Miss Wallace's, of Columbia, S. C., music. All seem to have had great success in their instructions. Eleven county institutes have been held, and in nearly all these counties Teachers' Associations have been recently formed as the fruit of their influence. The State has received \$5,000 from the Peabody fund in the last year, and \$6,400 have been promised for the next. Dr. Mayo has visited the State, and made public addresses in various places, and the State Superintendent himself, Hon. Asbury Coward, has proved his faithfulness and efficiency by visiting counties and cities, delivering addresses to teachers, pupils and the general public.

THE LATE ANNUAL REPORT of General Crook, commanding the Department of Arizona, and for the last three years in charge of the police control of all the Indians on the San Carlos Reservation, including the formerly hostile bands of Apaches, whom he had subdued and brought into the reservation, gives a graphic account of some of the difficulties of the position, and the necessity of harmonious or undivided control in the management of Indian affairs. While, as he says, "it should not be expected that an Indian who has lived as a barbarian all his life will become an angel the moment he comes on a reservation, and promises to behave himself, or that he has that strict sense of honor which a person should have who has had the advantages of civilization all his life, and the benefit of a moral training and character, which has been transmitted to him through a long line of ancestors," he bears the ordinary testimony of good

Indian fighters who cannot be charged with "Eastern sentimentalism," as it is called; that it is his "experience that Indians of late years rarely break out except for an accumulation of grievances." "The Chiricahuas had been asking for years for new traders in order that competition might reduce the excessive charges of the licensed traders. They had been all winter without their annuities. Some entire families had but one blanket, and scarcely enough clothing to cover their nakedness, though living in brush huts with the mercury below zero. They knew that their annuities were in the agent's warehouse at San Carlos." Up to the time they left, their chiefs had led their people as farmers and workers. The runaways numbered only thirty-four men and eight well grown boys, with ninety-two women and children. Though they were pursued with twenty troops of cavalry and one hundred Indian scouts, they escaped into Mexico without the loss of one of their number, travelling one hundred and twenty miles without stopping for rest or food. During the whole two years of General Crook's control, he reports that not a single depredation was committed. Even the Chiricahuas were fast becoming self-sustaining. Of the rest of the Apaches, Capt. Pierce reports to General Crook: "They have about eleven hundred acres under cultivation, and have raised about 700,000 pounds of barley and as much corn." "Some is taken by the quartermaster's department, and they are allowed to haul it to the towns of Thomas and Globe, where they get fair prices and make purchases at less rates than from the traders." "The people in Globe are particularly kind to them, and all citizens I have heard speak very highly of their conduct. About a dozen are regularly employed there at various kinds of work. They are encouraged as much as possible to seek work with citizens." "Their land all has to be irrigated, and their dams are frequently carried away. Capt. Pierce says "there has been enough labor expended, if it had been done with judgment and system, to make permanent drains and irrigating ditches for the whole reservation." General Crook does "not wish to palliate crime, but to speak a word to stem the torrent of abuse which has been indulged in against the whole Apache race." "Greed and avarice on the part of whites is at the bottom of nine-tenths of all our Indian troubles."

WE HAVE RECEIVED the thirtieth annual report of the industrial reform school for boys, in Lancaster, Ohio. It is a pleasant sign of the progress of Christian civilization. Instead of being left to grow up into a dangerous class, or herded with hardened criminals to learn more rapidly the road to ruin, these wayward children are gathered in a home, taught habits of industry, self-control, and useful learning, put on their good behavior, and when they have earned confidence by "merit marks," sent out on probation, to stay out if they do well, furnished with the knowledge of an honest trade. Many remain voluntarily to perfect themselves in their trades, among which are carpentering, shoemaking, painting, tailoring, brickmaking, telegraphy and printing, besides farming, gardening, etc. The neatly gotten up report is printed by the boys, who also take great delight in their school journal, which they publish and contribute to.

The Sunday School has been one of the strongest aids in influencing them. The report says: "Our scholars, when they leave the school, are regarded as the brightest and best informed in the scriptures of any in the schools they enter." The school chapel is occupied each Sunday by the ministers of the various denominations in the town, in rotation. The school has numbered 471 the past year, and since it was founded in 1858 has received 4,290. What figures can estimate the good it has done! The great want now is said to be a salaried officer to devote himself to secure good homes for homeless boys, and look after those who leave.

class matter

The Southern Press--Both sides.

One of the most zealous of the workers for Prohibition in Atlanta gives the following testimony to the stand taken by colored men during the struggle whose result was perhaps of even greater importance to them than to their white fellow citizens:

A few months ago when the banner of prohibition was unfurled in Atlanta, and the friends of truth and right were called to rally and organize for a great struggle, there were men who laughed at us, and said, "What can you do against the omnipotence of money, the influence of the press, and the organization of great monopolies? Your little 'rub-a-dub' agitation will amount to nothing; and you will soon be ashamed of it." To-day the same men are mute with astonishment. They regard our victory as the greatest marvel of the century. But it is not a surprise to some of us. We were confident from the start. Wherever there are twenty men solemnly committed to a new and great idea, there is the beginning of a revolution. Fifty years ago a little band of moral heroes committed themselves to the great idea of destroying the whiskey traffic in Georgia. That was the beginning of the revolution which is about to culminate. It comes out of the past. Its foundations were laid far back. Its growth has been as natural as that of the oak.

It is not strange when we know the men who championed the movement in Atlanta. When Napoleon, a young lieutenant of the French army, was asked by the President of the Assembly if he could protect the Government against the approaching mob, he replied, "I will do whatever I undertake." The next day he taught the Parisian mob for the first time that it had a master. There were hundreds of men who went into this battle against the black-banned legions of rum with more than Napoleonic courage and determination.

The whiskey power on this continent is doomed. Mr. Webster said: "There is not a monarch on earth whose throne is not liable to be shaken by the progress of opinion, and the sentiment of the just and intelligent part of the people." Such has been "the progress of opinion" in reference to the iniquitous liquor traffic, and now the almost universal sentiment of the just and intelligent part of the American people is that it shall perish.

It is a very common remark, that there is no political future for any man in Georgia who is on the grogery side of this great contest. The friends of virtue will henceforth rule the State, and they will elevate no man to office who is known to be in sympathy with crime and criminal makers.

Not less than fifteen hundred of the prohibition votes of Atlanta were cast by colored men. Thousands and tens of thousands of dollars were sent here by the whiskey rings of the West to buy these votes, but they were not for sale. Some of the noblest and grandest utterances of the campaign were made by men whose faces are as black as night. With holy indignation, they resented the base insult offered to their race. This prohibition war is God's solution of "the Negro problem." The two races are uniting upon a great platform of moral reform. All bitterness is gone, and a reign of peace and love is already upon us. Negro labor will be more reliable and productive than it has ever been, the property of the State will rapidly increase in value, educa-

tional facilities for all classes will be multiplied, and we shall be the purest and "happiest country in the world."

On with the combat! Success is as certain as the promises of a faithful God can make it. It is said, that, if the force of one human heart could be directed against a granite pillar, it would wear it to dust in the course of a man's lifetime. The forces of thirty millions of warm, throbbing, virtuous human hearts in this land of ours are now directed against the black throne of the whiskey demon, and ere long it will crumble into dust.

Let Richmond wheel into line, and keep step to the music of prohibition. Hatch, Cooper; Landrum, Pollard, Thomas, Harris and Jones.

"Sound the trumpet for the fray,

Shout the war-cry, lead the way."

J. B. HAWTHORNE.

Atlanta, Ga.

The *Memphis Appeal* speaks a good word for advanced ideas in farming, the need of which is felt, almost to desperation, by the intelligent and thoughtful farmers of the South, who unfortunately, are, as yet, in a minority.

Starkville, Miss., is a place that is bound to take high rank in its State. There is an agricultural college there, and what it is doing to call attention to the value of breed in stock and to the best grasses and the proper modes of rearing stock is of inestimable value. Especial attention is paid to the milk-producing power of the cow, and a kind of practical education of the whole State is going on by the establishment of a creamery, where the value of milk products and how to secure them of the highest quality is demonstrated by actual practice. The results have been most gratifying. The creamery first aroused curiosity, then interest, then imitation of what was found to be improvements on old processes, and a manifestation of powers to produce dairy articles in Mississippi that Mississippi had never dreamed of. *The Dairy World* says: "Mississippi is rapidly coming forward as a dairy State. One county with the remarkable name of Oktibbeha has twenty silos, built the present year, while there were previously five others in use. There is also a creamery in full blast in that county, and if a year's experience proves a success more of them may be looked for in the immediate future, for they are rushing things down there now." A writer in the *Starkville Live Stock Journal*, referring to the above, says that next year "the county 'with the remarkable name of Oktibbeha' will boast not less than fifty silos filled for winter use, and that not less than 600 cows will contribute milk to the creamery referred to above. Oktibbeha and East Mississippi will yet be prominent in the dairy world." From the same paper we learn what is the most convincing result of that which the college and creamery have done for the neighborhood. Farmers are becoming so much benefited by the presence of them and feel the advantage of the creamery in so practical a form, that, even where there are no valuable constructions upon farms, they are held at \$20 to \$30 an acre. Of two special cases cited by the *Journal*, it says: "Either of these farms could have been bought previous to the establishment of the creamery for less than \$12 per acre." Facts like these are beginning to arouse the apathetic and to change the course of ideas of the antiquated specimen who is so sure that what was good enough for his father is good enough for him. The consequence is that the "all cotton" superstition is receiving some heavy blows, and the South goes ahead in proportion to the advance.

The *New York Freeman* deserves hearty congratulation upon the step in advance which it has made, in establishing a "Woman's Department." That this department promises to be thoroughly well taken care of is again a matter for congratulation, and we believe our readers will share in the gratification with which we read such sensible suggestions as these which we take from a late number of the *Freeman*.

## OUR WOMEN'S DEPARTMENT.

EDITED BY MRS. N. F. MOSSEL.

(This column will be devoted to the interest of women and will aim to promote true womanhood, especially that of the African race. Suggestions as to how this department may be improved and its usefulness increased will be gladly secured. All success, progress or needs of our women will be given prompt mention. We shall be glad also to receive for exchange or for our book table such publica-

tions as may be deemed helpful. All communications or contributions for this department should be addressed to Mrs. N. F. Mosse, 924 Lombard street, Philadelphia.)

"Whatever is worth doing at all, is worth doing well." Many women are now asking that new employment be opened to the sex. And yet we have not done all we might in the employments open to us. That women in all ages and nations have had most to do with the preparation of food will be readily admitted. Yet how few even of those who profess to know how can prepare any number of meats, vegetables, fruit, etc., so that they may best afford sustenance to the body?

Many restaurants are started by women and fail. They rarely live long enough to establish a reputation for the perfect preparation of even one article. We have in this city one restaurant established by a woman, which has been in operation for forty years, and has gained a name for supplying good pies and biscuits. Women generally are fond of tea, coffee, chocolate or milk, and if these articles, with sweet fresh bread, home-made and baker's biscuits, short-cake or buns, accompanied with pure butter, not any imitation of it, were supplied upon reasonable terms, there would be found a ready sale for them. The first requisite would be a pleasant, cheerful location, easy of access. Let the table furnishing be clean and arranged with some taste. Let the liquids be served in dairy cups. Not oil cloth, but better quality of cloth, and clean white napkins. In many of the restaurants for the poorer classes oil cloth, cracked china and red napkins, almost destroy appetite. Women waiters are to be preferred. It makes the place more homelike, and one is able to forget that she is eating at a public place. Last, but by no means least, let every article placed before a customer be perfect. Perfection is what will gain a name for the place, and people will come miles and pay good prices to receive an article if they know it will always give them satisfaction. I saw a cake on Chestnut street sells chocolate only and yet the cake is crowded, because the chocolate has a reputation for excellence. A restaurant managed by a woman, and supplying no greater variety of articles, would be found to pay, and would really, by the good it would do, have a right to be classed under the head of a benevolent institution.

Women are too economical to pay extravagant prices such as men pay for meals taken away from home, but how many a one hurried without time to prepare a meal in a busy shopping tour, or when engaged in visiting the sick, would hail with delight such a place, where for a small sum they might supply their needs. Many a severe headache, indigestion, or other ailment, dyspepsia, would be warded off by this means.

Another colored journal, the *Virginia Critic*, speak, very sensibly upon the question of free books in the public schools.

"Why not give the teacher more support, to continue more zeal and love for the work that needs so much serious attention? Good teachers in this day can really conduct the best and most instructive recitations without books and a better result is obtained. It is not free books the country needs, it's teachers who can sail with or without books when they have control of the school room. The teachers only have 5 months in a year to teach school and an average sum of \$28-35 per month out of which their board has to come, and the other seven months they have vacation. Now what is worth any more Legislative consideration than this subject? 'What we wish in a nation must be put in the school rooms.' Teachers are suffering in many ways from the lack of proper care and attention needed to be given them. There has been nothing considered relative to the better facilities of the teachers of the State, in any recent Legislation.

More than three years ago, Mr. Enoch Pratt of Baltimore, offered to establish in that city under certain conditions an institution to be known as the "Pratt Free Library." On the 4th of January, 1886, the finished building was formally inaugurated and from the account of the proceedings published in the *Baltimore Sun*, we take the following statement of the manner in which this generous gift has been secured for the use of future generations.

Mr. Pratt agreed to erect upon a lot of ground on Mulberry street, owned by him, a library building of the estimated cost of two hundred and twenty-five thousand dollars, (\$225,000), and to convey said lot and premises to the mayor and city council of Baltimore; and also, to pay to said mayor and city council the sum of eight hundred

and thirty-three thousand three hundred and thirty-three dollars and thirty-three cents, (\$83,333.33), provided the said mayor and city council would accept said conveyance and said sum of money, and agreed by ordinance to grant and create an annuity, and to pay annually to a board of trustees and their successors the sum of fifty thousand dollars (\$50,000) perpetually thereafter forever in quarterly payments, for the purchase and maintenance of said library, with no less than four branches in different parts of the city, the said branches to be established by the trustees within such time as their construction could be reasonably accomplished out of said quarterly payments; the title to said library, its branches, books and all other property, to be vested in the mayor and city council of Baltimore. For the annuity of fifty thousand dollars, (\$50,000) being about four and one-third per cent. interest on the amount invested, which the city agreed to pay to the trustees of the Enoch Pratt Free Library, the sum of one million one hundred and thirty-five thousand eight hundred and thirty-three dollars and thirty-three cents (\$1,135,833.33) has been contributed by Mr. Pratt for the Library and its uses, made up of the following items:

Paid for ground and building,	\$1,145,833.33
Mulberry street	\$750,000.00
Paid the city of Baltimore	\$33,333.33
Paid for the four Branches	\$33,333.33
Cash on hand	12,500.00

In further elucidation of the financial condition of the Enoch Pratt Free Library fund it may be said that the money contributed in July, 1883, by Mr. Pratt toward the endowment of the institution has been invested by the commissioners of finance in the bonds of the city, and that the original amount with the increment, has raised the value of the Enoch Pratt fund to nine hundred and one thousand eight hundred dollars, (\$901,800), represented by seven hundred and fifty-seven thousand three hundred dollars (\$757,300) four per cent. stock; ninety-five thousand three hundred and thirty-three dollars (\$95,333) five per cent. stock; and forty-nine thousand dollars (\$49,200) six per cent. stock, yielding an annual interest of thirty-eight thousand dollars, (\$38,000) being only twelve thousand dollars (\$12,000) per annum less than the amount required for the support of the library. It is estimated that the accretion of interest during the ensuing five years, added to the principal sum, will make the Enoch Pratt Free Library self-sustaining.

Few things are more difficult than to give wisely; to get such a return from investments for charitable purposes as would be demanded from any business investment, and from that point of view the philanthropic undertakings of business men have special interest. Mr. Pratt says--

"It is with great pleasure and satisfaction I meet you to inaugurate the opening of the Enoch Pratt Free Library of Baltimore City, which I proposed to establish in my letter to the mayor of this city, on January 22, 1883, and after four years of labor to inform you of the completion in the most thorough and substantial manner of the five library buildings and the collecting of over 32,000 volumes of books arranged for your use. I have the greater satisfaction of knowing and seeing my plans are completed as I designed them. It may be proper for me to more fully explain my meaning of a free circulating library. It is not free for you to take the books as you please and return them or not, but it is free from charge for the use of them. To protect the Library the trustees have adopted rules, gathered from experience in other cities, which I have no doubt you will find satisfactory when you become accustomed to them. I consider the plan adopted to secure the annuity fund for the support and increase of the library as the great feature, and about the only thing I ask credit for. As it is founded on a rock, according to Scripture, it must stand. Now, in the hope of God's blessing, I hand it over to you, expecting you will foster, protect and increase it, that its beneficial influences may be for the benefit of the present and all future generations as long as our beloved city of Baltimore shall exist. My work is finished. I am satisfied."

Baltimore has been unusually fortunate in the gifts of its citizens, and no city in America can at present offer greater educational facilities or promises to be more attractive in the future as a permanent residence for students. While climate and locality do much for her, it is principally to the far sighted liberality of a few individuals that she owes her almost unequalled advantages, and their names should certainly be held always in grateful remembrance, by those who profit by their labors.

## SOUTHERN SKETCHES.

BY MRS. ORRA LANGHORNE.

## Adeline the Inn-Keeper.

One of the institutions of Chatham where in that prosperous village differs from most Virginia towns of its kind, is a hostelry combining the qualities of hotel and restaurant, kept by a colored woman, whom everybody calls "Adeline."

The aforesaid Adeline is one of those shrewd, clear-headed Southerners, belonging equally to the two races which occupy the land, possessing striking traits of both, and entirely willing to accept the position assigned to the African by the Caucasian. If she can thereby "put money in her purse"—the people of her district, throughout which she is widely known, are accustomed to her and her ways, and are quite oblivious of the striking points in the case, which make a vivid impression upon a stranger.

"Adeline" occupies a brick building about the centre of the village, which is a double tenement and contains another store and dwelling besides her establishment. I understood that she had built the house herself, but had not finished paying for it. She also owns a little farm in the country, now rented to a colored man. Adeline's business, she told me, had recently been somewhat curtailed. She had for a long time kept confectioneries, but had of late found it necessary to give up that part of the trade.

On Court-day, always a great occasion in the Virginia county seat, this energetic personage spreads an elaborate dinner for her white patrons, among whom are the lawyers attending court from a distance, well-to-do farmers and city drummers, who are present in force on such days. In warm weather Adeline keeps ice-cream on hand, and in winter oysters, all served in good style. The country around Chatham is thinly settled, and it is customary for ladies from the rural districts, coming to the village to do shopping, have dressed and visited the dentist to go first to the Adeline's. Rouse, tell her they want to engage a room for the day, order dinner and then attend to business as they please.

The house is in this way a great convenience to the community, and Adeline's idea is an excellent one for the well-mannered colored women of the South, who were accustomed in early life to intimate association with the gentry of the land, and understand how to suit their tastes.

One of the Lynchburg merchants, who always dines at Adeline's establishment, when visiting his Pennsylvania constituents on Court day, says this energetic householder has long purchased her groceries from him, and he has always found her thoroughly businesslike in her transactions and prompt to meet all engagements.

Accompanied by a friend I called at Adeline's house, one evening during my stay, and found myself in a large hall, perfectly clean, and plainly but neatly furnished with tables of various sizes, chairs and benches. Near the door stood a glass case filled with fresh and tempting looking cakes. The mistress of the house, a pretty, middle-aged mulatto woman with a sensible face and excellent manners, came forward to wait on us, and gave me a keen glance as my companion mentioned my name, adding that I was much interested in colored people. She seated us at a small table, and brought us the ice-cream we asked for, answering questions as she moved briskly about, waiting on other customers and all the time keeping a sharp eye on the door.

Adeline said she had been in business a long time, was fortunate in being able to please her patrons, but could not always collect money due her. She was obliged to give credit sometimes, and some of her customers were very careless about paying their debts; she had bills due, that had been running on for years. She could not carry on as much business as she would like to do on account of the difficulty of procuring progress assistants. She was willing to pay a cook, who would do what she wanted for \$12.00 a month. This was very good wages in a place where cooks could be hired at a dollar a week; she could get only two or three dollars a month. She could get plenty of custom, but could not cook and wait on her guests at the same time, and the people she hired were so troublesome and unreliable. At one time she undertook to furnish meals for several white families in the village, and her patrons were very anxious for her to continue to do so, but she was compelled to give it up on account of the cooks. She always found it difficult to supply the demands made on her for washing and parties, sometimes she feared the world have to give up business entirely, because she could not secure reliable assistants. Dame Adeline evidently belonged to the employer class, and her interest lay altogether with them and not at all with the Africans.

Whilst she was talking, a dirty, ragged black man entered the door, looked around hesitatingly, and as the proprietor of the place stepped briskly up to him he asked meekly if he could get some cakes. Adeline gave him the cakes, pocketed the money and turned abruptly from him to her other customers, and the Negro slouched off with a dejected aspect.

I was told that it is the rule with this enterprising citizen, as with all colored people in the South engaged in business of this kind, to draw the color line very closely, and "no Negro need apply" is her system when "white folks" on whom she depends chiefly for a living are on hand. Occasionally when some colored society, able to pay well for what they want, desire the use of Adeline's hall for some festival she rents it to them for the time, and white customers understand that they are not expected just then. In short, Adeline is "strictly business" and consults her own interest, showing remarkable "faculty" as our Yankee friends would say. This very shrewd and energetic person was never so fortunate as to acquire "book learning," though she could easily have done so if she had so desired. She is at no loss for the lack of education, however, as the young white gentleman she nursed in infancy keep books for her, and on busy days, while she is occupied in supervising the cook, and waiting on the customers, standing through her board, one of these youths stands at the desk making out bills and taking in cash, as the guests of the house, many of them the leading citizens of the community, go in and out.

The establishment is very well managed, and its success is encouraging as showing what sensible and polite colored people can accomplish in a Southern community. It is a good example to public reprobat as a hot bed of prejudice and ill-feeling between the races.

As I said before, the scene presented might strike the uninitiated as singular, but the people of the district, being long accustomed to Dame Adeline and her ways, take it all very kindly.

It was gratifying to me to learn that Adeline having no children of her own, has an adopted son whom she is educating at Hampton, where it is to be hoped the young man will appreciate and improve his opportunities, and will in future be useful to her who has done a mother's part for him.

## The Child of the Bondwoman.

BY ORRA LANGHORNE.

During my stay in the country last summer, I learned that a young colored girl whom I had known slightly as a child, but had for some years almost lost sight of, was staying in the vicinity.

The girl, Ellen Granger, is an excellent type of a large class in the South, identified with the colored people, but fast leaving behind them all the associations of slavery, and having great influence in the upward progress of the race. Miss Granger is the daughter of her former master, and her mother was one of his slaves.

Unlike most Southern men in such circumstances, this father had listened to the voice of nature in his own breast, and had done a father's duty to his child. He had given her a fine education and cared for her in every way as he would have done if she had been the child of his lawful wife. As a child she showed great aptness for learning and talent for music, and finding an accomplished Southern lady, brought to a hard struggle with poverty by the results of the war, willing to teach colored children, Ellen's father sent her to this lady to learn music.

The cultivated lady brought into what was then deemed a position of degradation, and ostracized by many prejudiced people, took a kindly interest in the bright little colored girl who was so anxious to learn, and so obedient and affectionate in her manners. The child acquired much from her teacher that was not "nomination in the bond," and made such gratifying progress, that her father determined to send her North, that she might obtain a thorough education. For some years I had heard little about her, though I knew that her reports were always gratifying, and I knew that Miss Granger after having all the advantages that money could procure, had become a teacher in Washington City, and was prominent as a musician among the colored people there. A rumor had also reached me that Ellen's father, who is a man of wealth in Virginia, had settled upon her a comfortable house, where she was living with her mother, the ex-slave.

This is the sort of thing that causes indignant comment among some classes in the South. Surely it is better that the child of Hagar should be thus provided for, than that a man should sell his own flesh and blood as was but too often done in the evil days of slavery. It is better than leaving

the daughter to ignorance and want, to be brought up in the same manner of woman that her mother was before her. It is even better than what Sarah, Abraham's wife, whom St. Paul holds up as an example for Christian women, did in ordering that the bond-woman and her child should be cast out. "It was God himself who cared for Hagar and her son in their desolation, and who shall say that it is not his hand which is stretched out in these latter days to save these innocent victims of an evil system."

Learning that Miss Granger had come to the country after a severe attack of sickness, and was still too "weak for much exertion," I went to see her at the home of her friend, Mrs. Johnson, the popular dress-maker of the village. The Johnsons were kindly spoken of by the white people of the community, as thrifty and sensible colored people, the husband a blacksmith owning property worth \$5,000.

In my walk to see Miss Granger, we passed a forge, where a sturdy colored man was beating his anvil lustily, and my guide, a gentle little white boy, said this smith was John Smith. Just beyond the shop was a pretty, two-story, white cottage, in the midst of a grassy lawn surrounded by trees and flowers, the comfortable home of the industrious family. As we entered the gate, I observed an elderly and very respectable-looking mulatto man, sewing in the last of the graceful figure of a young girl reclining in a hammock, with the irresistible novel in her hand, I recognized my young friend, Ellen Granger.

She sprang to her feet at once, and came forward with a cordial greeting, invited me into the house, and introduced me to her hostess.

I was ushered into a very tidy parlor, handsomely furnished, with piano, violin, books and pictures, giving evidence of the taste of its occupants. Having heard such pleasant accounts of this family, I should have been glad to see all its members, but was told that the eldest son, for some years employed in one of the departments at Washington, who had just been moved in order that a white Democrat from the district might be provided for, was absent, as was also the eldest daughter, who was a Hampton graduate, and teacher in the public schools of the village. In a long stay I made in the pretty little home, looking so sweet and attractive, whose owners so well deserved the comforts by which they were surrounded. I had much conversation with Mrs. Johnson and Miss Granger.

I had many questions to ask the latter of her life since our last meeting, and as talking of the present, led to talking of the past, I heard more of her life than I had before. The narrative seems to me so interesting and so striking in its illustrations of one phase of Southern life that I am inclined to write as she told it. Ellen was so young when her emancipation of her people came, that she has no recollection whatever of slavery. Her mother was an energetic and capable woman, who decided to go North to seek high wages as she was set free. The little girl was left with her mistress, and having no children of her own, she made a great pet of the child, who became her constant companion. As so seldom happened in such cases, a strong affection existed between the two, and Ellen only seeing her mother in her annual trips to the Virginia Springs, and calling her by her Christian name, as most other members of the family did, was not aware that the colored woman who always brought her presents, was her own mother. Not until she was old enough to suffer intensely from the knowledge, did she learn that she had been born a slave and must bear forever with her the shadow of the Ethiopian.

Ellen says her early years passed very happily indeed, being the only child in the household, and the family in very comfortable circumstances, she was much petted and indulged. Mrs. Granger being somewhat of an invalid, led a very retired life, and kept the little girl constantly with her, and to her the child looked as her friend and protector. She was never allowed out of the house to play with colored children, and only occasionally found companions of her own age in the children of white neighbors who visited the family. Some little white girls near them, who some times came in pleasant weather to play with her in Mrs. Granger's grassy yard, she dearly loved, and was altogether unconscious that they belonged to a different race from herself. When about nine years old, she no longer came in so often, when she called to these children to come and play with her, or spoke to them in the street, they seemed to avoid her. She was motherless at this treatment, and age to whom she had been much attached.

"You'd to come to see me and play so nicely with me, and now you won't come near me! What makes you do so?" The

child, a buxom Irish maiden, entirely untroubled by sensitive sympathies, answered bluntly: "I am not going to play with you or come to see you any more. You're a NIGGER."

"I died a thousand deaths that day," said the handsome quadroon, now a highly cultivated woman. "It was the first time that a thing had ever been said to me, the first time such an idea had ever entered my mind. For a while I was stunned and stood speechless, and then I rushed to Mrs. Granger, and threw myself sobbing into her arms. As I told her that Biddy O'Flinn said I was a nigger! Ellen said Mrs. Granger clasped her tenderly to her breast, assuring her that Miss O'Flinn was entirely unworthy of confidence, that she was her own dear little girl, and she should always stay with her and had better never have anything further to do with those rowdy Irish! But 'the Irish had entered the child's soul, the stern lesson' was never forgotten, and from that day she realized that she belonged to the despised race.

Miss Granger spoke affectionately of her first music teacher, who was always very kind to her, and with much pleasure of the years she had spent at boarding-school, and her life in Washington where she had for some time been a teacher in the public schools. She has continued to improve herself in music, and also studies French and German as she finds time for such pursuits. She has traveled extensively in the North and West and gave most interesting accounts of what she had seen and the people she had met. In Washington her life seems to be very pleasant indeed as her natural vivacity and varied accomplishments make her popular with the educated and intelligent colored people, of whom a number can be found in that city. It was somewhat amusing as well as good proof that there are "two sides to a question" to hear the object of the recent marriage of the Hon. Frederick Douglass, on the ground that his wife was not his equal in position. Miss Granger knows Mr. Douglass intimately, and speaks of him with much pride as the leading man of the race. I was very glad to hear her say that in a recent visit to Danville she had been most agreeably disappointed at the condition of the colored people, had found many of them very prosperous in business, enjoying in general kindly relations with their white fellow citizens, and on the whole doing better than most towns she had seen. She said she knew such a statement would be deemed almost incredible in the North, adding that most Northern people really understood very little about the true condition of the colored people of the South.

"They have no idea that such a home as this could be found among the colored people of Virginia," she said, looking around her at the abundant evidence of a happy and prosperous family life.

Miss Granger also spoke very favorably of the Hampton school, candidly admitting that until recently she had been much prejudiced against it. She said this prejudice was very general among the colored people of Washington. Since she had met a number of graduates of the school, some of whom had been employed as public school teachers, she had come to understand the plan and scope of the instruction and heartily approved it.

When we took leave, Miss Granger promised that if she should chance at any time to be in Lynchburg, she would visit me at my own home, and I parted with regret from the agreeable and accomplished girl. It seems singular that a woman possessing so many interesting and agreeable qualities should be included in a class denied social advantages in a Republic country. Such a woman, possessing such a cultivated mind has many resources in herself, and fortunately there is a large and fast increasing number of colored people, who are acquiring property and education, and among these she doubtless finds many congenial associates.

Such a woman as she is must exercise a great influence around her, and has great opportunities for doing good among her people and aiding them to reach a higher social plane. If all colored people were like her and the estimable family she was sojourning with, race prejudice would soon become as much a thing of the past as the slavery of the African in America, which has taken its place in history, and is rapidly passing from the recollection of the living.

## DENTISTRY.

DR. T. H. PARRAMORE,

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King Street, opposite Barnes' Hotel.

## SILHOUETTES.

BY ALICE M. BACON.  
Christmas Day at the School.

As Christmas time draws near, a general air of excitement and expectation begins to pervade the school. Christmas in the South in the old times was a festival that gave to the slave, for one week at least, the delight of freedom and which was celebrated by days and nights of mirth and idleness. To-day the Negroes regard the week beginning at Christmas and ending with the year as a time when if there is a penny in the house it must be expended on meat and drink to make glad the heart. Unfortunately too, in the Christmas gladness produced in this manner, instead of furthering the cause of "peace on earth, and good will to men" results in fights, bruises, arrests and legal proceedings which make the incoming of the new year a time to be dreaded by law-abiding citizens.

In the school an effort is made to retain the Christmas gladness and give to the time a special meaning as the time in which we celebrate the birth of the Prince of Peace, of Him who went about doing good. It has been for many years the custom for teachers and scholars to subscribe for the purchase of supplies to be distributed to the very poor at Christmas time. Sunday night at the evening service a subscription paper and a contribution list are passed through the audience and the money thus obtained is devoted to Christmas dinners for the poor. At the same time those of the students and teachers who have been doing "jungle work" among the poor are requested to hand in the names of needy and deserving families who are likely to have no Christmas dinners. A call is also made for volunteers to aid in the distribution. As a result of this project the work we find that we have obtained the names of about twenty families in need of help, seven dollars in money and seven more promised, and about fifteen volunteers to aid in the distribution.

It is curious to notice on a long drive into the country taken the day before Christmas, how all the population seem to be on the road. Steer carts, mule carts, horse and sleds or harnesses, pedestrians, footing it sturdily into town or returning with their marketing for the morrow—all are intent on business, almost all are carrying pails, baskets or bundles suggestive of the approaching feast.

A kind Providence has ordained that the Christmas time this year shall be neither rainy, snowy, nor cold, but that everything shall be favorable for the full enjoyment of the festival.

The afternoon before Christmas day is the time appointed for the distribution of provisions. The big School-wagon, commonly known as the ambulance, is packed with provisions in baskets and boxes. Coffee, sugar, meal, pork and rice don't go in packages, are stowed away under the seats and then a merry company of students pile in and we are off on our round of calls.

Down Goose Alley we drive, a lane running to the water so close that the big wagon fills it to overflowing. One and another little cabin opens its doors to our summons and its occupants greet us with smiles and hearty thanks the bundles that fill their arms. Then we turn around on the edge of the water amid little cries of fright from the girls when our long conveyance tips sideways, at making so short a turn, and once more our strong black horses draw us rapidly along over the level shell road until we turn off on a road gaitless of shells or any other repairs and dotted with mud holes from whose sticky depths we emerge with many a jolt and bounce productive of laughter and mirth.

Through the Negro settlement of Slabtown, on beyond the cross roads with fields dotted here and there with tiny white washed cabins, on still farther into the wooded country, we drive, and at last draw up in front of a house or rather a shanty that surpasses in wretchedness and ruinousness anything that we have yet seen. It stands alone, unsheltered by tree or house from the winter storms, and through its gaping walls and shattered roof the wind plays all sorts of tricks upon its inhabitants. It is very small, perhaps ten by twelve feet, the chimney has parted company with the house and leans one way while the house leans another. The inevitable dog comes growling and barking at us from behind the house, but on perceiving that there is a strange dog in our company, devotes his attentions to him and leaves us to enter the house. We peep in at the open door and the sight that meets our eyes is pitiful. Within the fire-place two little pine sticks are slowly burning, while clustered around the anything but cheerful hearth are the father, the family with the baby on his knee, and five shivering children. A bent old man with long, half covered, skinny arms holding out the mite of a baby toward the chilly little fire, he cannot find work to do, for though he is willing, he is not sufficiently able bodied to gain employment in a country where the la-

boring population is larger than the demand for laborers. His wife is away at work, and he stays at home, (if this miserable place can be called a home) and tends the children in her absence.

The children all have colds, one of them the whooping cough, and all are bare-footed and thinly clothed. We leave our bundles on the table and get back into our wagon, but an impression has been made on the students that seems likely to produce some good for the man's family. Many are the exclamations of surprise and sympathy that are uttered over the wretched condition of the family. We have collected in the wagon students from many parts of the South, students not unused to the sight of extreme poverty, but all are agreed that they have never seen human beings living in so wretched a place before.

We leave the place accompanied by a farewell salute of howls, growls and barks from the lean, black dog, and drive a cut across the bush, gorgeous with its furnished leaves and glowing berries, almost slaps us in the face as our big wagon moves along the narrow cart track. A cry is raised by the girls, "Oh, we must have that for our parlor" and soon every boy in the wagon is engaged in a hand to hand conflict with impertinent bushes. The bush comes out and we bear away in triumph the spoils of the battle. There is much quiet fun going on in the wagon all through the drive, fun that is thoroughly refined and innocent. The girls are pleasant and lady like, the boys gallant and gentlemanly. They mingle freely but courteously and have a grace of manner to instill of politeness. It would raise the opinion of anyone prejudiced against the race, to spend an afternoon thus in the society of these students, when free from the restraints of the class room they meet each other and their teacher on this purely friendly footing.

Our long roundabout drive brings us at last to the suburbs of Hampton and we stop before a tiny yellow house to give Aunt Betsy her Christmas dinner. We have learned by experience that Aunt Betsy's back door opens more easily than her front door, so we attack the point in her small castle. The little bent figure that opens the door is fairly shaking with delight at the sight of the bundles and we feel that we should like very much to deserve the many blessings that are called down upon our heads, when we deposit our gifts upon the rickety table.

This is our last call to-day, and the early December sun has long since disappeared from sight as we cross Hampton bridge on our way home. We feel like wanderers, returned after a long absence, and the lighted buildings towering up in front of us look so strange and comfortable after our cold drive in the gathering twilight. The drive has been pleasant and the home coming is pleasant too, for we come back with the sense of good done which makes us enjoy more thoroughly the festivities of Christmas Eve.

Up in Virginia Hall chapel a most mysterious curtain has been erected and all day a juggler and his assistant have been carrying in and out of the room black bags, long strappled up boxes, bird cages and other apparatus calculated to arouse the interest of the watching observer. At evening prayers during the hush that follows the prayer, the voices of the trained canaries proceed from behind the curtain. The teachers this year have given as their Christmas present to the students, a sleight-of-hand performance by a skilful professor of the art, imported from Philadelphia for the occasion. A more delighted or appreciative audience he surely never had. Every face is turned eagerly toward him, every time-honored joke in his repertory is greeted with the liveliest laughter and for two full hours the fun continues, ending up at last with a ventriloquist performance that keeps the tears running down our faces with laughter. At the close of the entertainment, large baskets filled with white bags of candy are placed near the door and one bag is given to each student as they file out. Where there are six hundred students the item of a bag of candy apiece is quite a good deal, but this year the teachers' contribution has been helped out by the kindness of the Hampton Club of Springfield, Mass., and there is enough and to spare.

Christmas morning dawns bright and cool, but not cold, and the air is full of Christmas gladness. The students dining room is gay and noisy as many find by their plates at breakfast little gifts from school friends. Every one is busy through the morning, for at dinner time the students form their own Christmas dinners, furnishing and decorating their tables according to their fancy. The dining room is gay with flags and garlands, the students are growing under the load of fruit, cake, flowers, holly and more solid furnishings. Down in the dining room pertaining to the diet kitchen, three big tables

are prepared for the Indians' feast. The room is crowded with Indians rushing excitedly about and Indian teachers directing and overseeing the willing, but somewhat unskilled labor of their pupils as they set the tables and decorate them. Everyone seems to be enjoying entirely the occasion and the bustle of the Christmas day. But if the preparations for the dinner are interesting how much more the delightful moment when at last they enter into their labors. How manly the boys look as they march into the dining room in procession, each with the girl of his choice upon his arm. How modest and coy are the girls, as with downcast eyes and shy, conscious glances they march slowly through the long dining room. But we will leave them to their fun for they do not want the gaze of curious eyes fixed upon them as they eat. Let them for this one day at least forget that they are part of a great institution, a curiosity and show to thousands of visitors. That they are enjoying their feast is very evident from sitting prolonged perhaps by all inasmuch as they know that when they rise they must clear away the dishes and leave the dining room in exact order for an ordinary, every day tea. But our scholars know how to work and do not mind work for the sake of a good time, and so by five o'clock everything is in apple pie order and all are ready for the short Christmas party in the chapel. A restful, pleasant thing the service is, held in the twilight which deepens into darkness before it is done. The sweet Negro voices sing Christmas carols, the old song is read of how "Jesus was born in Bethlehem of Judea in the days of Herod, the King," a few earnest words are spoken urging each listener to let the Christ-child come this night into his heart, and then the service is ended, the students march out and go their several ways with an impression, let us hope, of the meaning of Christmas day to the Christian world.

The evening also brings its pleasure in the shape of a social gathering, at which the students renew and carry on all their acquaintances or flirtations for which the every day discipline of the school allows little time. Much fun there is, though all quiet and decorous, games are played, marching to the music of the piano is in order, and scattered here and there on the benches are groups or couples engaged in conversation. But at last the inexorable bell sounds the obedient crowd disperses, and soon the sweet note of the good night bugle says to all that the most joyous holiday of the year is ended.

## Emancipation Day.

January 1st, is to the American Negroes a day to be observed as the time when freedom came to them and when they were done in. The Emancipation Proclamation of January 1st, 1863, which to Lincoln and his associates in the Government, was but a necessary measure for the subjugation of the rebellious states, was to the Negro the deed that made him a man. And so as each new year comes in, the Negroes celebrate with all the splendor and magnificence of which they are capable, the day when freedom was proclaimed to every slave within the rebellious states. Unfortunately for them, the first day of the year is almost always rainy, and many a dripping procession has trailed its way over Hampton bridge to stand soaked and unprotected upon the lawn in front of Virginia Hall and listen to the brief speech that General Armstrong is always expected to make upon this occasion.

Contrary to all precedent, January 1st, 1886, dawned clear and warm, and as a consequence the celebration for this year was much more impressive than usual. At about twelve o'clock the school battalion was formed to meet and escort the procession when it should reach the grounds. The school bands plays its liveliest airs and the green lawn, during the inevitable waiting that accompanies all things here in the South. At last a ragged crowd of small boys comes trotting along, surrounding the shouts and laughter of three grotesque figures, the forerunners of the approaching procession. Dressed in bagging, with streamers flying from every available point on their persons, with bent arms scratched masks covering their faces, these figures march solemnly about, amid the hoots and jeers of the delighted pickaninnies that follow close at their heels. After them comes a band of boys, dressed in blazing array of red shirts, contrasting most picturesquely with the brown faces of the wearers, follows close behind. Stalwart, strong young fellow, make covering their faces, which they follow: "The Oystermen's Association" this is, that once a year flames forth in this glorious effulgence of red shirts and silken banners to proclaim to the world that the Negro

free is better laborer than the Negro in bondage.

Behind the Oystermen march a number of men in blue scarfs. These men are older and their faces have the patient look, born of slavery and unrequited toil that we see on the faces of the old freedmen.

Many white heads are in their number and the legend on their banner reads, "The Sons of Abraham."

The bible history of the covenant with Abraham, fulfilled in this day of our fathers, has been a comfort and a hope to this race, as their poetic instinct grasps in this analogy to their own slavery and a hope that their own future may be one of glorious entrance into some promised land. This Emancipation Day is to the Negro who has felt the sting of slavery, what the Passover was to the Israelites in the wilderness, a day on which to remember their deliverance and all that the Lord has wrought for them.

Other societies are in this procession, each bearing a banner and marching in all the pride and circumstance that they can muster. When the foot soldiers have all come in and taken their places and the School battalion has formed in a long line behind them, there is a trumpet of service.

A motley company they are. The horses are of every variety, from the handsome black animal "full brother to Fanny," to the wretched, skinned rack of bones, who look "like every minute gwine to be de nex' as Uncle Remus would say, and the saddles are of various as the horses. As for the riders, words are inadequate to describe the costumes and equestrian performances of this squad of cavalry.

Here a broad brimmed sombrero, artistically looped on one side with a red feather. There an old beaver whose battered surface bears the marks of many a winter's storm and summer shower.

And again a combination of patches and rents which its owner fondly calls a hat and has decorated with a worn old feather which he has achieved its present position. But no matter what their head gear or how insecure their seat, they are all happy, some perhaps too happy with the misguided happiness that comes from imbibing ardent spirits. The horses are harnessed with many a half streamer, their tails tied up tight with a half dozen small knots of red or blue. Altogether the scene is a gay one and while amusing, there is an undertone of pathos as there must be for years to come to all thoughtful persons, in the child-like enjoyment that they take in little things like this one day, at least, the care and sorrow of their hard bare lives is laid aside and forgotten and they enjoy as a wise generation could not enjoy, the pomp and circumstance of their poor little parade.

As the cavalry squadron draws up in line behind the School battalion, the marshal of the procession comes to the front and calls for three cheers for General Armstrong. Three rousing cheers are the result, and Gen. Armstrong mounts upon a chair on the crowded verandah to address the procession.

A few brief words of welcome, and a little praise that puts everyone in good humor, and then he returns to the front and looks to the future, these are the chief heads of the speech to which the assembled multitude listen with rapt attention. As he closes, Gen. Armstrong introduced Mr. W. A. Walker Phelps, who happens to be spending Christmas at the Hygeia, and some stirring words from him follow. Watch that old "Son of Abraham" as with uncovered head he stands and listens to the speaker. As he speaks of the banished slavery and the hopeful outlook, how the worn old face lights up, and the whitened head nods approvingly.

For awhile the crowd melts away before our eyes and we see only that pathetic brown face with its patient eyes fixed on the speaker, drinking in with that eager look every word that falls from the eloquent lips.

Mr. Phelps' speech is followed by one from Mr. Pitt, Congressman from Illinois, to which the same delighted attention is given. Then the marshal of the procession proposes three cheers for each officer of the school and the cheers are given with a will.

Last of all, the whole multitude unite in the singing of the old war song "John Brown's Body" and the show is over. Not quite over, though, after all for the march away is perhaps more interesting than the arrival of the procession. Two brass bands strike up two different tunes at the same time; horses, who have only been allowed to take part in the proceedings by an occasional whinny of applause at proper points, now assert their right to do what they please and move about once more.

Mid cries of "close in," "move on," etc.; the procession departs, and as they move away, horses, brass bands, Sons of Abraham, Oystermen, and common folks seem to be mixed up in inextricable confusion.

## Letters From Hampton, Graduates.

DO THEY PAY THEIR DEBTS? SUPPORTING THE GOSPEL. FROM THE ASSOCIATE TEACHER, AN INDUSTRIOUS PASTOR AND TEACHER. LITTLE WOOD CARRIERS. A SCHOOL OF GROWN PEOPLE, TEACHING IN THE CORN-FIELD. WELL CONTENTED. ABOUT THE CHRISTMAS TREES.

## DO THEY PAY THEIR DEBTS?

To this often put question concerning the colored people as represented by our graduates, we are glad to reply that an increasingly large proportion of them manifest an honorable sensitiveness and ambition in the matter. The following letter is an especially noteworthy example of this fact. It is from a young woman who had just lost everything in the fire at the Chattanooga orphanage, including her last earnings which she was about forwarding to Hampton.

Steele Orphanage, Chattanooga, Tenn.  
December 16, 1885.

Dear Miss M: I cannot tell how glad I am to send \$12.00 to you on my bill. I have been feeling badly because I could not pay the debt before, but I hope I am excused. I will tell you how I got the money. Last Friday I received a nice package from Mrs. ——. There was a dress to be made in the bundle. To-day I started to make the dress and when it was unfolded I found a pair of gloves and purse with \$20.00 in it. You can imagine my delight and surprise. My first thought was my bill at Hampton. I hope the School is doing nicely. I do miss the dear place so much, there is not a day that passes by, but what I think of the ones I loved so much. We are doing nicely. The person has not been caught who was trying to burn us out again.

Yours gratefully,

## SUPPORTING THE GOSPEL.

The unsectarian spirit of Christian work manifested by the writer of the following letter, is not uncommon among Hampton graduates, though not all have her zeal, or are as fortunate in finding contributions so easy to raise as they seem to be in this mining town.

Dec. 3, 1885.

Mrs. H.

Dear friend:

I have a new field of labor in my own county, at the new mining town of which you have heard. The position is the best I have yet had: ten months session with sure and prompt pay. The house is warm and comfortable with good seats, blackboards &c. built by the North and owned by the South West Va. Improvement Co. The school has been taught by white ladies from Philadelphia. When I came here in July, I had little hope of getting it. But the people said they wanted a teacher of their own color, so I applied to Mr. — of Philadelphia, enclosing recommendations from the Superintendents of Co. and —, and I was appointed principal of the school, with a salary of the class of '82 at Hampton for assistant, I went to work with the children and made \$11.20 and sent, for Rev. T. A. W., who is preaching at — Spring, a graduate of Lincoln, to come and preach a Thanksgiving sermon to the people. He came and they were greatly pleased. It only cost \$9.20 but we gave the extras to him. Previous to that we made \$13.84 for the M. E. minister who preaches here once a month; R. B.'s husband Rev. D. W. Harth. She has been here twice. They have charge of the Sunday school at my old home twenty-two miles from here. And since then we have made \$36. for the new Baptist church. Yesterday our new school organ came. Now we must pay for that. The ministers say I "have as many kinds of meat as a turtle," because I work for all churches. I tell them I cannot afford to be sectarian while I am so far from my own church.

Gratefully yours,

M.

## FROM THE ASSOCIATE TEACHER.

From the associate teacher mentioned above we have a few more interesting particulars of this pleasant field of work.

— Va., Dec. 14, 1885.

Dear Miss L: Since leaving Hampton I have taught two years in Pulaski and one in Roanoke County. I now have a ten months term, have an excellent school-house furnished with patent desks; the house was built by a Northern gentleman. It is not a public school but governed by the Company. This Coal Company ships from one hundred and seventy-five to two hundred cars daily. The town consists of 12000 to 15000 inhabitants, seven or eight hundred of whom are employed by the company.

We have organized a literary society which is very interesting. The scenery coming down the river is very fine. High overhanging cliffs on the left and the winding river below on the right.

My chief amusement is reading when I have matter to read: but occasionally I get out.

Very respectfully yours,

H. P. S. A peep into my English Literature note book is ever a source of real pleasure.

## AN INDUSTRIOUS PASTOR AND TEACHER.

The following good record from an industrious worker in the school room and church will be read with interest.

— Va., Oct. 20th, 1885.

Miss C. Dear Friend: Your very interesting letter to hand, the contents of which inspire me with new or fresh courage and hope to do better work this year than last. I am teaching the same school near the above P. O., that I taught last Fall. I commenced the 7th ult. with ten pupils, now I have sixty. Taught 36 months and preached 42 sermons during the school year that ended last July 31st, 1885. I spent a part of my vacation at the Teachers Institute in Danville Va. and the rest in visiting Associations.

The children, thirty in number, that professed hope in Christ last fall are holding out very well so far. The Sabbath school is in good condition, the old as well as the young are interested. I very often hear the old people speak of the Christmas Tree we had and the nice presents sent by Northern friends. We wish to have another Christmas Tree this year.

Number of months taught in the Public schools of Charlotte and Mecklenburg Counties, Va., 82; number of places taught 7; number of months in each year 10; number of children taught 835.

Taught three years before finishing at Hampton. Most of the people here are renters with the exception of eight, who have bought themselves comfortable homes. Our people are improving in every thing else faster than they are religiously. I hope to see the day when we shall know how to worship God in spirit and in truth.

Yours truly,

H.

## LITTLE WOOD CARRIERS.

How many white children in the North would like to go to school, on such terms as these little dusky ones? We are glad that this part of their schooling is over.

Abingdon Virginia, October, 28, 1885.

My dear friend:

Your circular is received and it affords me much pleasure to write you of my work. I am teaching as usual, I am glad to say in much more comfortable quarters than heretofore; I have a nice new frame school-house well heated and lighted. The first year I taught, the little ones had to carry most of the wood for at least a quarter of a mile, but this year we have a coal house filled with coal. My average attendance of scholars is quite large, forty-five. I teach Sunday school in one of the churches. I think the school is in a very prosperous condition. I have fourteen little girls in my class. I did not have a Christmas tree last year for my scholars, but hope to have one this year.

I hope you will have many pleasant letters this year from my co-workers.

I find the map, sent me from Miss Mackie's scholars, of much use to me. I am so proud to have it.

Of course you are not expected to answer the replies you get from the circulars, but if you have time, I should be glad to hear from you sometime.

Respectfully,

M.

## A SCHOOL OF GROWN PEOPLE.

The effort of grown people—sometimes white haired and bowed with age—to learn to read for the purpose of reading the Bible, was one of the pathetic sights of early emancipation days, now seldom witnessed. In some

isolated places that have not enjoyed all the advantages of freedom, the zeal has not died out, and adult scholars still sit on the primary benches. Of such a school, one of our graduates tells.

— Va., Nov. 18, 1884.

Miss A. E. C.

Dear friend: Your kind letter of the 5th ult., directed to — Va., found me at this place. It always affords me great pleasure to hear from you as correspondent of the Hampton Normal and Agricultural Institute. Seeing that I am not forgotten but yet in remembrance with those dear ones who have done so much for the Negro's elevation in the South.

As regards myself I am yet teaching in Co., and have been over since I left Hampton, embracing a period of forty school months, or sixty calendar months, during all of which time I have taught the same school. I must say with much success. I find the grown people here as well as children, hungry for, and seeking after knowledge. My time is not engaged only among 128 children, the number enrolled on my school register, but at night after going to my place of abode, there I am met by 25 sturdy men, who labor during the day, and give three hours of their time to study at night. Some of these men, have made good use of their time. Notwithstanding they did not know a letter at first, some of them can now read, write and cipher well enough to attend to their own and others' business without seeking help from any one. Owing to circumstances, I sometimes think I shall abandon the work, and pursue some other, but then how can I when I behold from every view ignorance of my race exhibiting itself, even in our sacred and holy places and that ignorance seeking light. I can give it in a moderate way, and if I refuse, I should think myself unworthy of the name of a member of Hampton Institute, a name which has much influence here among all class of people, most particularly school officers.

I have no serious complaint to make concerning my day school, only short sessions and poor pay. One could not live decently here by teaching alone. Thanks to Hampton's able Principal, General Armstrong, who instructs that "the school room should not be the only dependence for a living" but that we should meet bravely whatever fate may befall us. I find the greatest hindrance to, among the children's attending school regularly is that the main part of the session contains the winter months, and most of their parents are in such poor circumstances they are unable to provide the necessary clothing, and to buy books for them during the winter. Hence quite a number of them are forced to remain at home till Spring.

I have not been negligent in the Sunday school work since I have been here. I organized four different schools consisting of three hundred and twenty-five persons. Through I am sad to say that in this number you would find very few children, on inquiring for them you are told by their parents that they are not fit to come out to Sunday school.

On visiting our Sabbath schools you would be astonished to see so few testaments or other spiritual reading, they want to learn, so they bring such books as they have viz. spellers, readers, etc. I know you are tired reading such dry news, out they are facts. Hoping you will have continued success in your labors.

I am respectfully yours,

B.

## TEACHING IN THE CORN-FIELD.

Our correspondent feels—as most Hampton graduates do we are glad to say, that he is responsible for other teaching than that for which he draws his salaries.

Roanoke Co., Va., Nov. 7, 1885.

Dear friend:

After I closed my school last Spring I went to work on my little place, believing that it is just as essential, to set an example in that respect, as in the school-room. I planted about three acres of corn and made sixty bushels. I did not have a horse, so I hired a team to break the ground, and then tilled it with a hoe.

I commenced my school the 19th of Oct., and have on roll forty scholars. I am teaching at the same place as last year and my school will be larger this year than it was last. Some of my scholars are very poor, especially two widows' children whose mothers are not able to buy clothes to send them regularly. I do all I can to make things pleasant and my school interesting.

Respectfully yours,

H.

## WELL CONTENT.

The extreme satisfaction of our next correspondent with things in general, rather illustrates perhaps the general

tendency to look at all questions from one's own standpoint, and no further than one's own experience. It also illustrates the fact however that there are pleasant experiences and standpoints from which to look at the "Negro Problem."

Washington, D. C., Oct. 29th 1885.

Miss C.

Foughkeepsie, N. Y.

Dear friend:

I had the pleasure of acknowledging your letter a few days ago, and it gave me great joy to see that so many of us are not forgotten.

You spoke of the fact that the power of six hundred young men and women, trained as we have been, ought to be felt. I do, and must say it is felt more or less in every state in these United States in some way.

There are 8 or 10 of us in Washington making from \$750 to \$1400 per annum, in the U. S. Departments. As for the "Negro Problem" its solution has already been satisfactorily reached in my opinion. I don't say this from guess work, but from sight.

I left Hampton, June 1879. Though I have had the pleasure of visiting the school 2 or 3 times ever since, and feel proud of her rapid growth, I am sorry to say I have not been in the school work, though I feel that all of us can't be engaged in the same work. I have been employed in the General Post Office Department for five years, and am getting along nicely. I have saved enough in that time to get a good farm in North Carolina.

Miss C.—I do thank you ever so much for your kind words, and greetings of encouragement. I shall endeavor to carry the banner of right in my hand through this life, with the hope of reaching the good Lord in peace.

Truly your friend,

J. P. O. Dept., Washington, D. C.

## ABOUT THE CHRISTMAS TREES.

We desire to express our hearty thanks to the kind friends who helped make a "Merry Christmas" for our graduates, their teachers and scholars. We give below a few extracts from letters showing that these gifts are appreciated.

"I want to tell you about my Christmas Tree. Through the kindness of Mrs. Hyatt of Brooklyn, N. Y. I had a 'Christmas Tree' for my children, and oh, I only wish you could have seen how 'carried away' they were. Every child received a present. I never saw a body of children so happy in my life."

"I went home on Wednesday before Christmas, and found there the splendid box from Mrs. D. for my children. Twenty-eight children were present, and such happy faces I never saw before. Their very expression showed gratitude. Each child got a box of candy, a pretty card, and some clothing. All were well pleased, and I feel very grateful to you friends for your help."

"I feel very much indebted to you for your kindness in providing a way by which we could have such a nice Christmas Tree. The barrel contained some very nice books besides many other useful things. I have some books left, and shall form a little library for the children so that they may have access to reading matter."

"The nice Christmas presents you sent us were duly received. Oh, I do wish I could, through the medium of pen and paper, tell you just how thankful we are to you. To-day when I gave the little ones their books, they seemed to be the most delighted little things I ever saw. I wish you could have been in my school-room, and enjoyed seeing them as I did. When I told them of their friend at the North, they seemed very much surprised to know that a person who had never known them would be so thoughtful of them."

## Southern Workman.

### Indian Department.

ELAINE GOODALE, In Charge.

Regular Contributors:

HERBERT WELSH, *Cor. Sec'y Indian Rights Association.*

ALICE C. FLETCHER,

REV JOHN J. GRAYATT,

MRS. A. S. QUINTON, *Gen'l Sec'y of the Woman's National Indian Ass'n.*

WE CAN SEE in him the elements of a man, if properly trained. For 250 years he has been buffeted, starved, frozen, shot down by the hundred, and has survived it all. The spirit of the Indian, so resolutely heroic, will make in the future the best specimen of the man and woman of America. *Senator Dances.*

THE CALIFORNIA STATE ASSOCIATION of Congregational Ministers has passed a set of resolutions in behalf of the Mission Indians, copies of which have been placed in the hands of their Congressional delegates. It appears that the lands recently appropriated to these Indians are "waterless and consequently of no value to them," and it is therefore important that a bill be prepared authorizing the sale of a part of this territory, and the purchase of "suitable lands, with water sufficient to irrigate them."

WE HAVE an interesting and well-written account of the life of Dr. Worcester, for 34 years a missionary among the Cherokees, from Nevada Couch, a girl sixteen years old, and a member of "Worcester Academy," the Congregational Mission School at Vineta, I. T. Its late principal, Dr. I. N. Cundall, is the writer of a somewhat original and outspoken discussion of the "Indian Problem," first printed in the *Milwaukee Sentinel*, and suggested by a visit from Gen. Armstrong.

#### "The Other Side."

J. S. McCain, Superintendent of Instruction at Siletz Agency, Oregon, writes a letter to the *Morning Star* in spirited defence of educational and civilizing influences on the reservation. We think his remarks entirely pertinent. Among other things Mr. McCain says of Indian Agents that "there is no class of Government officials in any other department who are under so strict surveillance as these same Indian Agents. No other class of officers are placed under such enormous bonds in proportion to their obligations as they. And from personal knowledge I unhesitatingly assert that no other public servants in the American Republic do the amount of incessant drudgery and hard work that absolutely must be done by an Indian Agent and his assistants."

Mr. McCain criticizes, or rather satirizes the Mohunk platform somewhat sharply, as a set of "beautiful theories," and declares that most of the ends proposed are already in rapid process of accomplishment. Superintendent Oberly, he says, "entirely underrates the school work now in pro-

gress on nearly all Western reservations. "We will gladly welcome our honorable Superintendent to a visit at Siletz, and will promise to show him a degree of proficiency in studies and industrial training among the seventy odd pupils of our school that may be something of a revelation to him." He also notices one of those careless newspaper statements which are among the standing grievances of western workers. "The writer of it informs the public that 'the schools of Carlisle and Hampton are the first practical undertakings for the proper treatment of the Indians.' We are to infer that this newspaper writer is ignorant of the fact that for the past twenty years successful schools have been conducted on many reservations, and for the past fifteen years on nearly all. In these reservation schools, the aim has constantly been to teach the rudiments of an English education, and to give the greatest possible amount of industrial instruction."

"And now in conclusion we wish to say, for the benefit of all concerned, that educating the Indian youth and getting Indian families located upon lands in severalty is the constant study and aim of all good Indian Agents and this too under the reservation system. Nothing else practical has ever been suggested and the wisest course to pursue now is to push the work along these lines."

#### The White Indian.

Our widely known Agent at Pine Ridge, Dr. V. T. McGillicuddy, has several times made enemies for himself by expelling notorious "squaw men" from the reservation. In reply to a question concerning the legal rights of these men on an Indian reservation, he gives the following interesting points.

"The policy pursued by me in dealing with the white men who refer to and which policy the Indian office has sustained me in, has been to recognize their only right in the Indian country as one of sufferance; that is, we suffer them to remain as long as we have no reason for removing them. The statute reads: 'The Superintendent of Indian Affairs, and the Indian Agents and sub-agents, shall have authority to remove from the Indian country all persons found there in contrary to law.' Now although these white men are not exactly here contrary to law, neither are they here by authority of law."

While among the five so-called civilized tribes in the Indian Territory the fact that a white man marries an Indian woman makes him a member of the tribe, there is no provision or treaty incorporating such white men in the Sioux tribe. Our policy as a nation has ostensibly been to convert Indians into white men. Now in any way to recognize these white men as having rights would be retrograde policy, and be practically converting white men into Indians."

This is in striking confirmation of the statement of Dr. Cundall, that "the white man, in defense of Indian ideas of communal interest and Indian questions as related to the whites, becomes more intensely an Indian than the Indians themselves. I think the fiercest defenders of the tribal system are white men who by marriage have become Indian citizens and are 'making money out of it.' \* \* \* The process of dilution of Indian blood goes on till it becomes very thin, while Indian habits and Indian characteristics still remain." Dr. McGillicuddy goes on to tell us that "the Sioux agreement of 1876, which reinforces the statute of 1868, goes further than the statute even, article 7 of same reading: 'And no person other than an Indian of full blood, whose fitness, morally or otherwise, is not, in the opinion of the Commissioner of Indian Affairs, conducive to the

welfare of said Indians, shall receive any benefit from this agreement or former treaties, and may be expelled from the reservation."

Under the above, white men, half-breeds, etc., can be and are removed, and it is not necessary that they should be guilty of any overt act, for mere laziness or general worthlessness may be considered as making them not 'conducive to the welfare of the Indians' by bad example."

A kindred question of practical interest is the advisability of educating the children of such white men, whose fathers are comparatively wealthy, at Government expense. There are doubtless many such in the schools, and the alternative would probably be to let them grow up in ignorance, unless their fathers can in some way be compelled to provide for their education.

#### Law on the Reservation.

Two interesting "test cases" under the new criminal law are brought up for trial before the territorial grand jury at Deadwood, S. D. Last October at Pine Ridge Agency, Little Moon attempted to kill Cut Meat, a half passing through his blanket and killing a horse. The assailant was arrested and put in the county jail. In December a deliberate murder occurred at the same Agency. Kills-the-Ene, a half-breed, shot and instantly killed One-Iron Horn in a quarrel at the beef issue. The arrest in this instance was accomplished with some difficulty, as the murderer belonged to the non-progressive or "Red Cloud faction," who contended that the affair could not come under the jurisdiction of the civil authorities. The man is now, however, in irons at the Agency, and it is to be hoped that Dr. McGillicuddy's courageous and proper assumption of authority will be satisfactorily upheld by the jury.

A blunder in the phraseology of the statute, which was "rail-roaded through" as Section 9 of the last Indian Appropriation Bill, throws the expense of procedure in cases of Indian offenses upon the white counties of the district. This was doubtless unintentional and is manifestly unjust. Its practical operation would be and in fact has been in another instance, to stay all prosecution of Indian offenses against Indians on Indian territory. Dr. McGillicuddy's promptness and efficiency in dealing with these two cases are to be commended, and we trust that effective measures may yet be taken for the arrest and trial of Handsome Elk, the murderer at Lower Brule. The moral effect upon the Indians of his liberty and defiant spirit is exceedingly bad.

As for the carelessly prepared statute, which throws what are properly U. S. cases upon the reluctant territorial court, it will no doubt be amended by Congress at the present session. It does not appear unreasonable that an appropriation should also be made to cover the expenses already incurred by the county in the trial of these cases.

#### Agent Gasmann's Removal.

The removal of Agent Gasmann is the cause for great jubilation upon the part of many of the newspapers published in towns near the reservation. One esteemed contemporary hails with delight the near approach of the day when all the Indians upon the Sioux Reservation will be removed to the Indian Territory—a new and rational policy, in the judgment of the writer, the execution of which will be greatly facilitated by the dismissal of such men as Gasmann.

On the other hand, in the deposition of so excellent an agent as Mr. Gasmann has proved himself to be, the friends of the Indian have received a severe shock to their confidence in the wisdom of the Indian Bureau.

#### Civil Service Rules in the Indian Service.

No hope need be entertained for stability and efficiency in the administration of Indian affairs until the Indian Service be freed from the influence of partisan politics and the principles of a reformed Civil Service be extended over the Indian Service.

"The governor of Dakota, in his reports, states that this order has been almost universally obeyed, and that these lands are practically free from settlers. The exceptions, if any exist, are cases in which a removal would cause suffering. Many of the settlers, I am told, went there in good faith under what they supposed was proper authority." From the report of the Secretary of the Interior referring to the old Winnebago and Crow Creek Indian Reservations in Dakota Territory. For the year ending June 30, 1885.

Prof. Painter upon inquiring at the Interior Department, learned that Agent Gasmann had been removed for failure to evict settlers in obedience to orders from the Department.

The case of Dr. W. V. Coffin, late Superintendent of the Chemawa, or Forest Grove Indian Training School, Oregon, is an illustration of the appointments upon which some dismissals and appointments are apparently being made in the Indian Service.

During the past autumn Dr. Coffin, for two years connected with the Forest Grove School, one year of which was in the capacity of Superintendent, was relieved by the Department. No reasons were furnished him as cause for his removal, and we can only infer that it was for the simple and to the minds of some, very sound purpose of making room for a gentleman of the opposite political faith. Dr. Coffin has taken no part in politics, other than to cast his vote as his conscience dictated. He is personally and most favorably known to us as a young man 28 years of age—full of physical and mental vigor. He is an earnest Christian and a member of the Society of Friends. The highest testimony is given to his character and capacity by Miss Susan Longstreth, Phila.; Joseph Moore, a distinguished Friend, formerly President of Earlham College, Richmond, Indiana, and Dr. James E. Rhoads, President of Bryn Mawr College and President of the Indian Rights Association. Dr. Coffin brings with him from Salem, Oregon, the following letter bearing the signatures of prominent gentlemen of the State. It is of sufficient importance to be given entire.

DR. M. V. COFFIN,  
Supt. Chemawa Indian Training School.  
On the eve of your departure for the East, and your retirement from the Superintendency of the U. S. Indian Training School located near Salem, we who have with others, taken a deep interest in the solution of the Indian problem, desire to bear testimony to your faithful work while in charge of said school. Familiar as we are with every detail of its management, and with the character of its work, it gives us great pleasure to say that in our judgment your work has been successful in the true sense of the word. You will leave behind you a lasting influence for good, and the direction which you have given the school will hereafter be found to be the only one which will stand the test of trial. Whenever you go you will carry with you the regard of all sincere workers in behalf of Indian civilization, and it is our hope that your services may not be lost to the cause, but that soon again you may be called to take up a similar work to that which to-day you relinquish.

With a deep and lasting appreciation of your work, we beg to subscribe ourselves, not only the friends of Indian education, but as well of yourself.

Z. F. MOODY, Governor.  
R. P. ENCHART, Secretary of State.  
EDWARD HIRSH, Treasurer.  
A. F. WHEELER.  
FRANK E. HODGKIN, Assistant Sec'y of State.  
R. W. HILL, Supt. Ind. Education under Pres'n in Foreign Board of Missions.  
CHARLES B. MOORE, Private Sec'y to Gov. Moody.  
SQUIRE FARRER.  
E. J. THOMPSON, Pastor Presbyterian Church.  
E. B. McELROY, Supt. Public Instruction, Salem, Oregon, Oct. 28th, 1885.

H. W.

## Incidents of Indian Life at Hampton.

A Seasonable Lesson. "What is the thermometer made of?" "Made of glass." "What is in the glass?" "Water." "No, not water—it must be something that won't freeze." "Hot water."

"The boys in the Wigwam all like to sing very much," writes one of them. "Some boys sing bass, and some sing tenor, and some sing alto, but no boy sing soprano—too high for him!"

A handsome illustrated Family Bible, with full concordance, is the gift of a friend to the Indian Sunday School. The presentation was made in the Chapel at Winona, at Prayer-meeting on New Year's Eve.

About two weeks before Christmas a box of exceedingly pretty outline work, with the materials for completing it, was sent as a Christmas gift from the ladies of Andover Academy to the Fancy-Work Class. Every girl finished a piece of work for a present to some teacher or friend before doing anything for herself.

The girls and boys spent last Saturday evening very pleasantly, cutting and pasting pictures to adorn the walls of the bare new Reading Room in some Western School, in whose behalf an appeal had been made to the "Lend-a-Hand Club."

Incidents of Indian Boys' Study-Hour. "How do you spell pay grub?" "What?" "How do you spell pay grub?" "I don't understand." Pupil patiently reiterates, and teacher is in despair. At last pupil drags a brown woven glove from the depths of his pocket. "How," with reproachful emphasis, "do you spell PAY GRUB?" Two minutes later. "What does squirrel mean?" "A squirrel," persuasively, "is a small animal. Didn't you ever see one?" "Hugh"—indignantly,—"told me that when you squeeze anything very hard, that is squirrel!" Query—did he mean squirrel?

The following communication comes to us with the request—"Put this in Southern Workman to be printed. I want you to send me one when it is done."

My dear friends—I am going write a few lines in this. I am in Philadelphia. I am going tell what some boys do on Christmas day. I take some boys in city to see a show. Some boy want to buy something and he give only one cent to the man and the man told him to get out, that was a "white boy his name was Charlie S— and one Mohawk boy name John S— afterward he laugh at himself for he thought he could buy anything for one cent, that is all.

Yours,  
CHARLIE MATTHEWS.

## Life in the Wigwam.

The day is stormy, and a friend of the Indians, thinking that the charms of poetry may make the boys in the Wigwam cease to regret the rain and their consequent confinement, appears in their parlor and offers to read "Hiawatha" to them.

The reading proceeds:

Should you ask where Nawadaha  
Found these songs, so wild and wayward,  
I should answer I should tell you,

Chatowak, the plover, sang them,  
Makig, the loon, the wild goose, Wawa,  
The blue heron, the Shush-shuh-gah,  
And the grouse, the mukkodasi!

One auditor strides over the benches  
and disappears.

Ye who love a nation's legends,  
Love the ballads of a people  
That like voices from afar off  
Call to us to pause and listen,

Listen to this Indian legend,  
To this song of Hiawatha,

More retreating backs have been turned to the reader, and when the introduction is finished so also, almost, is the audience.

Is their failure to "pause and listen" a proof that the degenerate youth do not "love a nation's legends?"

Can it be a fact that the charms of arithmetic and grammar have made them deaf to those of the "ballads of a people?"

Is the statement confirmed that the Red juvenile takes no interest in any story that is not true?

Or must the humiliating fact be faced, that Indian pronounced with a New York accent is more than the sensitive Indian tympanum can endure.

One thing at least is certain, namely, that a Wigwam audience leaves no one in doubt as to its appetite for the literary pabulum offered to it, and that whatever else he may lack, the Indian is not deficient in frankness. J. V. V. S.

## Our Indian Christmas.

Christmas began, of course, the day before, if not earlier. Delightful bundles and secrets, journeyings and consultations, crowded the hours with transparent mystery. That was a pleasant scene of the early afternoon, when the great hall in Winona was spiced with the odor of broken pine and cedar, and the younger and more daring Indian maidens were mounted on chairs and tables and improvised step ladders of all descriptions, arranging these and the red-berried holly with skillful fingers. Great was the stir of voices, contrasted with the silence in which their big brothers from the Wigwam, two days before, despoiled the woods of these decorations, and rowed home a green and sylvan boat-load from the grove a mile away up the creek.

The Christmas festivities proper were ushered in with the evening's entertainment, when the tricks of a conjurer surprised the "stoical" red man into remarkable demonstrations of applause, and led the boys for a week afterward to swallow eggs and manufacture roses to their hearts content. Very, very sleepy were the thirteen small boys who inhabit Division A. of the Wigwam, when at ten o'clock they hastily pinned their stockings to the mantel-piece, and departed, blissfully sucking their sticks of candy. It was almost midnight before the stockings were all filled and the conspirators bade each other good-night, casting admiring glances at their work and promising themselves to be up betimes in the morning. The editor, for one, was a stir as early as could reasonably have been expected, but alas! all the glory had departed, and there was only to be seen an occasional jubilant young Indian, blowing a tin horn, eating an orange, or playing ball.

The girls, meantime, were happy over their gifts in Winona, and the minds of the older ones were doubtless much occupied with the new dresses which they were to wear to the Christmas dinner! The tables were set for the usual "club dinner" of the Indians in the cheerful dining room connected with the Diet Kitchen, and with their fresh linen and tasteful decorations of plants, made a pretty picture. The traditional plenty spread the festive board, and still better than their hearty enjoyment of the good things provided was the perfect decorum observed, and

in many instances the really delightful good-breeding of the girls and boys. The waiters performed their unusual and onerous parts with grace and good humor, and after the dessert had been lingered over as long as at some more patrician tables, the prettiest girls and the most gallant youths cleared the boards and washed up the dishes quite as if it were an accepted part of the pleasure.

The Christmas Service in the Chapel at five o'clock was largely a service of song and very deeply enjoyable, with its rich Carols so fully rendered. In the evening the young men and maidens met again under the holly boughs in Winona, and played the usual games with more than usual spirit and enjoyment. At an early moment in the festivities, the editor was seized by one of the older girls, and borne away to her quiet room upstairs, where in a corner stood the prettiest miniature Christmas tree, hung full of little gifts and decorations, arranged by some of the older ones as a surprise for the smallest girls. The prizes for the best marching sent down by Miss Eustis, were unusually attractive.

The Doctor's report must not be omitted. Not an Indian sick on Christmas Day! The half of the pleasant doings has not been told, but it is safe to say that upon the whole the time was a happy one.

## "All Along the Line."

These reports of the Christmas season and other work on missionary ground in Dakota are gleaned from private letters not written for publication.

At St. John's School, Cheyenne River. Our Christmas festivities passed off charmingly. For weeks the girls were full of gifts and secrets and joy reigned supreme. To some the days went with lagging steps; to others anticipation was enough to make them enjoy every moment. I enclose a little programme of our entertainment. The girls made no failures and I think did themselves credit. H. S. K. (The programme includes the Carol, "Holy Night," a cantata, dialogue, reading and the Tree.)

At Hope School, Springfield. On Christmas day I was working hard all the day. I built a little house in the school-room and covered it up with cotton so it looked like a snow house, and on top I made a chimney and on that I nailed a piece of board written "North Pole." Then we sang the hymns, and the outside and we had Santa Claus inside and he gave out the presents. So we had a nice time. J. W. B.

At Black Pipe Creek, Rosebud. I would have been pleased for you to have been with me this Christmas week. I gave myself up to the children entirely. Mr. C. made a handsome donation to the Christmas tree, which now stands in the school-room, waiting to be disrobed of its ornaments all the toys, etc., having been given out Christmas night. My friends from Washington sent me a large box and I reserved all the candies and nuts for to-night. Jan 1st. The school-room was quite crowded, all the children being here. Everyone, (fifty two in number) had a large package of candy and nuts. Thus end the Christmas festivities, and I feel quite festive myself that they are over! L. B. A.

At Oak Creek, Rosebud. We had a Christmas tree in the Chapel Christmas Eve. It was a very pretty tree after everything had been on. A good many hung on presents for each other—that is something they have never done before. They seemed to enjoy it as well as white people! They gave me several nice presents. My husband and the Indian men trimmed the church all by themselves. They made crosses and wreaths and they took rope and tied evergreens on and hung that in loops up in the chancel so that the church looks very beautiful. Christmas Day after service we and all the other church members were invited over to an Indian's house to dinner. We had a splendid dinner and everything went off very nicely. R. F. H.

At Standing Rock, Sitting Bull's Camp. Christmas is coming near, and I suppose everybody be happy again, for I remember

how we used to be so glad and happy when we received the beautiful presents in the morning on our beds in Hampton. But my young children I don't have much to give them. They will be asking "What is Christmas Day?" I told them that it is the birthday of our Lord Jesus Christ, who have died for the world, and they know now that it is the birthday of our Lord, and they said they would always try to remember when they say *Angela Wakantanka* (Great Holy Day).

I am well all the time now and have grown so fat too, and I hope this letter will find you the same. But only sometimes I'll be lonesome after my parents, for I don't see them all the time, but once in two weeks they come up to get their rations and back again. But when I begin my work I remember that I am doing something, then I felt glad again, for the poor little ones that are away back from the lightness of the world. I'm helping them all I can with the good lessons that I have learned from the kind white people that have taught me, and above all how to love Jesus and serve Him. In this world that we may be happy with Him forever in our beautiful home in Heaven. R. C. B. (Hampton Student.)

At Crow Creek Agency. The Hampton children who returned last Summer had some presents from Miss W. of Pittsfield. They were very happy. We had a very nice Tree for the school children. We shall be very sorry to leave our school here. It is just getting into the nice working order, and we begin to see some of the fruits of our labor already. Some of the girls are so nice and appreciative. E. C. G.

At Pine Ridge Agency. I have now a very large Sunday school at the Agency. When I first took charge there were about 100 in the school. I have now in all 164. There is an increase every Sunday. About a hundred of these are from the boarding school. I have heard that about a hundred more will be taken into the boarding school in January. So you can readily see the increasing importance of this Sunday school work at the Agency. I have started the lesson of taking up the children's offerings as an integral part of our worship, and with most encouraging results, as the following will tell. Dec. 13th, \$2.60; the 20th, \$2.84; and last Sunday \$1.88.

The church is beautifully decorated, almost entirely the work of the Dakota's—both sexes. They manfully stood by until the work was finished, the careful sweeping and the washing of the entire church floor being the last. Then I had made some beautiful white hangings, altar cloth, etc., which are in keeping with the festive look of the rest of the church. The Christmas tree was a grand success. There were present between four and five hundred souls. Last Monday Mr. and Mrs. R. and I started on a Christmas 'trek' tour, and as last we have landed here, (Medicine Root Creek). But our stock of presents is much diminished—hence there will be no tree here just now. The work looks encouraging along the line. C. S. C.

STATUE OF "LIBERTY ENLIGHTENING THE WORLD."

## More Money Needed.

The Committee in charge of the construction of the pedestal and the erection of the Statue, in order to raise funds, for its completion, have prepared from model furnished by the artist, a perfect facsimile miniature statuette, which they are distributing to members throughout the United States at the following prices:

No. 1. Platinoid, 22 inches in height, the statue bronzed; pedestal, nickel-silvered, at One Dollar each, in case metal, twelve inches high, beautifully bronzed and nickel-silvered, at Five Dollars each, delivered.  
No. 2. Statuette, twelve inches high, nicely chased, statue bronzed, pedestal, nickel-silvered, at One Dollar each, delivered.  
No. 3. Statuette, six inches high, nicely chased, statue bronzed, pedestal, nickel-silvered, at Fifty Cents each, delivered.  
Much time and money have been spent in perfecting the statuette, and they are much improved over the first sent out. The Committee have received from subscribers more than \$20,000. The New York World Fund of \$20,000 for the pedestal and the erection of the Statue, is not needed to pay for the iron fastenings and the erection of the Statue. Liberal subscriptions for the miniature statuette will produce the desired amount. Address, with remittance, RICHARD BUTLER, Secretary, American Committee of the Statue of Liberty, 33 Marcor Street, New York.

### Among the Dakotas.

I am sitting in a luxurious parlor in the city of St. Paul, trying to look through the haze on this aesthetic heart to the day fifty years ago, when the missionary Williamson arrived with wife and children to the post of Snelling, my host—just been telephoning Fort Snelling—then pushed on two hundred miles further West in search of the lost sheep in the wilderness; to the day when the last bush of holly was reached, and the missionaries able to find no more under prairie snowfalls, and cheered by no prophetic murmur of Minneapolis mills that lead the world with prairie harvests; to the later day when twenty-seven years of deny-feeding and neglect had sprung the prairie into a madly scattered and savage violence and frontier war.

It is only twenty-three years since the horrors of that Minnesota Indian outbreak, but the flood of events has buried it deep as the flood of years. The flood of those days is still a flood of years. What has become of the scattered fold of the wilderness?

some light rose, even in that darkness, to the long suffering missionaries. The "good of preaching to the Indians" was apparent when every Christian Indian in the reservation remained loyal to the Government, many for their own lives to save the "missionaries and other settlers. And what could equal that scene in the Davenport prison, when, as twenty-eight years ago, if the white man's law, the awfulness of the thought of showing them the way to the white man's God. "To live and preach in these years," he says, "was worth a life time." The scattered flock of sixty Christians grew to six hundred, half of them gathered in the mission church of St. Ignace and Snelling. Their long captivity ended, the prisoners, with their wives and children, who had been kept at Cook Creek with others who had separated themselves from the missionaries but suffered many of its consequences, were removed to the new Santee Reservation set apart for them on the west bank of the Missouri. Some of the most progressive were suffered to push on and encouraged by the Government to go farther in the white man's road and take up homesteads off the reservation, near Flanndreau, Moody county, Dakota. The camp of the scouts became the nucleus of the mission and the Government's in that Territory, just over the Minnesota line, at Lake Traverse. Many of the uncaptured hostiles had fled into Canada, where they still remain. Others, who were more or less doubtful, were corralled on the "Dakota reservation," of whom George I have already written.

Santee, Plandreau and Sisseton, the homes of the prisoners, the homesteaders and the scouts, have been among the most interesting points of my summer's journey; not with special reference to Hampton, which has had few students from them, but for their various relations with the past and future of the Indian problem.

SANTEE.

At Santa, having but part of a day and obliged to choose between a drive on the reservation and a visit to the mission school, I chose, of course, the latter. For here is Rcv. Alfred Riggs, son of the venerable Dr. Stephen Riggs, Dr. Riggs is a coadjutor. In the early days of the work now carried on by their children. And here is the largest and most advanced Western mission school of the Congregational Church, perhaps of any. Some of the nearest Indian farms I passed on my way to the school, and some of their owners I met at the school. At Santa, Dr. Riggs had much interesting information on the condition of things on the reservation.

Its 800 Indians all wear citizen's dress and live like white people, without annuities. Eight years ago they were gradually cut off with no consequent suffering. All are farming and holding land in severality under the treaty of 1854. Each family has from 40 to 60 acres of land, and one acre is given to every minor and single person over twenty-one, requiring a residence of three years and improvement of the land before a patent is given to the allotment. If an Indian gives up his claim to his allotment, it reverts to the Government as reservation land, and he is given no money. There is no inducement to white men, as there is off the reservation, to try to persuade him to relinquish his land. The rest of the reservation was thrown open to settlers last May and many came in. Mr. Ruggs tells me that the relations of the Indians to the whites are the best they have been on the whole most amiable, and, that except some grumbling at the "babylands," as they call the generous portions of the reservation, the Indians conceded the Indians right to their share of the lands, which are

none too good, in great part bluff land, suitable only for grazing, with some desirable farm land along the streams. The fgdians have comfortable frame or log houses, and generally a good supply of cattle and agricultural implements. It is hard for some to shake off the old habit of dependence, but they are, on the whole, doing very well. Mr. Riggs reports a present membership of 175 in the two churches of his mission. He has a very good school, and is heartily loved. Some of the old people find it hard to comprehend any change in the old order. One good old deacon, he told me, a faithful member of his father's flock, in the olden time, was so shocked by the new order, and the innovation of taking up a penny collection every Sunday instead of lumping it every quarter. If the old way was right, the new way was wrong. He said that the new principle is a very peculiar Indian brethren, unfortunately.

The Episcopal mission school, burned out a year ago, will be removed to Pine Ridge agency, I understand. The church, too, has been burned out, and it is probable that the boarding school, which I did not see, reported a fuller attendance than ever last year, with eighty-four pupils. Mr. Riggs's school, however, was very close to being destroyed thoroughly as was possible in vacation, is most interesting one. It is on a generous scale, with ten or a dozen commodious buildings, all new, and well equipped. There are twenty strong men and little boys; "Dakota Hall" for the older girls and the "Bird's Nest," full of the music of little ones. A church, a school room, a dining hall, a kitchen, etc., are included.

Riggs' house add to the group, and a fine large three-story building for dining hall, school rooms and dormitories now going up will complete it. There are also two small shops on the farm, and in the agency brick yard, the boys work, learning no special trade, but a little of each for a general purpose. They have a blacksmith shop from the forge and shoe shops, however, "won great praise;" at the Madison educational office. The girls have sewing and housework classes, and are taught by trained native missionaries. The instruction here is partly in the Sioux Language, using the text books old Dr. Riggs was so at such pains to translate, but increasing the number of English words. This school, like other Western ones, is feeling the life of the Eastern wave of public interest in Government assistance for the last few years. Prompted by this aid, the American Missionary Association put more than that amount into permanent improvements, besides the present year's running expenses. Last year they kept the school running for ten months, with an average of 99 and a roll of 144. I had the pleasure of meeting a number of the devoted teachers, some of whom were women, who took short vacation to take charge of the 60 who did not return to their homes, some of which in Montana and Manitoba were a far longer journey from St. Ignace than that from Hampton.

## FRANDBILL HOMESTEADERS

The Flaudreau experiment is instructive both in its success and failure, for it has families of both. Of the ninety-three families who made this bold launch thirteen years ago sixty-one families still remain. This is a far larger proportion than would be expected. In the last year they have cultivated 120 acres, an average of about twenty acres apiece. They are recognized citizens, pay taxes and vote. Their native pastor, however, has been replaced by a minister of the Central Mission at Santee, gave me a rather dark view of the outlook. It is at least interesting as the criticism of one of their own tribe. He thinks that the natives are going backward. Most of them hold their own patents, and can sell their land, and there is great pressure on them to do so. They sell for a song, and soon sing it out. They sell their land, and go unpaid year after year till their land is taken and sold. They are moving off in this way, he believes, at the rate of two or three families a year. He says that there, for nine years, had 140 communicants to begin with, and now has but 95, the rest having died or moved to Santee. There is a Government day school at Santee, its average attendance is twenty-five. There are about a hundred children of school age. The farthest families live ten miles in each direction from the school. They would be admitted to the public schools but they are too distant. Those who have left have gone, some to Santee and some into Minnesota. The latter run a better life, he thinks. They are not living in tents and begging. About twenty families, he thinks, are doing very well and will be sure to stay. They are industrious and saving. Their way of life is better than that of the whites generally, more helpful nor the reverse. There is a good deal of consumption among them, not

much otherwise. He may take a somewhat too dark view of the prospect, and if only twenty families do hold out the proportion will not fall far behind that of the successful ones. I have no objection to the consideration that a number of those already gone are back at Santee, living on allotted lands. They have never had a resident agent to guard or guide them, and have been forty miles away. I do not think they have had a white resident pastor. There is an Episcopal mission station at the town of Hampton, but the only minister who has been here comes up from Sioux Falls once a month. Ignorance, improvidence and blunders were to be expected, and might perhaps have been avoided by a more judicious selection of the chaplain in quest of recruits for Hampton. I had a pleasant visit there and a drive among the scattered farms. We found a nice girl for the Hampton school, and a fine lot of wheat, "after harvest," in which he was hard at work. Agent Lightner of Santee—a good agent, Mr. Riggs says—takes a hopeful view of the case and thinks that the Santee people are becoming more honest and good citizens. I am told that since they have lived there, not one is ever been accused of theft. It will be greatly for their interest to remain here, and I hope his view of their prospects is correct.

### SISSETON RESERVATION

I was fortunate in reaching Sisseton at the meeting of the annual conference of Dakota missions and native churches. Presbyterian and Congregational; fortunate again in finding myself in the company of Rev. Dr. Roberts, Secretary of the Presbyterian Board of Home Missions—finding in him a college friend of a dear brother—and Rev. H. F. Johnson, of the same board, and a Christian Association of Dakota and Minnesota.

We were not going to the agency, but to the little mission station six miles beyond it, where the conference was to be held. It was a fine place, on Brown's Valley soon after sunrise. How can I describe the beauty of that drive over the prairie, through the morning whose exquisite freshness seemed to create a new world for me? Did I dare? Yet so useful was our first glimpse of the little mission church on its mount of Ascension—"Iyakaaptapi." "The Place of Going Up," as the Indians properly call it, "Coteaux des Prairies" on their annual hunts.—I remember it rather as I saw it two days later. The bell was ringing for the morning meeting as we drove up, and the door opened for Rev. John P. Williamson and Rev. Thomas Riggs and his wife, and within were Rev. Alfred L. Riggs and Rev. Charles Hall of Berthoud Mission, and Rev. J. W. Rogers, Eastman, and Mr. and Mrs. Rogers, all of whom I had pleasantly met in my summer wanderings. With Mr. and Mrs. Riggs, son-in-law and daughter of the good old pastor, were also Mr. and Mrs. Morris, his children, Miss Collins of the Dane School, and other good missionaries and friends of missions. I was glad to make acquaintance. The church was thronged with an Indian and a few white people, and with any white church need desire.

It represented nearly every one of the fourteen churches of the conference, from Sisseton to Berthold and Devil's Lake, and had had a hard day's work in bringing their own tents and provisions.

The morning meeting was of special interest to Mr. Williams, its subject being the duties of the *Koska-Ookadachike* (the lefts or right) have the Italian sound), or Young Christian Asian Indian, one of the six mission churches on the Sisseton Reservation, came across a constitution of the Dakota Y. M. C. A., and partly understood it. He got an interpretation, in translation, and found it very similar society. It has spread into eleven of the fourteen churches of the conference, and many interesting reports were made by its various delegations. The good points were not to be "Tied up to laziness," Black Owl modestly asked for advice, saying: "I am not wise. Still I am as a child, who goes round looking for things, crying."

"An infant crying in the night,  
An infant crying for the light,  
And with no language but a cry."

Mr. Williams gave the delegates a description of the white associations. He had come intending to suggest their affiliation with these, and attended their business meeting intending to propose it, when, to his surprise and pleasure, a spontaneous motion was made on the floor to request to be taken into the Editorial Association. He has carried back their petition and there is, perhaps by this time the first Indian branch of the Y. M. C. A. of Dakota.

With many others I found hospitable entertainment at the house of the Indian pastor of the Ascension Church, Rev. John B.

Renville, who, with his American wife, has done excellent work for many years among his people. In their little boarding school they are teaching now some of the children of their earliest pupils, the parents counted among the most worthy in the Indian community. Among them is a "Horace Greeley," who seems to know considerable about farming. Spending the second night at the agency, cordially received by the ladies of the Government School, I drove out next morning with Mr. Morris and Mrs. Alfred Riggs to the culminating interest of the conference, the communion service at Iyakaptapi.

wish that words could point for you the picture that we paused to take in on the brow of the bluff opposite that Mount of Ascension. The view was the gentle sweep of embosoming hills; the picturesque tepees of the camp on the slopes below us; the green mount beyond, crowned with the little white dome of the chapel; the wide level of the prairie through the morning air; the congregation too large to find room within, gathered on the grass outside; the Sabbath morning stillness that rested over all.

We hastened to join the assembly. The simple service was most impressive; the scene itself with its associations still more so. Most of the speaking was done in English, but we were very fortunate in having an interpreter beside me. The spirit needed no interpretation. It was impossible not to join in the hymns whose strange words were born in the heart, and whose familiar phrases strangely sweet.

The excellent sermon was preached by one of the fugitives who escaped into Canada at the time of the outbreak. "The word must be preached to the heathen," he said, "where it cannot be rubbed out, or though much water is used, be washed away. The communion service was conducted by one of the Davenport prisoners, a Scotchman, who carried speech with them. "The bread is planted, grown, threshed, ground, mixed, baked—all this is long and difficult—then it is eaten, and the man is saved." "But," he said, "my soul cannot live without Christ. There are men who are standing, but their souls are dead." One of those who distributed the bread was another Davenport man. Many more were in the assembly, or represented by their families.

For long years they have lived penitent, industrious, Christian lives. Their pastor, Mr. Williamson, their minister, Mr. Macdonald, and their people, when their voice broke as he recalled the days of trouble through which they had passed together twenty-five years ago, and the opening of prison doors for every man and woman, and child, and beast, and bird, and wind, which passeth understanding.

This was, of course, the climax of the conference, but it had other points of interest, especially a pleasant English service, with an eloquent discourse by Dr. Roberts on the progress of Christianity. After it, I took once more the ten-mile drive to the agency, and was most hospitably entertained for the remaining day of my stay at the Government School, and by the courteous Col. Thompson—one more good Indian Agent—and his wife.

and the Germantown School was waiting the arrival of its new Superintendent, who came the day I left, a scholarly-looking gentleman from Kentucky. I was glad to make the acquaintance of the refined, intelligent, devoted women who are its teachers. I say that the Ag. Bldg. is in his power to make it more interesting. The chief building is commodious and in good repair, with separate wings for boys and girls. The average attendance through last year was 91, with 137 on the roll. The building for tailor and harness shops, with rooms for the making of the elder boys' suits, is to be replaced with a new one. The Carpenter and blacksmith shops are buildings.

Col. Thompson on the condition and prospects of his Indians; and he kindly let me copy from his report, which contains some very interesting statistics. He reports steady improvement in all directions—in farming, education and civilization generally. There were in school, 215 were in attendance, with nine more at Santee and six in white families of the reservation. The crops were good. Twenty-five new allotments of land in several places have been made, and eight patents issued during the year. As an example of the progress of the reservation, in this respect, but all the young men are trying to fulfill the requirements of the treaty and get patents for land as far as it goes, especially against drunkenness. They have some cattle and sheep and buy some beef; but the fish-eating people—Sisseton means "fish-bone village"—don't like the trouble of herding.

There is a very interesting mission church on the reservation, and one at the

**Brown Earth Homestead Settlement:** five have native pastors, the others no resident ministers. I greatly regretted that the sudden cutting short of my visit to make a railroad connection prevented me from seeing the Episcopal mission, now going "Good Will" Mission School, taught by Mr. and Mrs. Morris, and built by their venerable father, Dr. Riggs, and now under the auspices of the Presbyterian Home Mission Board, with some Government assistance. Both are mentioned in Colonel Thompson's report as doing excellent work.

The facts about the Brown Earth Homestead are quite interesting and suggestive. About forty families went off nine years ago, to take up homesteads eight miles beyond the reservation in Grant county, Dakota. There are now twenty-eight. The twelve have dropped back on to the reservation, and the rest are dropping back. "The trouble with them is," as Colonel Thompson puts it epigrammatically, that "too much justice has been done them." That is, as according to the act of March 3, 1875, an Indian who takes a homestead does not thereby forfeit any of his tribal rights to allotments, annuity, etc., and the right of return there has been too much temptation to give up the effort when difficulties occurred. The bridges were not burned behind them. As a matter of fact, Col. Thompson says, whereas the homesteaders were, as one might expect, the brightest and most progressive of the tribe at the time they left, the best on the reservation are now fully up to or beyond, the best of the Brown Earths, and many of the latter have fallen behind. A Government school was established for them, but dwindled till it had to be discontinued. "Another fact" is that they have been more given up by the reservation than any other. As Col. Thompson remarks, that "the reservation system is not altogether vicious, at least." In the last year, however, they have been greatly improving in these respects, under the influence of their native pastor, Rev. Daniel Renville, who has indeed been with them all the time, but is "just beginning to get hold of them." Perhaps the fact was that they were not quite ready for the move when they took it, and it may have been well for some of them that they had the shelter of the reservation to fall back to. Brown Earth and Flandreau and Peoria Bottom seem some argument, at least, against the immediate withdrawal of guardianship from all the Indians, to hurl them with all the rights and responsibilities of citizenship.

On the other hand, Sisseton Indians on the reservation are now asking for recognition as a civilized tribe, and Col. Thompson is strongly in favor of it. Last December they petitioned Congress to put them on the basis of the civilized "Five Nations" of Indian Territory. Their request was not acted upon in the short session, but it is probable he renewed next winter. They will probably not get the independent sovereignty of the Five Nations, but the main thing they desire is to be dealt with on the same basis of "money down" for their lands instead of annuities. Col. Thompson thinks that if their petition is granted it will lead to their selling their surplus lands and the opening of the reservation to white settlers. He thinks that if the money is paid into their own hands they will doubtless misuse some of it, but that "the only way to teach them independence is to make them independent." It would seem a pity not to secure enough of the money for a school fund and make education compulsory till they have acquired more of an instinct for it than the Brown Earth Homesteaders seem to have. Then, with self-supporting peaceable Indian farmers and Indian Christians living on their land, in severity, with no "bridges" behind them, the question may well become "And why not Indian citizens?"

HELEN W. LUDLOW.

In Boston Journal.

#### Indian Farms and Indian Homes.

*Hardships of a Missionary—Discouragements of the people—The St. Stephen's Chapel—A Noble Ranch—Crossing the Missouri River—A Sick Child.*

Six years ago a log house on the bluffs overlooking the Missouri, among camps of wild "blanket Indians," a beginning made by two people who seemed to have hardship and danger—a patient man and an enthusiastic woman. To-day a pretty little frame chapel and mission house, with its rustic fence and neatly planned garden, surrounded by thrifty farms and cheerful homes. Such is the growth of St. Stephen's mission. More than one hundred families have been induced to leave the sheltered creek bottoms, where their teepees were built, to take up claims of good arable land, to build good log houses, establish comfortable homes and live peaceable, laborious, Christian lives. This is the obvious

practical result of six years of hard pioneer missionary labor, in the face of discouragements inevitable to the country and to the system, and of personal adventure and trial which sound, in the dramatic telling, like some wild and frontier romance. A wind so high that it sets one involuntarily spinning across the icebound Missouri; the fording of rivers when one's wet garments freeze stiff in an instant; a walk of forty miles through deep snow to reach a wife who is dangerously ill and alone—these may ripen into exciting reminiscences but can scarcely be romantic in the actual living. An interval of six weeks alone in an Indian camp, separated from one's books, and reduced, in the dearth of intellectual resource, to reading and rereading patent-medicine almanacs and scraps of old newspapers, is doubtless more among the hardships than in the fact. And what shall be said of such an experience as Mr. Swift relates to us in literal matter-of-course fashion—a missionary journey in winter, so intensely cold that the provisions freeze solid, with not a stick of fuel attainable, until after a three days' fast the "jerked beef" hanging at the door of an Indian lodge is hastily devoured in the snow?

The hardships and discouragements encountered by the people in their courageous effort toward independence are no less striking. Several years ago the agency farmer came here by order of the agent to sell all cattle and teams and order all able-bodied men to go to Standing Rock and bring down the hostile prisoners. As the Indians were just beginning to break their land in the spring and did not return until the last of May, "all farming," in the words of the missionary, "was pretty effectually blocked that year."

Great suffering seems to be entailed upon the Indians by issuing annuity goods in the severe weather of November or December. Old people, babies and even the sick are required to present themselves at the agency in person, and camp there often for several days. In the meantime pigs and poultry at the home ranch starve or freeze, and I was assured by Mr. Swift that many children die annually from exposure incident to the journey. It is often a serious matter to travel a hundred and twenty miles every week to draw rations, and only the more industrious and industrious Indians will put themselves at such a disadvantage in the matter of supplies. The St. Stephen's mission Indians, however, are nearly self-supporting, receiving only one-quarter rations, and not infrequently resign even this bounty in order to secure their harvests.

Each head of a family has from two to twelve acres under cultivation, and grows Indian corn, potatoes and a variety of remarkably fine garden vegetables. Mr. Swift last year encouraged them to attempt wheat, and the story of their difficulties and delays in procuring the promise seed, implements, instruction, is the recital of an evening. One admires the persistency and pluck of missionary and people, for after all, the experiment succeeded. Twenty million raised fine crop of wheat, cut, bound and stacked it with infinite pains; and now, while the needed threshing machine lies rusting under a shed at the agency thirty miles away, and the agent writes future letters full of promises, these Indian farmers despair of securing the results of their labor and enterprise.

This progressive people want land in severity, and are not unwilling to treat for the surplus Indian lands. All yesterday morning the principal men were crowding sedately into the missionary's little parlor, asking intelligent questions and giving cautious replies, and Mr. Welsh held an interesting meeting with them in the evening. The chapel of St. Stephen's—the prettiest interior I have seen, with its walls finished in simple pine, set off by a red railing and decorated with cartoons from the life of Christ in monochrome—was lighted by large wax candles in the two brass candlesticks on the altar, which stand either side of a plain brass cross. The groups of men in the pews sat in strongly accented shadow, and the murmur of earnest voices rose through the open windows into the warm starlit evening. The discussion was of the Dawes bill and of educational matters. These men are strongly opposed to the Eastern schools, preferring to see their children taught at home.

In Mr. Swift's light little buggy, behind his shaggy Indian pony with the pretty Indian name, he and I have skinned over the sandy roads, broken into astonishing ascents and descents, wound among the heavy cottonwood timber and through the high, coarse grass in the bottoms, and alighted before many Indian homes. The well-fenced acres of stable, or it may be of freshly plowed ground, the neat corral inclosing hay-stacks and wheat-stacks, the cabin often of double size and two-roomed, well built of heavy logs, plastered without and within with a sort of clay, surrounded usually by one or more cellars or outhouses for storing vegetables and males—such is the typical Indian homestead. We can pick them up and glance at the postmarks, we find Va., Fla., Tenn., Ga., etc. Will you

of hours a board floor, curtains at the windows, the walls covered with picture papers, perhaps a gun and powder horn in one corner and in another a little shelf of well-worn books. Dakota Bible, a hymn book, and Pilgrim's Progress—in the center of the room a polished stove, two or more beds neatly made with white pillow-cases and patch work quilts, chairs, tables, a clock, and it may be a sewing machine. The women and children are neatly dressed, and the interior of the log cabin is a picture of domestic comfort.

Thirty minutes we all drove a distance of some eight miles to the settlement on the Lower Moreau. Here we visited a "model ranch." The approach delighted us. Imagine a level, smiling stretch of "bottom land," skirted by the irregular line of timber on the banks of the river, large herds of cattle grazing quietly on one side and a drove of nearly fifty ponies, in their odd, piebald coloring, on the other; a row of yellow haystacks and outhouses, which recall a New England farm, and a long, low farm-house which, although built of logs and but one-story high, would not disgrace the same thrifty premises. Lewis, the intelligent, vivacious Irishman, are making an excellent drinking-trough for cattle out of a cotton wood log. We are conducted to the "root-cellar," an underground structure of logs, its bins well filled with fine potatoes, turnips and squashes; then through the pleasant house and afterwards out into the corn-field, surrounded, strange to say, with a New England "squire fence," built not of rails but with royal expenditure of labor and material, of solid logs. Here we met Molly, the Indian farmer's pretty young wife, husking the beautiful brilliant "squaw corn" in her gypsy face looking shyly out from under the Yankee sunbonnet, and her little feet in bodied moccasins. The homestead is a lovely pastoral west of the Missouri, and on an Indian reservation! Molly has never been to school, and does not speak English, but she is a neat housekeeper, and, in her own quiet way, a bright attractive-looking young woman.

We do not, however, need to be told that we are in an unfamiliar region, when, shortly after the picnic, we undertake to cross the Moreau river. We seat ourselves in a rude flat-bottomed boat, and the muscular young Irishman pulls us with short, powerful strokes through black "gumbo mud" as thick as cream. It is wonderful that he can move the boat at all in the strange element; the sun-burnt flesh deepens in his cheeks and reddens up under the Celtic fair hair as he tugs powerfully in a half standing position at the short, clumsy oars. Thus he conveys us to the opposite bank and back again, and frankly refuses the fee that is offered him for these herculean labors. In the Indian lodge at the top of the bluffs we witness a painful scene—a touching contrast to the prosperity and comfort we have left behind us. Mr. Swift has come to visit his sick child. We stoop to enter at the doorway of the tent and are half blinded by smoke and oppressed with the heat of the fire which smolders in the center. Two or three women are crouching on the ground, and on a low couch, indescribably squalid, reclines a poor emaciated creature, a boy of perhaps fourteen years, deformed with scrofula. He is too languid to speak, but produces the medicine, the nourishing food, the warm clothing he has brought—puts an apple into the little wasted hand—gives a few plain directions to one of the women; and then with great simplicity and naturalness, bows his head and prays in the musical tongue of the Dakotas. Then we all rise and pass out of the stifling air of the miserable teepee, with a feeling of the saddest pity, which rises almost to indignation as, with unwonted heat, Mr. Swift preaches on the text we have just had concerning the need of more physicians for the Indians and of a hospital at each agency. One physician for three or four thousand people scattered over a radius of two hundred miles—what unrelieved suffering—what preventable, needless disease and death! "I have saved as bad a case as this," Mr. Swift tells us, "by careful nursing at our own house. Now," bitterly, "this poor boy will soon do his part toward suffering."

ELAIN GOODALE.

In Hartford Courant.

#### Christmas in "The Graduate's Department for Reading Matter," Hampton Institute.

*A Glimpse of a Christmas Tree in the South. The well-fenced acres of stable, or it may be of freshly plowed ground, the neat corral inclosing hay-stacks and wheat-stacks, the cabin often of double size and two-roomed, well built of heavy logs, plastered without and within with a sort of clay, surrounded usually by one or more cellars or outhouses for storing vegetables and males—such is the typical Indian homestead. We can pick them up and glance at the postmarks, we find Va., Fla., Tenn., Ga., etc. Will you*

look over our shoulder and take a peep at the contents with us?

Many are from places too small to be dignified with a name, having to be carried 7 or 8 miles to the nearest town to be mailed, and here is one which will tell us how a Hampton Christmas box helped to make a Merry Christmas for a Hampton graduate and his little scholars. We will read it together—

DEAR FRIEND,—Many thanks do my pupils and I send for the pictures and books sent from Hampton. It was a season of great enjoyment for one who is interested in the instruction of the little ones, to sit and look into their smiling faces as they gathered around the beautiful Christmas tree. It would have filled any one's mind with gladness to see the little ones pointing and owning the presents as they looked upon the tree. As each name was called, the little one would march up and receive his or her present with a nice little bow and smile. It made me feel as proud as the valiant knight felt on his return crowned with victory.

There seemed to be an expression on each one's face which spoke louder than words. Love to our Northern friends who have sent us so many beautiful things. The children all said "We will be better children in the future than we have been in the past. We will always obey our teacher, who has such kind friends, who are doing so much to make us happy." It has proved to be as they said. I opened school the following morning of the new year with more scholars, and each one has a great desire to do his or her best.

How many of the "Northern friends," we wonder, have ever seen a school-room filled with the bright expressive faces of these little colored children? I can fully appreciate the expression on each one's face which spoke of the gladness of the smiling eyes and white, gleaming teeth. We know two white boys, who every year take their Christmas pleasure in putting up a Christmas tree for the school children in "Little England," a small settlement, not even a village, just a mile or so from here. We have even seen the biggest girls and boys reach out for a paper vase to carry away with them; every little decoration of the tree, and it was always made as ornamental as possible, with fancy paper, etc., eagerly begged for; it is such a wonderful thing to them.

It is no wonder then that we tear open our envelopes with pleasure. All these letters from our own boys and girls—Hampton graduates—who came here perhaps with hardly a word of English, and yet to tie up in a handkerchief, but with hearts strong, and willing hands, perhaps working all day, and then perhaps going to night school to study all the evening, and then to "help our people." Then as graduates, going out wherever they can do the most good—bearing hardships and privations, and having the courage after writing, "I have been to school 3 months and have not seen a cent of pay yet," to add "I hope the Hampton school is full for there is a great call for teachers."

All these letters mean a busy season in the "Graduate's Department for Reading Matter." By the first of November, letters were coming in to let us know that any help in "getting up" Christmas tree, an sending pictures to give to the little schoolrooms a festive aspect, would be greatly appreciated. These letters were carefully put on file, and before the 15th of December a number of good sized boxes, containing such toys, library books, pictures, and Christmas cards as had been sent by Northern friends" to this assortment, were packed and expressed, and several days before Christmas had reached their destination. Then came the sending off of large rolls of papers to all those graduates who had written since the 1st of October, containing besides the usual amount of good reading matter, all the children's papers we had on the shelves, all the pictures we could cog, and in each roll, four illuminated mottoes, large enough to hang upon the school-room walls, with colors bright enough to please the childish fancies of our little friends; also a Christmas card for each teacher. Here is part of an acknowledgment for one of these rolls.

DEAR MISS T.—Your package was so valuable that I must call it my Christmas present. The colored "mottoes" are just lovely. And what I wanted was a message to have Christmas exercises, etc. The kind friends who sent these mottoes for distribution ought to know how much pleasure they have given, for several hundred of them were disposed of in this way and went to North and South Carolina, Georgia, Alabama, Mississippi, Tennessee and through Virginia, bearing such messages as "The Lord will provide," and "I am going to be a great comfort to some of these poor people."

Here is another bit from a letter—"When my little children come around as Christmas to wish me a Merry Christmas, I shall have something to give them. These little papers will make their hearts glad,

and I feel his give."

But the next excitement, "our his exclamation papers sports, mas cards, p and put upon Youth's Court ward, for the become quite up the large spread out on their off."

and I feel happy in having something to give.

But this work of distributing reading matter is not confined to the Christmas season. We have a corner of our own which we dignify with the title of our "office." Its sides are lined with bookshelves reaching to the ceiling, and we are happy indeed when a generous, clean, looking barrel marked "Graduate's Dept. for Reading Matter, Hampton Inst., Va.," is found outside the door. The opening and unpacking is the next excitement, and even the interested student, "our office boy," cannot restrain his exclamation of pleasure, as packages of papers sorted, and neatly tied up, Christmas cards, pictures, etc., are brought out and put upon the shelves. He often puts a *Youth's Companion* in his pocket as his reward for the afternoon's work, and he has up the large piles of papers which he finds spread out on the broad, long tables, with their wrappers addressed, ready to be sent off.

Here are some of the results of the experiment (now five years old) of sending out papers to those who are often unable to obtain them in any other way. "The papers you send me seem to be the life of my missionary work."

"I take great pleasure in acknowledging the papers, etc. They came just in good time for me to make some selections from them for my Christmas festival."

"The papers are read with much interest by the children. Often I have read them instead of their regular reading lesson and then again they write about the pictures after I explain them and set the pictures before them."

"The papers are just the thing I need for my Sunday school; they did more in the way of instructing the children than anything I have had since I have been here."

"I am engaged in the Temperance work, and I find the papers to be just the thing I need."

"Your paper was the first 'donation' to our library. We are proud of it."

Just before the class of '84 graduated, the system of "book week" in their "office" to make picture books to be used in their schools. A bright colored cambric was kindly loaned by the teachers in the institute, and all the pictures were cut from any picture papers we happened to have on hand, and the fortunate enough to have a pretty C. was used to put on the outside of each book.

It was a very pleasant scene, the bright faces of the girls bending so interestingly over their work, clapping the edges of the cambric in white points, and telling each other to paste their pictures so straight and neatly, or they would prove but a poor object less than their lot in life. We were all so busy that it was impossible to stop to interest them in these graduates from year to year. If they are given their education, and attend to their duties, it would seem as if our work does not stop here. This is the feeling of one of the earliest graduates who still has her care.

"Please accept my thanks for the nice papers sent me. It is indeed a great blessing that you are so concerned and look after by the dear friends at Hampton, although having been so many years from school."

Sometimes, when going into our post-office, the postmaster says, "The mail is pretty heavy today, Miss F.—so many packages of papers to go that I have sent to the barn for a wagon. The postage in your department is about \$30 a month now." For although these papers are sent to us by friends of the school, the mailing of them to individuals is a duty which it accepts as its own. Oh! for some capacious pocket, into which we might dip recklessly, and with no questions asked.

R. G. T.

The interesting sequel to the account in our letter from "Among the Dakotas" (page 21), of the Indian Young Men's Christian Association and their petition for affiliation with the white Y. M. C. A. of Dakota, comes to us by Rev. H. F. Williams, State Sec'y for Minnesota and Dakota. From its report of the late Convention of the Associations of that State and Territory, held in Minneapolis in December, we make the following extracts:

"At this point the Indian delegation took seats upon the platform, and Mr. Williams spoke of the work among them, saying he was sure the meeting would welcome them. The pastor of the First Presbyterian church of Flensburg, Rev. J. Eastman, an Indian, spoke through an interpreter of the origin of the work among them, saying that they began with 5 members and now had 15. Mr. Williams explained that the interpreter was a son of the Rev. Dr. Riggs. The

Indians then sang in Dakota "Jesus Loves Even Me." The congregation joining in English in the chorus. John Crawford, of Santee, spoke through the interpreter of the work being done. He created much amusement by saying there were four of them here, as the interpreter was like an Indian having grown up among them. He spoke of his early life, when the woods were full of game and the people knew nothing of the word of God, though it was brought to them some 50 years ago.

During the last 17 years, the word of God has grown mightily among them. "We have seven associations," he said "in the district where I live. We have abandoned the hunt for game and taken up the hunt for the Lord Jesus Christ."

Edwin Phelps, secretary of all the Indian associations, addressed the audience through the interpreter, said he despaired once of being here as he had to ride 100 miles in a wagon; said now he was here it made his heart large. He said he had been secretary three years, and made a brief report of what had been done. They counted in September 12 associations with 187 members and have given for missions this year, \$308.40. The addresses of the Indians were received with enthusiasm. They were followed by the Rev. Mr. Riggs, the interpreter. He said he thought the audience had before them a proof of the power of the Gospel. "Here is the only true solution of the Indian question," Mr. Williams, in behalf of the state work, extended to the Indian delegation the right hand of fellowship. The Indians being called upon, sang another song in the Dakota tongue. Dr. Brooks, of St. Louis, made a brief address, referring to the good work being done among the Indians. Dr. Brooks closed with prayer, singing "Blest be the Tie That Binds," the convention adjourned.

The Tribune adds:

"The Indian delegation attracts considerable interest among the members manifest in the proceedings."

It also says of the general work in the State:

"H. F. Williams, state secretary, presented a report showing the great work accomplished since the first association was formed in the state in 1856. Ten new associations were organized last year. In the state, 17 now reporting. There had been 14 in membership during the year of 1884. The greatest cause for gratitude was in the increased religious interest among young men."

The seventeenth annual report of the Freedmen's Aid Society of the Methodist Episcopal church is not only a record of past work, but embodies also a statement of present conditions and probable future needs, which is of special value because of the size and importance of the field occupied by this denomination. The Secretary of the Society says:

"Our schools among the Freedmen have grown in number and improved in character until we now have twenty-one of them, with 106 teachers and 3,633 young men and women in attendance, a large proportion of whom are studying to be preachers and teachers. These schools have, of necessity, been almost wholly supported by the Freedmen's Aid Society."

On the other hand, a development no less remarkable has gone forward among our Southern white people. In the midst of their poverty, with but little aid from the general church, they have laid the foundations of what have grown to be eighteen institutions, in which are eighty six teachers, and over two thousand young men and women. From these young, and as a rule, poorly equipped institutions, have gone out, during the past fifteen years, more than one thousand to preach and teach, who for longer or shorter periods have been students. The beginning and growth of these schools were so manifestly of God, and the demands for their enlargement were so clearly providential, and the people themselves being greatly in need of help, the General Conference of 1880 and 1884, without changing the name of our Society, directed that this work should be helped as our funds would justify, in addition to meeting the wants of the work already in hand. The action taken was that the "entire educational work in the Southern States should be under the direction of one Society, and that the Freedmen's Aid Society should have full charge of this work in that section."

Here, then, is a summary of the work this Society is expected to maintain and develop in a section of our country where the greatest masses of our ignorant and poor people dwell. Thirty-nine institutions, with 192 teachers and nearly 6,000 young men and women as students, nearly all of whom come from homes smitten with generations of poverty and ignorance, and who are struggling by their own efforts to meet the call of God within them, to prepare for lives of usefulness.

The close connection between the school and the church work of this sect, is noticeable, and the results of this are given as follows:

"Twenty years ago, when what was slave territory, we had only a small membership along the border, but now in that same section are found nearly one-fourth of our entire membership. In that time nearly 4,000 new church edifices have been erected. The increase in membership has been over 350,000. This growth has been about equally divided between the Anglo and Afro-American, showing that our Methodism preaches the Gospel alike to all. Our membership in the South now numbers 420,000, which represents a population of 2,000,000."

And unmistakably the fact that the work includes the two races increases its value in a ratio hardly to be computed.

Following the instructions of the General Conference, aid has been extended to institutions of learning among the white people of the South, as far as it could be extended without interfering with the work among the colored people.

Our white members of the South, during the past twenty years, have done heroic work in providing schools for themselves. The following schools have nearly all been established and maintained through their own efforts. Our Society has aided as its means would allow.

This system of schools includes six colleges one in Alabama, two in the South-east, another in the South-west, the fifth in Texas, and the sixth in Kentucky; and twelve seminary tributary to these colleges:

The enlargement of our school work among the whites will strengthen the colored. Aiding both classes of this needy people will set forth the broad principles of philanthropy upon which our work is established, and will secure the confidence of the benevolent friends of our Church. We seek to instruct and save the people of the South, without regard to race or color.

It is, naturally, to the schools for colored people that our attention is especially directed, and we are glad to give place to the following resume of their character and location:

CHARTERED INSTITUTIONS.	
Teachers.	Pupils.
Central Tenn. College, Nashville, Tenn.	329
Clark University, Atlanta, Ga.	216

Academic. . . . .	445
Normal. . . . .	1,410
Intermediate. . . . .	800
Primary. . . . .	314
Total. . . . .	3,432

The Report closes with an earnest expression of feeling in regard to the responsibility of the Methodist church for the work which it has undertaken. One may say "the church must educate her ignorant masses." Another may add, "the question of the Negro's future and his relations to the white man will solve itself

if let alone." And others may ask, "Why so much responsibility upon the Church?" And still again, "If the Church has so much responsibility, can not this be met better by the old Southern denominations on the ground?"

True, "the State must educate her masses in public common schools; but the State must first believe that common schools for the masses are wise and necessary. The South, led by her Churches of all denominations, did not believe in common schools for the masses, even for the whites, and made it a penal offense to educate the blacks. Now the South is coming to believe in the education of the masses."

At first, almost wholly, and still very largely, this new belief is one of the results of the presence and work in the South of the Freedmen's Aid Society and kindred organizations. As to the Negro question, the one thing essential is a conscience in relation to his rights and needs as a freeman. The South had a conscience toward him as a slave. The needed conscience toward the Negro as a freeman the whole American Church must give. Politics or commercial activity will not do this. The Church of the North must lead the way in the development of the needed and new conscience, and the Methodist Episcopal Church, to a great extent, responsible for freedom to the slaves, therefore, largely responsible before God for the conscience of the South and the nation toward the Negro as a freeman.

No notice of this Report would be complete which omitted to speak of the paper entitled "Negro Education; Its Helps and Hindrances," which is printed as a part of it. Written by a Negro, W. H. Croghan, A. M., Professor of Ancient Languages at Clark University, it is remarkable not so much for its eloquence as for the fairness and breadth of its views, and its candid, although not bitter, expressions of opinion. We have seldom seen anything emanating from a similar source, which showed such strong and unprejudiced thought, or which would be more likely to raise friends for the views which it advocates.

Much of it would repay careful reading and we regret that we have space only for a few sentences from its close:

In the school-room the Negro is taught one thing; in society, another. In the school room he is instructed in the same Bible which you study. He is taught that God made him, that Christ redeemed him, that the Holy Spirit sanctifies him. In society he is taught that, although God made him, and Christ died for him, yet there is a vast difference between a white man and a black, a wall of partition between a Jew and a Samaritan, between a Brahmin and a Pariah. In the school-room he is taught the dignity of manhood after the American idea; taught that

"The rank is but the guinea's stamp. The man's the gold for a' that." In society he is taught that rank or no rank, although a man, he is a black man; hence not a man "for a' that." In the school-room he is taught that character is the only shibboleth demanded in civilized society, that learning, that culture and refinement are the only passports needed. In society he is taught that whatever may be his character, his culture, or his refinement, he must not attempt to enter any and every hotel in this country, and that he must sometimes, after paying first-class fare, ride with his family in a second-class smoking-car among drunkards and blasphemers.

Now, ladies and gentlemen, I submit, here are two lines of education running counter to each other. Here are two forces acting upon the Negro, one in a straight line along the plane of manhood, the other urging him downward. Consequently, if you would find his true position in society, you must seek it along the resultant of these two forces, and whenever found, it will be a position beneath the American idea of manhood, beneath God's. What is to be the outcome of this? It must certainly be clear to you that the more you educate a man, the more sensitive you make him to bad treatment. What is to be the outcome? There are men who are devising makeshifts, men who, in the language of Dr. Calloway of Georgia, are inquiring, "What shall we do with the Negro?" Instead of "What shall we do for him?" You can't do anything with him. He is in God's hands. You can do much for him, but you can do simple justice to him. In the *Popular Science Monthly* for February, 1883, Prof. E. W. Gilliam advises colonization as the only "remedy." Colonize whom? Colonize men who are the ballot in their hands, and with half the white people protesting against their departure? For Anglo-Saxons will fight over ideas, and to many of them the Negro in this country represents an idea. Colonization will not

HAMPTON, VA., MARCH, 1886.

No. 3.

An interesting letter from Mr. Booker T. Washington, principal of Tuskegee Normal School, on page 35, testifies to the interest of both races in colored education in Alabama.

The views of an army officer on the Indian question are given on another page by Capt. Henry Romeyn, U. S. A. now stationed at the far frontier post of Fort Keogh, Montana, formerly commandant at Hampton Institute. His views shared by many army officers as he says, are of especial interest as such. There can be no "Eastern sentimentalism" about men engaged in the stern realities of active frontier service.

THE SCHOOL has had the pleasure of a fortnight's visit from Miss M. C. Collins, from Mr. Thomas Riggs's Indian mission school at Oahe, Dakota, under the American Missionary Association. For many years a devoted worker among the Dakotas, Miss Collins's present mission at the East is to interest white people in the cause, and her talks and letters have proved very effective to this end in many places. All at Hampton have been very glad to make the acquaintance of a worker so full of heart and enthusiasm, and we believe that her visit has established closer relations of understanding and friendship between the Eastern and Western branches of the one great work. Miss Collins went from Hampton to Washington from which her further movements will be determined by the Association under whose auspices she is engaged.

THE BLAIR EDUCATIONAL BILL is not ideally perfect, nor such in all respects as educators would have framed. It would have been, we may say, three times as good with one third the yearly appropriations proposed, or, better, with the same gross amount spread over three times as many years. But the need of some such powerful help to diminish the mass of illiteracy in the South is a tremendous one, and we have no doubt of the nation's responsibility and duty in the matter. The imagined dangers of the bill are insignificant beside the imminent danger and actual suffering without one. There is no compulsion in the proffered aid. If Massachusetts and New Hampshire feel that it would pauperize them, they can decline it. But to draw any parallel between their experience and that of the Southern communities, is a delusion. It is easy to sit in an editorial arm chair and figure up per cents in cold blood, but mere figures do not represent the actual state of the case. The percentage of school population out of school in New Hampshire and Massachusetts is in totally different environment, menaced by no such dangers and menacing no such dangers to the country as the ignorant masses in the South.

There is peril in ignorance anywhere and everywhere, but the ignorant percentage in a mobile population where individuals are constantly changing place and plane, surrounded by an atmosphere of intelligence centuries old, girt about by a public sentiment of law and order and progress, in sympathy with public education, cannot for a moment be balanced with a similar percentage under conditions just the reverse; conditions which tend to sepa-

rate it into a class, a class marked by color, steeped in ignorance of whose density figures take no account, backed by an inheritance of slavery and barbarism, set off by race prejudice and assailed by social, commercial and political corruption.

Against these evils the South has indeed struggled bravely. The growth of a sentiment for popular education in the Southern States in the last twenty years, has been wonderful, at once the result and justification of the heroic measure of giving the ballot to these ignorant millions. Under the pressure of such a danger, the percentage of ignorance in Massachusetts and New Hampshire would not stay where it is. The fact that eleven Southern States pay sixteen millions annually for education and five millions of this for Negro education, while the Negroes themselves pay not over two millions in taxation, tells the story. The South is doing its best in this direction. We have no doubt it will continue to do its best, aided or unaided. But its best is not sufficient to meet the need, and by what it has done—is too great to be diminished by aid that is none too much to meet them. What does too much to pauperize an individual will not pauperize a community, and no individual is ever pauperized by help administered in dire necessity after he has reached the extreme of effort to help himself. The millions contributed by Northern philanthropy to Southern education since the war have not been thought pauperizing, but a stimulus. We hear no such charge against the Peabody fund or the Slater fund. Is it only that it is national aid? Why is it more demoralizing for a state to accept national aid for education than for the improvement of its rivers and harbors? We believe the people of our country are growing up to the conviction that no question is so vital to a nation's life as the education of its citizens, that the mighty Mississippi's golden band is not so important to the unity of this nation as the stream of intelligence flowing deep and free from end to end of the Union—that to keep its springs full and its course clear is preeminently a matter of national concern.

It is on these grounds that those engaged as we are in the school work of education in the South have advocated the Blair bill while never unconscious of its defects. If it should fail in the House, the question of national aid to education should not be regarded as settled by any means, but a way should be considered to give the country its benefits without its risks, some provision, taking perhaps far less money, applied where it is needed, and as judiciously and disinterestedly administered as the munificent gifts of Peabody and Slater?

It may be perhaps that our legislators are unequal to the task, that stupid legislation would doom us to another century of blunders in our dealings with the black race like that which has been a disgrace to the "dishonor" in our treatment of the Indian. Then the ignorant Negro, like the uncivilized red man, must be left to suffer as he does, to endanger our national prosperity as he will, till a wise public sentiment is strong enough to speak through the mouth piece of a popular government; and meanwhile we can only fall back upon such national aid as that broad philanthropy whose fifteen millions poured into the South for Negro education since emancipation,

have shown what wise, adequate aid could do to stimulate effort and multiply results.

The report of the third meeting of the "Lake Mohawk Conference of friends of the Indian," held in October, has now been published in an attractive pamphlet, and is well worth the perusal of all friends of the Indian who were not present at that meeting. The instructive statistics given by Dr. Rhoads, the information given by Prof. Painter on Indian legislation in Congress, the addresses of General Whittlesey, on the annuity system, Hon. Erastus Brooks on the Indian in American history, the eloquent speeches of Senator Dawes, Miss Alice Fletcher and Mrs. Quinton, Dr. Abbott's and Mr. Oberly's interesting discussion of Indian policy; all these and much more from workers and thinkers in the field, make a valuable addition to the literature of the Indian question.

SOME OF THE special needs and experiences of English teaching at Hampton have evolved a system of elocutionary training which has been reduced to form on a chart prepared by one of our own teachers of long experience and success as well as thorough professional education. After testing it by daily use in our class rooms through the past year, we can heartily recommend the chart to our graduates who are teaching, and to any other teachers of colored or Indian schools. The advantages of the Hampton chart are not in novelty of method but in adaptation to special conditions and difficulties, with simplicity and cheapness which will bring it within the reach of those who most need its help. It is copyrighted and published by the Normal School Press, and can be had by application, at a price of \$1, mounted.

MANY OF our friends have become interested in what are known at Hampton as "scholarship letters." Others may not be familiar with the term. We repeat, therefore, what we have from time to time explained: that the expenses of a student at Hampton are met first by what he pays for himself in work and cash—\$10 a month for board and lodging, with whatever is needed for books and clothing—and second by contributions from friends of the school of \$70 a year for that which he cannot himself pay for, his schooling. The first payment by himself prevents all pauperizing, gives him the ability of self support, and the moral strength that accompanies it. The second meets him when he has proved himself worthy of help and can go no further without it. These contributions of \$70 for a year's schooling, we call scholarships. As they are paid into the treasury they are apportioned to different students, who receive their benefit in the instructions of the school. The case is carefully explained to the students that they may understand that every advantage has to be paid for by somebody, and may know from whom this help comes. Understanding this, every one is required to write a letter of acknowledgement to the friend or friends from whom his "scholarship" comes. To interest the contributors, the first letter contains some sketch of the student's life and efforts to secure an education. If there is occasion for a second and third letter,

they may contain sketches of vacation experience, in work or teaching, or the student's thoughts of his people and their condition. Each letter is understood to be the best the student can write at the time. Nothing less is accepted from him. The students are generally very glad to take this opportunity to express their appreciation of what is done for them, and often spend much time and effort to do their very best, knowing also that their mistakes will not be corrected. Except cutting when too long, or suppression, if necessary, of some such inappropriateness as a request for further help—which seldom occurs—the letters are sent exactly as they are written, in order that they may thus be an accurate gauge of the students' condition and progress from year to year.

Very many of our friends who have thus received "scholarship letters" have expressed much interest in them, and they have been a great help in keeping up, and creating new interest in the cause of Negro education. Some have come to Hampton to see their scholarship student and the acquaintance has brought pleasure both to the beneficiary and the benefactor. Others have been so kind as to reply to the student's letters, and while they are not permitted to request this any more than any other favor, in a letter which is simply an acknowledgement for what has already been done, we will say for them that any words of response are received with the greatest delight, and are of more value and help than the writer has perhaps imagined. Many, of course, who have generously given have no time to reply to letters. Some may even feel bored by those they receive. They can of course take refuge in not reading them, and we beg that they will simply understand that however awkwardly expressed, it all means only a "thank you," and a pledge that the writer will try to do his best to profit by the generous help that has been given and to extend it in his work among his people.

A few samples of extracts from this year's scholarship letters are given on page 35. They are not apt to be as thrilling in interest as in the early days of the school when almost all had experiences of slavery or the war to relate, but they show improvement from year to year in the more prosaic virtues of accuracy and proper expression.

Gen. Miles's annual report for 1885, bristles with suggestions and plans for action on the Indian question. He found in New Mexico the troops guarding the southern frontier against the hostile Apaches, and in the north controlling the disaffected and poorly fed Utes who "had good ground for complaint, their men murdered by lawless whites, their reservation overrun, their game destroyed and their means reduced to starving point, till for the relief by the Secretary of the Interior." In Indian Territory was a "pandemonium"; the "Cheyennes and Arapahoes had been huddled in disagreeable and unhealthy camps, white men invading the Territory." The revocation of the cattle leases remedied this, and under the efficient management of Capt. Lee, they are rapidly improving. But General Miles thinks that the time has come for a radical change, that "the Indian Territory, whose reservation was originally a judicious and humane measure, is now a block in the way of civilization, a refuge for mongrel outlaws whose vices are

killing the Indians rapidly by disease." "Without courts of justice or popular institutions, it is a blot on our maps."

The General urges the appointment of a Commission, to treat with the Indians for the final allotment of their lands in severalty, untransferable for twenty years, the sale, for their benefit, of the rest, and its opening to settlement. He urges the same with equal force for nearly every reservation in the United States, and is convinced from his extensive experience that the plan is "practicable, just and humane." There is, however, he considers "several important elements essential to success." "The Commissioners must be men who understand Indian methods of reasoning, tastes and ambitions. They must be men who would inspire perfect confidence in the Indians. They must be practical men, not theorists, and they must be provided with something more than promises."

Given all these essentials, and Gen. Miles believes it "would be perfectly practicable to make any tribe of Indians self-supporting in five years. The difficulty then is to find the men, and provide them with 'something more than promises'."

The General recommends the enlistment of more Indian soldiers, having had them under his command for five years and never known one to desert. Is it easier to find good faith among red men than among white?

Last words are significant and worth treasuring or not, according to the words, and deeds that have preceded them. In this light, the last words of John B. Gough, the great champion of temperance, were a noble ending to a noble life. We cannot imagine that the great heart could have desired a better fate than to die in harness, with all his armor on, and spend his last breath in admonition to the youth whose struggle lies before him.

"Young man, keep your record clean!" He who spoke these words and fell dying on the platform where he had won so many victories of eloquence, knew what that struggle means, knew the value of a stainless record by the loss of it in his own young manhood, knew the terrible of the conflict with evil habits, with the serpent of intemperance coiled close round heart and will, knew that the victory is worth all it costs to him that overcometh and walks in whiteness. There is no John B. Gough to take the place of the great orator whose last words have been spoken on earth, but there are hundreds and thousands of those his burning eloquence has inspired, to gird on such armor as may fit them and carry on the war.

THE sudden death of Mr. Harrison Phoebe, the genial proprietor of the Hygeia Hotel at Old Point, has shocked and saddened the community, and will be felt far and wide by the hundreds who have pleasant memories of him as host and friend.

As a man who has won his way to exceptional success by determination, industry, integrity and unceasing attention to business, his life is a lesson worth considering. The son of a country Methodist minister on the Eastern Shore of Maryland, one of a family of sixteen children, his inheritance and early surroundings were such as to lay the foundations of sterling character in honesty, industry and self-helpfulness.

He served his country in the Union army through the war, and soon after its close applied for work at the Adam's Express office in Baltimore, offering to "sweep the floor, load wagons, or write letters." Hired as a wagoner, in ten days he was transferred to the desk, and in six weeks detailed as special messenger. In 1866 he was sent to Fortress Monroe as agent of the Company, became also agent for various transportation lines, postmaster, notary public and United States Commissioner. Investing his savings in real estate, he established himself here, and in 1874 was ready for the great opportunity of his life, in the purchase

of the Hygeia Hotel, a small affair then in comparison with its present palatial proportions. The late Mr. Shoemaker of Baltimore, then chief manager of the Express Company and a warm friend of Phoebe, invested largely in his enterprise, though at the time of his death we understand Mr. Phoebe was sole proprietor. The energy with which, with no previous knowledge of the business, he set himself to learn everything that could be known about it—visiting other hotels, studying every new method device and improvement, and devoting himself to the satisfaction of his guests—was remarkable and ensured his success.

Every year has been marked by progress, until the Hygeia's reputation is unsurpassed as a delightful summer and winter resort. While on government land and paying no tax to the state, it has been a great element of life here, giving employment to many, spending annually from thirty to forty thousand dollars in the community for labor and supplies, and bringing thousands of visitors to the place.

Mr. Phoebe's start and course here have been about coincident with that of the Hampton Institute, and there are interesting parallels between the two. Our mutual relations, business and social, have been always pleasant and friendly. Among the earliest patrons of the Hygeia were the friends of Hampton, and the thousands who now throng the pavilion at Old Point take the drive to the Normal School as a regular part of their program. Many of our students have found employment at the hotel, and kind treatment. A lady visitor at the Hygeia at the time of its proprietor's death, remarked to us: "One of the most touching sights is the grief of the employees of the house. They go round with tears on their faces, saying to each other what a good, kind, just man Mr. Phoebe was. He seems to be truly and deeply mourned." All the kindness Mr. Phoebe has shown to the hard working poor will perhaps never be generally known on earth. With all his business carefulness, he was never deaf to an appeal for one who was struggling with difficulty. In all the relations of family and social life he was a man of heart, kind and generous, and will be long remembered and missed.

We understand that Mr. Phoebe, with characteristic forethought, has left full directions and provision for carrying on all his business enterprises and plans in every detail. We have no doubt that his great heart will be continued without interruption as the first class and delightful resort it has become, for as such it cannot be spared by the public.

WITHIN the past few weeks several editorial articles as well as a number of letters, anonymous and otherwise, have appeared in the New York Evening Post in regard to the Blair Educational Bill, or to speak more accurately, in regard to the principle which that and all similar bills bring into prominence.

The question of government interference in educational matters is sufficiently intricate under the simplest conditions, and in the United States where the conditions are by no means simple, it seems hardly possible that any single political axiom can be made to cover the whole ground. While there can be no doubt as to the correctness of the principles for which the Post contends, viz: that each state should depend upon its own resources for the education of its people, and has, for such purpose, no claim upon the general government, yet are there not exceptions to this, as to all other rules? As, either from the point of view of the philanthropist or the political economist, the treatment of the individual is dependent upon and therefore varies with the conditions of which the individual is the result, so with states, or bodies of individuals, all the conditions demand consideration. Most of us have learned either practically or theoretically, that ill applied or unneeded assistance stunts and perverts its recipient,

but most of us also know the saving value of a helping hand from the right quarter at the right moment. If the South can take care of her illiterate, then the folly and harmfulness of Federal interference is manifest, but there are many close observers to whom that "if" remains as a stumbling block in the way of any sweeping decision. For if, on the other hand, she cannot do this, then the instinct of self-preservation alone will lead the nation to look to its means of defense against a very present danger. It is not merely the poverty of the Southern States which must be measured nor even their ability to help themselves, but also that which is more important than either, the strength of their desire to be educated.

No one can live in the South without realizing that there is a certain proportion of the population which has not awakened in any forcible sense to its need of schools and school teachers, and this more than anything else, makes the question a difficult one. Just what this proportion is and just how far it is safe to leave it to itself, we do not claim to decide, but only insist that the fact of its existence can not be gainsaid, and is certain to have its influence. We have, unmistakably, on our hands a class which has yet to be educated up to the point of appreciating education, and whether or no this can be accomplished without stimulus and assistance from outside, is doubtful. These illiterate masses are a heavy burden because of their own inertness, and we have as yet no guarantee that the intelligent classes of the South are sufficiently strong either in numbers or in determination, to overcome this inertia. To lift the whole burden would assuredly be a dangerous mistake, but to assist at the point of probable failure does not weaken the capacity for self help with the state any more than it does with the individual, and before denying Government aid to the South, our legislators ought at least to assure themselves that without it failure can be avoided; a lure being here held to mean an indefinite postponement of the end in view.

#### Convict Labor.

The subject of convict labor is one that is agitating the public mind more or less through all the states. Mr. Cable's article in one of the magazines recently published, and the number of things in the South under the contract system that was simply appalling. In the state of Virginia, owing to its poverty and the crowded condition of its penitentiary where twenty men are now confined in a single cell, a large number of the convicts are leased to the railroads and those who are within the walls of the penitentiary are worked under the contract system. Even this is a great improvement on the condition of things which formerly prevailed when the men were left entirely in idleness. We hope for better things however in the future. The number of deaths and escapes is reported by the superintendent to be about twice as great for those without the penitentiary as for those within. Parts of the state where the prisoners have been working have been kept in continual terror on account of the number that get away from their guards. Going down on the Richmond & Danville Road with a company of convicts destined for work on the railroad, the guard, a pleasant appearing man, showed me his gun almost entirely covered with the names of the men he had shot in their attempt to run away.

All this calls loudly for reform. There is a growing feeling of interest in the question of the best method of dealing with prisoners as evinced by the meeting held in Richmond not long since. It is to be hoped that before long we may have a Prison Association similar to the one that has done such good work in Maryland. Some such association is needed in order that the proper measures may be submitted to the legislature. The general agent of the penitentiary has called attention to the necessity for a reformatory for young convicts and his suggestion was heartily endorsed by the board of directors. Certainly no one can see the boys of nine, twelve, fifteen and sixteen years old who are to be found in the jails of our state, without feeling the need of a reformatory. They are under the tutelage of hardened jail birds and are taking lessons in crime each time they are imprisoned. The sheriff's report that they are imprisoned again and again, each time worse than before. Here certainly is work for a prison association to do in Virginia.

The prison association of New York has recently been considering the subject of convict labor in that state. Owing to the large number of this class who come to New York from other countries and the large number confined within the penitentiaries of the state, the question of the method of employing the convict is a most important one. The action of the New York legislature will influence prison legislation throughout the country. A special committee has recently made a valuable report to the prison association on the subject. It deals with the three systems of prison labor known as the public account system, the contract system and the piece price system, and asks the right question which the committee asks in judging of these three methods is as to what test shall be applied. Shall the success of a system be judged by the amount of profit the state can gain by prison labor? The committee thinks that this is not the proper test. The idea of reforming the prisoner they think should be the one first considered in judging a system, although a reformatory system is not necessarily opposed to a lucrative employment of prison labor.

The report then goes on to discuss the meaning of the word reformation as applied to the convict class. The criminal, says the report, "is not governed by the restraints, the motives or the incentives that control other men and are sufficiently strong to keep them from falling into crime. It must be the aim of reformatory treatment to awaken in the criminal the hopes and desires, the motives of right and justice, the sense of the right and the wrong, the general prevalence of which among men sustain the reign of law and order. In a word, it is the aim of reformation to restore the criminal into the likeness of common men, men when that has been effected so completely that he will lead a law abiding life through the force of the same habits and motives that govern ordinary men in common life, then the criminal is reformed." The report then goes on to speak of the kind of labor valuable in producing this end. It criticizes the contract system as giving no incentive to labor and therefore as not helpful to reform. "It regards and treats the convict as a slave or a live chattel in the service of the state, and it asserts the right of the state to use the convict or hire him out to others to be used, as it might do with a horse or an ox, for the profit of the public treasury. The contract system involves and indeed is based upon these two propositions: first, that the state is bound to support the convict in prison and to supply him with all the necessities of life; and second, that the convict is entitled to no interest in the products of his prison labor. Now the first of these propositions worked out, results in pauperizing the convict, taking away from him the necessity of earning his daily bread. This to many men of the lower class is the worst of all punishments. They are free from the care that belongs to life outside the prison wall.

The second of these propositions results in taking away from the convict the strongest incentive to an improvement of life and habits.

The committee suggests that the prisoners should be given an opportunity to work for his food, clothing and bedding, and that further incentive to labor should be applied by means of rewards and punishments. Increase of comforts within the prison, opportunity to see his friends, might be held out to him as the reward of diligent labor, and so, it is suggested, "the convict will be gradually trained into the habit of living and working with reference to the future."

To carrying out this plan of reformation, the contract system, which treats the convict as a chattel is evidently not well suited. The second system, known as the public account system used in England, is considered as not practicable on account of the cost to the state of providing the penitentiaries with the necessary plant, and the difficulty in obtaining proper men to carry on such an extensive business as would be necessitated by this plan.

The third system, known as the piece price plan, is the one which the committee recommends for adoption. By this plan the goods are merely manufactured by the prisoner, the machinery belonging either to the state or to the dealer, and the raw material being bought by the dealer, to be worked up by the prisoner. Under this system, the whole management of the labor is under the control of the state and can be apporportioned with intelligent reference to the diverse capacities of the prisoners. Under this plan all the reformatory measures spoken of above may be employed. This plan has already been adopted with success in Ohio, Canada, Massachusetts, New Jersey and the Elmira Reformatory. It is to be hoped that some such improved method may before long be adopted in dealing with the convicts of our own state. I. B. F.

## SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October)  
Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG, Editors.

REV. H. B. FRISSELL, *Chaplain*,  
MR. W. N. ARMSTRONG,  
MISS ORELL LANGHORNE,  
MISS AETRY N. BACON,  
F. N. GILMAN, *Business Manager*.

TERMS: ONE DOLLAR a year IN  
ADVANCE.

The "Industrial South" and  
"Southern Workman"  
Together for One Year, \$2.00

Entered at the Post Office at Hampton, Va., as second  
class matter.

## The Southern Press.—Both Sides.

Nothing shows more plainly the general change of feeling in the South, than such items as this which even now come upon the Northern reader as a sort of surprise:

The State Chronicle (Raleigh, N. C.), in an editorial on the Negroes and the South, says some things that are as "progressive" as anything could desire. Among other things it announces that the Negro is entitled to a good common school education, and insists that there should be special legislation in behalf of Negro morality.

The Memphis Appeal is especially cordial in the welcome which it gives to all evidences of industrial progress among the colored people, and it is a pleasure to quote words of encouragement so heartily spoken as the following:

A notable event is the opening, on Christmas day, at Nashville, of the first exposition of the industries of the colored people of the State. It speaks louder than words for the steady advance they have made in twenty years of freedom, and puts to shame the men who have derided their efforts and refused to lend them a helping hand. The speech made by the Hon. J. M. Langston, late Minister to Haiti, on the occasion, was temperate and sensible, and he was especially happy in the comparison in advancement he instituted between the Negroes of the British West Indies, emancipated in 1832; those of San Domingo, who have been free for well nigh a century, and those of this country, who have only been free since 1865. The Appeal congratulates the colored people of the State on so rich a promise for their future as this exposition affords.

That even a small proportion of the colored people recognize the importance to them of opportunities for industrial training, indicates a great advance, and surely such a demand as this of the Richmond Planet cannot long exist without a corresponding supply.

Oh! for an industrial school in this city. There are hundreds of youth who are idly spending their time or are laboring at minimum wages that could be learning to be skillful mechanics, blacksmiths, carpenters, watch makers, shoe makers, compositors, painters, bricklayers, and the like.

We need a school in this city that will give this training. Our people must if they desire to succeed, give more attention to the industrial pursuits. In order to have a healthy body, one must necessarily eat all that goes to make up the various functional parts. So it is in other senses. In order to become a powerful people we must practice all trades and professions that have advanced our white brother to the standard he occupies to-day. We hope are many days that Richmond will be able to boast of giving to the black sons of Virginia not only a literary education, but an industrial one.

The *Vicksburg Weekly Herald* recognizes the ultimate meaning of industrial education for the South, in a commercial point of view, and makes, perhaps

unintentionally, a strong plea in its favor:

The Philadelphia Times says: The industrial growth of the South during the last few years has been marvelous, and there is every indication that it is a thoroughly healthy and permanent growth.

This industrial growth in the South is no sudden or accidental affair. It is only the beginning of the wonderful advancement the South is about to make in adding to her own and the nation's wealth. Her surplus of a full hundred millions this year will fit her for more than doubling that surplus next year, and the next decade will witness the South closely pressing the North in every channel available for her industry.

We hazard little in saying that the next decade will present a more prosperous industry in the South than in the North. \* \* The new wealth of the South will be largely diffused throughout the North, and Southern prosperity will mean the common prosperity of the whole country.

There is a good deal of truth in the following, from a prominent Democratic journal, for there is no doubt that a little wholesome neglect, in this case as in many others, would assist very much in establishing more correct estimates of political values. But to administer this prescription in just the right direction and proportions, is by no means an easy matter, especially for a President whose intentions are in the line of reform:

The prominence of the colored man in politics was sensibly diminished by President Cleveland, so far as his message is concerned, as to provoke the Philadelphia Press to note that he omitted to say a word about this. This will be regarded as wise policy by men of all parties who desire to see a disturbing element removed from the political arena. We are glad to see that the Boston Herald differs with the Press and refuses to regard the fact cited to mean that the President is prejudiced against the colored race. While the Boston Herald would "have been glad to see" in the President's message a recommendation of national aid to the cause of common school education at the South, it regards the omission to refer to the colored people as such, so far from indicating a prejudice against them on the part of the President, as in reality "the Republicans have treated the colored voter of the South as though he was with them, but not of them; a reliable black contingent, a serif, not an equif." It was the use made of the Negro voters by unscrupulous white men, more than any hatred of the Negroes themselves by the Democrats, which led to the outrages upon the suffrage at the South. And no one can do the colored people a greater service than to wipe out this idea of separation, and treat them like what they are—simply American citizens, with the same feelings, interests and preferences as other men.

Of course we do not admit as true the indictment drawn against the Democracy, but this Republican authority approximates truth when it assumes that the undue prominence—the distinct and separate character—with which the Negro in the South has been invested, has been hurtful to the interests of this emancipated factor in politics and obstruction of national harmony. It will be the part of wisdom to abandon the Negro to himself, as is the case with white citizens.

The New York Freeman has something to say upon the same subject in reply to an editorial in the Detroit Plaindealer:

There are, we grant, features in the Educational bill, now pending before Congress, upon which the President might have delivered an opinion in his message. In conversation with us on this point, he said he had not bad time to give the matter the thought he desired, but would do so before it should reach him for his Executive sanction or disapproval. We are sure he will give the matter earnest thought, and when it comes before him, treat it upon its merits. Our contemporary speaks of this Educational bill as if it were intended solely for our relief. Nothing could be further from the truth. We would benefit vastly by the passage of the bill, but its provisions are intended in no sense to supply alone our educational necessities.

The fact is, no outrage of a political character has been committed under this Administration. When Mr. Cleveland revoked

the appointment of Meade, the Copiah county bulldozer, as postmaster at Hazlehurst, Miss., he showed the cut-throat stamp of Southern politicians that they had no right to expect from him or his Administration.

Why not admit that Mr. Cleveland is an excellent President; that he thinks as well of the race as President Hayes or President Arthur did; that things are moving along smoothly in the South, and that if they were not, no President has any power to make them run smoothly; and that after all is said and done, it is for us to boss our own machines and not permit persons not interested in us to do the bossing for us? We believe in race leadership, in politics as in religion, and we propose to fight for it.

The expressions of opinion, during the past month, in regard to the President's attitude have been particularly interesting and among them by no means the least noticeable is the following from the New York Freeman. We regret that our space does not permit us to give the entire editorial, which, beginning with an outline of the Senate's opposition, continues:

It is evident that this opposition was made in the interest of good government there could be little objection to it from any quarter; but when it plainly appears that the only purpose is to question the President's prerogative to remove office-holders from office and appoint Democrats in their places, such policy should be condemned as very poor politics indeed.

Had Mr. Blaine been elected President instead of Mr. Cleveland, there is no doubt but that he would have made more removals up to this time than Mr. Cleveland has made: because Mr. Blaine is one of the best practical statesmen in the country. Every office holder who could not show that he had been an earnest Blaine Republican would have been removed and a Blaine heeler appointed in his place. Very few office-holders were Blaine-ites before, Blaine was nominated. They were Arthur-ites, and labored for the re-nomination of that gentleman at Chicago. It is usually the nature of office-holders to favor a continuance in power of the chiefs under whom they serve. There is much that is very natural about this. Hence, had Mr. Blaine been successful the official guideline would have been ceaseless in decapitating the head of office-holders who had opposed the nomination and election of the so-called "Plumed Knight." It would have been the tireless work of the Blaine Administration to make these soldiers for the second time by using the offices for all they are worth.

Such would have been the Blaine policy. Would the Republican Senate have opposed such policy? Not much. It would have been the purpose of Republican Senators to acquiesce in the policy of the Republican President, in order that they might control as much as possible of the Federal patronage of their States. We know that such opposition was shown by Senator Conkling to the high-handed removals made by President Garfield, dictated by Mr. Blaine as the evil genius of the State Department and the most restless and vindictive member of the Garfield Cabinet; but there are few Conklings in our politics to-day and none of them in the present Senate.

Mr. Cleveland was elected as a Democrat by Democratic and Mugwump votes, and the country conceded to him and expected that he would fill the offices over which the Constitution gave him power with men of his own political faith. Only by doing this could he properly organize his administration on a Democratic basis. The concurrence of the Senate was required by the constitution for the purpose of guarding the public interest against placing the business of the government in the hands of incompetent or corrupt men, and not for the purpose of handicapping any President in the work of putting the government in sympathy with him by the appointment of men of competence and honesty who shared his political persuasions. Therefore when the Senate seeks to block confirmation of Presidential appointments for other than the public good, its conduct cannot be construed in any other than a reprehensible light.

This is a Civil Service law which regulates the removal of inferior offices of the government and prescribes how they shall be filled. The President at the outset pledged himself to observe the conditions of this law, and the candid verdict is that he has kept the pledge. The offices not covered by this act, and which promise to become a question of Senatorial contest on purely partisan grounds are legally the prerogatives of the President. In filling these it was inferred that so pronounced a civil service advocate as the President would be actuated largely by the spirit, not the letter,

of civil service; but this was, obviously, discretionary with him. That he should have desired to, and to certain extent, filled the offices with men of his partisan beliefs and obligations, if not natural and to have been expected. The country does not expect that the President will continue in or appoint to the office Republicans, but it does expect that he will, when Republicans are displaced, appoint as good if not better men to succeed them. When he has done this he will have fulfilled the obligations of his oath and satisfied public opinion, and the opposition of the Senate will be injurious rather than beneficial to the Republican party.

The *New Orleans Picayune*, is, as a matter of course, warm in its support of the President, but weakens the value of its arguments by unnecessary vilification of Senator Edmunds.

The President cannot furnish the papers which the Republican Senators demand without at the same time virtually surrendering a prerogative which the Federal Congress has at pains to renew and remove beyond the reach of attack by amending the tenure of office law. It is true that the Senate has a right to legislate for the correction of abuses, but that right cannot be construed as superior to the President's absolute right of removal under the circumstances defined by both houses of Congress. Mr. Edmunds has the genius of a special pleader; but he must understand that a law in actual existence is not to be violated in the interest of prospective legislation. He must face the stubborn fact that he has to contend with an opposing majority in the House of Representatives, and a President fortified by precedent and clothed with a veto power. The Democratic party is on deck, and the will of the people is not to be defeated by the sharp practice of a shrewd attorney. Mr. Cleveland has behind him the broadest constituency of any man in America. He has the law on his side, and if we are not mistaken in his character, he has the courage to maintain it.

The *Norfolk Landmark*, has also something to say upon the same subject, in regard to which there is no doubt strong feeling throughout the South—

If we understand the position taken by the Republican Senators, it is their desire to have the reasons given by the President in cases of removal or suspension, because they say: If officers were turned out because they were Republicans, they do not object; but if charges affecting their characters had anything to do with it, then in that case, they wish to make an inquiry into the several cases. In point of fact, however, it means that the Republicans desire to show, if they can, that the President has not stood up to the civil service law. This is a most unworthy scheme, and on their own showing they would make no objection to an appointment where the incumbent had been removed for his political opinions. This sort of inquiry is something never contemplated by the Constitution. The Executive Head of the Government has the right to select his own agents, and should not be disturbed in this, because his is the responsibility for administration. In this state of affairs the Democrats have very properly decided to stand by the President, and this they do on constitutional grounds, as well as for the further reason that so honest an officer deserves support. An easy solution to the affair is offered in the proposition to hear and settle the matter of appointments with open doors. It is the business of the people which is under consideration, and no Star Chamber proceeding ought to be tolerated in this country on such an occasion. The President has exercised a right secured to him by the constitution and statutes, and it is a small piece of business for the Republican Senators to attempt to embarrass his administration about the offices. The people desire to see fair play, and they have a right to demand it as it is their business which is obstructed by the small, nagging process resorted to by the Republicans.

## SILHOUETTES.

BY ALICE M. BACON.

## Some Morning Calls.

It has become noised abroad through the neighborhood of Hampton, that over at the "Missionary" somebody gives away clothing, rations, houses even, to poor and deserving colored people. The facts that give rise to this rumor are as follows: as a result of the expedition made by some of the girls at Christmas time, to the tumble down shanty occupied by Susan Mims and her large family, a movement was started in the school to obtain money enough to secure a house for these people, whose poverty had so forcibly impressed their visitors. The girls were to try and raise money to pay for the lumber and the boys were to haul the lumber and build the house.

The undertaking looks rather large on paper, but when we say that the house was to consist of one room (10 x 12) and was built of rough boards with no paint or plaster, the reader will understand how such a project could be started and carried out. And started it was by the girls, and carried out by the boys who worked away day after day until the little cabin was finished and the family safely housed, just in time to escape the force of the blizzard that wrought such havoc in the South January.

This philanthropic effort of the students was the fact that furnished a foundation for the general impression that any poor person had only to come to the "missionary" and say that he wanted a house, and he would be at once provided with one.

A few barrels of old clothing, too poor and ragged to give to the students in the school, had been distributed among the needy and destitute waifs who come drifting over on to the school grounds occasionally. Rations of meal and bacon have been given out in cases of extreme want. So the idea has gone abroad that some one at the school gives to poor people anything that they ask for. In rain, wind, snow, slush or sunshine, the lame, the halt and the blind, come hobbling and stumbling over their squallid bones to see what the school can give them to make their lives less wretched.

Perhaps my friends would like to spend a morning in my parlour and see what I can give them. They will ask for—Anything from a house to a pair of worn out shoes may be on the list of demands, but though they ask for anything, they often go away apparently satisfied with nothing but a word of sympathy.

We will seat ourselves about the cheerful wood fire and get ready to do our Monday morning mending. It is raining hard and two ago is rapidly turning to the slushiest kind of slush. So as we sit with our work and implements in our laps, we feel glad that we have a cosy cabin and a bright fire on such a dull, nasty day.

Soon a shrill volley of canine abuse from our neighbor's dog, drowns out for a few moments the patter of the rain. A neighbor and soon our neighbor herself appears leading a blind man who has come to her house looking for "Mrs. Baker," as he insists upon calling me. He stumbles into the room and takes a seat by the fire, where he basks for a few moments in the pleasant warmth before he enters into conversation. He is all done up around the head and ears with rags, mostly white, which contrast strongly with the ebony blackness of his skin. His hat, a battered old soft felt, is tied on with an old red scarf, and upon his nose rests an immense pair of green goggles which hide his sightless eyes. His coat is one mass of rags and patches; tied with a string about his waist he wears a placard bearing the inscription "Dear friends, I am blind." His story is as follows. During the war he came here to work for the Government and earned his living honestly and comfortably by working at Fortress Monroe until two years ago, when he lost his sight and is now obliged to spend his old age in blindness and beggary. He has a wife who takes in sewing when she can get it and so helps in the support of the family of four children, but the trouble is that during the winter there is a terrible dearth of work of all kinds. So old Freeman goes about, feeling his way along with a stick, and gets whatever people will give him for the support of his family. He owns his house and the land on which it stands, so he has no rent to pay, but food and fuel for a family of six are hard to find, and many times there is real want and suffering in his home.

At last he finds his tongue and begins: "Miss Baker, I came to ask you, could you give me something to eat? De weather been mighty cold and I can't picked up much lately." There is a deprecating ring in his voice as if he feels that he is asking a great deal. Although he is a beggar now by profession, he does not seem to have yet gained that feeling so the public and the fraternity that the public, and indeed every individual member of the public, owes him a living.

He always asks as if it were hard for him to ask and as if he had a perfect right to refuse. After a little conversation and a few inquiries in regard to his needs, he is given an order for meal and bacon, and is led away by one of the students who is called in for the purpose, and seated in the commissary to wait until his provisions shall be put up.

We have just seated ourselves, collected thread, scissors, thimble and work, and are getting started once more on our mending, when there is a shuffling and tramping on the piazza and fumbling at the door knob, then a muffled thump on the door. Once more we jump up; scissors, thread and work are scattered to the four winds of heaven, and we open the door and usher in two dripping, but respectable figures. They wear not only shoes, but overshoes, each carries a poorly cotton umbrella in her hand and their dresses are clean and whole. Their air of respectability is so overwhelming that we hardly like to begin the conversation until we know what they are here for, lest we should make a mistake in regard to their errand.

But as they seat themselves in silence and are evidently waiting to be questioned, we plunge boldly in and ask their names; or rather we address ourselves to the smiles and least impressive one and ask her name. The conversation once opened, all parties feel more at ease and embarrassment vanishes as the talk continues. We find out that the woman's name is Agnes Crocker, and that she lives on Lincoln street opposite Brother Tom Parker's. A little inquiry into her history elicits the following. "I was raised in Richmond and my mother went away and left me and den I uz root pig or die. When I live up in Richmond den I er de war I use to give Jeff Davis two work a week. Den I come down yer an I den some land, so I bought me some land. My ole man, he is mighty ole man now. He has some corn ore ole lan an we has a cart an a steer and I never ask no help of no one ontwel now. But de winter so hard and we jes scuffle long, so I heerd dar was a lady over at de missionary dat give away thing so I come over here."

She doesn't seem to need anything in particular, her clothing is better than the average, but she has come with the vague hope of obtaining something that she can not get for herself. We explain to her that we do not give away to people of whom we know nothing and that we must look her up before we can help her. She is perfectly satisfied, and beams upon us when we say we will come and see her, and expresses herself as pleased at the honor conferred by such a suggestion.

Then we turn to her companion who has been coughing and choking, ostensibly upon the sofa. Her name proves to be Martha Goodwin. She complains of "a great square cold" caught during the recent cold snap and also of a lame knee which she tells us is "knocked out of joint." Her living she obtains by keeping a little stand on the street on market days, where she sells peanuts and cakes and sometimes a chicken when she gets it, to the people who come in to buy to sell. Her house belongs to her but she has set it down on the land of an obliging neighbor who lets her use the ground, free of rent. She complains that she can't get no hard houses work because her ankle gives away, and then she goes on to tell about how her ankle gave way on the street a few days before and how she "ketches and clawed all the way up to save herself until she was clear way shamed."

Poor old soul! our expressions of sympathy seem to be very grateful and she is mightily pleased at the prospect of a call from us. She doesn't know what she wants any more definitely than her friend, but seems pleased and satisfied with the result of her visit, though all she obtains is the promise of a call. After a long call, the two old ladies depart through the rain, shaking hands with us warmly as they leave and urging us to call as soon as possible.

Once more we return to our mending and proceed a little further with our work when the front door is once more attacked from without. This time a forlorn little woman stands dripping on the piazza, holding by the hand an equally d-ding child. She is almost too wet to invite in, but the weather is certainly too wet for her to stand outside, so we swallow our compunctions and ask her in. We find that she has come in three miles or more from the country to see Gen. Armstrong about getting a house built. Upon inquiry we elicit the information that she lives in a house she rents for \$2.00 per year, but she seems to think that if houses are given away at the missionary, she would like to have one. We explain that we are not giving away any more houses this year, and she seems to take the news quite calmly, so we hope that she has not expected much from her visit. We ask her if she has not found it muddy walking in but she explains that she came in in a "kay." Finding that nothing is to be gained by staying she departs, her little girl carrying with her a lump

of sugar folded tightly in her little damp hand.

Our mending progresses but slowly this morning, but we go to work again and for a few moments all is quiet. Then we are roused by a thumping with a stick, not on the door but on the piazza floor. It is repeated again and again, and we at last leave our work once more to open the front door and ascertain the cause. There, standing in the slush, is a little old man, one mass of rags and tatters, and with a little round black face in which two upturned eyes show white; the pug nose and broad mouth are all twisted about in a mammoth smile. We recognize Watt Smith, who had been to see a few days before to tell us of his wife's illness and ask for fuel. He breaks into a chuckle when he sees us: "I come to tell you my ole woman done dead." Though surprised at the manner in which the news is conveyed, we try to appear sympathetic but find it difficult in the face of so much mirth on the part of the bereaved husband. Further conversation brings to light the fact that the "ole woman" isn't quite dead, only "mos' dead" as Mr. Smith cheerfully remarks. The old fellow declines to come in and we do not urge the point as we do not care to have the moisture drain off of him, nor to our parlor carpet. He is given an order for a little bacon and meal and a promise of some wood and goes off even more radiant than he was when he came.

Next comes aunt Betty Satterfield with a pitiful story of how she tried to move her house from land where she had to pay rent to land where she would have to pay none. She has a house with a piece of land on the way and so she is left houseless. She thinks she could get along if she could get enough timber to build one wall and the roof, for she can make out the rest with the pieces of the old house. When we ask her dimensions with a view to seeing about the lumber we find that the whole house measured twelve by fifteen feet. Aunt Betty has a fine story of her benefactor in the shape of a well to do colored woman who has taken her in to her own house until she shall succeed in patching up her old one so that she can use it.

A thumping of a stick on the piazza and a masculine voice without make us aware of the presence of some one else, and as aunt Betty is ushered out, Mary Frances White enters. Mary Frances is a young girl, a character, and her visits are always entertaining. She is perfectly blind, lost her sight early in life playing "hide and switch" when she was a girl of twenty. That was thirty years ago. When you drive about the roads in the vicinity of Hampton or Old Point, you are very likely to meet her walking along at a swinging pace feeling the roadside with her stick to guide herself and shouting or singing all the time to warn people that she is coming. Her voice is masculine, her dress peculiar; very early in our acquaintance she frankly informed me that she got her living "off de white folks," but there is a certain quaint humor and subtle skill of flattery about her that is not without its effect upon those with whom she comes in contact. There is a freedom and independence about her too that is quite taking, and her dialect has little peculiarities of its own that are delicious. We were asking about her family the other day and she told us that she had a daughter over on the Eastern Shore. Then fearing perhaps that we would suggest that she go and live with her daughter she hastened to explain "You see, I knows all de pedigrees round yer and den I know de pedigrees over on de Eastern Sho', and you know blind woman like me bleeged to know de pedigrees." Much was our amazement to discover her long thought and study on the matter, that by "pedigrees," Mary Frances meant "roads."

She was explaining to us one day that if she could get work to do she would not have to beg. We asked her what kind of work she could do, "Oh, chop wood, wash dishes," she replied in her terse abrupt manner. She expresses a great contempt for her own color because "dey won't do shuffin fer you cepin you pay 'em fer it" but is loud in her praise of the bounty and liberality of "white folks." She has a crafty way of winning our liking too, by petting Bruce, who goes and puts his head in her lap so that she can feel and pat him. "I likes good dogs and good chilluns," she says in explanation.

To-day she is in search of "a little sumpin' to do" and some wood. We had a slight misunderstanding about wood in the past that was amusing to me if not to her. Quite early in our acquaintance with her, she appeared one morning asking for wood. We had said that we would see about it but could not promise it. The next morning while I was at breakfast, a note was handed me from Mary Frances. This came this morning for the wood that you promised her yesterday. Has gone to get a cart and will return in half an hour. What shall I do about it?

She wasn't very much to do with so energetic a beggar, so we got the order for wood signed by the proper authorities and

waited. The morning passed and no Mary Frances appeared and nothing was seen of her for a week when she appeared on my piazza, asking this time not for wood but for underclothing.

I asked her why she did not come to get her own wood; she replied that she "couldn't get no karyat." Her explanation of her efforts in that direction was as follows: "I done asked a man to lend me his karyat. He tole me I give him fifty cents. I tole him I hain't got any fifty cents so he wouldn't loan me his karyat. Colored folks is so mean, dey won't do nothing fer you cepin you give 'em fifty cents."

Mary Frances gets her wood to-day and, after sitting for a while before the fire drying her ragged garments, she goes out again into the slush, just as the dinner bell rings.

We hasten to put away our mending and leave the house, for the stream of callers takes no notice of our dinner hour, and we seize the opportunity to go over when the house is providentially free from them.

## Butler Letters.

At the recent Christmas celebration at the Butler School which took place in February because the Christmas boxes and barrels were so late about arriving, Santa Claus, instead of coming in person, sent a letter to the children, which dropped mysteriously down the chimney and was read to the assembled school. Students of the new psychology who are studying the workings of children's minds will be interested in reading first Santa Claus's letter, and then the children's reports of the same in letters written to thank him or other benefactors of the school for the presents received.

The following is Santa Claus's letter.  
Christmas Tree Lodge, North Pole,  
January 20th, '86.

Dear Miss H., Please give my love to all the children and tell them how sorry I am that I cannot come to see them this year. I had to go back to my home at the North Pole before I had finished my work this year, for the weather was so cold in the South that I was afraid that my reindeer and I would freeze to death if we stayed there any longer. The reason why I did not come to the Butler when I came to the Normal School, was that I heard so many of the children had whooping cough and I was afraid I would catch it, and when so cold a wind as this has the whooping cough, it is likely to prove dangerous. So for the sake of all the children who would miss me next year, I thought I wouldn't run any risks from whooping cough.

As I say, I couldn't come to the Butler when I was here at Christmas time because I was afraid of the whooping cough, and now I am safe at home in my snug quarters right under the shadow of the North Pole and am hard at work getting ready for next Christmas, so I can't come myself, but I have sent down to you by the North Pole Express Co. some things which I had all ready for you at Christmas if it hadn't been for the cold weather and the whooping cough.

I have sent you a grab bag and every child can put in his hand and pull out the first thing he gets hold of. I have selected the things in the bag with great care, and hope that every one who puts in his hand will find something that he will like. There are some other things that wouldn't go into the grab bag and that will have to be fitted to the children as I couldn't take their measures when I was here last year. Just do what you think best with these things and I am sure all the good little children will be satisfied with the result.

Its cold up here. My pet polar bear is sitting by the fire shivering and I am all wrapped up in furs while I write.

Good bye now, and give all the children my love. I hope I may see them all another year.

Your affectionate friend,  
Santa Claus.

Here are a few of the three hundred letters written by the children as a school exercise the day after the event.

Hampton, Va., Feb'y 9th, '86.  
"My dear friends, I will take my pen in hand to let you hear from me. I am well and I hope these few lines will find you the same. We had a nice time yesterday? Santa Claus sent a letter down the chimney and Santa Claus says the reason He did not come because He were afraid of the whooping cough. We sang a song yesterday and after we sang we went into the room and one o'clock we went home. I thank you for what you sent me we have three hundred of children. I live Mill Creek Va. you must come to see me I must close my letter."

Emma Laster.

## Southern Workman.

### Indian Department.

ELAINE GOODALE, *In Charge.*

*Regular Contributors:*

HERBERT WELSH, *Cor. Sec'y Indian Rights Association.*

ALICE C. FLETCHER,

REV JOHN J. GRAVATT,

MRS. A. S. QUINTON, *Gen'l. Sec'y of the Woman's National Indian Ass'n.*

THE *Morning Star* states the fact about twenty-one returned Carlisle students in the Indian Territory, as proofs of the permanent value of Indian education.

MR. HENRY M. PANCOAST writes a letter to the *Evening Post* protesting against the number of recent removals in the Indian service—about sixty per cent.

COMMISSIONER SPARKS has discovered that the Indian title to 10,000,000 acres of land in North Dakota has not been extinguished, in spite of the "executive order" of 1884 opening these lands to settlement. All contracts for survey are suspended in the disputed territory.

A RETURNED HAMPTON STUDENT at Standing Rock writes a letter to Mr. Riggs asking for "another church besides a Catholic church 'up here.' We want to have a church that can teach the old and young folks how to become a Christian and have all sorts of Societies and have them learn in English language." There are now small mission stations under the care of both Episcopal and Congregational churches at this Agency.

### The Day School.

Mr. Oberley's clear and readable report, as Superintendent of Indian Schools, summarizes the benefits of the present Indian School system, contrasts boarding and day schools, and concludes in favor of the Reservation boarding school as the most efficient civilizing agency which can be employed. His argument against the day school is the usual one—the irreclaimable savagery of its surroundings. We agree with Mr. Oberley that the progress of the individual boy or girl is far more rapid and striking under boarding school discipline—it is almost more than progress—it amounts to a transformation. If this is his sole aim he ought logically to go a little further and give the preference to the Eastern school, which undoubtedly brings a superior force to bear and produces a quicker and complete change. It seems to us, however, that the Indian question is a broader one than this, and that success depends not upon destroying the home, but upon building it up—not upon compulsory education of all the children in boarding-schools, but on a plan which saves the family and keeps the parents in sympathy with the growth of their children.

Barbarism as an aggressive force has no part in our calculations. We do not believe in any "savagery" that is irreclaimable. We might almost say that we do not believe in "savagery" at all—for the word is very far from

applying to the most untaught Indian. Ignorance is negative, not positive, and ignorance is the crime of the Indian—an ignorance readily met and easily overcome. The day-school is of primary importance—not so much for its immediate result upon the children, as for the easy and unforced nature of its conditions and for its indirect influence upon Indian life. It is the natural and necessary first step. We do not look upon Indian civilization as a rapid forcing process, but as a normal and gradual development.

All work in the home, all help toward right living can best be given in connection with the camp day-school. The day-school teacher is often entrusted with annuity clothing to make up, organizes a sewing-school and transform the women and children of the camp. On several Agencies the teacher assumes the care of distributing farming implements and seed, in proportion to the needs and efforts of the would-be farmer. The relation between teacher and people is one of the most vivid interest and responsibility. The importance cannot, in our opinion, be too strongly urged of quadrupling the number of day-schools, of selecting the teachers with greater care and of providing for competent and general inspection of schools.

### An Official Interview.

An embassy from the Indian Rights Association, consisting of Dr. Rhoads, Mr. Welsh and Prof. Painter, made a recent visit to Washington, for the purpose of laying before the President and Indian Commissioner the importance of the Daves' Sioux bill, the desirability of extending civil-service reform principles over the Indian service and other matters of interest to the Association.

"Commissioner Atkins received the Committee courteously. He stated that 'he was out and out a Democrat, but he believed in making appointments for merit and not partisanship.' Mr. Welsh, in his report of the interview, informs us that Mr. Atkins further remarked that 'he had but little to do with the appointment of Indian agents.' This is a somewhat suggestive admission.

"The next visit was that to the President who manifested evident interest in the question, talking upon it freely and at length. At the same time he spoke as a man who was wearied with the practical difficulties of the work. He did not at all doubt, he said, that the Indians could be civilized within a comparatively short period if the Administration could select the right men to carry out the work. But that was the great difficulty. \* \* I mentioned in reply to this the importance of retaining agents whose ability had already been proved—such men as Gasmann, just dismissed from Crow Creek, and Wright and McGillycuddy, still in charge at Rosebud and Pine Ridge.

\* \* I asked him whether he would favor an extension of the principles of the reformed civil service to the Indian service. He did not make a definite answer to this question, but appeared not to favor the idea. The President evidently felt the weakness of the Department in respect to the appointments of Indian Agents, for he said that it was with a desire to obviate the difficulties of the present situation that

he had recommended the appointment of a salaried commission, three of whom should be officers of the army, to make a careful study of the whole question and advise the Secretary of the Interior. \* \* The President thought Indian Agents should receive higher salaries, to which we agreed." This closed the interview."

### The Women's National Indian Association.

The annual Report, the President's address, and accounts of missionary work of the Association are before us, with their record of wide-spreading and successful effort. The aim of the Women's Indian Association is threefold—to influence the people, to influence the administration, and to aid the Indians. The former ends are attained by the usual machinery of public addresses, newspaper articles, pamphlet literature and personal interviews and effort; the latter by a well-devised scheme of missionary labor.

The Association has now 56 auxiliaries located in 27 different States and Territories, all working effectively for Indian civilization. An aggregate of 450 meetings have been held during the year. Mrs. Quinton alone has addressed 73 meetings. Numberless petitions have been sent to State and National Legislatures, personal letters secured to members of Congress from influential constituents, and editorials and published letters widely circulated through the press both East and West.

The interesting features of the Society's practical work for the Indians are the support of missionaries at points where no missionary work is being done, (the plan being to resign each station as soon as some church society will accept it for permanent work.) and Miss Fletcher's new scheme of "Indian home-building" for educated young married couples. The duties of the missionaries are very wisely and practically defined. In less than two years work of this kind has been done in five tribes, and the department has proved itself "one of great value and growing power." Miss Cota Fellows went out a year ago to study the language and the Indians at Mr. Riggs' school at Santee, and after a visit to one of the out-stations at the Cheyenne River Agency, is now in charge of a new station at Rosebud, as Government teacher and practical missionary. Extracts from her letters, while at Elizabeth Winyan's house, are vivid and touching. "I am grown a real Dakota now, not afraid of anything, but able to talk and help teach these people. Wild as they are and ignorant, they are gentle and seem fond of me and wish to learn.

\* \* Monday morning, and we are all through our work, have our clean aprons on, are ready for school, and Winyan has put out her little pink flag to show the people she is ready for them. As I write there are two men and a boy coming in with their blankets about them, to take their lessons. It really seems wonderful that this Indian woman is here as a missionary teacher, helping her people to read and write and to become Christians."

Missionary boxes valued at over a thousand dollars have been sent to the field through the various branch Societies. In the building of public sentiment, and in the Christianization and civilization of the tribes, we have to record a year of fruitful work on the part of the Women's Association.

### A Branch of the Indian Rights Association formed at Princeton, N. J.

The Corresponding Secretary of the I. R. A. spent Saturday, Jan. 16th and Sunday, Jan. 17th, at Princeton, N. J. The visit was made at the instance and through the earnest cooperation of Mr. Wm. M. Langdon, a student in the

Princeton Theological Seminary. On Saturday evening, at 7 o'clock, Mr. Welsh addressed a meeting composed principally of the students at Princeton College and of the Theological Seminary, in the hall of the Philadelphia Society. About one hundred students, who evinced marked interest in the subject of the address, were present.

On Sunday Mr. Welsh spoke as follows: at 4 p. m., before the congregation of the Episcopal church through the invitation of Rev. Alfred B. Baker, Rector; at 5 p. m., to the students of Princeton College, through the kind permission of President McCosh; at 7:30 in the evening in the 1st Presbyterian church, Rev. Mr. Hinsdale, Pastor. After the address at the evening meeting, which was attended by a large number of persons; principally men, the Princeton Branch of the I. R. A. was formed with Prof. Wm. Henry Green as President and Prof. Alexander Johnston as Secretary, and a membership of 33. An important step has been taken toward advancing the work of the Association by establishing a Branch in so important an intellectual centre as Princeton. H. W.

### The Puyallup Land Patents.

The 170 patents for land, so long vainly asked for by the Puyallup Indians, have at length, by order of the Hon. Secretary of the Interior, been issued to them. More than one year ago application for these patents had been made by the Indians. The refusal of Sec'y. Teller to grant them is quite inexplicable upon reasonable hypothesis. The Puyallup Indians are a civilized and self-supporting people, owning a small reservation of about 18,000 acres upon Puget Sound, close to the city of Tacoma. They asked only for that to which they were justly entitled under the terms of their treaty—a right to the individual possession of their land by a permanent title. But, as has been so frequently the case, there were influential men who coveted the fertile lands of these thrifty people; powerful leverage was brought to bear upon the Government to have the Indians removed and their appeal for patents refused. Through the intervention of Senator Dawes and the alertness of Prof. Painter, at Washington, this iniquitous scheme was unmasked and a promise was secured from the new administration that the patents so long withheld should be issued. Eight months have elapsed since this assurance was given, and only now has that promise been performed. Strong pressure has been brought to bear upon the present authorities, as upon those formerly in power, to prevent the performance of so plain a duty to the Puyallup Indians, but not with the same success. This act of justice upon the part of Secretary Lamar, which we can only regret has been so long delayed, will be duly appreciated by the friends of the Indians. H. W.

## DENTISTRY.

Dr. T. H. Parramore,

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King Street, opposite Barnes' Hotel.

### Incidents of Indian Life at Hampton.

Snowballs!  
"Those lemon tarts" are the latest from the cooking class.

"Fish-pond" is the new popular game at the Wigwam.

One of the patrons of the Indian Reading Room is making a study of "Character," by the English moralist Samuel Smiles.

The boys of the Normal School held their last debate on Senator Dawes' bill for opening to settlement a part of the Sioux Reservation.

The Winona "piano fund" is growing slowly but surely by the sale of small articles of Indian work and of Indian paintings. A visitor the other day made purchases to the value of \$2.50 and declined change for a \$5.00 bill.

The new folding doors between the Assembly Room and the Sewing Room at Winona are a great convenience, practically increasing the seating capacity for Literary and Prayer meetings. It has been proposed to enlarge the Wigwam Assembly Room, which is somewhat crowded, in a similar way.

Miss Collins, for ten years a missionary of the A. M. A. in Dakota, is making us a visit. Her experience will no doubt be helpful to us in the way of criticism and suggestion, and it is delightful to our children to see one so well acquainted with their language, their homes and themselves. Miss Collins has a series of engagements to address churches and associations on the Indian question.

### From the Omahas.

My dear teacher: I write a letter to you. I thought of Hampton all time. I didn't go farther at all in my lessons. When I come here I sick three time. Omahas paper for our land. My father got me land, good land. My dear friend, I want you help me about something. Will you please send three rubber boots and something to wear in night. I two little sister and my father going sent them to mission. My father tell me to think about God, he think about too. My father when he think about, glad. My father want letter from you. I want one too.

From your GUY STABLER.

### "Inspection" at the Wigwam.

At 9.40 o'clock on Sunday morning every Hampton student is expected to be in his room, and boy and room to be in irreproachable order for "Sunday morning inspection." Let us see the Indians at home.

We step briskly out of the keen frosty air into the battered hallway of Division A, where the smaller boys live. There is a great scampering of feet on the uncarpeted stairs, and two very minute youngsters stand and give the military salute, with a vain attempt at perfect gravity, as we knock and enter. "That sheet is not quite straight, is it?" "Suppose you were to dust the top of that trunk," and then Miss T.—delights their hearts by the promise of a picture for their wall, as a reward for absolute neatness the next Sunday. Another boy apparently about three feet high, in a room some three feet

square, evidently has theories on the subject of ventilation, for he stands unmoved in the strongest kind of a draught. "Did you make that bed yourself? it looks very well, indeed," and so on and so on. On the whole, Division A does itself credit, and we proceed to Division B.

Our janitor's room is a model, and as Mr. S. remarks, "must be an excellent object lesson to the boys when they come in to borrow a match!" The mantel lambrequins and other elegances give it an air of refinement, and the appliances for the toilet are noticeably nice. Pictures on the walls of nearly all the rooms above the high pine wainscoting, give an idea of the taste of the occupants, and are usually a medley of illuminated texts, full page illustrations from *Harper's Weekly*, photographs of the school, tin-types of friends, chromos and Christmas cards. One boy has the latest London styles from a fashion magazine, another a decidedly lackadaisical group of the "Christian Graces," and still a third some vigorous drawing and very Indian coloring in horses, hunters and buffalo.

There are school books, Bibles, and the "Story of the Bible" on almost every table or mantelpiece; but here is a room with a modest shelf of poets as well—Longfellow, Cowper, Tennyson and Bryant! There is also a portrait of Longfellow on the wall, and a violin in the corner. Next door we find another violin, with the music of "Home, Sweet Home" lying beside it, and a quantity of brilliantly colored Indian arrows give a decorative finish to the apartment. In another the mirror is accidentally hung upside down. "Do you stand on your head when you brush your hair?" Mr.—inquires; and the inmates appreciate the joke! The very exactly made beds in the pleasant room of two of our best carpenters suggests the remark that they "make their beds by rule!" Here are also some photographs of public buildings in Washington—a memento of last year's Northern tour. The American flag occasionally waves over the bed or the wardrobe, and hints at a hope that our boys may be citizens some day.

The appearance of the young men themselves is certainly pleasant to behold. The becoming uniform, the neat boots and linen, the bright, intelligent faces fill us with pride, and while the salute is not always given with military precision, it is on the whole creditable.

The furniture is not invariably above criticism—here, for instance, is a mirror which certainly cannot encourage vanity in its possessor, and there a bed which looks considerably smaller than the boy who stands beside it! But as a rule, there is comfort, neatness, and a degree of taste displayed. In the endeavor to say something pleasant, we do, occasionally, make a mistake as when Miss—exclaims over a "pretty afghan" which is in fact our young friend's rather ample "comforter." We retire, nevertheless, with a sense of satisfaction. "Will they keep it up out West, where there is no Sunday morning inspection?" Miss— inquires. "Well, I have seen log cabins look as well as these rooms—and I have seen a great many that didn't!"

### One Saturday Evening.

"Saturday evenings" at Winona are not always very accurately described by the names of the various "Clubs" and "Societies" which arrange the program. We sometimes take a wicked satisfaction in announcing "Temperance meeting this evening—we shall have a report of the Lead-a-Hand Club and marching afterward," or "This is our evening for Debate—there will be songs and recitations." "A good time" is really all that is expected, and it seldom fails to be realized.

Our last Saturday evening was noticeable for a variety of literary and musical exercises. Poems were read—one young girl giving the whole of "Curfew Shall not Ring To-night" to a spell-bound audience, and our poetry-loving Senior reading with admirable expression Longfellow's beautiful "Ladder of Angels." "Three boys" rolled out several college songs with humorous emphasis. A row of little girls recited in concert old "Independence Day." A number of boys gave a good recitation of a dialogue called "The Emigrants," which in spite of our enjoyment, suggested to our minds at least, the painful contrast between America as a refuge for the poor foreigner and America as a home for her own native people.

A letter was read from "Sitting Bull's Camp," which shall be given as a sequel to the pathetic one published last month:

"I received your kind letter and the nice Christmas letter you sent. It was very kind of you all teachers to remember me, even from our dear Miss E—, who I thought didn't know that I was doing something. I tell you, Miss R—, I enjoyed so much for the poor children were so pleased with their presents, we had the merriest kind of a Christmas at the little school house, given altogether by the good Hampton teachers, and that was the children's first merry Christmas they had in all their lives."

After this there is a little hush, then a small boy's brief comic recitation, which is hailed with great applause, and a song by three of the girls. The voices have noticeably gained in quality and compass since Mr. Rathbun's era of musical teaching. The perfect attention and exuberant good humor of our audience is always inspiring.

Almost at the last, one of our young men who has been here for several years, but has the reputation of a deer rather than a speaker, delivers his maiden speech, and surprises us by his excellent voice and presence.

"We all know that it is very hard to stand up and say something, but, my friends, just think about your homes and see how hard it is out there, and I don't think this so very hard, to stand among ourselves and say something. My friends, let us look back to the dark place, and there our people are living and they cannot see very well the light, and we know that they are waiting for us. And so, my friends, let us try our best while we are here and learning all we can in order to use all we can to help our poor people when we go back to them; and we must try very hard and stand against them and try to lift them up and show to them the better ways and the better road and the light, so they can follow. We know that it is very hard for them to try to follow the white men's way, and we all know how hard it is when we first try to follow the white men's way and it is the same to them. But some of them are trying very hard to stand up, but sometimes some of them are fall off because they did not hold anything strong."

Now some of them are trying to raise something themselves. I think it is good for them to try very hard and raise something for themselves, so if the Government of the United States did not give them any food then they can work and raise something for themselves.

My friends, when you go back to your own people then I think you are the ones are going to lead the people in the right; and if we try very hard and get good education, then perhaps we can teach our people as well as the white people teach them. We know that it is very hard for us to lead our people or teach them in the right way, and we know that there is great

temptation out there, but we can ask our Great Father to help us and not lead us into the temptation."

Is it surprising that a gentleman, a stranger to us, who had been asking a few minutes before "Can the Indians do anything at all?" rose up from this meeting deeply roused and interested, and we may hope, an earnest convert to Indian education?

### "Settled Down to Business."

The following testimony to the good sense of an Indian youth who bore while at Hampton a varying reputation and is naturally restless and discontented, may be looked upon as encouraging:

"K— came over to see me yesterday. He had come down to Bismarck to buy some material for his house. He says he has taken up 160 acres of land, has built a log house and has some land broken, that he is chopping wood this winter and intends to break up a good deal of land next spring. He has a cow and a pig and hopes to receive a yoke of oxen from the agent next spring as he hears that the 'Great Father' intends to send some domestic animals to the Fort Berthold Agency. K— looks like a 'country man'—citizens' clothes, short hair, and talks bravely. I am inclined to think that he has settled down to business and should not be surprised if he proved to be a success—financially, anyhow."

### He Wants to Teach.

MISS C. WINNEBAGO, NEBRASKA.

Your letter reached me some time ago, and I will write a short letter in return, I am almost ashamed of myself to say that I am not engaged in the good work. It is not because that I don't want to—but I am not teaching because my father is so that I have to carry on his work. At first when I was at school I never thought of teaching, but since I have been home and seen the position of Indians here and elsewhere, I have made up my mind to do what I can towards uplifting the Indians from that low position that they are in, but I am sorry I could not commence this year. I think before I commence I have to go back to Hampton in the spring and finish. I went away before school closed.

I wanted to write to you long before this, but being busy harvesting I couldn't until now. — is home not doing much, but don't seem to want to teach. I'll was in her place I would have gone to teach long ago.

Yours Respectfully, ST. C.

STATUE OF "LIBERTY" ENLIGHTENING THE WORLD.

### More Money Needed.

The Committee in charge of the construction of the pedestal and the erection of the Statue, in order to raise funds for its completion, have prepared, from miniature Statuettes, which they are desiring to subscribers throughout the United States at the following prices:

No. 1 Statuette, 12 inches in height, the Statue bronzed; Pedestal, nickel-plated, at \$100.00.  
No. 2 Statuette, in same metal, nickel-plated, at \$50.00.  
No. 3 Statuette, in same metal, nickel-plated, at \$25.00.  
No. 4 Statuette, in same metal, nickel-plated, at \$12.50.  
No. 5 Statuette, in same metal, nickel-plated, at \$6.25.  
No. 6 Statuette, in same metal, nickel-plated, at \$3.12.  
No. 7 Statuette, in same metal, nickel-plated, at \$1.56.  
No. 8 Statuette, in same metal, nickel-plated, at \$0.78.  
No. 9 Statuette, in same metal, nickel-plated, at \$0.39.  
No. 10 Statuette, in same metal, nickel-plated, at \$0.19.  
No. 11 Statuette, in same metal, nickel-plated, at \$0.09.  
No. 12 Statuette, in same metal, nickel-plated, at \$0.04.  
No. 13 Statuette, in same metal, nickel-plated, at \$0.02.  
No. 14 Statuette, in same metal, nickel-plated, at \$0.01.  
No. 15 Statuette, in same metal, nickel-plated, at \$0.005.  
No. 16 Statuette, in same metal, nickel-plated, at \$0.002.  
No. 17 Statuette, in same metal, nickel-plated, at \$0.001.  
No. 18 Statuette, in same metal, nickel-plated, at \$0.0005.  
No. 19 Statuette, in same metal, nickel-plated, at \$0.0002.  
No. 20 Statuette, in same metal, nickel-plated, at \$0.0001.

Much time and money have been spent in perfecting the Statuettes, and they are much improved over the first sent out. The Committee have received from subscribers many letters of commendation.

The New York World Fund of \$100,000 completes the Pedestal, but it is estimated that \$200,000 yet needed to pay the iron fastenings and the erection of the Statue.

Liberal subscriptions for the miniature Statuettes will produce the desired amount.

Address, with remittance,  
RICHARD BUTLER, Secretary,  
American Committee of the Statue of Liberty,  
33 Mercer Street, New York.

# An Army Officer's View of Indian Civilization and Education.

From a Lecture by Capt. Henry Remey, U. S. A.

What to do with the Indian has been one of the problems that have occupied the public mind from the time when the first white man landed on the shores of the New World. The Spaniard, prompt in deeds of rapine and blood, applied the sword to the Gordian knot, and at the same time tried to reunite the widely sundered cord by laying on its remnants the symbol of Heaven's good will to men. Chivalrous Captain John Smith found the "savages" of Virginia at times more than a match for his colonists, and King Philip baffled for a time all the military skill and strength of the Pilgrims. But, here, as in other countries, Providence has seemed to be on the side of the strongest battalions, and the constantly recruited ranks of the pale face have driven his red brother from one after another of his strongholds, till he is to-day wholly girt with a cordon of civilization from which there is no escape. The choice of civilization or extermination sternly confronts him, and unless he is in some manner convinced that the former will be for his benefit, the latter will take its course, and in a short time—counting time in its entirety—he will have ceased to be.

But he is tenacious of life. On the soil given him, as he believes, by the Great Spirit, he makes his stand, and though in the end worsted in every war, he makes it costly to his conquerors, gets "skin for skin," and sends desolation to many homes. What shall we do with him? Shall we keep up this costly and barbarous practice of wrong, cheating and slaughter, sue in the end to recede and give up the land we are looking abroad for fields of mission labor, shall we look nearer home, and strive to love our neighbor as ourselves, and though his skin may be of a more tawny hue than our own, believe that, in the sight of God, his soul is as precious as our own. We have struck off the shackles of the slave, and put him in the pathway of knowledge.—Why not put the red man on the same road?

Since 1778, when the first treaty of this Government with any Indian tribe was made with the Delawares, six hundred and forty-seven treaties have been made with different tribes within our borders. In over ninety per cent. of these treaties, clauses relating to education have appeared. Of this ninety per cent. but ten per cent. have been complied with, and it has not been these clauses alone that have not been kept. Indeed had we dared to break faith with civilized nations as we have with the Indian we should have had more wars, and been held up justly to the execration of the whole civilized world.

History furnishes but few worse records of cruelty to the weaker party, than that of the forcible expulsion of many of the tribes from homes east of the Mississippi to new localities west of it, and it has been their misfortune that the historians have all been of the conquering race, and but few of them free from all prejudice; and the same may be said of the readers of that history. Few of us like to be told of our shortcomings. We are ready enough to hold whole tribes responsible for the theft or murder committed by single members, but when we see a nation are held accountable for the lawlessness of some of its citizens, a different face is put upon the matter, and public opinion is too apt to say "It's only an Indian." Then comes a war, with its attendant horrors, and the country rings with the cry for revenge, and with denunciation of the "blood-thirsty savage."

I do not want to be understood as an apologist for Indian cruelty and barbarism. I have seen enough of them to melt a heart of stone with sympathy for the tortured captive, and draw tears from eyes that have not known sorrow. I do not claim that the Indian is an embryo saint, only waiting development. I regard him as a very great sinner, capable of breaking every command in the decalogue, and all laws human or divine. But put yourself in his place. Imagine, if you can, that you had never heard the glad tidings of a Savior and salvation, never been told that thou shalt not kill, Thou shalt not steal, Thou shalt not covet; that you had been taught that to be a great warrior in the nothing and of life, that wealth is better if stolen than acquired in any other way, that an enemy is to be destroyed if possible, by any means; imagine that we claimed as a heritage the land where our fathers had dwelt, and we had birth, and that another race stronger in numbers and in knowledge came in and attempted to take possession, and, without, in many cases, any acknowledgment of prior ownership on our part, they should proceed to set aside for us such portion as they thought they would never have use for; that, when we had performed our duty to their demands and made for ourselves new homes, we were again ordered to move on, again defrauded by their superior intelligence and our sim-

ple faith in their words. Imagine that most of them looked upon us as no better than wild beasts, fit only to be destroyed, and gave us no encouragement to make ourselves better, but rather strove to seduce and debauch us and overreach our ignorance at every turn. What would we do? Would we not carry a heritage of hate in our hearts for those who had thus wronged us, and wage unceasing war against them? Would we not distrust every attempt to induce us to change our course, and refuse to sit still? Would we not say to General Terry in 1878—"I want no more lies?"

It is much cheaper to educate an Indian boy than to allow him to grow up in savagery and vice, and then fight or feed him. Many of the states of the Union have enacted laws for compulsory education, and levy the necessary taxes for its support. The question of national aid for the suppression of illiteracy has of late come under discussion. If states can compel the education of children within their limits, why cannot the General Government do the same for its wards? And if citizens of a state can be taxed to educate its children, why should not the proceeds of sales of unused Indian lands educate Indian youth? The Nez Percés war of 1877, lasted less than six months and cost a little less than \$300,000, besides the pay of troops and over five hundred lives. You can place one hundred young men old enough to take up arms and go on raids, at Hampton or Carlisle or Lawrence, and keep them there for a year, out of harm's way, learning good and unlearning evil, gaining a knowledge not only of books, but of how to earn an honest living, for less than that war cost in money, and lose no lives by violence; and the expenses of ten of them for three years will be less than those of a company of troops following them in the field for three months.

The question is often asked does the Indian appreciate what is done for him? The Indian has been so often lied to and deceived by his pale-faced brother that, naturally cautious and conservative and slow of belief, he has grown wary and untrusting. But, on the other hand, he sees that the white race increases and his decreases, that their knowledge is power and his ignorance is weakness, and while he may say that he is too old to change, his children may do so. There are no children at Hampton or Carlisle to-day who are not there with the consent of their parents or friends, and ten times that number could be had for school attendance if there were room to place them. Among the northern Cheyennes, located near Fort Keogh, Montana, there is a demand for teachers at their own homes which they are now building. Put yourself in his place again. "Would you like to trust with your children the race who nine times out of ten had cheated you in your dealings with them? Wouldn't you consider first before you gave your children to their care, to be educated in manners and customs directly opposed to those you and your fathers before you had followed? But those who have sent children to Hampton and Carlisle do appreciate that being done for them. Their influence is already widely felt, and scores of Indian parents beseech the white man who has taken their children and shown them how to be true men and women.

The army officer last on duty at Hampton as commandant of cadets, who was instructed two years ago with the duty of selecting children for the school from the different agencies along the Missouri River, said: "Among the most prominent advocates of education among the Indians whom I met were Sitting Bull, Crow King and other chiefs of the Sioux, children from whose bands are already at Eastern schools. They seemed to be thoroughly imbued with a desire to learn the white man's road and how to make a living. War and hunting have failed them and they are brought face to face with the issue—education or extermination."

This makes the time more propitious than any has been before, and faith honest dealing will be appreciated by the majority.

I would arrange the measures necessary for Indian civilization in something like the following order:

1st. Homes, and ownership of their lands in severalty; titles to be inalienable for twenty or twenty-five years.

2d. Education, religious and secular, and in manual labor.

3d. Dropping all tribal relations; and dealing with the individual.

4th. Equality with whites before the law.

5th. Citizenship and the ballot for those who can pass an educational test.

I do not believe in the total segregation of the races. Experience shows that the isolation of any race has not tended to its highest development. Friendly and intimate relations with those who have enjoyed superior advantages is one of the best means of our own advancement. Many are already at work, but where there is no fixity of tenure or individual titles, there is no encouragement to building a house only to find,

as has been found too often, that the house is no sooner built than some greedy white man has usurped its coveted eyes and declares that "the Indian must go."

An army officer writing of the Indians of the Pacific slope, says of the Klamaths: "They are industrious and temperate; energetic and progressive; friendly to the whites and loyal to the government of the United States. They have all adopted the customs of the whites, and as far as they are able, their modes of living. Considering that it is not twenty-five years since they first came in contact with civilized people, they have made remarkable progress in civilized life. They are anxious to work and are good laborers. They find considerable work outside their reservations, among the whites, making rails and hay, hauling lumber, cutting cord wood and logs for saw mills; contributing in their way, largely to the support of their families. Similar testimony as to other tribes in that locality is borne by officers and civilians. The Indian when willing to work is not always allowed to or given full wages."

When once located, education can be made compulsory. He needs educating in everything pertaining to civilized life. Employment of brains and of hands does much to destroy the devil's workshop.

Responsible to no one, as the present self-styled chiefs and head men of the nomadic tribes are, it is impossible to bind their fellows by any treaty or promises they may make, if they choose to repudiate, it is often done. Many of the chiefs are opposed to land in severalty, because their impulse will cease.

The corner stone of any Indian system should be "equal and exact justice to all, for all," red or white. Punish as severely the white thief who steals an Indian's horse as the red one who steals a white man's. Responsibility to law would soon obliterate polygamy and tend to cement family relations.

To have full protection in law, the Indian must stand before it on a full equality with his white brothers, have the right to sue as well as to be sued, the right to sit on juries when one of his race is party to the case. If he has the ballot, he becomes an object of saving interest to the politician. We give the ballot to the foreigner, utterly ignorant of our laws, customs, or system of government, almost as soon as we do to the Indian. He is ignorant of the use of it, and is often more fitted to use it than is the blanket savage of today. We have enough of ignorant suffrage; the educational qualification would make him the more anxious to get education, and help make him the better citizen.

The poor Mahometan said: "One year of justice is worth seventy years of prayer." The Indian does not want less prayer, but he does want more justice.

All these things cannot be done at once. We boast of our civilization. It is the product of thousands of years of effort with a crown of eighteen centuries of Christianity; and we have wild and bad blood in us still. We have only to look back in history to see our forefathers roaming the sunny plains of France, or the forests of Germany, British raiding on the weak and defenseless, and like our untutored savage of today, recognizing no law but that of the stronger.

Why should we be interested in saving the Indian?

First: It is cheaper to save him than to destroy him; saving of blood as well as of money.

Second: humanity demands it. Third: The gospel of Christ demands it. We profess to be the followers of Him who died for all men. We boast of our light and our knowledge. That light and knowledge we owe to Christianity.

"Shall we to men be lighted, The lamp of life deny?"

Do you wonder, as some have, at such words from the lips of a soldier? "All that we are is the result of what we have thought," is an old Hindoo saying, and none have thought more deeply on this subject than have army officers, who, year after year, are brought face to face with these people, and their control.

My own ideas are the result of seventeen years of constant familiarity with them in all situations; in peaceful camps; through three wars; among all the wild tribes east of the Rocky mountains, from Texas to Manitoba; stationed for three years among the civilized tribes in Indian Territory; twice in charge of numbers of Indian prisoners of war; and, for more than three years in charge of Indian pupils at Hampton Institute, where first the present system of manual labor education had a fair trial. I confess that at my first contact with the Indian wretchedness, I had no hope for the future of the race. Now, I see none other than the plan I have tried to lay before you.

Many perhaps meet—of the people of the eastern portion of the country, think that the army wants wars with the Indians. Some Congressmen, judging from their utopian schemes, think that if the army is not every day actively employed, it is inefficient and should be disbanded. Some, like the

little miss in a Connecticut manufacturing town, think that fighting must begin at a regular hour every morning.

I do not remember seeing a dozen officers who did want an Indian war. We know many of us by sad experience.—We know wars mean hard work, hard fare, exposure to summer's heat and winter's cold, wounds, and, to many, death; and that, do as we may, we get but few thanks.

But I have known of, and can name, instances where white men who have wanted the lands of peaceful Indians, or who had grain for which they wanted the market which the presence of troops in their vicinity would create, would deliberately commit some outrage, on purpose to bring on hostilities and thus create the desired market for their produce, or employment in transportation; and then, in the minds of people more distant from the scene, the army and the Indian must share the blame. Then, war is declared, the aid of the army must be called in, and perhaps a company of the very men whose cupidity and brutality brought it on, be organized to assist; and the tax-payers of the country must pay the bill.

Away with such mockery of civilization. Either say to the savage, "We can and we will be more savage than you," and openly proclaim a war and a policy of extermination with all its penalties to the exterminated in this world, and to the exterminator in the next—and so be consistent—or else treat the Indian as a man; ignorant and savage, but still a man; with a soul for which, so well as for yours and mine, Christ has died, and, concerning whom, the Judge of all may say to us, some day, "The voice of thy brother's blood crieth unto me from the ground."

## A Missionary Journey.

Crossing the Plains—in Camp on the Grand River—Dakota Weather Signs—A Service Among Heathen—Wanted, A Man.

ST. STEPHEN'S MISSION, DAKOTA.

October 10, 1885.

It occurs to me that even the experienced "camper out" may accept a hint or two from the Indian, who has acquired through centuries of practice the keenest sense of locality, weather, distance, the most compact outfit of necessities in the world. We have been to Standing Rock, and returned a distance of about a hundred and seventy-five miles, in an Indian lumber wagon, lined with a motley collection of buffalo robes and patch-work quilts, Indian lodge-poles projecting from behind, an Indian, or rather a half-breed driver, with his wife and child, on the front seat, and an Indian pony, meek but enduring, bringing up the rear. We have slept in a tepee; we have eaten lacon and coffee pounded in a bag, and fried "Indian bread"—the staples of prairie fare—but let us also confess to lobster salad, pickles and pound-cake and other luxuries of an advanced civilization. This mixture of frontier simplicity and eastern abundance, with an aboriginal flavor thrown in, is no less the height of picturesque than the perfection of comfort.

I wish I could describe our first evening's camp on the Grand River. It is sunset; the air is still and cold; the pale yellow cotton-woods on the river bank are reflected in the glassy waters; there is a yellow light in the western sky. Wood, water, grass—these are the three necessities—and Baptiste finds them all in a lovely sheltered hollow, close to the river. "Mor," says the experienced missionary, "I always let an Indian choose his own camping ground." Swiftly, silently, our driver unbuckles the harness, and throwing the bridles over his arm, leads his horses to the water and then tethers them out along the bluffs. In a minute or two the saddle is off the grey pony and he, too, is grazing at a little distance. A tin pail of water makes its appearance in camp, and the snapping of twigs and resonant blows of a hatchet from the neighboring thicket predict a goodly store of fire-wood. Boxes of provisions, rolls of blankets, and a few kitchen utensils are scattered about in the long brown grass. On one of the piles Julia has summarily planned her baby—a genuine Indian baby, which never cries—and is dexterously arranging the lodge-poles in a conical position, tying them together at the top in an incomprehensible fashion. Then a shapeless roll of white canvas is dragged forward, its peak fastened to the end of another long pole and raised to the apex of the cone—and, as if by magic, the beautiful and convenient Dakota lodge rises complete in the wilderness, its little nest of poles projecting from the top, its aperture for the exit of the smoke, with a flap ingeniously arranged according to the direction of the wind, its lower triangular opening by way of a door, closing at will by means of slits and wooden pegs. Crowns and hatchets and the plentiful use of tent-pins soon make our shelter secure—rugs and buffalo robes within capture the soft grass, and Baptiste, on his knees in the middle, is coaxing a heap of splinters into a blaze; a wreath

of blue smoke ascends through the opening in the top—we are at home! Julia boils potatoes and makes coffee. I broil the steak and unpeel the baskets; a candle tied to a pointed stick supplements the red light of the fire, and in the course of an hour or so we are all reclining on our rugs in Oriental ease, supping with keenest zest. In the drowsy warmth of our lodge. If the night prove cold we have only to replenish our fire, and what with an abundance of blankets, nothing could be more comfortable.

The morning, indeed, is white with frost, and we notice the curious fact that it is cold just after sunrise.

The caprices and paradoxes of Dakota weather are infinitely amusing. "We shall have rain soon," says our missionary guide, "there's not a cloud in the sky!" Or, "the sky has clouded over; it's going to clear!" In the course of the morning I learn that the signs of the heavens and the lore of the prairie—chiefly in a sort of dialect of Indian-English: "Wanna int kite, it will be colder," Mr. Swift remarks, when his practiced eye detects a film of white vapor rising upon the horizon. This, it appears, is an infallible sign of cold and usually of a blizzard or at least a very high wind. But on this occasion the ominous little mist wreath melts away and the noon is glorious.

We anticipate taking our midday rest at St. Elizabeth's—an Episcopal mission newly planted on the border of the large Standing Rock reserve, under the charge of Philip Deloria, the Indian deacon who chanced to be our fellow-passenger on a Missouri river steamboat. So soon as we have exhausted the subjects of "plain" weather and "trails," the curious depressions or "wallow" which, with an occasional whitening skull attached to a pair of jet black horns, remind us of the vanished buffalo; the large Standing Rock fossils found on these high lands; the eccentric customs of the *chien du prairie*, wrongly so-called, and other fascinating local topics, the discussion settles down to a deeper channel. It is seldom that we get a really interesting view of the "conversion of the heathen," a view with any breadth, practical wisdom or human nature about it. Not that the missionaries do not possess these qualities—it is very evident that some of them do—but the traditions of the churches seem carefully to have excluded all expression of them from the lifeless records of infant baptism, the weakly sentimentalism and burden of ecclesiastical detail which form the staple of our so-called "missionary literature." The healthy mind cannot fail to wonder what may be the actual living relation of "the church" to the undeveloped but logical intellect of the "pagan" red man.

It is refreshing to observe the earnest common-sense of a man like Mr. Swift, the successful pioneer missionary, who, although he calls himself an orthodox high-churchman, does not pin his faith to gown and ritual, but has developed a practical many-sided response to the more urgent needs of the wilderness. The candid blue eyes glow with intensifying color in the grave face with its thicket of tawny beard and deeply sun-burned complexion; the peculiar reserve of the man sensibly melts away in the warmth of his earnestness as he describes his first religious service in a heathen camp. "I didn't begin with 'Dearly beloved brethren,' the Scripture moveth us in sundry places," he says, with quiet humor. "I went into all the houses and talked in a friendly way with the people; then I asked them to come to my house at the ringing of a bell. When the time came there were some women and children present and a very few men. Chairs were provided and we all sat down in a circle, I with the rest. Then I told them that I had come together to speak to the Great Spirit, whom they knew. I asked them to kneel down, and a few followed my example; the others remained seated in perfect quiet. I repeated the Lord's Prayer in Dakota, sentence by sentence, and asked them to join me. Gradually two or three voices said the words after me in almost inaudible tones. We rose and I talked to them a few minutes in simple language of the meaning of the prayer we had said. That was all our service."

Then, inspired perhaps by our evident sympathy, he goes on to develop his plan of work. "My idea of the first want of a nation is not a chapel or a school house, but a man. Given the right sort of a man, let him choose a good location, not in the midst of a camp, and build his own log house, paying the Indians liberally for the logs, interesting them in work and engaging their assistance. For the first three months let him devote all his energies to this and to making the acquaintance of the people. He must know how to make himself at home in the tepee, to accept its primitive hospitality, to win the confidence of the children and the state of the tribe, the promise of the corn crop, or even the baby! By degrees he will interest the boys of an inquiring age and turn of mind to come to his house; and will initiate them into the mysteries of learning

to read, and teach them the Lord's Prayer, the creed, and other parts of the Dakota prayer-book, with a few hymns. He will begin to hold simple services in his log cabin. By and by he will turn it into a rude school house and chapel, and will build a small frame house to live in. In a few years before he takes the final step, and puts up the church building which the Indians have learned to use and to appreciate. He now has his people scattered on farms of their own, living in log houses; he keeps a day-school for the children in the original log-cabin. His wife has taught the women to sew and to keep house and has probably done more than he for the civilization of the settlement."

We have reached two round-topped hills, or *pajalas*—the pretty native word—divided by a deep ravine. On the opposite slope rises the lonely mission-house—on this congregate the tents of the Dakotas. Julia steps in the camp to make a fresh store of Indian bread—a sort of doughnut, unsweetened—we leave our wagon and equipments behind and proceed on foot to St. Elizabeths. I am mounted, for the sake of variety, on the grey pony, converting a strap and buckle into a stirrup and the high fork of the saddle to a pommel, much to the pony's amazement and the delight of the simple Indian women, who treat me with genuine consideration, quite as though I were not, (as I must be), an object of very considerable curiosity. By my side walk gravely the rest of the party. Mr. Swift deep in conversation with John Grass, a mild, dignified old man, and the intelligent "chief" of the band—and thus the incongruous cavalcade proceeds toward the deserted mission.

In *Hartford Courant*. ELAINE GOODALE.

#### Among the Dakotas,

STANDING ROCK AND DEVIL'S LAKE—OLD ANTELOPE'S MARCH—MAD BEAR'S FAIRM—NOT SO "MONOTONOUS" A DAKOTA SCHOOL. THE VOICES OF A LATE STORM—TEN LITTLE INDIANS—RETURNED HAMPTON STUDENTS—CANNON HALL CREEK.

At the Agricultural Fair in Minneapolis three years ago some of the Standing Rock Indians took part in a spectacular "March of Civilization," bringing up the rear, as they were the wildest representatives of the native American present. Chief Antelope, being an orator as well as a "big Chief," was appointed to receive the banner won by Burlington, Iowa, in the best agricultural fair of the products exhibited by that Territory. Receiving it with grace and dignity, he said: "We Indians have helped Burlington county get the banner this year. Next year we will compete for it ourselves. They could make a good showing for it this year if they had the chance."

Antelope's band was the first on the Standing Rock reservation to leave the agency. Major McLaughlin's persuasion, and scattered out on individual claims on the reservation. There are about forty families of them who have now good sized farms—up to twenty-five acres—under cultivation. Last year the half destroyed all their crops, but they worked on in spite of the discouragement, and this year they have more corn than they can use, and will "sell it like white paper." The chief is a stately man in citizen's dress, his only remnant of Indian get-up a large silver breastpin, the gift of some Great Father, doubtless. He welcomed us into his comfortable log house, the seats of honor opposite the door while he took the place of the master of the lodge at the right of the house—our left—the other members of the family at our right. His two rooms were in good order, with mosquito bars at the windows and a picture of buffaloes, painted in Indian style by himself, on the wall. Then he escorted us to the house of his son-in-law, one of the Indian policemen, where we met with the same etiquette. This also was in order: the two beds on one side, dresses hanging neatly against the wall by one of them, and harness, ropes and saws on the opposite side of the room. Boxes, barrels and the inevitable Saratoga trunks were ranged round the sides, and in one corner a churn, have been surprised at the degree of order in many Indian homes. There is a difference, as among white housekeepers, and confusion is often twice confounded, but even in some of the tepees I have seen the instinct of order prevail—with a few inconsistencies, it is true.

Antelope's long speech of welcome ended in a request to be allowed to sell two of his cattle to replace a worn-out mowing machine. Government furnishes only scythes to the Indians on this reservation. Besides the 240 of these thus distributed this year, the Indians have themselves bought twenty mowers at \$75 each. They allow on permit to sell the increase of their herds after a certain number. Good beef cattle from three to four years old bring from \$30 to \$40. There are 19 head, a good number for one man. They are in prime condition, he says, "so let they can hardly walk—just roll." We go out to

spect these phenomena, and their proud owner easily gets permit to sell. There are 143 head of cattle Antelope's band, all fat, handsome animals. "Lean kine" have no excuse on these rich prairies and sheltered ranges. Their owners seem to take pride in them and understand their value.

Mad Bear's district, which we visit next on our long drive over the reservation, has been less fortunate this year, all their crops having been destroyed by the late storm. Antelope and some others, however, bags of last year's corn still remained, and their provident owners see the advantage of forethoughtfulness in a pleasanter way than some have to learn it. Many of the families were camping out in their tepees to gather cherries for winter use, among them the mother and pretty sisters of one of our girls at Hampton. Mad Bear himself has twenty-one head of cattle and eight horses. He "tries to live like a white man," but finds some embarrassment in the possession of two wives. He cannot decide which to put away, and on the times of his ignorance are winked at by the authorities of church and State. His mind may be somewhat biased by the fact that if either should go, she would by Indian law take with her a share of his cattle and horses proportioned to the number of her children. His progressiveness is proved, however, by his kindness to both wives, refraining from the Indian custom of beating them on the general principle that a wife needs a whipping once in so often.

How shall I describe the beauty and excitement of these prairie drives; up and over the rolling hills, plunging madly down the gulches by a sliding road that threatens momentarily to capsize our prairie schooner and send it broadside down the bank over its gallant cargo, who when the side of the danger, holding it with one strong hand while his passengers throw their combined weight on the opposite side; fording rivers, scrambling up impossible banks, picking our way among innumerable hills, down intersecting ravines, coming out on precipitous bluffs high above the Missouri; pausing for a glorious view, then turning to find the right way again; up again and up again, and best of all again over the vast, breezy plains, bounded only by the circle of the horizon or distant buttes, fantastic and beautiful. I do not here I have heard people complain of the "monotony" of this country. Monotony indeed! They cannot look about them, and the thought of "monotony" never enters their minds. On our way home the third day of our tour we passed the farm of a half breed who has fifty head of cattle, and a farm he has planted three times this year on account of the heavy storms which twice destroyed it, fortunately early in the season.

A fitting close to our excursion among the camps was a visit to the Farm School, beautifully situated on bluffs overlooking the winding river. It is a Government boarding school, helped by the Catholic Benedictine Mission, which supplies some of the teachers as well as the missionaries. Seventeen miles from the agency, it has no supervision from the Agent and is in fine condition. Seventy-two boys were enrolled last year with an average of 56. It has a farm of 65 acres with corn, oats and vegetables, and a little wheat for which there is no near mill or market, however, its only use, as yet, being to feed the stock. But there is no reason why it should not be largely cultivated in time. There are nine head of cattle and horses. The boys study half of the day and work half. A new dormitory is to replace the old log one, and the school house to be enlarged. The neat chapel, costing \$2500, was built by the Catholic church. Its priest has charge of the religious work and another of carpentry and one of farming. The Sisters, of whom there are a number, do the house keeping and assist in teaching and religious instruction. All but the latter teaching is in English. It is of course so far elementary. Thirty boys have been sent from here to the Catholic school at Fitchville, and some to Hampton. Major McLaughlin has the right idea of Indian education, I think. He is aiming to make a regular agent from the district day school, through the agency boarding school, to the Eastern schools, for as many as can be taken. Each step is designed to make the boy come East from the camp, it is better in most cases, to pass the first seasoning to school life at home, making the change less trying and more beneficial. The very prettiest of the day school in them is of great benefit to the camps themselves, as the education of those who go East is an education of white public sentiment which is essential to the whole work.

The "monotony" of our drive home was further relieved by a magnificent thunder storm which we had waited for a couple of days. Each step of the journey was really taken by the last Indian houses we should pass before reaching the agency.

The gathering darkness of night and storm, rising wind, and lightning flashing as only this out-west lightning can, in great double arches across a quarter of the sky, created a halt. On a low butte above his house, an old Indian was posing, his tall form in gigantic relief, his blanket and long hair flying and streaming in the wind; one hand raised above his head, he faced each quarter of the heavens in turn, praying for mercy to the four winds. Seeing us, he came immediately down from his devotions to offer the hospitality of his house, like the saint of old who left the heavenly vision in his cell to minister to the strangers at his gates—board, hope he had corresponding reward. We gladly hurried to the shelter he offered us in his new unoccupied house, while the women of the family, dressed all in white, flitted in and out of the door like spirits of the storm. The flashes and peals grew more vivid and frequent. There came a dash of rain. Then we heard the old medicine man's voice outside shouting "Wasool Wasool!" Half heartedly we rushed to the door to listen to what I shall never forget—the sound of a hail storm, not falling, but passing by high in the air; a strange, awful, continuous roar, more like wind than thunder, but with a ringing-sound unlike either, all its terrible own—the ice stones hurtling and shrieking along on their errand of doom. Five minutes more and the stars were shining clear in the pale of the storm. We thanked our hospitable heathen and, glad that his fields were spared this time, took our own way home. Next day news came of the devastation wrought in other places, and two days afterward the hail stones were seen unmelting in the deep ravines.

After our grand tour I was willing to do some of my sight-seeing near home. The Government industrial boarding school for girls and young boys under twelve is under charge of the Benedictine Sisters. It had last year an attendance of 125, over seventy of whom were girls. The house is convenient and comfortable. In the school room the Sisters assembled for our inspection the forty-two children, chiefly Indian girls and boys, who remain under their care during vacation. They were neatly clad and well mannered. They spoke their little English pieces with great distinctness, sang for us and wrote beautifully on the blackboard. Ten little Indians told us about "Ten Little Lazy Boys" and a large girl declaimed with great expression, though I trust she was too young to have provided it to start our belief, that "This world is all a fleeting show." One of the shining performers was a tiny Afro-Indian boy, little Sam. Another mission chapel stands near this school.

There are at Standing Rock 17 returned Hampton students—4 girls and 13 boys. I saw most of them and heard particular reports of all. Of these the four boys, who returned last July, went at once to work. One of them will return, by his own request, to Hampton in the fall, to go through the Normal School course, as three others have done before him. Of the 13 who returned from only to five years ago, to have done continuously very well indeed; 3 are doing fairly well now. None are doing badly; none have "gone back to their blanket." Returned students at Standing Rock receive every possible care and encouragement. There is farming for all; herding for about a dozen, from the beef contractors, at \$30 a month and found. There are places as teachers in the five day schools, as assistant farm laborers and stable men, and as assistants or apprentices at the trades in the carpenter, blacksmith and harness shops; eighteen or twenty places in all, at fair wages. Three places are now filled by Hampton students. The others are engaged in farming for themselves or others. One, who married a daughter of Sitting Bull, and as the favorite son-in-law might easily have fallen back on his rich father-in-law, finds abundant employment at his carpenter trade, putting in doors and windows for the Indians and paid by them. The Major hopes to add a tin shop and shoe shop to his industries, which would not only give employment, but prevent waste of the time were used in idling. I took most of the Indian training shops at Hampton, and I was gratified by a good report as to its quality.

My ten days visit to this most interesting agency was closed by a long, delightful day's drive to its northern boundary and on to Fort Lincoln, the military post opposite Bismarck from which the "long haired chief" Custer rode off his last daring exploit. The black paint put on all the facings and trimmings of the windows and doors to commemorate that disaster has only been taken off this spring, nine years ago. This upper end of the reservation has been occupied increasingly for the last few years. One of its farms has forty acres enclosed, and thirty under cultivation. Many beautiful slacks are occupied by coniferous woods. The northern boundary is the Cannon Ball Creek, which gets its name from the curious stones found in its bed, large as 2000

pound shot and perfectly rounded by the action of the water. Here we stopped to see a day school under the care of an intelligent, educated half-breed who, when he was a child, had a thrilling, hairbreadth escape from death at the hands of a hostile band who had murdered his father. The Major had sent word in advance to assemble the school for our inspection. Forty boys and girls rose as we entered the school-room. Two of the little fellows looked at us nicely their English lesson. We looked over their copy book and took a specimen from one who had written his name after his copy, "God helps those who help themselves. His Fast Horse."

A relay of fresh horses took us over the rest of the route in fine style; over high plains breaking now and then, and descending in wild precipices and gorges to the river. At one spot the road crossed a narrow ridge between two such terrible descents. One might shudderingly look for some monster of the inferno to rise from the abysses and bear us down on dragon wings. Through such "monotonous" scenery we drove to Fort Lincoln, and found a pleasant welcome from Lieut. Geo. Leroy Brown for three years our commandant at Hahpton—and his charming wife.

In Boston Journal. HELEN W. LUDLOW.

#### Scholarship Letters.

The following are a few specimens of the letters of acknowledgement written this year, as usual, by our students, to the Northern friends of the school whose contributions of \$70, constitute the Hampton scholarships, paying for a year's tuition. Taken from every grade of life school, and given, as they are sent, without correction but prepared with much care, they fairly represent a student's progress through the school.

#### FROM THE PREPARATORY CLASS OF THE NIGHT SCHOOL.

The Night school for students who work all day, learning trades or earning enough to enter the day classes has various sections preparing for every grade in the day school. Our sample taken from the section preparatory to the lowest or Junior class, is said to show the average standing of those who enter it.

The writing being legible only to an expert, it was copied before sending, but without other change.

Dear Friend

I take this opportunity to write to you to give you a brief history of my life. I was born near Pungotseque, Accomack County Va. May, the 8, 1862. My occupation have been farming. My father is a farmer, so he imparted upon my mind that farming is a good way to get an honest living.

There are thirteen of us children. I am the youngest boy, there is one girl two years younger than I. My father was not a slave man but was treated very cruel by the southern people. Since the Emancipation He is successful enough to raise his large family and to accumulate a fine lot of movable property and some live stock and a house with a few acres of land. The 15 day of Oct., 1882 all was consumed by fire leaving them without a shelter. My Father and Mother at the time that sad misfortune occurred, each of them were 60 years of age and could not do much work that fall I had made up my mind to come to this Institute. But they being old and were unable to work, I remained with them three years longer trying to accumulate something for them to live on while I at school. I have to work very hard. I have only been to day school six weeks when I became 19 years of age. I began to go to night school. After working all day I then would walk three miles and a half before I reach the school House. I have often been caught out in the rain and snow, I taken a great deal of cold and was sick for several months. But the good Lord has restored me to good health again. I came to this school, the 13 of last June, 1885. I worked on the farm for five months, then I was transferred from the farm to the Bakery. And now I am cooking for the school. I am here trying to get an education, so I think you very much for assisting me as to pay my way true school.

Yours respectfully,

Another is not content with expressing gratitude for his tuition only; but writes to the generous giver not only of many scholarships but of the beautiful Hemenway Farm which employs our students and benefits the school;

"I thank you very much for giving this farm hit has done me a hap of good and hope I will be able to returned some to you."

FROM A JUNIOR GIRL.

My Dear Friend:

It give me great pleasure to write to you, for the first time and I highly appreciate it.

I have met with a glorious opportunity. In coming to Hampton, I went to night school some months; my day school was in the laundry ironing boys' collars and cuffs, and table clothes.

I am in day school this term and I like it so much, I hope that I may be successful enough to stay in school until I can finish all my studies.

I was born February 6, 1864. My mother was the mother of twelve children, only three of them living I am next to the oldest, only living all of them are married but me, and I am the only one how to read to any advantage my sister and brother did not care to learn.

I have a mother and father they are both very old people my mother can work but my father can not work, he is near sixty from old age and five years ago he got stoned of his eyes knocked intily out, he was working in a saw-mill.

My mother was very willing for her children to go to school but she was not able to send us regular, this was the way we had to go to school, my sister went to school one week and I one week.

I am glad it is so I can be in school every week and I feel proud of my chance, I am enjoying myself very much going to school here and I am trying to make every effort I know how to learn.

My teachers are very kind and tries to do all the good they can for me. The first day I entered day school my teacher had asked me which I would rather do, go to school or work I would have told her work because I was so devoted to my work at that time, but since I have changed my mind, I would much rather be in school.

I had not been in school for four years, I had been trying to get in school for some time but I could not, by happen chance I got hold of one of Normal School catalogues, and I read it for myself. I sat down and wrote a short letter asking Gen. Armstrong if I could enter night school, he was very kind and wrote me word I could come, when I received his letter I was overjoyed I went to work and got ready and was very soon in Hampton school. Grammar and Arithmetic are my favorite studies, I have improved on all my studies since I have been here in school.

Dear friend, I turn you many thanks for paying my scholarship.

Yours respectfully,

FROM A MIDDLE CLASS BOY.

The comment of the teacher upon this letter is "Vast improvement over last year's letter". The handwriting is fair.

Dear Friend:

I think it will interest you to read a short story of my early life, so I take great pleasure in writing to you and tell you of it. My early life was spent in hard work for my parents. Now I have come to seek an education in which I hope I may be successful with doing all I can and with the help of others. My age is twenty-one. My home is in one of the old slave states, Virginia, the state in which the first cargo of slaves landed in 1619, the mother state of slavery.

My parents were not allowed to go to school when they were young, so they had not the chance to cultivate their mind as I have. For in their young days, I have heard a book say, if her master caught them with a book in their hands, the book was taken away from them and burnt up, and then they were punished for it, sometimes whipped, and then if they would continue to do so then they were sold to speculators where they would be very badly persecuted. They had not the chance to serve their God. But I say this, since they have been free they have done all they could to educate their children, and are yet doing their best though they are getting old and can't do very much. My chances for school have been very poor indeed. When I was a very small boy, my parents sent me to school, but then I did not have the least thought of an education. I only studied my lessons so as to recite well enough so not to get a whipping, and as soon as I could get out, I did not think of it any more. When I was old enough to go to school I had to stop and go to work so those that was smaller could go some. I had no one to help me on then, so I was as a child when it has just commenced to walk. I had no one to lead me on, so I fell back and had not a chance to start again soon. My next step

towards an education was made when I had grown to see the use of it, then I had not the chance to go to school. There was a teacher boarding with us, she used to teach me at night. Though I had to work hard all day, I would spend a part of my night's rest in studying my books, though I was very hard with me, but I never stopped and by that I learned enough to come here.

When I made up my mind to come here to school, it was not for myself only, but I felt that there was a work for me to do. I felt that I had to do something for my people who had been in the dark so long and have not seen nor thought of an education to teach them that now is the time for them to improve their time, for it has been only a few years since we have had the chance to improve ourselves and to make men and women of ourselves. I live to graduate, I am going to teach and do my best work for my people of the south.

I came here September 9, 1884. I made the Junior Class. My teachers were very kind to me. I am glad I can say this much for myself. I did not get any *zeros* last term, and I only hope I may be so good this term. When school closed I was promoted to the Middle Class in which I hope I may get along as well as I did in my Junior Class. I spent my summer vacation here which I enjoyed very well. I like my work very well. I thank you for this helping hand that you have given me that I may make a man of myself and do a valiant work for my people.

Respectfully yours,

Another Middle Class student, a young man of 24, writes:

"My first effort toward an education was in the year 1875. Then I could only attend school when opportunities would permit. I had to work when the weather was fit, in bad weather I went to school, though I had to walk five miles. I had to start in the morning before sun rose, in order to get to the school house in time. I have often met people on the way to school who would ask me where I was going. I would tell them, 'You will earn your education,' they would say, but I don't regret it at all, had I not taken those walks I would not have been here."

FROM A SENIOR GIRL.

Dear Friend

When I wrote you before, I was in the Middle class, since then I have been out teaching and am now in the Senior class. One year ago last September, after spending a very pleasant summer here, I went to take my school. Three days after I reached there, I was taken in a buggy to the Supt's house to be examined. As I had never been out teaching before, you will not be surprised, perhaps, when I tell you that my courage almost failed me. When we got nearly to his house I really wished that he wasn't at home, but he was, so my wishes were in vain.

He greeted me very kindly. After I had rested a few moments, I went into his office where I took the examination, and secured the First Grade Certificate. He said that I was the first one out of twelve who had been examined during the last few weeks to get the first grade.

The next day I visited my school house and took with me a hammer and nails. I thought that I should see a log house, but to my surprise it was quite a nice looking frame house with three windows and two doors, and quite a comfortable one for that year; for, as I entered, I saw in the sides and the roof, large cracks as well as in the floor.

As I did not see any wood I enquired of the gentleman who took me there, where the wood was gotten for the school. He said that sometimes the parents carried it, but the Board never supplied it. I thought at once what I would do.

On the first day of school, after sweeping and dusting the school room, and washing the windows, I borrowed two axes, and my friends and I started out to the woods to get some wood. After we came to the house, I had the larger boys cut it to the little ones pick it under the house. This I did every day unless it rained, until there was as much as could be packed under the house. Of course their faces were often screwed up when the cold snaps came because I would not let them get the wood that was packed away, but they were very grateful when the very cold weather came bringing hail and snow, and they had to go only under the house for wood.

"The people are quite poor. Very few own land, but they seem to be poor farmers. They live principally by growing peanuts, and that year the crops failed. The children were poorly clad, but showed great anxiety to learn, and their parents were no less anxious to have them learn. Many mornings I felt sorry for the little ones as they entered the room so poorly dressed. Some coming at least two miles."

I cannot tell you how much I enjoyed my work which was not only teaching day school but night school and Sunday school and visiting the people in their homes. The last day of school was a very sad one for both teacher and scholars, and it was plainly seen that in that little school "Love won love."

My school closed in April and I went to Mass. I worked there until October when I came back to dear old Hampton. It is impossible to tell you how glad I was to return. Little I realized until I went out among the ignorant, how much I needed the dear old home's teaching. I am trying to improve every moment, trying to store up as much as possible to take with me when I again take up my work. I cannot express my thanks to the dear Northern friends who are so interested in us, but will try very hard to show my gratitude by doing a great deal for my people when I go out. Thanking you for your great kindness to me, I am

Yours very gratefully,

#### Self-Help among the Colored People in Alabama.

TWO GRAND RALLIES IN THE INTEREST OF THE TUSKEGEE NORMAL SCHOOL AND GENERAL EDUCATION. GOVERNOR AND STATE SUPERINTENDENT SPEAK.

Editor of the Southern Workman.

On Sunday Jan. 31st, the ministers of the colored churches in Tuskegee suspended their services in order that themselves and their congregations might be present at an educational mass meeting called to meet in the Normal School chapel.

When the hour arrived for beginning the exercises, every part of the room was closely packed with people.

A short educational sermon was preached by Rev. P. J. McIntosh, a graduate of Talladega College and present pastor of the Tuskegee Methodist Church, and several short addresses were made. A collection in which all joined heartily was taken up for the general support of the institution. The collection and the meeting throughout was a credit to the people of Tuskegee.

#### MONTGOMERY RALLY.

At the suggestion of citizens of Montgomery, a very large and successful educational meeting was held in Montgomery a year ago for the purpose of giving the people a chance to show their interest in the work of this institution in a practical way.

That meeting was very large and the best class of citizens were present, and nearly \$1000. was given towards furnishing rooms in Alabama Hall.

On last Thursday night, Feb. 11th, a similar meeting was held, the object being to keep the people alive to the importance of education and self-help. Between one thousand and twelve hundred people were present. Governor O'Neal, State Superintendent, Maj. Palmist, Col. H. R. Shorter, President State R. R. Comm., were present and made stirring and encouraging addresses. Dr. A. G. Haywood had promised to be present and was on his way but his train was unavoidably delayed. Besides these mentioned, many more of Montgomery's best white citizens were present and showed as much interest as the colored.

To add to the interests of the meeting a double quartette of singers from the Tuskegee Normal School was present and interspersed the exercises with singing that was highly enjoyed by the immense audience.

To give point to the meeting a collection was taken up to be equally divided between the Swayne Public School in Montgomery and the Tuskegee Normal school. That for the Swayne School was to be used in putting the Swayne Normal School and that for the Tuskegee Normal School to be used in purchasing a set of blacksmith tools for the new shop at Tuskegee. While the collection on account of very dull times in the South was not as large as it was last year, the crowd was larger and the interest in the thing seemed greater. The most encouraging interest was shown from beginning to end and lasting good was done.

### The Attack upon Indian Education in Congress.

The determined onslaught that has been made in the House of Representatives, upon the cause of Indian education, in the East and in the West, induces us to devote our editorial pages chiefly this month to presenting to our readers a concise view of the contest.

The attack has failed in the House this time, but the misstatements made have gone abroad, and so should their answers.

The quotations below are from the *Congressional Record* of March 11-17; not always in chronological order. They contain the animus and the gist of the speeches and remarks from which they are taken.

#### AGAINST EASTERN SCHOOLS.

Mr. Cannon [of Illinois] "In company with the gentleman from Kansas [Mr. Ryan], with the gentleman from Arkansas [Mr. Peel] and with my friend from Indiana [Mr. Holman], I traveled through the Indian country. We made diligent inquiry across the continent on the north, and across the continent on the south, and we could not find that there was one student of all the hundreds educated at Carlisle or Hampton, or in any of the schools off the reservation, but had gone back to their savage life in a very short time, except a few that were employed by the Government of the United States."

Mr. Ryan [of Kansas] "I did not find a single instance in all our investigation of any Indian child who had been educated in any of the centres of civilization who had returned to his home, who had not also returned to the condition of barbarism in which his tribe was at the time he returned, except only those who are sustained and held up by having been given employment by the Federal Government."

Mr. Peel [of Arkansas] "The student [returning from Eastern schools] is bound to succumb, and falls back into the old habits of the tribe, becoming, if possible, a worse Indian than before he was educated. If this be true—and I repeat that in the investigation of the committee it was found to be the case without a single solitary exception—the money spent upon these Eastern schools is money thrown away."

Appealed to for confirmation of Mr. Cannon's statement, Judge Holman endorsed them and added:

"Mr. Holman [of Indiana] "Missionaries, agents, teachers, and especially those military men who have been long stationed among the Indian tribes but are now identified with them, express the opinion that unless the Government gives to the Indian boy or girl employment, in other words, unless they are supported by the Government, they relapse into barbarism when they return to the tribe, while the Indians educated on the reservation, going home once a year, seeing the old father and mother now and then, keep up their relations with the tribe and are not shocked by a return from civilization to the scenes by which they are necessarily surrounded, but are accustomed to the ways of the tribe and their habits; that such as keep up their relations with their tribe are not so influenced."

Mr. Holman, also declared "In my judgment the results of the removal of Indian children from their reservations and teaching them in schools located at remote points, would shock those who had caused them the moment they came to their notice."

#### AGAINST WESTERN DAY SCHOOLS.

Mr. Holman, "Experience demonstrates it is practically impossible to induce Indian children to attend the day schools in that systematic and regular manner necessary to secure any satisfactory progress. I think everywhere the result is that these schools practically amount to nothing. This seems to be the judgment of all persons so far as I am informed who have had experience or opportunity to investigate. I think therefore the day schools under support of the Government ought to be abandoned."

#### AGAINST INDIAN TEACHERS.

Mr. Long [of Mass.] Let me ask the gentleman from Indiana whether any of the [Eastern] scholars ever go back to become teachers at these [reservation] schools?

Mr. Holman, "Occasionally. I remember one who is employed as a teacher in the vicinity of Standing Rock, another in the vicinity of Pine Ridge. There are other instances. The testimony of the Indian agents is not favorable to the employment of Indian teachers because of the absence of their power to control which is the great cause of complaint."

We would not be unfair in reporting Judge Holman. His position seems to be somewhat fluctuating, we trust because he is open to conviction.

He said later—the day after certain statements from the pamphlet, *Hampton's Work for Two Races*, had been read in the House by Mr. Cutcheon of Michigan:

"Where Indian teachers, trained at the institutions established for that purpose, or educated at their homes, have been employed in the education of Indian children, I admit that there have been good results, and I would be perfectly willing that this \$44,000 be expended in the employment of Indian teachers."

Why, then, did he vote for suppressing the schools where such teachers are trained?

#### AGAINST ALL INDUSTRIAL SCHOOLS.

Mr. Throckmorton [of Texas]. "What I would do would be to insert provision that the provisions for the industrial schools [on the reservation] and other schools at Hampton, Carlisle, Genoa, Salem, Lincoln, and all of them, should cease with this fiscal year. Was it ever contemplated, that the unpretentious requirements in the treaties should be supplemented with \* \* \* industrial teachers for the laziest creatures on earth?"

Mr. Cannon, "The children work at the schools; but they do not work anywhere else."

#### AGAINST ALL GOVERNMENT SCHOOLS.

Mr. Throckmorton, "And now I come to the crowning shame and folly of this miserable and farcical Indian policy."

We have not room for the details under this head. They include all Government appropriations for Indian education off or on the reservations beyond what the honorable gentleman considers the absolute requirements of the treaties; viz., the day schools, which the investigating committee regarded as "practically worthless." And these are allowed only because stipulated, not with any faith in them as the gentleman remarks, (italics ours):

"The utmost we can expect to do in the way of education for the Indian is to make the effort to teach him the elements of an ordinary English education. This is provided for in the treaties, and should be carefully carried out. You can't make a Christian out of a Jew or a Mohammedan, or a Jew or Mohammedan out of a Christian."

Mr. Cannon (in reply to Mr. Cutcheon of Michigan). "If the gentleman thinks that this educational system has affected in the slightest degree the moral tone; or the war tone, or the peace tone of these tribes, he is very greatly mistaken."

In accordance with the above sentiments, various amendments to the Indian Appropriation Bill were offered, providing for the suppression or discontinuance of the Indian work at Hampton, Carlisle, and the other schools off the reservation. All were rejected. On a technicality disregarded for four years, the House dropped from the Bill the name of Capt. Pratt—a man to whom the honor belongs of inaugurating the Eastern work for Indians, and who was stated in the House to have raised \$51,000 to supplement the Government's work at Carlisle.

Mr. Cutcheon of Michigan, spoke eloquently as the champion of Indian civilization and the Eastern Schools. His able defense of both had, ardent weight with the House. Mr. Perkins of Kansas, also spoke forcibly for the right.

### Hampton's Answer.

The testimony Hampton has to give on these questions has been frequently put before our readers, and needs but brief restating. Every year careful investigation has been made, and reports brought, by visitors sent from the school to the agencies: Capt. Pratt, the school's chaplain, Rev. Mr. Frissell, Rev. Mr. Gravatt of Hampton, Lieut. Brown, U. S. A. and Capt. Romeyn, U. S. A., school commandants, its Principal, and latest, Miss Goodale and Miss Ludlow, have thus served, some of them more than once, and their reports have been published, as well as those of agents, missionaries and the students themselves with whom communication is carefully kept up. The record is specific, name by name.

From all these sources, the reports brought down to the present moment, may be thus briefly stated:

To Dakota Territory there have been returned, at various times from six months to five years ago, 132 students, viz., 47 young women and girls, 85 young men and boys. Nineteen of the whole number have died, but their record while living is included, and also that of 9 who after a good record at home have voluntarily returned to Hampton. Of these 132, four only have "lapsed into barbarism," "gone back to savage life" to the extent of wearing the blanket. Nine others—two girls and seven boys are reported as "bad," i. e., lazy, troublesome, active on the side of evil; though they keep themselves in citizens dress, and have not committed crime. Forty-two are reported "doing fairly well"—which seems to mean that some have not done continuously well, but are now on the upward road, and others are negative characters, not very progressive and earnest, but well intentioned. Of five we have no definite report.

Seventy-two—viz., 26 out of the 47 girls and 6 out of the 85 boys are reported as having done "very well" since their return home; the boys working as they have had opportunity, at their trades, on farms or otherwise, the girls as teachers or at home—eight of the latter having married well, one a fellow student from Hampton. Seventy-two out of 132 would not be a very short honor roll for any class of students.

But how about Government employment which the Committee says is all that has saved "a few"? Of the seventy-two—28 have been employed by Government, most of them not continuously: 5 girls as teachers and assistants, 23 boys in various ways. Forty-four—viz., 21 girls and 23 boys have managed not to "lapse into barbarism in a very short time," or at all, and seem to have distinguished themselves for good behavior, without Government employment, and—strange to say—without discovery by this "diligent" Congressional committee.

Are they then disproving all Hampton principles of the gospel of industry? By no means. All are reported as workers except 7 disabled by disease, six are in private employ, thirty-one at work for themselves, or attending school.

Of the 42 doing fairly well, but eight are in Government employment. We have no doubt that more of them would have done "very well," if they could have obtained it. If the committee had urged that, without some chance of honest work and self-support, through Government employment or otherwise, an Indian, like every weak mortal, is very apt to go backward instead of forward, they would have been announcing a universal and important

truth; if they had urged upon the Government the consequent duty of giving employment or the chance to seek it to all, and encouraging every effort to train them in industry, this would have seemed a worthy and natural effort for honorable representatives.

But no—they would cut off their faculties of education; in the industrial schools off the reservation, on the one hand, and the day-schools on it, on the other; knock away the first and third rounds of their ladder, and obligingly leave them the middle one. Some would even give that a wrench.

Thirteen Hampton students are teaching, or have taught in the reservation schools, industrial or day-schools; eleven in Government schools, two in missionary schools. To train teachers is one important office of the Eastern schools. The Eastern and Western work is one. We believe in the missions, in the industrial boarding schools at the agency, in the day schools on the reservation. Improve and strengthen all—abandon none. We had some reason to suppose that this was the sentiment of the honorable committee themselves, judging from a letter received after their visit to Standing Rock agency, from Maj. McLaughlin, agent there, who thus writes:

"There were so many things said and matters spoken of by the members of the committee while here that it is difficult to recall all or remember the exact words, but the substance of conversation while at Rose Bareface's school was the neatness of the school, Rose's general appearance, deportment, easy manners, English speaking, self-possession and correct and easy answers to all questions asked her, and Judge Holman said that he was delighted to see her, a full blood Indian girl after a three years term in Hampton school, in her present position; that it was indeed very pleasing, and the most practical of any results he had seen of the Eastern educational work for Indians. The other members, Messrs. Ryan and Cannon, were equally profuse in expressions of praise, and all agreed that such system and practical work was the true solution of the Indian problem."

It is not always dishonorable to change one's mind. It is evident that this committee can change theirs. We hope therefore, that on consideration of all this positive testimony—which has been duly presented to the members of Congress—they may change them once more.

The members of the committee have never extended their continental explorations to Hampton, where they would have been cordially welcome, and possibly have been able to discover a few Indian students who after a good record at home without the aid of Government employ, have returned for further instruction in English and industry, hoping, perhaps, for the free use of both sometime, as American citizens.

Hampton's work for Indians—Carlisle and the rest—means something more than Government patronage. It means public sentiment, public faith in the work of humanity, public determination to carry it out. Does it not?

Rev. Mr. Gravatt, Rector of St. John's Episcopal Church in Hampton, is well known to our readers as a Virginia gentleman officially connected with the school and long a generous and earnest coadjutor in its work for two races, particularly for the Indians. Just returned home from a journey, he adds his cordial testimony to Hampton's answer. It will be found with other editorials, on page 47. See also, the Indian department of this number, for a communication from Miss Collins, and other interesting Indian matters.

WE OFFER HEREWITH a brief resume of testimony from missionaries, army officers and United States agents, beginning with a letter from Bishop Hare, who, as Missionary Bishop from Southern Dakota, is too well known to require introduction:

PHILADELPHIA, March 19, 1886.  
My Dear Mr. Welch:

I am amazed at the statement which you say is gaining currency that "Indian students from schools at the East release almost without exception, on their return home, into barbarism."

Twelve years of my life have been spent as a Missionary Bishop in work among Indians whose children have been largely represented in these schools. The missions and schools in which I am especially interested, are all of them located right among the Indians, and my prepossessions, therefore, are altogether enlisted in behalf of schools situated on Indian Reservations; and my judgment is that most of the educational work for Indians should be done there.

But I cannot shut my eyes to the incalculable service which well conducted Eastern boarding schools have done the Indians, and I am filled with alarm when I hear it suggested that their work should be either discontinued or crippled.

(A) Those schools serve as high standards by which Reservation Schools are tested, and they thus correct the common tendency to apologize for poor school work on Reservations with the thought, "O, this is about the best that can be done with Indians."

(B) They are models, to which schools less advantageously placed, are working up.

(C) They have placed a practical argument in favor of Indian education before which scepticism has fled, and indifference been warmed to zeal.

(D) And they have sent back to the Indian country a large number of young people who have been of great service, intellectually, morally, and practically, to their people.

I am aware that much testimony can be produced on the other side.

The reasons are not hard to discover. Some students do turn out badly, and such cases make deep impressions.

Indian youth, like white young people, when they come back to their homes from school or college, are apt to have an exaggerated sense of their own importance, and want to have their own way.

They have ideas of their own, and are harder to manage than ignorant Indians, a disagreeable thing to incompetent guides.

They know too much to be easily cheated, and they have too much independence to submit to being treated like dogs.

To some this is inconvenient. In a word, these students are in their green-apple stage. People who bite them get covered with faces. But let them alone, or give them the sunshine of a kind and considerate friendship, and they will become ripe and mellow.

Yours sincerely,

W. H. HARE.

The Rev. Thos. L. Riggs, missionary to the Sioux Indians, and son of the Rev. Dr. Riggs, the veteran missionary to Dakota, made the following statement in 1884:

Now I would offer in regard to the facts above mentioned, the following by way of comment and suggestions. 1st. There is danger of expecting too much; you are not going to lift up a savage people by giving to a few boys and girls a three years' course of study alone. The dead weight of the heathen life is greater than we suppose. 2d. It is difficult to reach and hold to a correct standard in judging the boys. It is wholly unfair for an Indian agent to test an Indian boy returned from school, according to the requirements of trained labor. This accounts for the fact, that many of the boys, who at first did well, are not reported as doing so well now. 3d. We must admit, that in some cases the results have not been wholly satisfactory. So in any other line of work and effort, failures are not confined to this work alone. 4th. Careful study of results show that failures have not been the rule.

Now, my own feeling is, from what I regard the correct standpoint, that of entire satisfaction; the gain is more than I had expected. A little education is apt to spoil an ignorant man for a time. He usually, however, grows out of his spoiled condition. So with our Indian boys—being away at school, is very apt to bring them home on an inflated basis. Often you can do nothing whatever with them. This is not the case with returned Hampton students alone.

Some of the boys have returned to the camp and camp life, and to all appearances are but little above what they were before. They are not, however, as before, and never can be. They need a certain support

and charity of judgment, and from friends at least, this should be freely granted.

In conclusion, I may say that by no means is it true that your boys from Hampton "have gone back, and are worse Indians than before," as one government official puts it. They have done better than some of us who are on the ground, and understand the difficulties of the question, expected they would. We rejoice in it, and bid you hearty God-speed. We see clearly the great need there is for continued support, sympathetic backing in the field; the boy must return home, there is no other place for him; and no one but the missionary or agent—interested in him and his people, can enable him to step down, and yet stand upright.

Very respectfully yours,  
T. L. RIGGS.

From Nevada comes a decided expression of opinion:

WADSWORTH, Nevada, Oct. 23, 1885.  
PRESIDENT OF INDIAN SCHOOL.

Dear Sir:—Will you please send me a catalogue of your school, and such other information as is necessary in regard to a student entering your institution? I am doing missionary work among the Putes (or Mimas) of this State.

There is a youth here, 19 years old, of good character (having been raised by a white family), who would be useful among his tribe if he could be induced to go away to some institution where he would receive proper training. He still lives with the white family, and is attending the public school this winter. He reads and writes fairly, and speaks English pretty well. He also talks his own language.

We have schools here on the Reservations, and as they are not as good as the public schools, and being constantly in the midst of the tribe he unavoidably would grow up full of Indian notions.

I have been among these Indians for three years, and have reached two conclusions:

1st. These people can be best civilized by educated teachers of their own.

2d. These teachers must be educated outside of Reservation schools, such as those with which I am acquainted.

You will confer a favor by an early reply.

Respectfully,  
J. M. HULSEY,  
Missionary.

[Boy is now waiting decision of Congress on a bill to establish a Normal School for Indians in Nevada. If not passed wants to come next Fall.]

Lieut. Geo. Le Roy Brown, U. S. A., who has seen six years' service among the Sioux tribes, and was for three years commandant of cadets at the Hampton School, says:

On the 18th of June, 1885, in compliance with the instructions of the principal, Gen. Armstrong, I left Hampton in charge of a party of twelve Indian youths, who were to be returned to their homes in Dakota Territory. Having performed this duty, I was directed to look up ex-students, visit the parents of the students, and to return to Hampton about the last of September, with twenty Indian youths.

On arriving at their homes, the boys had no difficulty in obtaining remunerative employment. Revisiting one of the agencies in September, I was informed that one, who had been returned in June, on account of his physical disability of his father (who had been badly frozen during the previous winter), had earned since his return several hundred dollars, furnishing pay to freighters to the Black Hills. This is an exceptional case, but I was agreeably surprised to find that all the boys who had been returned home from Hampton had done better than I had expected. The majority had decidedly improved, and not one had gone back to Indian ways. They have shown a strong inclination to work, earn money, and improve. The three years' course at Hampton is too short a time to accomplish the best results. A number of the leading Indians are recognizing this, and requested me to keep their children as long as I thought best. I brought back to Hampton three of the boys who had been returned two years previous after a three years' course; one had assisted in teaching at the agency school for a year, and was employed, at the time of my visit, as a laborer at the agency at \$20 a month; another had been employed for nearly two years as assistant teacher at the agency school, and the third had been employed, off and on, at the agency as a laborer. They were at different agencies; all had improved since leaving Hampton, but were anxious to receive a better training. Altogether, the outlook for the boys was very encouraging.

The Indians readily acquiesce in the new departure taken and independent spirit shown by returned Indian boys.

We quote from a recent lecture of Capt. Henry Romanyn, who has for many years served among the Indians, and was for three years at Hampton:

You can place one hundred young men old enough to take up arms and go on raids, at Hampton, or Carlisle, or Lawrence, and keep them there for a year, out of harm's way, learning good and unlearning evil, gaining a knowledge not only of books, but of how to earn an honest living, for less than the Nez Percés war alone cost in money, and lose no lives by violence, and the expense of them for two years will be less than those of a company of troops following them in the field for three months.

There are no children at Hampton or Carlisle to-day who are not there with the consent of their parents or friends, and ten times that number could be had for school attendance, if there were room to place them. Those who have sent children to Hampton and Carlisle, do appreciate what is being done for them. Their influence is already felt, and scores of Indian parents bless the white man who has taken their children, and shown them how to be true men and women.

The date and address of the following letter explains its timely appearance:

CARLISLE, PA., March 17th, 1886.  
Hon. R. M. CUTCHEON,  
House of Representatives.

Letter just received. I have returned to 45 tribes, 438 pupils. I have received information that 34 are now employed as teachers, etc., in agency and other schools, that 42 are working for the Government, that 45 are farming for themselves, that 46 are attending agency or other schools as pupils, that 9 are employed as clerks in stores, 41 are reported as doing house and farm work. Of the balance I have no certain information, but know that a good proportion are employed as scouts and policemen. Since school began, Oct., 1879, we have had 141 students. Of these have sent into families hereabouts for longer or shorter periods, 716. Coming from all tribes, 24 being Apaches, and a full proportion being Sioux, Kiowas, Cheyennes, and others, and others of the so-called "bad tribes." Only 7 of this whole number have been charged with criminal conduct. We always require that unsatisfactory pupils be returned to the school; 42 were so returned among the whites, and are mainly in excess of the number appropriated for, and without material cost to the Government. This system qualifies for a change from tribal and reservation life to that of a citizen, and begets the desire for it. Scarcely a student but is able to take care of himself or herself among civilized people, at the end of their five years' course. So far as my somewhat extended information goes, the committee's visits to agencies seem to have been of the briefest character, and have failed to satisfy and urged Mr. Holman to bring his committee to Carlisle. He made two promises that he would do so, but he did not. It would seem important that the coroner should read the speeches of Mr. Cannon and Mr. Holman and others carefully, and trust that the committee will furnish the minutest details, and names of witnesses, and evidence taken. Looking at the black sheep herd, the best institutions in the world will stand condemned. It is the murderers and housebreakers in the great city whose work is fully paraded in the morning papers, and not the work of the 80,000 non-criminal citizens. In regard to the cost of Carlisle, as compared to agency boarding schools, see page 30, near top of this year's report of Indian Schools' Superintendent, that the per capita cost per month of agency boarding schools is \$14.55, or \$174.60 per annum. Congress gave us last year \$175 per capita. Our work continues, and a training goes on our schools remind their children to camp for two or three months, and education goes backwards in the tribes. The industrial habits and examples are at the minimum, and the whole tendency is to consolidate, unify and strengthen the tribes as such, and create petty nations as Choctaw and Creek, etc. His was a great mixture of tribes, and surrounded by civilization, the feeling is broken up, and we educate in loyalty to the Government and individual manhood, which would continue to go on to perfection in proper soil. Citizenship and industry are the great influences here, while, per contra, there is no place in the United States where citizenship and industry are at a greater discount than upon an Indian Reservation. The million dollars the Indian Commissioner recommends for education this year is objected to. I hear, nothing outside of Congress that warrants the views expressed. It ought to be two millions for next year. The beneficences of one man, Stephen Girard, gives nearly \$500,000 annually for the education and support of 1100

to 1200 fatherless lads from the slums of Philadelphia, who have no such claims upon him as the helpless Indian youths have upon the United States. Turn on all the light, and the most competent and experienced investigation you can, both here and all over the field, and you will then adopt means big enough to reach the Indian quickly from his ignorance and reservation prison.

R. H. PRATT,  
Capt. and Sup.

From the agencies come strong proofs of the character of our returned students. Major Gasmann of Crow Creek says:

CROW CREEK AGENCY, Aug. 14, '85.  
My dear General:

Your kind letter in regard to the Hampton children on this subject. Brule Reserve should have had an earlier answer but it not been for the fact that I desired to visit Brule Agency before writing. This visit has now been made, although I am quite unwell from hay fever—and I have made inquiries with regard to all the children. As soon as the young men return home they generally demand work. Unfortunately I have not the work to give them. I can only employ a certain number of men. They become impatient at this delay and sometimes speak unadvisedly with their lips. I have advised them to work with their friends upon their farms until such time as I can get work for them at the Agency. I regret that some of them have joined with the old chiefs and have counseled with them unwisely. None of them, as far as I know, have gone back to the Indian ways, but not having regular employment, they are restless and sometimes unreasonable. Here at Crow Creek, Little Eagle, Samson, Cean are now at work—one as wheelwright and the other as blacksmith's apprentice. Edward Ashley is working on his farm and taking the care of his and his relatives' cattle. Others are working on farms—have assisted in harvesting and haying, and as far as I can see, have conducted themselves well. I am in hopes of being able to establish several day-schools soon—here and at Lower Brule—where I shall place those fitted for such work. I am doing all I can for these young people and I have no doubt that most of them will do well. We must expect some discontent among them as the change from Hampton to Lower Brule, and even to Crow Creek, is very great. What we must have is more industries at the agencies, and day-schools, where these young people can be regularly employed. It shall not be my fault if we have them not.

Very truly yours,  
JOHN G. QASMAN, U. S. Indian Agt.

From Cheyenne River, Major Swan reports:

"What we need here is an Industrial School near but not on the agency. The day-schools are well attended, and the Indians appear anxious that their children shall be sent to school."

Maj. McLaughlin of Standing Rock, D. T., writes:

The Hampton pupils at the Agency are all doing well, with the single exception of F—, whose conduct is not satisfactory. John P— is still stableman at the Agency, and John T— is assistant carpenter and doing well. Rosa B—, and Frances W—, are at school preparing themselves as teachers, and I intend to place them both in one school as teachers on May 1st. The school will be a day school located in Sitting Bull's camp, three miles south of the Agency, where either myself or wife can visit them daily, and I am confident of their ability to conduct it successfully. Jennie N— was married to an excellent young man, Louis P— by name, on the 11th inst. He is a mixed-blood of the tribe and is employed as clerk and interpreter in the Trader's store at the Agency."

Maj. McGillycuddy of Pine Ridge, D. T., has lost none of his faith in day schools. U. S. Indian Reserve, Pine Ridge Agency, Dakota, Mar. 14, '85.

Miss Elaine Goodale,  
Dear Madam:

I am now building my eighth day school, about four miles south-west of the Agency.

A few weeks ago I began striking the children off the ration tickets for non-attendance on the schools, and as a consequence we now have an average attendance in our seven day schools of seventy-five each and requests from the Indians for three or four more day schools.

Red Cloud's village will break up and scatter in the spring. The Cheyenne village we visited has split in two and half of the Cheyennes will settle away from the agency in the spring and build homes. So the work goes on.

Y. T. MCGILLYCUDDY.

H. W. LUDLOW,  
M. F. ARMSTRONG. } *Editors.*

*Regular Contributors.*

Entered at the Post Office at Hampton, Va., as second class matter.

It was decided not to distribute the money on the basis of population, because that would not bestow the money most where there was the greatest need—the late slave States; therefore the distribution determined was that of the number of illiterates. As the South has the greatest number of illiterates it gets the lion's share; but when the next step is taken, to provide that these shall receive the benefits according to the unavowed intention of the bill, —the majority of the illiterates,—that is "a horse of another color." That there are practical difficulties, they may be Constitutional, in the way of the general government administering this

In 1882, they owned in Georgia 6,800 acres of land. Some individuals are worth from ten to fifty thousand dollars. In 1882, the colored people of the South owned 1,600,000 acres of land, and were assessed for \$91,000,000.

Prof. C. H. Corey, D.D., the most popular man in Richmond, some say, has shown great ability as Principal of the Richmond College. The man does not live who spurns the money making of Dr. Corey. He is willing to do his best for a good cause. He is going to have a good place in history, and his years will be shed in coming years over him as thousands of Baptists will read of the contributions of the man who is going to be remembered in centuries succeeding the war. Dr. Corey is holding his own "with all parties and with both races. Some day we expect to write the history of Dr. Corey and of his Institute as a monument for a good life and work. There is no good reason for anything being said against Dr. Corey until his death. He is not likely to be injured by them. Indeed, he is not prone, but money, about which he is anxious just now. He wants the white people to feel in their pockets. Dear brethren and sisters of Virginia, what better thing can you do than, give this Richmond Institute

We shall be known by our work. The fact that many of the great mining interests are supported by colored labor when white men are ungovernable; the fact that much of the nicest railroad work of the South is done by colored men, shows the miscalculation of Prof. White. Georgia is about to abolish the whiskey traffic. Let her do this and she will confer a greater blessing upon herself than by crowding the already overcrowded working classes there with foreign recruits. If many thousand workmen would leave the State it would be a blessing to all concerned, but to increase the number would seem self-destructive.

## SOUTHERN SKETCHES.

BY MRS. ORRA LANGHORNE.

## What Virginia People Read.

Several journals, among them the New York Times and the Lynchburg Advance, have recently copied from the (English) *Fortnightly Review*, extracts from an article written by "Mrs. Nichol," on Virginia people and social customs. I do not know who Mrs. Nichol is, but am glad she wrote her observations, particularly as to the methods whereby the young men and maidens of the land enjoy each other's society. It is well that Virginia papers should copy Mrs. Nichol's remarks, and it is hoped that those who read may profit by them.

On some points, however, I am inclined to differ with her, at least in regard to such sections of our State as I am acquainted with, chiefly the Shenandoah Valley and the region round Lynchburg. The English woman says: "There is a conspicuous lack of intellectual vitality which more or less animates communities elsewhere. Here one may go from house to house and rarely see a book, except, maybe, a 'dime' novel, or in some old family mansion the remains of what may once have been a fine library, imported from England a century ago. There is more deadness on the point of self-cultivation than it is easy to imagine." This statement is a great surprise to me. I think I know something of Virginia; I am sure I know no other land, and I am impressed with the idea that there is a great intellectual awakening throughout our borders. Everything is changed in the Old Dominion since our National Era, "it of the Surrender" (Virginia) is the sign of the emancipation, and in nothing is there more change than in the intense desire for knowledge pervading all classes of the people.

Mr. Harrison wrote some excellent articles on the "New South" in the *Atlantic Magazine* and New York *Tribune* several years ago, made many inquiries on this subject during his stay in Lynchburg. He advised the formation of reading circles, clubs among us, and after his return North induced several kind and liberal-minded people to send me boxes of books for distribution. At his desire I wrote out notes on this subject, and as the MS. As before me I give an extract from it.

Nov., 1882. Some ten or twelve years ago my sister, Miss A. D. Gray, of Harrisonburg, began what she called "keeping a church library." The war had left us greatly reduced in means, and the little enterprise was undertaken with the hope of making some money for the Episcopal Church, to which we were all deeply attached. My sister had some books of her own, others were given her by benevolent people, chiefly those interested in our church, and from time to time as she was able she has bought books which she thought would serve her purpose. She began by renting the books at ten cents a piece, but after awhile, finding few renters at that price, she reduced her price to five cents and has earned quite a respectable amount of money. She has taken a vast amount of trouble, usually carrying her books to people likely to rent them, frequently walking several miles to make five cents, though very often people came for the books and sometimes returned them. At first she allowed her customers to keep the books as long as they chose, but as this plan did not work well she began to charge five cents a week and has kept to this rule.

She says she has found the exercise taken in connection with the books very beneficial to her health, and as she frequently takes with her in her walks one or two of another sister's children, thus giving their mother more time for sewing and doing them good also, the time is well occupied. The village bookseller is very gracious to her, and tells her she has helped his trade so much by cultivating the taste of the community, that he is willing to sell her books at reduced rates. She visits the jail regularly, and tries to keep the prisoners supplied with instructive books and papers. She often gives or lends books to those unable to pay for them. In some cases, she has induced prisoners who could read, to teach their illiterate companions, by furnishing them with books to while away their erring hours. Those who know anything of jail life know that the chief resource of prisoners is gambling, so this may be counted as really good work. Some of the habitual drunkards of the town are among her constant readers, and she takes much satisfaction in knowing that they are well employed and are putting their money to good use, at least while reading her books. Occasionally, one of these unfortunate, appreciating her kindly interest, will send her a notice of some book he wants to read, or will buy the book himself, and after reading it send it to her to circulate. She often finds the girls employed by the milliners and mantua makers eager for something to read. A handsome young girl of

this class once told my sister that shop girls who were anxious to avoid evil associations were often "so lonely," and as they could not afford to "buy" books, they seldom had anything to read. She spoke warmly of the pleasure the books from the "Church Library" had given her.

My sister is very scrupulous as to the books she circulates, and at one time almost determined to banish all novels from her collection, but her business fell away so much after she took this "high toned" stand that she reconsidered, and thereafter made use of books of fiction which she was perfectly sure were safe. By far the greater number of people prefer novels, and I think this is especially true of women. My sister tells me she found it necessary to keep two copies of a few especially good books, and both copies were generally in circulation.

Among these is Mrs. Prentice's "Stepping Heavenward" and the "Chaplet of Pearls," and "Dave in the Eagle's Nest," by Miss Yonge. She and I both find a perfect lure among our constituents about "Uncle Tom's Cabin," a book which one might have been arrested for circulating in ante-bellum days, but which everybody wants to read now. The remark is constantly made, "I have heard of that book but never saw it, and am so anxious to read it." Sometimes, after it has been read, the book is returned and the reader says: "If I had read it before the war I would have been a Northern side." A great many of the delightful books written for children now-a-days are extremely popular among the uncultivated grown people of both races. Among these are the books of Miss Alcott and Mrs. Whitney, and some beautiful Irish stories, by an author whose name I forget. My sister's plan is to sell a book which most of her people have read, for by price it will bring and use the money obtained towards buying a new book. For instance, some years ago she sold a copy (the large edition) of Du Chaillu's *Travels in Africa*, which had cost \$4.50, for fifty cents to a sensible colored man who was going to one of the rural districts to teach school. Probably the African-American found his chief consolation that day in his contemplating the contrast with those of his compatriots in the Dark Continent.

There was no library in Lynchburg when I came here in 1871, but the Y. M. C. A. is now trying to establish a library, and has made a very good beginning in that way. When we first moved to our home in the suburbs of the city, which then seemed to me in many respects on the outskirts of civilization, though it is now a pleasant and fast improving neighborhood, I was often asked for books by poor people living around me. I soon loaned all the books I had which they cared to read, and thought I would try my sister's plan for a circulating library. It did not work well at all for me. I had not the time or strength for it. I gave no time for or selling anything or making money in any way, and found so many people anxious to read, to whom five cents appeared too large a sum to pay for a book, that I gave up renting or trying to rent books and lent or gave them away.

About the time I began my book business a friend from the North visited me, and became much interested in my work of circulating books. She said she had some books at home which she would like to send me, and as I knew she had no money to spare, I rashly told her I would pay the freight on the books from the rent collected from them. She sent me some excellent books, well worth the small amount paid for carriage, and told her friends about my efforts in the way of a circulating library. They sent boxes of books, too, some of them very heavy boxes; one of them contained several volumes of the *Coast Survey* in huge volumes, with other books equally unsuited to my purpose. The freight on this box was seven dollars. For a long time I did not know what to do with the *Coast Survey*, but at last gave it bodily to a neighbor whose ambition it was to get his boys, then children, into the navy when they reached the proper age. As a rule, good stories and novels are the most generally popular, and I think often do good in cultivating literary taste and instilling useful lessons.

Some trashy, and occasionally an immoral novel, has been sent me. I regret this because I rarely have time for reading novels, and do not wish to circulate anything that might be harmful, and should always prefer lending standard works of undoubted purity of tone. Good travels and biographies are always acceptable. Sometimes a friend whose lot is cast in one of our mountain regions, where the people are densely ignorant, comes to the city, and if I can, I give him at least one or two books which will convey a little light into the darkness. The books are given with the understanding that they are to be read and "lent around." It is evidence that the spirit of improvement has reached this wilderness that a request from that region was sent me lately to send some more books

and help the writer, who was trying to buy an organ for the little church near by. Perhaps the history of two or three of my books may best illustrate the kind of work I have been trying to do. Soon after the war, a dear friend in Baltimore sent me a copy of Mark Twain's "Innocents Abroad." It was the first copy that reached the valley, possibly the first in Virginia. All of our household read it, I lent it to our friends, and at length nearly everybody in the village had read it. The book was so much enjoyed by people who were sick, or sad, that it came to be considered a remedy for all cases where it could be taken, and we sent it about to invalids, and people who, as the prayer-book says, were troubled in "mind, body or estate," a description which seemed to apply to most Virginians in those sad and weary days. After I came to Lynchburg the book was sent out on its travels again, and was literally worn out in the service. It was long past being sewed or glued, when it started on its last journey, but many of the fragments were still readable, and I tied it together, and sent it to a nice young colored girl to read to her sick mother. I have long hoped that some good Yankee would be inspired to send me another copy. Several of Mark Twain's books I should like much to have in my library, and think they do a great deal of good. At one time a lady lived near me, whose daily life was so exceptionally severe and wearing, that one of our most remarkable strong in mind and body could have stood the strain. I once lent her a copy of "Roughing It," which had been loaned to me with permission to use it for a while in my library. Some time I could not induce my care-burdened friend to return the book, though I begged earnestly for it. She said that volume was her chief resource and comfort. She wore out the book in her duties, and she could not do without it. A minister, to whom I chanced to repeat this remark, meaning to show the value of the book, said grimly, "He had better read her, and she would not agree with him, as I know my friend did not neglect her religious duties, and made the Bible her rule of conduct, and thought she did well to turn to Mark Twain for diversion."

Some years ago, a box of books was sent to the children of a family whom I was visiting, and among the books was "Sally the Mountain Girl," by Mrs. Eudora Cheney. I knew something of Mrs. Cheney personally, and from reports of her lectures in the *Woman's Journal*, and was surprised to hear my hostess say "that book was not exactly refined, and as she did not care for it, I might have it if I wanted it." After reading the book I deemed my fastidious friend's criticism severe, and did not hesitate to put it into the hands of poor girls around me, both white and colored, the class for whom it was intended. There are one or two objectionable sentences, but the story teaches an admirable lesson of filial piety and persevering industry.

I have been amused to see how generally it gives pleasure to those who read it. I have taken pains to ask the opinion of all the hands of poor girls around me, and say, "Oh! I liked it splendidly! It is a real pretty book." Sometimes a girl who had heard another speak of it, will come to ask for it, saying, "Please send me the book." Salesy Jones or Suite Smith had, she said it was splendid and I ought to read it."

I hope I have shown that our young Virginians are not so "intellectually dead," as Mrs. Nichol states.

But for fear of extending my article beyond reason I could add much more on the subject. I will only state that some years ago the prize offered by the London Athenaeum (?) open to all competitors for the best original essay on Hamlet was awarded to two Virginia school-girls, the critic saying that "the essays of both were so good that they could not decide between them." At the time the prize was given both the young ladies were students at Hollin's Institute, Roanoke County, Va.

## Home Making in the New South.

FROM OUR YOUNGEST CONTRIBUTOR.

We were all glad to hear from an old family servant, Aunt Jane Wilson, when she came to see us a fortnight ago, that the little home for which she and her children had toiled so faithfully, was at last paid for. Soon after the war, Aunt Jane and her husband purchased a house and lot in New Town, a suburban village of the population of which is composed of colored people almost solely.

The house was old, small and uncomfortable, but the lot was large, and good land, and they resolved to put up a new house as soon as possible. In the meantime they built the necessary out-houses, dug a cistern, and made a garden. Several years ago they determined to build the new house without delay. By dint of careful economy, they built a very neat and comfortable

house for eight hundred dollars. Robert is a good workman, and he and his sons saved a good deal by helping in the building.

They all fell to work to finish paying for it. Aunt Jane took in washing and she rubbed and wrung with added zest as she thought how pleasant it would be to own every plank in the floor on which she stood, bending over her tubs.

Robert is an excellent job workman, and when work was scarce he fell to basket-making. He did his work well and seldom failed to find ready sales for his baskets. Every cent they saved was added to the treasured sum, to meet the next payment on the little home.

The eldest son was living in Washington and sending his savings from time to time to help at home. He has lately been appointed to a government office under Democratic rule, which he had applied for and failed to get when the Republicans were in power.

After attending the Hampton school for a year or two, the youngest daughter, Lucy, got a position in the town as teacher of a public school, which she has kept ever since, a benefit alike to teacher and scholars, for her salary was a great help in meeting the yearly payments on the house, as well as in defraying the family expenses, and a good education added to a natural talent for teaching, makes her an excellent teacher.

Ulysses Grant ("J.G." as Aunt Jane says) is the youngest son of the family. He has been at school until last year, though doing odd jobs, and helping in all the small ways a young boy can, saving where he can not earn, and studying faithfully. He graduated with honors and got a position as teacher. Whatever he could save besides helping his parents, he is keeping, hoping to earn enough to attend school at Hampton Institute for at least a year.

In spite of all this care and industry, there were times when they feared they must give up the hope. "But I knew the Lord was sure to help me," said Aunt Jane, and so she prayed and worked and waited, till, in His own good time, her prayer was answered, as He has promised to those who "ask in faith, nothing wavering," and she may spend her declining years in peace and quietness, under her own "vine and apple tree."

The house itself is large, neat and pretty, with a tiny front porch, and gilded lightning rods on the roof. It was made at Aunt Jane's request, on the plan of her former master's home, with which she has almost as pleasant associations as have the children and grandchildren of the family. Her especial pride is in the folding doors between parlor and dining-room. She takes great pleasure also in the pretty little parlor, and one of the children she had nursed and played with in babyhood, and with whose children she is now a favorite story-teller and playmate, had laid aside for her a pair of lace curtains for her parlor. They were well worn, but neat darning had made them almost as good as new. "I am afraid the darns will show a little, Aunt Jane," her friend said rather deprecatingly, as she gave them to her. "Not at all, Miss Alice, but if they did show, I hope never to have in my house a visitor so ill-bred as to show if she did notice such a thing," responded Aunt Jane with the dignity of a queen. The curtains are now draped in the windows of the parlor; on the floor is a three-ply carpet, there are several easy chairs in the room, a sofa, and a pretty table where lie several books, and on the walls hang a few pictures. Foremost among these is a portrait of the master she so loved and honored. In another group are the photographs of two of the Hampton teachers, to whom their children owe the education that has stood them in such good stead and to whom they are so grateful.

This is only one of many hundreds of such homes growing up in the South, for the colored people are learning more and more the blessings of such homes. As the love of home-life grows, the love of Christ, which is so inseparable from all purity, will also increase, bearing in their lives the blessed fruit of good living. H. H. D.

## BY ALICE M. BACON.

BY ALICE M. BACON.

One bright Sunday afternoon an expedition to the Poorhouse, long planned and postponed, was at last put under way. There were numerous reasons for visiting the place. Some of us wanted to call on the family of the keeper of the institution, some wanted to look over the accommodations and see whether there really *was* any reason for the violent prejudice against the place that exists in the minds of the Negro population of this region, and others wanted to see in what way the services held there every Sunday afternoon by two of our students were conducted. So with this threefold object we started out.

So four of us packed into a high box and went with a gentle horse, recommended by the authorities at the stable as one that ladies can drive, we venture out on our mild Sunday afternoon dissipation. Bruce, entirely thrown out of his dissipation, this morn'g, is the only day that is to him the dearest of the whole week, barks madly at our horse's heels, or chases the unwary domestic fowl, or the wary turkey buzzard. These amusements are varied by occasional plunges into the water, and the dog emerges to shake his dripping coat on the first foot passenger in Sunday best that he may chance to meet. Bruce is evidently not in a Sunday frame of mind, neither are dogs, ducks, peopple or chickens, along the course of triumphal

As we pass Zion Church, the people are just coming out from their somewhat protected colored service. The road is filled with waving people talking, laughing, hand-shaking, in the sociable manner of all country congregations after their meeting. May I friendly face light up with a smile of recognition as we pass, for there are in this company Butler children and their parents, those hobnob with the members of the Bu-Prin-Prin household name, and that distinguished personage is of our party. So the Butler child is prevalent and "Cool evening Miss H.," greets us in a continuous murmur as we pass along. Our eye is caught by a frantic gesticulation, and as we follow up the waving arms we see a tall, dumb, fig-

seeing face of a dead and dumb being. "Dumb" and "dead" were the only words which mother and daughter both suffer under the same affliction. They live in a little two-roomed cabin, on the fields; and the only of persons, Eliza's father, old Caesar Selden, and her younger child, a baby of three or four, are the only persons who can speak. But Eliza, as she said, is a person, and may herself understood by signs and gestures. She called at my cabin one day to tell me how terribly her cabin leaked. First she pointed to the ceiling, then to the floor, and then to the walls, drawing in of the breath, showed me that something was wrong there. Then with a drooping motion of the head, she indicated the down-fall of something. Then a chill seized her, and a terrible shivering and chattering of the teeth, indicated the entrance of cold air from a corner of her tattered garment, and with a wringing motion and many grimaces and stertorous breathings, showed me we were in a bad situation, and could not have failed to comprehend the situation. The kindly help of some friends at the North has put us into the graphically-described leaks; and we hope that soon Dumb Eliza will be freed from the necessity of wringing out her garments after every

As we drive on through the country we soon get beyond the crowd, and for a little while our road lies through the open fields only dotted at wide intervals with little cabins. Then we pass through the pine woods, fragrant with the warm, resinous breath of this season's saplings. At last a cluster of neat whitewashed buildings is pointed out to us as the Poor-house, and we strike off from the main road leading up to the gate. A whitewashed fence made of rough palings, and the house made of rough planks, from the county has entrusted the care of its paupers. A strong-looking man, whose tawny beard and hair give him a somewhat leonine aspect, opens the gate for us to drive in. He is another of the "big fellows" quite evident from the manner in which he answers our questions in regard to the whereabouts of Miss P. We are also inclined to the opinion that he is white, though in the part of the world it is somewhat common for even the blackest to blacken from white.

There is a case in hand right here. We descend from our high vehicle and walk up to the door of the low comfortable-looking house within the whitewashed enclosure. A dusky serving maid answers our knock, and as we wait she looks up and down the street. She shows us into a parlor that looks like the best room of many a New England farm house. Soon the door opens, and a motherly-looking woman, with snow-white hair and a white check of her head, and with a snowy kerchief and apron, comes with outstretched hand to meet us. As you look at her, she might be some New England farmer's wife, with the same old England farmer's face, the same old England face, the full dark eye and the somewhat more rounded curves of cheek, lip and chin might indicate the secret of her race, for this woman is "colored," by virtue of some of her blood. She is a descendant of the almost lost in the full tide of the Caucasian that flows through her veins. As we sit and talk with her, the children run from church, the older sisters and brothers come in like a flock, and conversation follows, our salutation last year at the Normal School, and this year a teacher at the Butler, and two younger children, a boy and girl, well mannered, well educated, and well known to the children in the Butler now. We ask about the people now under Mrs. P's care, and find that there are about fourteen, some of them very old, or totally disabled from some of the worst of the old people, some strong bodily, but deficient mentally. Several of the colored paupers are idiotic or crazy, the rest of them too old or feeble to do any work. One young man, Mr. P. speaks of, was a very good fellow, but he was a drunkard. He was picked up and put in jail for vagrancy, and finally sent to the Poorhouse. His name has been extracted from him, but he either will not or cannot do any work, and maintains complete silence all the time.

During the conversation, we mentioned Mary Frances White as a candidate for board at the expense of the county. Mrs. White knows that she is not a candidate to board at the county. She is a woman to be happy under the restraints that must be imposed on the inmates of the institution. A few stunts she can pull off, but she is not a candidate for the board; of how the white man who opened the gate for us goes off occasionally and disposes of all his clothing, of how she washes her face and the white man, then sends word to Mr. P. to come to such a place in a wagon and bring him home. The great difficulty in managing the pauper is to get him to do as he is told. At peace with one another, for, with nothing else to do, to amuse themselves life would be dreary in deed without occasional fights among them.

selves. The children escort us out to the "quarter" that they may see for ourselves how the poor paupers live. A good sized one-story house stands on a beautiful point of land that runs out into Hampton Creek. The streets are paved with cobblestones, and the houses are white with red roofs, and the air is cool and fresh, and the fine turf is just growing green under the breath of spring. As we reach the little porch we stand for a few moments outside of the hall opening for the earnest voice of the people in prayer. The hymns are sung and falls in musical cadences in that peculiar chant which always seems to be the natural and earliest form of prayer. Doubtless, to the poor souls that listen, it seems like a strain. But we are told that we will hear the souls up from earth into the very presence of God. A hearty amen follows when the last entreating note has died away, and then a hymn is lined out, and sung, and such singing, it is said, will lead the souls up to heaven. We are told from the wandering of them all there is such the vague semblance of a tune. Look for one moment at the scene within. The crouching figures awaying heavenward as they pray, the worn pathetic faces, the eyes now with the hope that the prayer and hymn have inspired. O wonder in a corner is one hopeless lack of dark, despairing, though quite young. He sits in the attitude of prayer, but his eyes are closed. A sudden shock, and has no other effect, but he has gathered his wits so as to fit himself again to his altered conditions. His back is bent down, one hand rests on each knee, and he never looks up at the speaker, but his eyes are full of interest in anything that is going on. Either the boy is not right in his wits, or he has met with some shock that has benumbed his faculties for the time. This is the boy whom Mrs. Jones has called the dumbest of the dumbest she ever

\* When the singing is ended we go in, and are welcomed warmly by most of the parish members. As we go from one to another, their faces grow fairly radiant, and they seem pleased and proud to answer questions about themselves. One man attracts our attention who is so badly deformed that it is with difficulty that he can turn his head to look at us as we speak to him. A bright, pleasant face he has, though one that bears evidence of much suffering. He has been

out here thirteen years, and reached his present deformed condition through rheumatism, which has drawn him up into the shapeless mass that he is to-day. He says that he likes the Poorhouse well enough, but the thing that he finds hardest in his lot is the inability to work. He said he had been used to working all his life, and he sort of missed it. A peep or two into the bedrooms is enough. Though the paupers all looked clean and comfortable personally, their rooms were not attractive to eyes rendered sharper, perhaps, by Sunday morning inspection of the boys' quarters at the Normal School.

mal Schorke, "the quaters" at last to return to our house, but Bruce, whose sprits have been so way diminished by his run, sees fit to assert his superiority and to make a thorough show of his prowess. He snaps and growls at their familiarity. Thereupon ensues a grand dog fight, in which three dogs are rolled in one. The victor, a small black and white female proprietor of the dogs, runs wildly around the edges of the conflict, making occasional dives at the combatants, and separating them as they are about to close. She then joins in fierce conflict again. At last, Bruce is rescued and dragged into the house, chousing and snorting over his fate. He is then taken to the kitchen and confined by the gate-keeper and ignominiously confined in the barn, and the small black cur who promoted the quarrel by his conduct is promptly left in an undisturbed possession of the field.

After bidding good bye to the "family," we climb into our wagon and start out on our morning trip. The first stop is at the mill, stationarily along on three legs, except when the sight of a duck or goose causes him to

We reach home just as the battalion is drawn up in line for church inspection, and hastily handing over our horse, we shut up our dog, don our best gloves, and proceed to afternoon service.

Readers of the SOUTHERN WORKMAN

Readers of the SOUTHERN WORKMAN may remember Watt Smith, whose jollity under the most adverse circumstances was worthy of a Mark Tapley. A week or two ago, the little round face appeared once more at my cabin door. This time he appeared not all alone, but in company with an elderly colored woman. Watt Smith does not consider that it is polite for a white man to come upon my piazza without a special invitation, so the manner in which he makes known his presence without is by tapping with his stick upon the posts that support the piazza roof. The tapping is peculiar and unmistakable and as I answered the

[illegible]

chuckling over the extreme humorousness of his present situation.

To-day we went out to look them up, and after a long drive of seven or eight miles we found them not far from the banks of the James river. The new house was going up and stood half finished, its new pine boards gleaming yellow against the dark background of the woods. As we came up, Watt's comical little figure came hobbling toward us. A little heap of crumbled bricks and charred red timbers, with here and there a bit of broken crockery or battered and blackened tinware, showed where the old house had stood. Watt stood over the ruins exultingly.

A little house near by is pointed out as the one in which the old lady is at present living with one of her sons. One of the sons who has been married, tells us that he has no regard to the cost of the new house tells us that they have spent \$1,000 on lumber and haven't quite enough to finish with and will want besides about \$500 worth of bricks for the walls. The other son says that he has never seen anything after a burried walk from here to another son's field where he has been engaged in helping him put in his potatoes. "He's been working" for me on my house." I like to do what I can for him," said the first son. The second son seems very much affectionate and helpful toward each other. The sons help their mother, the mother helps them, and the old brother and older look

## Letters From Hampton Graduates.

FROM "THE PROMISED LAND." A NEW EXODUS. WOMEN AND CHILDREN LEFT TO SUFFER. FROM A REPRESENTATIVE'S DAUGHTER. TEACHER TEMPERANCE BY SELF DENIAL. A QUILT THAT IS NOT CRAZY. FROM OUR JOURNEYMEN TEACHERS. KNOCKING AT HAMPTON'S DOORS AFTER EIGHT YEARS' ABSENCE.

FROM "THE PROMISED LAND."

One would expect a pleasant report from "the promised land," and here it is, sent by one of Hampton's earliest graduates, a young married woman, now teaching in that happy land.

S. C., February 12, '86.

Gen. S. C. Armstrong,

My Dear Friend:

It has been a very long time since I have had the pleasure of addressing you a letter, but I can assure you it was not because I had not forgotten my kind "principal" and friend.

I am teaching in the public school in "the promised land," just a mile from a small station on the railroad. "The Promised Land," a queer name is it not? I don't know how it received its name, but it is a tract of about three thousand acres of land which was sold by the Government to a number of colored families. They have been here, I suppose, some fifteen or more years, and they seem to have done well in many ways, though there is much still to be done in the way of improvement.

There is a host of young people growing up here, and they are all anxious to be educated, and have an "Educational Society" here; the County schools run about six months in some of the counties. This county is among them. The Promised Land people, while they are thankful for what the county does, decided to run their school longer, and pay their teachers more, so they formed themselves into a society, and pay enough to run this school between eight and nine months, and add five or ten dollars more to the teacher's salary. Don't you think that is doing well?

I have been teaching now three months, and I find some as promising scholars as I ever met anywhere. I am trying very hard to persuade some of them to go to Hampton next term, but they don't think they are able. I have several young men in my school who would make splendid workers among our people if they could get two or three years at Hampton. Is there any way for at least two of them to get help for another term? Please let me have a catalogue and the SOUTHERN WORKMAN. I don't know the rates but will remit when I find out.

I have said nothing about myself, but you can judge from the tone of this letter that I am well and in good spirits. I hope you and your dear little girls are well, though I hardly think *girls* will apply to them now. How I should like to see the dear old place.

Please give my love to the Misses M. and Miss H. if she is there.

I should like so much to know how General and Mrs. Marshall are.

Now, General Armstrong, if you can in any way help some of these young men you will benefit the whole community, and I assure you, they are worthy of help.

Hoping to hear from you soon, I am, very truly, one of your old pupils.

E.

## A NEW EXODUS.

From North Carolina comes a sad story of suffering for want of work, and an exodus in search of it. A new feature of distress which we did not hear of in the greater exodus to Kansas, is the destitution of families left behind, deserted, not intentionally probably, but practically by the husbands and fathers who fail perhaps to get the means to send for or return to them. The writer is a teacher and minister.

N. C., Feb. 9th, 1886.

Times are very hard here, and as usual the colored people get the worst of it. The result is that the majority of the colored men of this and adjoining counties have gone to Georgia and Alabama to get employment. They have failed in crops for two years. It has been the rule to give a mortgage on the crop even before it is planted, for provisions to live on while making it. This has ruined many of them doing well. More than three hundred have gone from this depot, many of them leaving large families unprovided for. Some never return. On my way home to-day I saw a neglected

house with a bunch of orphan children, one of them about seven years of age, almost naked, having nothing to protect him from this cold weather, except a short and well worn shirt. I have four women to one man in my church and congregation.

It would pain you to see the poor women who are left here to suffer.

I desire to get up a home for orphan children in North Carolina, or a home and school for fatherless and orphan children. There are poor fatherless and orphan children, naked, hungry and friendless, exposed to temptation, coming up for the penitentiary, how grateful I would be to know, if called to die to-morrow, that there was a home for my own children, should their mother be unable to provide for them, or die and leave them orphans. I desire to do something in this direction; since such a plan would require a great deal of capital, it may look like attempting to move a mountain. I should be grateful for your advice concerning such an institution.

We are thankful for papers. Mrs. C. joins me in love to you.

Yours in Christ,

C.

FROM A REPRESENTATIVE'S DAUGHTER.

And here is a glimpse of a happy home, and the bright side of life among our colored citizens.

Dec. 31, 1885.

Dear Friend:

I finished my third month on the 18th inst., and closed my school for Christmas. My average last month was 43.35. I shall only have a five months' term this session. I have not received a cent for the three months taught.

Papa was elected to represent this county in the House of Delegates during the present session. We do miss him so very much, but he has been home every Saturday and returns on Monday, until last Saturday, he failed to come, as they will journey this week, early for Christmas. You cannot imagine how we did miss him on Sunday, as it was the first Sunday that he has stayed away from home for more than ten years. He always comes out in the country Saturday evening and goes back to F. — on Monday. Grandma, my two sisters, myself, and two boys that we hire, are at home. My married brother comes over quite often to see how we are getting along.

The colored people around here are getting along very well, buying homes for themselves. They buy small quantities of land and a yoke of oxen to work on their little farm and carry wood to F. —. I guess it would be a great curiosity to you to see so many ox-carts in F. — every Saturday loaded with wood to sell. There are a great many marriages around here during this month, but none of your acquaintances are among the fortunate ones. I am invited to wait on two couples on the 23rd inst.

We are preparing for a fair at our church, which will take place on the 25th and 26th inst. My grandma keeps as well as usual; she has walked over to see my uncle's farm to-day, a distance of one and a half miles. Should she live to see the 10th of next March she will be 86 years of age.

I am ever gratefully yours,

E.

## TEACHING TEMPERANCE BY SELF DENIAL.

Another graduate pastor, working under a church home missionary society, tells his way of convincing drinkers that old habits can be conquered.

Jan. 30, 1886.

I could speak very strongly to the people on the temperance question, for I am a "teetotaler," but I found two notions prevailing with regard to temperance that were not easily corrected: one was, that intoxicants are good for the health; the other was, that when a man is used to drinking, he cannot stop and hold out.

To satisfy myself as to the correctness of the last matter and to add greater force to argument, I resolved to give up the use of a beverage which I loved as well as any old toper ever loved his strong drink—coffee. I had read the position of a certain physiologist with regard to coffee-drinking, in which it was contended that it would be better not to use it. This was some help to me in the struggle which ensued. I was in earnest, determined; the battle ended, I conquered.

The crave for coffee left me, and, strange to say, but is true, I improved in health and gained in weight. I know that a habitual drinker can, if he will, free himself from drink.

I could occasionally deal a heavy blow against the expensive, dirty habit of smok-

ing and chewing tobacco; for I once indulged myself.

I used prayer in connection with these resolutions to forsake these habits, and I commend it to others.

He adds:

I am no politician by any means, yet in some degree I am interested in politics. I am opposed to those political alienations in the South by which the races are embittered and arrayed against each other. The Negro's home is in the South, and he is so situated that he cannot make any marked progress without the good will and friendship of his white brother be he Democrat or Republican. It is the friendship of the white citizen that we need rather than the flattery of any party for mere political purposes.

Faithfully yours,

R.

## A QUILT THAT IS NOT CRAZY.

A young girl of the class of '84, who has been teaching since her graduation, writes of her ingenious efforts to cultivate ambition and industry in a rather difficult field.

Nov. 28, 1885.

This little town is situated in the part of the State. This is considered the poorest portion of Georgia. I have my hands full here, the people are very ignorant, and in most cases degraded, so you see I have a broad field in which to labor, and hope to be able to do some good. I thought when I was in school at Macon that the race was rising, but sometimes here I stop and wonder if one portion are not going backward. They seem to be void of ambition, contented to remain just as they are. I have a very good school, and quite a number of large boys and girls attend. The people have a very nice school house started, and with a little exertion they could finish it if they would. I have been trying to plan some way to arouse them. I don't know what my success will be, but this is my plan. I have gotten up a sewing class in my school, quite a number of the girls are sewing nicely. I have each member of the sewing class pay ten cents a month, and with it I buy material for them to use, and the articles that are made we expect to sell and take the money for the school house. The class is making now a beautiful quilt in the form of wheels, the spokes of each wheel are made of red and green calico, and the centre circle is a really pretty. Each scholar that makes one will have her name in the centre of the wheel. I am preparing them for an entertainment for Christmas, and I hope to use the money made with it for the school house. What do you think of my plans? You help me to think of something else to do when I am through with this place? I know you can suggest something. Last winter while at home I learned to embroider, so after the class finishes the quilt I shall teach them to make something in that line. I hardly know what now. Miss H. —, if any of your wealthy friends want to help those that are trying to help themselves, please get them to buy our quilt when it is finished, perhaps they will not care for it themselves, but they can give it to some poor person, can't they?

She adds:

I have been teaching steadily since leaving school I feel quite old in the cause now. I closed my school in June at 28. I went to a place in the country and taught from July until the last of September. At C. — they only have public school three months, and that is through the summer. It is an out of the way country place. The people are worse there than I find them here. I don't think they hardly understand what freedom means. This is my home, but when you leave Macon, Atlanta, Augusta, Savannah and Columbus, you'll find our people in a pretty bad condition. If I had ever any idea of going to Africa I should abandon it now. I shall tell — when she starts to come in this direction.

I think this summer and winter experience will make a real woman of me. You know in school I had — to act as a mamma. At home, I had mamma, but now I have to stand and act for myself and others too.

I don't like to think of Hampton without General and Mrs. Marshall there. I know they are greatly missed. It seems to me that I am so far away I'll never be able to see Hampton again.

Devotedly,

J.

## FROM OUR JOURNEYMEN TEACHERS.

One and another of last year's middle class, which was sent out to take

its "journeyman year" of school teaching, before entering the senior class, are sending acknowledgments of the wisdom of the new requirement which seemed at first to some a little cruel.

Va., Feb. 13, 1886.

Gen. S. C. Armstrong,

Dear Sir:

I hereby send myself to write you a short letter about my teaching, and the circumstances I've met with since I left the Institution. I passed a good examination, making an average of 84 per cent, and got a first grade certificate. After teaching two months I was informed by the trustees that the district had gone so far in debt that they could give but a twyn and a half month's session. Now I am teaching another school under Superintendent — for whom many of the middle and graduates are teaching.

I am very glad that I had to stay out a term and teach, because I have found from what experience I had, where my weakest points are, and what I need in everything.

Respectfully,

W.

## Another middler writes.

I like teaching very well, and am doing well in every respect. The people are very kind, and anxious to receive instruction. I have sixty-four pupils enrolled and a good house to teach in. I have a term of eight months. I had no trouble in getting a school.

Respectfully,

D.

Hampton will welcome back her journeymen, and they will make the better master workmen for their year's experience.

## A LONG "WANDER-YEAR."

Perhaps some of the under-graduates whose youthful impatience chafes under Hampton's requirement of a year out teaching between the Middle and Senior terms, may be encouraged by the testimony of an under-graduate who after eight years of successful teaching and hard work since his middle year, is now bravely knocking at Hampton's door, asking for two years more "to better equip him for the battle, and place him just where he wants to be."

— Va., Jan. 4, '86.

Dear Friend:

By writing some one each year since leaving, I've tried to prevent Hampton from forgetting me. I have reason to believe that she has not. Like a good mother, she remembers her children. Now, after a protracted absence from her *alma mater*, an humble son sends back a gentle reminder of himself, with a brief account of the work she gave him to do. Hampton gave him but two talents (two years schooling) and sent him forth. Whether or not he has attained unto the measure of the "faithful servant" and "gained" (deserves) "two more," the sequel of these lines I trust will show.

Of my four years in Maryland, I have given account in former letters. My return from there to my home was August 28, '81. I was then prepared financially, and it was my purpose to re-enter Hampton that fall. But providence ordained otherwise. During my absence father had died. Mother was living alone, in a log cabin on her own lot. This was ready to fall down. I was not long in deciding to remain at home and discharge my filial duty. I tore down the old cabin, and put up a beautiful little house with four rooms. I am now almost through paying for it. This explains why I have not yet settled my account at Hampton. I hope to cancel the debt by June by paying five dollars every month, or perhaps more. There are two things I am bent on doing this year—paying this debt and re-entering Hampton next fall. Having made mother comfortable, I can leave home happy and contented.

Upon my return home in '81, I became first assistant in a graded-school near this city. I taught there two terms and was offered the principalship, the third session, but refused it to accept a better position in one of the city schools. In '83 I entered as a teacher, the school in my native city in which, eight years before, I had been a pupil. Here my comrades were Hampton graduates also, one from Maryland and one from Storer College, all experienced teachers. How could an under-graduate like me succeed among these was a question. That I did my part, almost three years of service attest. I teach now the second grammar

(Continued on page 43.)

## Southern Workman.

### Indian Department.

ELAINE GOODALE, In Charge.

Regular Contributors:

HERBERT WELSH, Cor. Sec'y Indian Rights Association.

ALICE C. FLETCHER,

REV JOHN J. GRAVATT.

MRS. A. S. QUINTON, Gen'l Sec'y of the Women's National Indian Ass'n.

THE SENATE has passed an amendment to the Indian Crimes' act of last session, throwing the jurisdiction within the Territorial or State courts and the costs of trial upon the United States Treasury.

AN INTERESTING QUESTION has lately come up in regard to the constitutionality of this same law, giving the courts criminal jurisdiction over Indian reservations. The defendant in a case tried at San Francisco, an Indian living upon one of the California reservations, has appealed to the Supreme Court against the new statute, which is claimed to be unconstitutional.

DR. MCGILLICUDDY is building his eighth day-school about ten miles north-west of Pine Ridge agency. There is now an average attendance at the seven day-schools of seventy-five each, and the Indians are asking for three or four more schools. The doctor says that Red Cloud's village and the wild camp of the northern Cheyennes will break up and scatter in the spring.

SENATOR DAWES' SIOUX BILL has passed the Senate after much interesting debate, and will probably be favorably reported by the House committee. Mr. Plumb objected to the perpetuation of the day-school system, and Mr. Teller offered one or two amendments of a radical nature, which were promptly rejected. The Coke bill, providing for allotments of land in severalty to all Indians, and including the citizenship amendment, has also passed the Upper House.

THE RAMONA SCHOOL for Indian Girls is a new philanthropic project. The Indian Industrial School at Santa Fe, New Mexico, is to be removed to another site and placed exclusively under Government control as a boys' school. The plan is to establish a large school for girls of the Pueblo, Navajo and Apache tribes, and for those of Arizona and Southern California, on the present site, which is said to be very beautiful and healthful. Prof. H. O. Ladd, of the University of New Mexico, will assume the Superintendence of the new institution. Benevolent people are asked to contribute.

#### Why not a Citizen?

There is a surprising narrowness in the attempt to exclude an Indian who has complied with the terms of the Coke Bill, cultivates his land in severalty, and has adopted "civilized" dress and habits from the privileges and protection of American citizenship. The most bitter and un-American prejudice is almost the only conceivable motive for such an attempt. "He does not speak our language" says one Honorable Senator. What of the thousands upon thousands of foreigners—German-speaking, Swedish-speaking, French-speaking American citizens scattered all over our land? It is also worthy of remark that about 80,000 of our Indians do speak English; and when they are all scattered upon lands in severalty, surrounded by white settlers, how long will it take them to acquire our language?

"He is a savage." When will our average Congressman learn that the

Indian is not a savage—that he has many rare virtues and very few vices in his natural state—and that when he abandons the tribal relation and accepts our mode of life he is entitled to the same safeguards with ourselves. How ridiculous is this hesitation! We should probably be safe enough in making all the Indians citizens of the United States without further ceremony. So soon as they cared to take advantage of their rights they would be as well fitted to exercise them as are a majority of our voters.

It may be imagined by some that citizenship for the Indian is after all but a name, and that he is just as well off without it. This is a great error. You do him a cruel injustice when you give him land in severalty without the power to protect himself in the common struggle for bread in which he is then engaged. The Omaha Indians in Nebraska, nominally self-supporting, are suffering severely at this moment, although with titles to their lands, and willingness to work them. They are debarred the right to make contracts, to lease a part of their farms or to bring a suit in law. They have no capital nor the means of getting any and they are without redress against the most open and flagrant wrong. An Omaha farmer may take his wheat to mill, make a bargain with the miller, and when the grain is in the hopper, the white man may refuse to make his contract good and the Indian robbed of his year's work, can bring no legal claim. Citizenship for the Indian is not an empty honor. It is, in the case of the Indian homesteader, a natural and necessary right, and it should be granted now.

#### Progress among the Pueblos.

A letter to an Albuquerque journal propounds the theory of "absorption" as the true Indian policy and gives some rather novel reasons for the advancement made by the Pueblo Indians of New Mexico. We are not accustomed to look upon Indian traders and "squaw-men" as the best Indian missionaries—but in this case the progress of the Pueblos in civilization is said to be "unquestionably due to the influence of white men who have settled among them," post-traders, physicians, etc., who have taken to themselves Indian wives and identified themselves with the people.

"The Pueblo of Laguna is universally regarded to-day as the most enlightened and advanced Pueblo in New Mexico." \* \* \* The potent elements that have worked this transformation are Col. W. G. Marmon, his brother, Capt. R. G. Marmon, their partners, Capt. G. H. Pratt and Rev. Dr. John Menaul. The two brothers are civil engineers and have lived in Laguna for several years. They early learned the language of the people and interested themselves in their welfare. They joined the tribe, selected wives from among the daughters of their adopted people, and now have interesting families of sons and daughters. For the past five or six years they have constituted an oligarchy, in that they have in succession received the suffrages of their people for the position of governor of the Pueblo. It is to be hoped that this triumvirate may be maintained until the Indians are prepared to look to and take advantage of the laws and courts of the territory for the protection and enforcement of their individual rights. \* \* \*

The Indians have found in these men faithful friends. They have in every way encouraged and stimulated the progressive element. They have given them employment in their surveying expeditions, and thus educated them in habits of thrift, promptness and self-reliance. They have organized among the Indians, three companies of cavalry, which are now a regular part of the territorial militia. These companies are thoroughly organized and carefully drilled, and make a very creditable appearance. They did good service during some of the recent Apache raids.

Dr. Menaul has been physician, teacher and preacher for about ten years. Each Sabbath a largely attended service is held. \* \* \* He has reduced the language of the people to writing and has translated and printed parts of the Bible and some school books.

\* \* \* These four men have of course warmly advocated education for the children of their adopted tribe. They have to-day about ninety children at Carlisle, fifty-four in the school here at Albuquerque, and about thirty in a day school taught by a Miss Shields. And similar changes could be effected in all the Pueblos."

#### "Concentrating Our Indians."

BY M. C. COLLINS.

No one but an Indian can fully comprehend the meaning of these words. Our daily papers lightly refer to this subject as mentioned in our late reports of those in authority. The idea of concentration undeniably the whole foundation of the structure of civilization. Place two or three hundred thousand of these people in a pen, be it large or small, so enclosed that there is no way of escape except through the gate. It will not take long to wipe out the whole of the Indian race. Can American civilization afford this? Concentrating the Indians means placing together in one vast herd, nations, tribes and bands who have always been sworn enemies, having nothing in common. Their habits, speech, modes of living, all differ. They have lived in different climates. We need only refer to our late treatment of the Poncas to be assured that it is death to the Northern Indian to send him South. The Indian loves his home; his native land. This strong love of home, found in every heart, is the best channel through which civilization may be carried to him. Are they called a wandering people? They never of their own free will wander far from home; often returning never ceasing to call it the "home coming."

The Indian believes in the immortality of the soul. Therefore he frequently visits the graves of the departed in order to lay gifts thereon, to assure the soul in the spirit world that even in death he is not forgotten. Encourage this strong affection for home and friends. Give them titles to these homes that mean something. Of what value is a title that a presidential proclamation can make void? Of what use a claim that an act of congress can so easily efface? Let the Indian see the spot, sacred by the dust of his ancestors is his, his for all time. He will feel a pride in his home that no white man can possibly comprehend. "Let him dig him from the soil." Yes, but first teach him how to dig. It is said that there are farmers at each agency to teach the men to farm. Who has ever seen the agency farmer away from the agency? How many Indians can he teach there? Perhaps a few half-breeds, or it may be a few boys in the school. Let the Indian farm; let him raise cattle or horses; let him work, but first teach him how to work. We hear it said they are all lazy. This is false. An Indian will spend more time, strength and patience in going twice a month to the agency for rations than he would take to earn his living three times over, if he knew how to do it, and was given the opportunity. He can harness his poor little ponies, and with a heavy government wagon make his way to the agency, sometimes distant three days' journey, often more. He knows how to load on the wagon his wife and children, blankets and tent, frying pan and water keg. He knows how to run his team down every hill and how, with wife and children, to "man the wheels" on the ascent. He knows how to dig the wheels out of mud in spring and wade the snow drifts in winter. He has learned this through bitter experience, taught by a Christian government. After reaching the agency he must wait until the agent, the "Master of Ceremonies," chooses to give him his rations. Rations for two weeks means food enough for one week and hunger for the next. Then he must go again. Why do they not live near the agency? They must live where there is land and water, and consequently scatter along the little streams. Is he lazy? Who of us would like to work at such distasteful labor for such small returns?

The majority of the Indians to-day are in a far worse condition than their ancestors. They were hunters, the country full of game, and they were skillful with the bow and arrow. The Indian of the present is disarmed and untrained. The white man in cruel sport has driven the game away, and the Indian is a ward of his country. He can walk and carry burdens; he can stand hunger and cold. But look at his arms and hands, weak and delicate as a woman's. Plenty of brain, and a strong will but no muscle. Give him his home; educate his heart and brain; strengthen the muscle; civilize the sav-

age; and thus save to our country a true type of American manhood.

His god is a god of vengeance, and teaches him to be cruel to himself and to others. Take away these false ideas. Take away his "Evil Spirit" and tell him of Christ who came to bring "Peace on earth good will to men." His god tells him that no coward can secure honor in the great hereafter. If he would gain assistance of the god of war he must cause his enemy to be tortured in the most cruel manner. Our Christ would say to him, "Love your enemies." "Do good to them that hate you." The Dakota boy, who with uplifted arms and lacerated flesh stood in the hot sun on the bill top for hours, suffering, bleeding, to appease the wrath of an angry god who had afflicted his mother with severe illness, possessed the kind of spirit we need to cultivate in our country to-day; willingness to forget self to save others. The old chief with his quick discerning eye, seeing the difference between his filthy abode and the personal appearance of the white lady missionary who entered his door, arising with all his native dignity, taking his blanket from his shoulders and laying it upon the floor for her to walk upon, showed the same innate principle of refinement and chivalry that made Sir Walter Raleigh the beloved of all who knew him. Shall we as Americans, permit such a man to be placed in a common pen and fed till all his manhood dies? God forbid! We love and honor the memory of Grant. He was a great general, mighty chief, skilled in warfare. Shall we displace the same spirit in our native warriors, the spirit which cries out for its freedom and rights, and which has enabled them successfully to repulse the armed invaders? True, their manner of fighting is cruel barbarous in the extreme, but they have no West Point support, by no means the government to teach them to kill the enemy in a gentler, refined and Christian manner.

We shall never civilize the Indians by herding them together. If we would kill the savage and save the man, we must treat them as individuals, not in masses. Give to them their homes, and American education; not concentration, but American civilization and American citizenship.

Fort Sully, Dakota.

#### An Evening with the Indians at Carlisle.

It was our good fortune lately to spend a day or two at the Carlisle Training School, enjoying its kind hospitalities and visiting with keen interest the class-rooms, workshops, and various buildings of the historic old barracks.

Friday evening brought round the monthly exhibition given by the pupils, and we were thus enabled to see the whole school together, and to listen to the singing, recitations and speeches, that made up the pleasant programme.

A cold, blustering wind forbade the use of the little chapel, near the old Hessian Guard House, but the spacious, well-ventilated Dining Hall, in the building lately erected in the centre of the quadrangle, was quickly metamorphosed into an auditorium. A stage was prepared with the help of a few tables, and in front sat some four hundred earnest-faced boys and girls, the former in their trig uniforms the latter in dark blue dresses, with here and there a bright ribbon in the white ruffle or the smooth black hair. There were no backs to their stools, but who need have asked for a more quiet and orderly assemblage.

It required some courage on the part of the speakers, some of them new-comers, with but little knowledge of English, to face such an array of schoolmates and teachers, but there was no flinching. Bravely they mounted the steps and stood alone on the platform, and their voices rang out loud and clear. There were all grades, from the boy who came last Fall to the thoughtful fellow who has spent three or four years in the school, from the tiny Pueblo girl to the young Quapaw (was it not?) who recited so well the long poem, "Curfew shall not toll tonight."

What quite brought down the house was a charming performance by some little Pueblos representing the city children who work for their bread. The ragged little musician with song and triangle, the errand boy, the flower girl, with exquisite bouquets, bestowed later on a favored few, the newspaper vendor, all appeared in turn, and were followed by a diminutive dude in all beaver, and a small shoe-black who gave him a shine and pocketed the change, as to "the manner born." But the evening would not have been complete without a little music from the Minnits, their great-hearted leader who, in the midst of his mighty cares, knows every boy and girl under his charge, and is ever ready with a word of needed help or encouragement.

A kindly greeting of good fellowship to be carried to Hampton was not forgotten, and to it was added the motto of the Carlisle School, "God helps those who help themselves." J. E. R.

## Incidents of Indian Life at Hampton.

*Use of Personal Pronouns.* I am so hungry I cook myself. If you give me corn bread, I go to eat you.

*Agnyapi hmiyana taku waukyeca ognakapi* is the Dakota for *you*. Let us not carry civilization too far. Fancy getting up the *menu* for a dinner of twelve courses!

"Where is Dan?" enquired a lady of one of the smallest sized Indian boys. "Is he up?" "O yes, he's up," cheerfully replied the little rascal, adding in a lower voice—"up-stairs!"

A class of "babies" carried out on Kindergarten principles and with some of the Kindergarten "gifts" and "employments" is a new and successful feature of the Department.

An excellent Mason & Hamlin upright piano has been added to the attractions of Winona hall by the indefatigable efforts of one of our teachers, who goes by the Indian name of the "Starter of Sweet Songs."

"Waghuda" is the Omaha for it, and "catiohanpi" the Sioux. It is only hulled corn but it is a great Indian delicacy and to the delight of all has been placed among the regular dishes at the students' table.

"Some boys were hidden to work, And they thought it was better to shirk— They thought themselves heroes: But when they got zeros They concluded 'twas wiser to work."

They went to the N. and A. school, And they thought they could make their own rule—

But each little sinner Kept home from his dinner, Now follows the rules of the school!"

## Indian Tableaux.

An impromptu entertainment was given in Winona a few evenings ago by the girls and boys in the normal classes. The tableaux, interspersed with music, ranged over a vast variety of subjects and were decidedly effective, although the "stage" was unfortunately so low that a great deal was missed by the rear part of the audience. George Washington in the act of cutting down the cherry tree, Lowell's famous "court-in" scene, Rebecca at the Well, a sprightly representation of Monday morning in the laundry, Mother Goose rhymes acted out, and finally a realistic "tepee" and blanketed Indians singing "Home, Sweet Home," rapidly followed each other on the programme, each number eliciting loud applause. The acting was done with much spirit, and the fun behind the scenes was not the least part of the evening.

## A Practical "Talk."

Mr. Tibbles, whose wife is the well-known "Bright Eyes," was with us last Sunday and gave the Sunday School an exceedingly practical and forcible warning against certain of the Indian customs which prevail at the homes. They listened with great attention as he described in very plain language the unsuitable food and unhygienic living against which they must make a stand, the superstitions which they would have to meet, and above all the practice of *cereemonious giving* from which they must desist.

Most of the Indian dances now in vogue have little harm in them aside from this custom of present making, which is carried to such an excess that some will part in a night from all their earthly possessions. A man is esteemed among the Indians, he says, not for his property but for the number of ponies and blankets he has given away! Mr. Tibbles has been living for the last four years among the Omahas and is come to Washington to agitate the question of citizenship, for without the power to make contracts and to bring a suit in law, their titles to land in severity will not enable them to support themselves.

## Life in the Wigwam.

That there is life in the Wigwam no one can doubt who happens to be there at six A. M., when broganed feet come thundering and crashing down the uncarpeted stairs, more anxious to "fall in" in time for roll-call than apprehensive of "falling out" with those who would fain sleep at that hour.

Whatever advantage the brogan may have over the moccasin, it is apparent that the change is not in the interests of quiet.

That there is life there, is evident at noon, when voices, scarcely audible in recitations at a distance of six feet, exchange congratulations on release from the school room in tones that an attentive ear could catch half a mile away.

The house-mother of the small boys has tangible proof of the vitality of her charges, when after rolling over one another, like puppies, during playtime, they bring their torn jackets and frayed trousers for prompt repair.

Animal life is there, robust and active, and clamoring for expression. If the intellectual life were at all a match for it there are no heights of scholarship to which it might not aspire.

But the intellectual life has had by no means an equal chance for development. Newly born, it needs to be fed with literary milk, and to be patted and encouraged to stand on its own legs and picked up when it falls. Still it exists and struggles toward health and vigor and shows hopeful evidences of growth.

It exists also in the adolescent stage demanding strong food and promising usefulness in its future held of labor.

Approaching the Wigwam in the afternoon, one sees a very large boy whipping a top on the porch. Entering, two boys are seen trying to pass one another on the same plank, with a result somewhat similar to that which follows the meeting of two engines on the same track. The sound of a Dakota hymn, sung to the accompaniment of a parlor organ, is heard. In the reading room a reader asks for an introduction to a word he has not met before, and his book proves to be a compilation from the Prayer book. A little later games of checkers are in progress; a dissected map of the United States is being put together; one boy puzzles another with a handful of connected letters which, put in the correct order spell, "Philadelphia," a teacher gets a new view of Indian possibilities when after a struggle with a word given her by an advanced boy she finds out that it is "anthropomorphism." The Wigwam Father is trying to select books from the library adapted to the mental calibre of applicants.

The bell tolls and the Wigwam empties itself into the dining room.

At 9 o'clock the house bell is rung; the sound of the shutting of many doors and the tread of many feet is heard, and the family assembles for the last roll-call of the day and family prayers.

Before parting, evidence is given that the *material* has still a strong hold on some natures, and that breakfast is already being enjoyed in anticipation.

Voice, in no whispered tones unite in the utterance of the words "beans to-morrow."

"Taps" are rung, the bugle sounds "Good night" and quiet reigns in the Wigwam.

J. V. V. S.

## The Fox and the Crow.

The above fable was read aloud to the Second Division, and afterwards written out from memory with the following results:

The crow took a piece of cheese that did not belong to him and the fox was very angry and did not know how to get it and so he played a trick on him. He went and set down under the tree where the crow was and folded his arms and began to talk (talk) to the crow. He says, you are very graceful and you are very good shaped, you

are so jet and black and the crow was so pleased with the fox and he said to the crow but I have not heard you sing, but will you not be kind enough to sing me a song and the crow at once open his mouth and give a loud caw and down went the cheese and the fox jump on top of the cheese and ate it up and then run off.

The crow got the cheese and set the top of the tree. The fox wanted the cheese and sat under the tree and said. Oh you have nice feathers and I never heard you sing! Then crow open his mouth and said *caw, caw*, then the fox saw the cheese and ate it up. Then the fox ran away and the crow flies away, and I left about that time too. A.

The crow had a cheese and fox saw him and he want but crow flew up on a branch and he sat there and ate the cheese, and the fox want climb the tree but he is unable to do it. The fox sit down by the tree and fold his arm and twist his tail and look up where the crow was and say that he is a graceful bird. "Your wings are so white and your voice will sweet as can be." The crow was very pleased and he think the fox was a good fox. At once the crow say *caw*, then the cheese fell down on the ground and the fox got the cheese and run into the woods. The fox was trick fox and the fox laughing in the wood.

Once there was a crow who steal a cheese out of a pitcher and carried on the top of a tree. A fox came along and stand by the tree and he began to talk with the crow, and the fox fold his hands and his head and he began to sing and said, you are very graceful and good, because the fox is unable to climb up to the tree, and the fox and the crow makes a trick to each other and the fox said to the crow, you are very good and you have a good figure, and he said again to the crow, you are very good and wise, and the fox said to the crow, sing me a little song, and that crow was very much delighted and he began to sing his mouth and said "caw, caw, caw," and there came out of his mouth a cheese, fell out on the ground and the fox jump on it and eat it all up and disappear away. D. F.

There was once a crow that stole a piece of cheese and flew up into a tree to eat it up and a fox saw him and he made up his mind to get the cheese. But the fox was unable to climb the tree and if he was the crow would have down away before he could get to the trunk of the tree and so he sat down and folded his arms and gave his tail a little twist and opened his wicked mouth and began to talk. This is what he said. "You are so beautiful that no bird can be compared to you. You are such a pretty shaped bird, your feathers are jet black, your neck has such a pretty tint, and the fox he said that he had never heard the crow sing. And the crow sat there and twist on the cheese and that fox was such a gentleman! and the crow opened her bill and uttered a awful *caw, caw*. Down fell the cheese, up and as he disappeared in the wood the foolish crow heard a laugh in the woods that told her what a fool she had been. E. B.

## A Letter to the "Lend-a-Hand Club."

YANKTON AGENCY, D. T.

Dear Schoolmates and Friends:—

It is said to be inelegant to begin a letter with excuses for not writing, but I am going to give you a few of my excuses, and I hope to be excused. I did want so much to write a letter to this society, of which I was once the president, but thought I should like first to obtain a position in some school like this I might be able to tell you about my work for our blind people, who are coming up slowly. I say slowly, because circumstances will not allow time to improve fast. I find Dakota to be a poor, dark place for a Hampton student—especially this Agency. It seems to me that I am of no good or use to the Indians here at all, present. I am not at all sure that I am not a failure. I am sorry to tell you I am not teaching, but glad to say it is not my fault. I have tried and tried to obtain the position, but it seems to me all fall to me. There is one white man here in this Agency at present than I ever saw before. It does not seem so hard for a white lady to obtain a position here as it does for an Indian lady. It is said to be a poor, dark place most starved and half-clothed in this cold winter. Most all of them live in houses, still they are not comfortable. They are small log houses and sometimes two or three families live together. They try so hard to make themselves comfortable and to live like the good white men, but bow can they do without the means to accomplish their different needs? Some of them are so old and can't help themselves at all and have no one to help them.

As I was visiting the Poncas, I came across an old man, a poor old lady whom one cared to take care of. I asked her some questions and she answered the best she could with her trembling voice. I asked her what took care of her? She said "No one."

I asked her if she had any relations? She answered "Yes, lots of them, but I am old and good for nothing and they don't care for me any more, because I can not work." Perhaps some of you can think a little how she looked, but all can not. She was not near as tall as I am, she was bent with age, she had on a pair of moccasins that looked as friendless as she did, she had on about one half of a dress and two old worn out blankets. Her hair was short and looked as if a comb never touched it. Her skin looked as if she had never seen soap and water. Her fingers were all bent, and she can not use them much. She is hard of hearing and can hardly see. As I opened the door of a little log hut, I saw her first of all in the house. She was sitting near the door, where it was cold and not good enough for any one else in the house to sit. She was not at all pretty, but my heart felt for her and I gave her more attention than any one around. I found the rest in the house teasing her and making fun of her. I stopped them and talked with the old lady. What do you think was the first thing I thought of when I saw the condition of this old lady? It was a beautiful thought. "Lend-a-Hand Club at Hampton." Do you think you can help her? You would lend her a strong hand by sending me five dollars to get her some clothes and something to eat. I should go to her with a glad heart, and with the present from Hampton. You may be sure that one article would be a comely addition, and the others would be a good food. How happy the poor old soul would be to receive these, but don't forget that you all would be just as happy to give to her as she could be to receive.

I suppose you would like to hear where I make my home. I have been home with my mother awhile, but now I am at my sister's. I go up to Mr. Cook's and stay once in a while to wait there to see if I can get a position in school. I fail every time, but I am still living in hopes. I hope I may not die in despair. Annie Lyman, Mary Randall and I meet sometimes and speak of the days we spent at Hampton. We don't think of coming home before your time is ended. This is a great mistake of the Hampton students. You can not stay at Hampton too long. Do not write sad letters to your friends long. Do not write sad letters to your friends long. Do not speak of corn-bread when you write. It is good for you. When you write, do not ask your friends for money. You do not need it at Hampton, and your friends need it at home. Pray for your friends and lend. Lend-a-hand to them in the little things.

It seems as though I am here this evening taking a part, instead of writing here in Dakota. I can almost name every one in this dear room this evening. If I should attempt it, the first one I should name would be dear Mrs. Seymour, who, I think, is sitting at the end of the first seat on the girl's side. The second would be my little sister, the third, Miss Richards, walking in the big hall. I could keep on but you are too many.

I am your friend,  
ZALLIE RULO.

## DENTISTRY.

Dr. T. H. Parramore,

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King Street opposite Barnes' Hotel.

## JAMES PYLE'S

## The Great Invention.

For Easy Washing.

IN HARD OR SOFT, HOT OR COLD WATER.

Without Harm to FABRIC or HANDS.

and particularly adapted to Warm Climates.

No family, rich or poor should be without it.

Sold by all Grocers, but beware of cheap imitations. *PEARLINE* is manufactured only by JAMES PYLE, NEW YORK.

**Among the Dakotas.**  
THE SACRED WATERS OF MYSTERY.—FRONTIER WIT. BY INDIAN POETRY.—A GREAT SUCCESS.—NEARLY ALL SUSTAINING.—LAMOS IN SEVERALITY.—BOU SHIELD'S MESSAGE TO THE EASTERN PEOPLE.—PRACTICING ON A "TENDER FOOT"—WIFE TO LOOK FOR SYMPATHY.

And now, taking a reporter's license, if there is such a thing, I will leave to my next letter an account of my next, very interesting visit to the wild tribes at Fort Berthold, and transport you at once to the Devil's Lake—with return tickets. A sketch of this Agency makes the proper companion piece to one of Standing Rock. It was the great things accomplished for the Indians here that induced the Government to transfer Major McLoughlin to the charge of the larger agency with the surrendered hostiles. And his work having been carried on in similar spirit since he left, we can see here, on a similar scale, some of the results toward which the Standing Rock Indians are progressing. I need hardly, perhaps, describe to Eastern readers, who are so often Western travelers, the pleasures of a long day's ride over the wonderful Northern Pacific Road, from that triumph of engineering skill, the bridge which spans and controls the treacherous current of the Missouri at Mandan and Bismarck, through the mammoth wheat fields and "bonanza farms," where regions of harvesters are gathering to the two continents, through cities springing up in the wilderness, to Fargo, which, with a growth of ten years and a population of 18,000, calls itself an old town, and beyond the need of a "boon" settles down to a steady pace that would take the breath of an Eastern metropolis. From Fargo an entire holiday I traveled north and west over the St. Paul, Minneapolis and Manitoba Road. It connects the mills and markets of Minneapolis and Duluth with the vast valley of the Red River of the North, whose undeveloped soil, the richest in the world, is estimated to be capable of producing forty million bushels of wheat in excess of all this year's yield of the whole United States. Surely we may still say to the poor Indian, as the philosopher says, "There is room enough for us both in this great world."

The frontiersman and not the Indian is responsible for the name which liketh this beautiful sheet of water. The Indian, awed by its beauties, its bitterness, the strange reverberations of its springs under the ice in the winter, its fitful rise and fall and the occasional bursting of a bubble of gas, forming a new little lake among the hills near it—as has occurred within the last eight years—called it Minnewaukan, the Sacred or Mysterious Water. A beautiful dromedary, the Indian, that overlooks a landmark far a long distance in every direction, they called the Heart of the Sacred Water, and filled it full of legends as the Untersberg. The rougher humor of the settler transformed it into the Devil's Heart, and finds a Devil's Tooth, and Devil's Backbone, and Devil's Punch Bowl to keep it company. The little two year old town on the opposite shore is a sheet of water, and its bank has adopted as the most appropriate vignette for its checks and drafts, a picture of its satanic patron climbing over a silver dollar, which on a sheet of water, bears a map of the lake, to which he points with his spear, and demands that you "give the devil his due."

The Devil's Lake reservation extends along the southeastern shore of the lake. It is forty miles long by fourteen broad. A third of it is arable land, very fertile. Twenty thousand acres are in timber and the rest in flats, alkaline flats and rocky hills. It was one of the reservations set apart by treaty in 1867 for those Sioux who had not taken part in the Minnesota outbreak. This treaty gave the Indians their annuities on certain conditions discretionary with the Agent. The deserving were to be rewarded. This clause made it more possible to advance the Indians, and to it Major McLoughlin attributes their progress. In his eight years, his thousand wild "blanket Indians" were transformed into a nearly self-sustaining community; he scattered them on separate farms so that none were within three or four miles of the agency; got 180 of the 380 families into log houses. All had crops of wheat, one had 80 acres under cultivation by his own industry. This was one who had fled from Minnesota after the outbreak of 1862 in which he was implicated. Induced by a relative to attend one of the Progressive Councils, "Shipto" kept outside, but listened at the window and heard some advice the Major was giving the Indians, telling them that it was not so very difficult to get out a few rails and make a fence. He went home and said to his wife, "I believe I'll try the white man's road." That winter he cut 2000 rails. When any Indians came along where he was at work, he hid his axe in the wood. In 1881, when the Major left Devil's Lake, Shipto, after getting in his crop of wheat from fifty acres, had several

sacks more than he needed, and gave them to the poor. Schools had been established, gradually overcoming violent prejudice. The good will from sale of ponies, guided into wise marriages, and those who married were established on claims of 160 acres, with wagons and cattle.

On my visit this summer I saw many of these homes and others since established. I saw Shipto's house and farm also. He bought himself a self-binder this year for \$180, paying part in cash and part in flour. He had 600 bushels of wheat and 585 of oats last year, and will have 1000 bushels of wheat this year. He has nearly 80 acres under cultivation, and to reward his industry the Agent has built him this year a good granary. On the whole agency over three thousand acres are under crops, with 850 more of new breaking. They will have 25,000 bushels of wheat. The treaty annuities have expired, and the only ration now issued are for the sick and destitute. Every family is now cultivating from one to eighty acres, generally from 3 to 25. They have bought and paid for this year, for themselves, 7 self-binders at \$180 each, 2 rakes at \$20, 3 mowing machines at \$60 and 7 at \$75. The larger machines are usually bought by clubs of five or six. They are paid for by sale of flour and wood on and off the reservation. They hire a steam thrasher which I saw vigorously at work, turning out "No. 1 hard" at the rate of 20 bushels to the acre. There is a good mill on the reservation, with flour of stone, and a capacity for 25 barrels of flour. They have a market for their wheat both across the lake off the reservation, and to Government for the Turtle Mountain reservation, also under charge of this agency. Here, as at Standing Rock, the Government schools and most of the mission work are under the care of a Roman Catholic mission. Predictive priests and a Gray was from Montreal. Here, as there, however, a Presbyterian mission station has also been established under care of an intelligent native pastor, who has been here for two years and has eighty communicants. At the agency a new school house is nearly finished to replace one burned down three years ago. The farm school has 80 acres and dormitories for 30 boys. The new school house for girls and young boys will accommodate about sixty. Both should be larger. The school facilities seemed small at the former.

The reservation had just been surveyed and the allotment of the claims are going on under the provision of the treaty, that as each Indian gets 50 acres of his 160 fenced and under cultivation, he shall receive his patent, to be mailed to him, and he shall receive and descend to his heirs. Certain aid is still received from the civilization fund, and there is a now nearly exhausted fund from the sale of their lands in Minnesota and Dakota. The appropriations, amounting this year to \$3000, after payment of employees' salaries, are spent in roofing their log houses, building granaries and otherwise encouraging the most deserving, as far as it goes, which is not far enough. The agent, Major Cramie, would like to see, not a return to rations, but an appropriation for working cattle and graded stock, that would give them a start in farming, and give an animal food for which their health is suffering. They live chiefly on vegetables, with some game and pork; few can get beef. The result is low vitality, increased sickness, and though the births thus far slightly exceed the deaths: There are men among them who have been running farms for six years with hired cattle. A thrifty white man starting with no more would have gotten ahead faster of course, but the Indians have had all that could be reasonably expected of them and more, and deserve encouragement. A wise expenditure for stock and working horses would put them on their feet once for all.

On one of the prettiest claims on the reservation I found a young man taking advantage of a rainy day to work inside of the house he is plastering. "Blue Shield is one of our rustlers," said the agent. He hauled his house nine miles to secure a larger farm, and is building one near him for his mother. He has a granary, and has bought new furniture and an ingrain carpet for his house—unwanted luxuries. Throwing down his trowel, he came to speak to me, and asked me to send a message from him to the people in the East. "Tell them," he said, with appropriate gestures, "Blue Shield says that the Indians are going up step by step—not only in farming but in all kinds of work, in education, in Christianity—everything. And tell them also, if you will, one little word in praise of me. Blue Shield, that I am like a beaver, I build my house of logs, and plaster it, and agree it with food."

Not all are even yet on the progressive side, of course. Only last Fourth of July one of the finest young men of the reservation was shot, presumably by one of the anti-progressivists left, for his bold stand against him in council. Nor do they get all the sympathy they might from their white neighbors. I heard a gentleman in the opposite "city" say that he would "like

to see them all shot," and declare that "three years ago, when there were only 300 rifles in this town, they were planning to make a raid on us and exterminate all the white people here—1200 braves of them." As there never were over 1000 Indians on the reservation at any time, counting men, women and babies, and the little city is only two years old now, I fear this was an old settler's attempt to practice upon the credulity of a "tender foot." An intelligent little lady of whom I enquired as to the general state of feeling among the white people toward their red neighbors replied: "Well, it takes a real Christian, I think, to be interested in Indians, and there are not a great many in this place. I am glad there are a great many in Boston."

*in Boston Journal.* HELEN W. LUDLOW.

#### Red Cloud and his Agent.

A DRAMATIC SITUATION—THE TWO PARTIES—RESULTS OF MR. MCGILLYCUDY'S WORK—THE SCHOOL SYSTEM—INDIAN POLICE—THE WHITE-INDIAN PROBLEM—"ISSUE OAY."

If Lower Brule Agency possesses elements of dramatic interest, we, at Pine Ridge, discover a fully developed "situation." The first represents the blind chaotic struggle between barbarism and civilization; at the second the two forces are played off against each other, by a cool and skillful hand. Dr. McGillicuddy, Red Cloud's famous agent, has been called an autocrat and a tyrant, but this is the mere arbitrary exercise of power. His will is practically absolute; yet he is an agent in the fullest sense of the word—acting under authority of government, of law, of civilization, to put down barbarism. His policy is to use the progressive party as a check upon the other. So soon as the chiefs and leaders of the people accept civilization, the church, the school, the police—these are entered upon one side, and employed directly or indirectly, by strategy or force, by special privilege or delegated authority, to restrain, compel, subdue.

There are then at this great agency two fully organized parties—on the one side this remarkable man, all coolness, nerve and executive force, with a backing of fifty Indian police, a band of well-disciplined, under Captain Sword, an almost equally remarkable Indian, and a majority of the chiefs with their bands of followers; on the other the famous old malcontent, Red Cloud, obstinately fighting for his declining influence, and surrounded by a little band of dissatisfied, turbulent, and non-progressive Indians. The "Red Cloud faction" is a refuge for every Indian who has an old enmity toward the Government or a personal grudge against the agent; every lazy Indian who doesn't want to work; every objector to the schools, who wants to keep up Indian dances, dress, and customs; in a word, all the chronic grumblers and "coffee-coolers," and the whole "opposition" element.

Dr. McGillicuddy, with his superior force, organization, discipline, and with the overwhelming weight of law and order on his side, naturally commands the situation. His ultimate triumph would be certain but for the vacillating policy of the Department, the unwisdom of compromise, and the agents, who give undue countenance to Red Cloud, and the detraction of his enemies, which last, however, is so ridiculously overdone that it does him, perhaps, as much good as harm. The results of his six years' administration are effectively indicated by a few figures. In 1878 all the Indians—8,000 of the wildest Ogallala Sioux—lived within a mile of the Agency, in lodges or teepees, doing no work, and spending their nights in dancing and feasting, and their days in sleep. Now 10,000 log-houses have been put up by the Indians themselves, with a little assistance, and over three-fourths of the people are living in houses and away from the Agency. In 1879 there was issued 60,000 yards of canvas for lodges; last year only 20,000. Five hundred freight wagons are driven by Indians from the railroad to the Agency and the Black Hills. Last year they earned \$45,000 by freighting supplies. In 1879 the Indians sold \$200,000 worth of beef cattle of their raising, and this year produced 10,000 bushels of corn. Now that a large proportion of Indian families are living in houses, Dr. McGillicuddy is concentrating his fight upon village life, which tends to keep up the social customs of barbarism, and offers them every inducement to "scatter-out" and take up so-called "civilization" at isolated points. The nearest settlement is now on Corn Creek, fifty miles from the Agency.

The school system is probably more generally efficient here than at any other agency in Dakota, and the policy of compulsory attendance better enforced. The doctor says that he can get as many day-schools as he is prepared to ask for, and he is rapidly placing all the children of school age in school. The school-houses are of logs, sub-

stantially built and comfortable, in the shape of the letter T, with teachers' rooms in the addition. The main difficulty is the chronic one of obtaining suitable teachers for these isolated and unattractive posts. Those whom I saw were men—somewhat rough in appearance and uncultivated of speech, but apparently doing fairly vigorous and conscientious work.

The Government boarding-school at the Agency is the largest and most thoroughly equipped on the reservation. There are now 150 children in school, and it is expected after Christmas to accommodate about 100 more. The thoroughness with which we were invited to inspect every detail of the *menage* was an indication of its completeness. The close personal superintendence of the agent was everywhere evident, and his mechanical and inventive genius displayed itself in the ingenious arrangement of fire escapes and portions of the heating apparatus. In the girls' dormitories he pointed out to us the faulty construction of the "hospital bedstead" supplied by contract to the Indian Bureau, and then took us across the hall and tested with a vigorous kick the more substantial make of the ones purchased by himself in the open market at a saving of 50 cents. His knowledge of interest extended to the baking of bread then in the ovens, and to the style of the girls' new uniforms—dark blue flannel and gold braid—which littered the sewing room.

We visited the school-rooms and heard some rare recitations in arithmetic. There were several strangers present, and we were told that it was a common occurrence for people to drive over from Rushville, the nearest railroad station (a distance of twenty-four miles), to visit the agency. The "singing" on Sunday evening was very pleasant and homelike, and so it was to see the processions of the church, and to hear the prettily chorused "Good-night!" The school owns and cultivates for its own use a farm of twenty-five acres—some of whose products we saw, and very considerable they were—and new training shops have just been put up for twenty-five apprentices. Here the boys will learn all the principal trades, and manufacture goods for the Indian service. In this very important point of industrial education for boys that the Agency schools are almost invariably weak, and it would be well for other agents to imitate, in this respect, the enterprise of Dr. McGillicuddy.

The general appearance of the Agency is the best that I have seen. It is exquisitely neat. Everything is methodical and ingenious, from the system of office calls, to the gate which "no Indian has ever yet succeeded in passing on horseback," and from the complete contrivance of the doctor's invention for protection against lightning, to the storms here are very severe—to the wise collection of all inflammable materials in one isolated building. A walk around the agency with the doctor enlightens us on a great many points. The interruptions are especially instructive. We start from the doctor's residence, which, like almost all houses here, is one story high, but is furnished with an unusual degree of elegance. The doctor himself—long-limbed, well-dressed, with a careless stride and an easy, almost indifferent manner which does not deceive us in the least as to the expression of that powerful cold gray eye—is a most impressive presence. One feels somehow that in touching him one would receive an electric shock. He is a rapid, careless, often exaggerated, but always interesting talker.

The police parties, mess, and guard-house are all well kept and orderly. Dr. McGillicuddy is the originator of the Indian police system, which was inaugurated under Secretary Schurz. In 1878. He says that his fifty police are a great deal better than an army post and a company of militia to keep order on the reservation. The presence of soldiers irritates the Indians, they are proud of their police force. There are ten stationed at the Agency; the others are scattered through the villages. The detail is changed every week. "An incendiary council could not be held in the remotest village but that I should hear of it the next morning." These men are faithful and vigilant, prompt to make arrests when necessary, to compel attendance on the day-schools, and to perform all the duties of their important positions. So far as the other Indians are concerned, there is often a rankless as well as an arduous post. It is no wonder that Dr. McGillicuddy advocated the recent increase in the pay of Indian police from \$5 to \$8, and from \$8 to \$10 a month. About two years ago, Secretary Teller insisted upon that all the Indian police should be disarmed of their rifles, leaving them only their revolvers with which to inspire terror among cow-boys and wild "blanket Indians" fully armed with Winchester of the most approved pattern. Agent McGillicuddy disobeyed this extraordinary order on his own responsibility, and threatened if they were carried out to place his police force and to resign. It is perhaps needless to add that the stacks of

glittering barrels still furnish the guard-room, and that the Fire Ridge policemen are able to back up authority with force, whenever it may be necessary.

At this point, the doctor is addressed by a tall, dark-haired woman, neatly attired, with scarcely any distinguishing marks of race, who informs him with perfect coolness and self-possession that she has "come to stay," and politely demands ration tickets for herself and a large family. "Here is a peculiar case," says the doctor as she turns away. "This quarter-breed family from Iowa—they have always supported themselves and are perfectly capable of doing so. Why should they be foisted on the public in this way because of a few drops of Indian blood?" These are questions which will be settled themselves when the Indian becomes a citizen, and instead of conferring doubtful privileges we grant him equal rights. One of the freighters, a tall, splendid looking specimen of an Indian, decked out half in working clothes, half savage finery, and with the antique folds of the blanket dropping carelessly from his shoulders, plants himself directly in our path. His gestures are quite magnificent as he displays his long buckskin pouch, beautifully ornamented with beads, and demands in a sort of "pigeon Indian" the silver dollars in payment for his labor. The agent, in the same jargon, directs him to report at the office in an hour. His off-hand manner and unconventional salutation "Hello, Indian!" seems to be accepted in good part by these strange beings. This one takes himself off with a curious, indulgent smile, and is soon installed on the office steps, smoking immovably. Patience is an Indian virtue which almost amounts to a vice!

We pass through the great storerooms, with boxes of bacon and sacks of flour piled from floor to ceiling, and go into the issue house for a few minutes, for this is "ration day." The actual issue of ration tickets is a tiresome and painful sight. I never recalled the degrading features of the system so keenly as during that quarter of an hour in which we watched the sharp, eager, pitiful crowd of women, in their gorgeous uniforms of dress and unbecomingly black hair, jostling each other to push the cabalistic bits of paper through the little window, and kneeling on the floor to gather up greedily the measure of sugar, coffee, beans, into an unsavory looking sack, and bear it triumphantly away. The loud rhythmic cries of "nonpa-topa-yanni-sakpe," and so on, indicating the number of persons in a family and the corresponding number of pounds of flour to be doled out—the great open ledgers on which every ration is entered as soon as issued—every feature of the strange, orderly busy, commonplace, yet phenomenal scene is indelibly stamped upon my memory.

The beef is issued fortnightly "on the hoof" and the cattle are chased and shot down by the Indians as fast as they leave the corral. This is said to be a brilliant spectacle. I shall not see it. The Pine Ridge Indians receive very large rations, three pounds gross of beef per day, and other things in proportion. Dr. McCullyddy favors their gradual reduction and the substitution to some extent of vegetable for animal food. "Increase the ration of beans and rice 20 per cent," he says, "and cut the beef ration 40 per cent." He also believes in refusing luxuries, such as sugar and coffee, to the persistently idle and improvident.

ELAINE GODDARD.

In New York Evening Post.

#### Industrial Education.

(A Paper contributed by request to the Industrial Association of New York.)

Eighteen years ago, when the idea of the Hampton school began to take formal shape in the minds of its originators, the conditions which surrounded and controlled us, were undoubtedly unique. We had no theories; we simply accepted facts, and in order to credit the experiment with its full value, these facts should be clearly understood.

We, as representatives of northern charity, were confronted by a most clamorous and pressing demand. From whence did it come, and how was it to be answered?

To-day, even the briefest reply to these questions must be retrospective, and to some extent historical, for systems of education are not founded upon, nor always expressed by statistics alone.

We found then, that this demand came from a people who practically knew nothing of life except under the unnatural conditions imposed by slavery, and we found furthermore, that these conditions false and cruel as they seemed, had not altogether weakened, nor even radically perverted the men and women who came to us in their blind search for light. Slavery had been a hard school, but it had trained its pupils to obedience and perseverance. It had given them inexhaustible endurance, and above all it had taught them to work. Of its degradations they were in the main uncon-

scious and had therefore escaped the worst degradation of all, the loss of self-respect. Their condition was anomalous, for they were ready and eager to turn their backs upon a shameful past, of which they had no reason to be ashamed. Its stigma was their stimulus, and we found ready to our hands pupils whose docility was equalled only by their enthusiasm. Their attitude towards us was from the first assured, and was the legitimate outcome of the training of slavery. The open question was, and has continued to be, of our attitude towards them.

They must be taught, but we could not teach them all, nor everything, and there was little time for deliberation and none at all for testing theories. The immensity of the appeal forced the conclusion. We must give what they most needed to the largest possible number of those who could best receive it, and it is out of the attempt to do this that our labor system has been evolved. They could do nothing for us, and directly money they could substantially help themselves, directly and indirectly, if they were given the opportunity to work. By just so much as their work could be made productive were their drafts upon charity decreased and the possibilities of the school increased. But there was even more than this to be considered. Granting that the object of education is to fit the pupil for the life before him, then pre-eminently was it necessary that our pupils should be taught to work, for otherwise we were merely smoothing the road to pauperdom. Our workshops and industrial departments were literally created by these two needs, which took shape in the demand of a people for the education without which they were scarcely fitly equipped to perform their part on the face of the earth, and the no less imperative demand that their labor for their own sake and the sake of the nation which had freed them, should as speedily as possible be trained into its productive uses.

The exclusion from our curriculum of Greek and Latin and of what are known as "higher studies" in general, kept away from us, as we were well aware, a certain proportion of more advanced and more aspiring members of the race, but we have as yet seen no reason to regret the decision which has attracted to our school-room and shops, the strong middle class, upon whose vision and force, experience has shown us that we can make heavy demands. Our students represent neither the aristocracy of the city nor the low-down poverty of the plantations, but a class which is in some respects distinct, from either. They come mostly from the rural districts, are accustomed to hard labor and harder work, and while physically strong are by no means mentally weak, being remarkable throughout for a certain sturdiness of body and mind which responds admirably to the somewhat severe conditions of the school life. They know labor in its crudest forms, and any thing like thorough technical training has not as yet been practicable for two reasons, 1st—That to apply this profitably, pre-supposes the existence of certain fundamental ideas. 2nd—Because it was essential from the outset that our students should be to some extent self-supporting. As these fundamental ideas were in the minds of our students, and deal little more than embryonic, and it was only in certain directions that the labor of our students could be made to contribute to their support, we were again and promptly forced into certain channels. A moment's glance at the field will show that the problem was by no means an easy one, but it will also show, we believe, that the success of our system, if it is to be called such, is largely due to the fact that the conditions offered us no alternative. There was, as it seemed to us, but one road to the end we had in view, and the connection has been so direct, as, happily, to leave us no room for doubt or questioning. The unskilled labor of our students could only be made to pay its own expenses by being put into marketable shape, the market was as crude as the labor, and our industrial departments took form accordingly. That is, it paid us to run, not a market garden nor a nursery, but a well cultivated farm, and on the other hand, our students, ill equipped as they were, could not with advantage attempt more than this, which, it must be remembered, was a vast advance upon their previous experience. Again, in our sewing rooms, the girls can do profitably make plain garments of all descriptions and are taught mending and the care of their own garments, but as yet we have found no place for art needlework or scientific dress-making. The result of this, briefly stated, we find to be that our young men go back to till the few home acres as they never have been tillled before, while many a forlorn Hampton girl, for their training has been carried on in full view of what lies before them, as well as with intimate knowledge of their past.

Tradesshops after tradesshops, and departments after departments have been added to

our original nucleus, as the number of our students increased, and as the growing prosperity of the South has created a demand for the articles which we are able to produce, until the list stands as follows:

Huntington Industrial Works. First-floor, Saw-mill. Sometimes boys make full time for one year, for \$10 a month and board; sometimes work two days a week. Lumber of all kinds is sawed to order and kept on hand, and a good permanent business has been worked up.

Second floor. Wood-working shop. All varieties of building materials are here prepared by machinery. Twelve boys work every day for three years and four work two days a week. Total force is fifty young colored men of whom those who work all day study nights. Their wages are saved for future school expenses.

The Shoe-shops employ nine Indian and two colored students, the former work half a day and go to school the other half. About 800 pairs of shoes are made and 1800 pairs repaired annually, chiefly for school use.

The Knitting-room employs 20 boys and 6 girls, all colored. The former make and the latter "finish" an average of 10,000 pairs of mittens yearly which are taken at a fixed price by a Boston firm and sold in the North.

The Household Division employs in housework and in the Laundry 120 colored and 50 Indian girls all of whom take cooking lessons; 40 boys act as waiters and as cooks. Seventeen boys are janitors of the various buildings, and three are on general duty.

The Girls' Industrial Department gives 54 girls each one day's work a week in sewing and mending, and employs ten constantly tailoring and shirt making, besides two Indian and two Negro boys who work as tailors.

The Printing-office and Bindery employs 7 colored and 3 Indian boys, publishes four periodicals, and obtains a good deal of outside work.

The Engineers' shop employs two Indians and two Negroes, four of whom come two days in the week. This department has charge of all the gas, steam and water on the campus.

The Indian Training Shop teaches 17 Indian boys carpentering, painting, tinning, 4 harness-making; with these are 9 colored boys.

The Wheelright and Blacksmith shops employ 7 Indians and 5 Negroes, who do all the work of the place and some from outside.

The "Home" and "Hemenway" Farms, 700 acres, employs 65 boys in raising early vegetables for Northern markets, home supplies, grain, stock and milk for home use and for sale. 27 work all day and 38 two days each week.

In all these various branches it has been necessary, of course, to feel the way carefully, but the correctness of the principle on which we started seems to have been proven by the fact that at no point have we encountered serious failure. We have been able gradually to raise the standard of our under-graduates' work, and have been enabled to establish a technical class to which such of our graduates as can afford it, may return with a view of preparing themselves more thoroughly than can be done in the school proper. This class will be under the charge of a Northern mechanic who has been trained in the Boston school of Technology and also in Col. Auchmuty's school, and will make it possible for us to offer new opportunities to our students and to fairly test their capacity in this direction.

The adaptation of our labor system to our academic work involves a certain amount of friction, but we find that this decreases with each year of added experience and has not at any time given rise to more than temporary inconvenience. It is, however, only fair to say that our success in this respect, as in many others, is largely due to the intelligence and devotion of the teachers whom the peculiar attractiveness of the work have drawn to it. The heads of the various departments have almost without exception, co-operated heartily with each other, and the friction at present is reduced to that which of necessity arises in deciding as to the arrangement of classes, transferring individual students from one department to another, or in similar details. We have upon our roll for the current year 605 students, of whom 139 are Indians and a little less than one half girls; the average age of the whole being seventeen years. Of the 566 Negro students, 376 are in the Normal classes which means that they study four and five months of each year being credited for this labor upon the books of the school. As a rule this pays about half the cost of board, clothing and books, the remainder (\$5.00 more or less) is paid in full or by the credits on their accounts as students of the night school, or in some cases by their earnings during the summer vacation. Their tuition in all departments

is given them, and is provided for, with the exception of \$10,000, which in its capacity as an agricultural college, the school receives annually from the State of Virginia, entirely by charity. About half of this, given in the form of scholarships of \$70.00, the remainder comes to us, without restrictions from one and another quarter, the whole amount annually expended being now over \$50,000, which represents free education for nearly 600 students who are paying chiefly in labor for their board, clothing and books. The night school, which has been previously mentioned, was opened five years ago, to provide for the large number of promising applicants who were not prepared for the Normal classes, but who offered such good material that we were not willing to lose our hold on them. These students, 190 in number, work all day during the entire year and study from 7 to 9 o'clock five evenings in the week, receiving in regular wages. Out of the amounts with which they are credited, a sufficient sum is taken to defray their necessary expenses while at the school, and the balance is put to their credit. This system has been found to be the best, and the fact that more than two thirds of our students are now prepared in this way, and that the proportion is still increasing, gives us all the assurance we need, that hard work under proper conditions, in no way dulls or stunts the intellectual faculties. Nowhere in the school is there more enthusiastic or willing study than is done by these night students, boys and girls who work from 8 to 10 hours a day and yet some of them are among the classes full of zeal and mentally fresh. A few young men who are taking a two or three years course in the shops as apprentices, also study in the night school, which as may be seen, has come to be a most important feature of our system.

The Indian students, to whom no reference has as yet been made, number 139 girls and 26 boys, and for the purposes of this article must be considered apart from their Negro fellow students.

When, in 1878, seventeen Indians, expelled from the work of the farm for bad reputations, came to us, in Capt. Pratt's charge as applicants for admission, it seemed almost impossible to meet their requirements under the conditions then existing in the school. To put them side by side, in class-room and workshop, with a race with whom they had no point of contact either in their history or their characteristics, involved a series of experiments in regard to which, we had, it must be admitted, no data whatever, and we accepted the new element with some doubt as to the possibility of assimilating it. The Indian then, there was no clearly marked line of development, no rigorous pressure of circumstances, no inherited habit of right doing in any direction, and from the first the advantage of the Negro at all these points has been evident.

The injustice and indifference of the white man have weighed more heavily upon the free Indian than upon the enslaved Negro, for the system which gives ration is far more fatal to the manhood in any true sense, than was the system which gave only the bread that was earned by the sweat of the brow, and the Indian who comes to us convinced that he is a disgraced man, with a disadvantage beside his colored brother, who not only is not afraid of work, but who welcomes it as his only avenue to a much desired goal. There is an apparent contradiction in saying of a savage that his past has been demoralizing, but there is nothing else which expresses more nearly the difference in the two races. The average Indian, untouched by the influences of civilization, shows no lack of promise and offers probably to the full as strong a type as the native African.

No recapitulation of the history of the last two centuries is needed to show that where and at all times, civilization has done its most for him, and that the attempts which have been made to protect him have been superfluous and ill-judged. For years there has been going on with the Indian a vitiation of his simple instincts which has resulted in a condition worse than his original savagery, and the final stage of this "civilized" savagery, when we are fortunate enough to get him, is apt to be an easier subject to handle than is his brother the "agency Indian," who not infrequently has lost the instincts of one race in acquiring the vices of another.

The noteworthy exceptions are those who come to us directly from the hands of some of the few really capable agents, or mission teachers and who, bearing the impress of strong personal influence in the right direction, take their place here as examples of what good men can accomplish in the face of surroundings which practically take the shape of organized opposition. But whether our Indians belong to the one class or the other, it is certain that in the beginning they show little real enthusiasm for either

study or work. The Negro comes, and is nized how important success of every thing they are, in a board, books—admission as necessary and their!

Our Ind study the as possible labor. They are so in spite of one half the not only as an essential part of other half is retail their homes, when in tools to make it. They find it difficult to find it and always the value of its inspiration, though have to forces outside stood that fine except One they think we find Negroes, they are stances that influence Indian, and has so far advantage of

Additionally such theory i is beyond the patience for into faith for good trial syst choice of influence be called be one we have look upon civiliza

study or work. They are sent to us, the Negro comes, and the teacher will recognize how important a factor this is in the success of every system. Again, the fact that they are, in a majority of cases wards of the Government which pays for their board, books and clothing, affects their position as Industrial students and makes necessary certain distinctions between them and their colored fellow workers.

Our Indian pupils work half the day and study the other half, and are paid as nearly as possible according to the worth of their labor. Their ideas as to the value of money are so inaccurate that it has been found best in spite of the attendant dangers, to give one half their earnings into their own hands not only as a stimulus to labor, but also as an essential part of their education. The other half is retained until they return to their homes, when it is expended for them in tools or other useful articles.

They find it difficult to apply themselves closely and while the Negroes understand always the value of work and often catch its inspiration, the Indians know nothing of either and have to be impelled and guided by forces outside of themselves, it being under proof that we find occasionally strong and fine exceptions to this general instability. One of the most trustworthy of these forces we find to be their association with the Negroes, through whom and from whom they are constantly learning. In many instances the Negroes act as an intermediary influence between the teacher and the Indian, and our experiment of co-education has so far been conducted, we believe, with advantage to both races.

The technical ability of the Indian is as great as that of the average white man in certain directions they give decided promise, but they fret against the monotony of steady work and tax not only the patience of their instructor but the elasticity of our system to the limit.

When therefore we are able to report that out of 145 Indians who after three years at this school have gone back to their homes, two-thirds are doing well as teachers, farmers, mechanics and laborers, we believe that we are giving strong testimony as to the value of industrial education for this race. They themselves show their appreciation of it by the efforts they make to return here, after a year or two spent at home, in order to fit themselves more thoroughly for the work which they find to be waiting for them among their own people.

We desire to admit here our full recognition of the fact that no fair estimate of the proportionate value of such education can be made which does not include a consideration of all the influences at work upon the student, and it is just now that we feel ourselves able to speak strongly. We know, as has been already said, how much is due to the character of our teachers, but character in this connection means simply the ability to carry out certain ideas. We realize also that in the case of one of the races with whom we are dealing the pre-existing circumstances are perhaps exceptionally favorable, and we know again that in working out the general plan of the school certain apparently accidental details have furthered measurably the end in view.

As, for example, in military drill, which was instituted as an experiment, has been found to be of decided assistance, not only because of its effect in making certain minor virtues habitual, but also because it makes possible a training in self-discipline through our students' courts-martial officered by themselves) which could not easily be secured in any other way and which does much to promote healthy organization and that *esprit de corps* in which the Negro is markedly lacking. Manifestly too it gives a certain sparkle to the dull round of daily duty which is not, without influence upon both teachers and pupils. The music of a band and the shining of an occasional epaulette do a good deal toward enlivening long days in the carpenter's shop or the laundry, and here as everywhere else "a merry heart goes half the way."

But it is something more than merry hearts, or good intentions or even faithful friends, that carries our young men and women through three, four or six years of hard work and harder study, and the record made by both our Indian and Negro graduates deserves the close scrutiny of experts, for supplies perhaps the safest test of an educational theory which for years has been a hard working fact.

Additionally, we believe that back of any such theory lies a personal experience which is beyond the reach of figures, and this experience forces us more and more strongly into faith in the as yet unmeasured power for good which a well ordered industrial system exerts over those who either by choice or by force are brought under its influence. Setting altogether aside what may be called its commercial value, we find it to be one of the strongest moral forces that we have at our disposal, and are inclined to look upon it as the corner stone in the civilization of the two races with whom we

have to do. We do not hesitate to say that we have found its influence in the creation of character to be so marked, that having been forced into adopting it as a prudential measure, we should be loth to give it up, as our best ally, under God, in the work which we have undertaken.

The *Evening Post's* opposition to the Blair Bill has been throughout based upon a perfectly sound theory, and although we believe that the convictions of the editor are so intense as to make his appreciation of the principle in question untrustworthy, yet we have had no criticism to offer, beyond that conveyed in the suggestions contained in the editorials of our last number.

But it must always be a serious disappointment to the readers of the "Post" to find that journal lacking even in the minor detail of courteous expression of its views, and that it should have so far lowered its tone as to be guilty of a bitter personal attack upon such a man as Dr. Mayo, comes to many of its friends in the nature of a shock.

In its issue of March the 13th it gives a letter from that gentleman wherein he makes a fair statement of his position which he defends only with legitimate weapons. With this letter for a target, the editor of the "Post" devotes a column and a half in the same issue to what he is pleased to call the "Mayo Myth", ignoring, not only the facts of the case, but turning his back, so to speak, upon the traditions of his own paper, which has usually left the shriekings of weak sarcasm to journals of a lower grade. A little candid enquiry would have shown, we believe, that Dr. Mayo has, in his line, done a work in the South which no other man has accomplished or even attempted. His varied culture, eloquence of speech and liberality of thought have enabled him to take hold of the best class of Southern peoples no other Northernman working with any similar enthusiasm and opportunity, has yet been able to do. He has further more had the great advantage of a roving commission and while our interest in his work is not, except in the most general sense, that of a supporter or an ally, and we have no desire to resent any fair criticism of it, yet our observation of results leads us to believe that to undervalue either the task he has undertaken or his fitness for it, is a serious mistake.

It is as an humble friend to both parties that the "Southern Workman" puts in its plea for fair play, and while Dr. Mayo is probably quite able to take care of himself, yet we do fear injury to the cause which he champions from this ill-judged and distinctly unfair attack from a quarter to which we are in the habit of looking for wise and courteous discussion of open questions. The following extracts show the tone of the "Post's" article, and, we think, point the moral, that if brilliancy is to be attempted at the expense of truth, one should first be sure of the brilliancy. The *Post's* remarks are:

"When Senator Blair originally presented his scheme for Federal aid to education in the South, he produced as the chief authority for its necessity a person named Mayo. When people asked why the nation should make such a revolutionary departure in the government as to assume for the first time a share in the maintenance of schools in the various states, the answer always was: 'Mr. Mayo says it is necessary.' When anybody inquired why the Southern people did not raise more money in order to secure better schools, the reply promptly came: 'Mr. Mayo says they cannot stand any heavier taxation.' When a doubter suggested that the schools which they already

had were steadily and rapidly dispelling illiteracy among the only class where it can be dispelled—the persons who are not too old to attend school—the impudence was sharply rebuked by the announcement: 'Mr. Mayo says there are four million children in the South who are not getting any decent education.' Indeed, the main support of the whole argument that the South needs educational appropriations from Washington has been all along the popular faith in what may be called the Mayo myth—the belief, in other words, that there was a being gifted with omniscience in all matters concerning public schools in every part of the country, whose decision that the Blair bill should become a law could be disregarded by the nation only at such risk of ruin as no prudent nation would venture to run."

That the conscience of a supernatural being should have been attributed to one who thus proves to be the most fallible of mortals, and that the Congress of the United States should have proposed, upon the vague outgivings of such an oracle, to revolutionize the established educational policy of the government, will be accounted in future years one of the most extraordinary exhibitions of popular superstition on record; and the Mayo myth must hereafter occupy a prominent place in every history of the world's mythology."

#### One More Witness.

What becomes of Indian students returned from Eastern schools to their homes in the west? My experience during three visits to the Indian country is very different from that of the Congressional committee. The wonder to me was not that so many, but that so few had relapsed into "barbarism." I do not believe one was worse than he was before—more than that, as one ball imparts motion to another, so what one educated Indian loses others get. But admitting that he is in worse condition, did not Judas leave the school of Christ worse than he entered it? Must therefore all Christian teaching cease? Having known Hampton students here, I sought them out there. Some who had returned to the blanket, promised to put it aside, showing we yet had an influence over them. One young man, David Simmons—not employed by the Government but working on his farm, was said by the agent to have raised the best wheat in Dakota.

Another young man—a graduate of an eastern school, who so far as I can learn was never in the employ of the Government, is to-day a leader in Christian work, respected and honored by all who know him. Before the return of a girl educated at the East, her parents decided their home was not nice enough for her, and built and furnished a house that she might be satisfied. In a party which I took west last summer was a daughter of chief Wizi, who taught her family to sit at the table and eat as white people do, bringing out china-ware which they had owned but had not used.

I desire so far as I went over the same ground, to endorse unqualifiedly the statements made by Misses Ludlow and Goodale.

It has been said in Congress that these children are brought East against the will of their parents, that they are required by the agent to come. I have brought these parties from Dakota to Hampton. In no case have I brought one without the consent of the parents given, not by force of the agent. Each time I have had more applicants than I had authority to accept, actually bringing more—because good material—than my instructions allowed.

One mother, if I remember rightly, came 70 miles with her son to ask me to take him East.

A young man now here, walked 22 miles to beg that he might come East.

I do not mean that all the Indians feel this way, but those who have had a taste of civilization earnestly desire more and greater opportunities to learn.

If the committee saw only the wild Indians I can understand how they got the impression.  
J. J. GRAVATT.  
(Rector of St. John's Church, Hampton.)

#### Southern Prisons.

EDITOR SOUTHERN WORKMAN.—For one who wants to do the work of a Howard or a Wilberforce surely there is no greater opportunity presented anywhere than is found in the prisons of the Southern states. With few exceptions all the Southern states have their convicts, both state and county out to private contractors for so much a month. These contractors work their prisoners on farms or in coal mines. During the prisoner's entire confinement there are no forces at work that tend to make him a better man when released, but rather a worse one. This fact alone, to say nothing of the terrible suffering endured, ought to influence some Christian reformer to give his life to the work.

But let a few examples which I have gotten within the last few days illustrate what I mean. When reading this it should be remembered that the thermometer in most parts of the South has stood below zero many times this winter.

"The feet of a colored boy rotted off a few days ago. This was caused by him being worked in the county chain-gang all the winter without shoes."—*Atlanta Dispatch*.

Now let the coroner's jury tell the story of Alex. Crews who was unlawfully forced into prison in the first place and while there was so inhumanly treated that he dropped dead before he could reach his home after being released.

The Negro, Alex. Crews, whose pitiful story of distress and suffering was so graphically described in the *Dispatch* of yesterday, died as he was entering a hack to be taken to the depot on his way home.

The coroner was notified, and summoned a jury of inquest. After examining the witnesses, the jury rendered this verdict: "We, the jury empaneled to investigate the cause which led to the death of Alex. Crews, a colored man, now lying dead in this office, are unanimous in the opinion that the deceased came to his death by cruel and inhuman treatment at the hands of those who had him in charge on the convict farm, and we recommend that proper means be taken to bring the guilty party into court to answer the charge."

The Montgomery *Daily Dispatch* further says: "After his conviction and sentence to the chain-gang he laid in the jail for a considerable while and his attorney applied for a release on a writ of *habeas corpus* which was denied by the lower court. The application on writ was then taken to the supreme court which body decided that he was entitled to release. While the matter was pending in the supreme court, Crews was unlawfully sent to the Smith convict farm." Hear what the State penitentiary physician, who visited the Smith convict farm recently, has to say:—"I was at Smith's farm in Tallapoosa County, Jan. 30th. I found the clothing of the convicts very defective. Being thin and worthless, insufficient for protection during the cold weather. Many of them had no shoes beyond a sole tied to their feet, there being no uppers, and some with no protection for the feet except ragged around them. I told Mr. Smith that the clothing and sanitary condition of the men were miserable and outrageous." Still another newspaper report says: "Capt. Irwin who works convicts at his mill on the other side of the river states that he had received during the coldest portion of the late cold spell, five convicts who came from the Smith farm in Tallapoosa Co., Ala., and that their condition when they arrived at his mill was most miserable. They were poorly clad, having on only shirts and pants and those garments were made of very light material. Personally the prisoners were in a very bad condition, being covered with dirt and vermin."

This statement of Capt. Irwin, who is known to be a just man, bears out the assertion of the poor unfortunate who laid down his life in this city (Montgomery, Ala.) a victim to the inhumanity of man.

The above are examples of what goes on in a greater or less degree in almost every Southern prison. Be it said in justice to the Southern press that every prominent paper is beginning to condemn this horrible mode of treating prisoners.

B. T. WASHINGTON.

Tuskegee, Ala., Feb. 18, '86.

[Graduates' letters concluded from page 42.]  
grade," there being two grades above me and five below me.

Having gone thus far, my aim is to go forward and not back. Hence, I stand knocking for admittance to Hampton once more. Hampton, I am sure, will not refuse me this privilege. I am not tired fighting ignorance but only desire to better equip myself for the battle. I am ambitious of acquiring a thorough knowledge of my profession. I've had eight years of solid practice, and not a little theory. So I think two years at Hampton would place me just where I want to be. Much of my time has been given to methods and routine work. My success is due more to utilizing these than to scholarship. Nevertheless, my examinations have compared favorably with those of the successful teachers of this neighborhood. I enclose the certificate I obtained on my examination last fall. Please return it. It may be of use to me.

I hear you are sending Middlers out a year before they finish. This makes a poor Middler shake like Belshazzar, I imagine. Hardships, self-reliance and persistence are stern school-masters, and we must submit to this rule, if we would rise to better things. It makes me feel more manly to send Hampton this certificate than to have received from her a diploma, because it is a receipt for hardships overcome, self-reliance attained and opposition successfully met by persistency. Providing the Middlers can get employment as teachers, this plan of sending them out is a good one.

#### OBSERVATIONS AMONG THE TEACHERS AND THE PEOPLE.

Our city has nearly 500 colored pupils, and nine teachers. We have poor school buildings but shall have better next year—so our school board says. All of our teachers engage in Sunday school work. Mr. O. D. instructs at two; one in the morning and another in the afternoon. "O" is wide awake; he has opened a grocery and his genial manners and business tact are bringing him a paying custom. I am assistant superintendent of a flourishing Sunday school of 600 pupils.

During these eight years I've come in contact with many Hampton students and found two things characteristic of them; devotion to their race, and no compromise with wrong doing. To the former many have given their lives, and for the latter many have suffered reproach because they dared to protest against the glaring vices of the people they love. My experience is that it is best as a general rule not to rebuke severely the short-comings of the older people. Their practices are confirmed by age and habit. Our efforts, in the main, should be to prevent the younger people from contracting the faults of their fathers and mothers. In this good work the co-operation and good will of every parent is secured. "Ephraim is joined to his idols," but he does not wish his children to worship them. Railing at our ignorant masses does no good. The influence of a noble character among them has a value which cannot be computed.

Home influence is all powerful, overcoming in many cases the best efforts of the teacher. By close observation, I am led to think that the people's homes are becoming more sacred. The organ, piano and sewing machine, civilizing influences, are crowding out the banjo and tamborine. Those who own houses, have, as a general rule, parlors, in which are found books and pictures.

The pupil is being elevated. Many congregations will not have an ignorant preacher. In some cases they split, the illiterate going with the ignorant preacher, and the intelligent calling or applying for an educated man. The ignorant ones declare that there is no "feeling" in his gospel. But he stays; the colored teachers rally around him, and he is their strong ally. The educated preacher has the ear of the progressive people; the teacher has the children of both classes. Thus the battle goes on. The practical teacher and cultured minister are to push our people onward. The Negro must go beyond his books. He must buy land, work it, build houses, practice morality instead of talking about it, and think of the completion of his character and the color of his conduct when discussing civil rights. If these things are done in deed and in truth by those called to lead, our people will rise and enjoy every privilege they desire.

Yours faithfully,  
D.

Harrison Phoebe,  
Proprietor.

Is situated one hundred yard from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia has four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrities and general healthfulness, material fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows are most healthful soporifics of the Hygeia.

A little more than half are girls; average age, 17 years.

Its object is the practical Christian education of these two races; especially the training of teachers.

It is a private, chartered institution, owned and controlled by a Board of seventeen Trustees, with a majority of no denomination. It is aided by the State as an agricultural school, and the Government pays \$167.00 apiece annually for 120 Indians, but it needs from private charity every year for its support the sum of fifty thousand dollars. About half of this has been given in the form of Annual Scholarships of seventy dollars a year, which pays the tuition or cost of education of one who pays in labor for board, clothing and books.

It needs a partial endowment fund.

Five Hundred Thousand Dollars are asked for that purpose.

Circulars and general information sent on application to the Principal.

### Hampton School Record.

VOL. XV.

HAMPTON, VA., MAY, 1886.

No. 5.

ANNIVERSARY DAY at Hampton Institute is May 20th. The morning will be devoted to the dedication of Marquand Memorial Chapel, the sermon by Rev. Mark Hopkins D. D., ex-President of Williams College. The rhetorical exercises of the afternoon will be held as last year in the Gymnasium. There will be an Industrial Exhibit in Stone Memorial Hall. There will be no opportunity for examination of these classes on the anniversary day this year, but, on the day previous class rooms and work shops will be open to visitors as usual.

On Sunday, May 16th, a farewell commemorative service will be held in Bethesda Chapel, when we hope for the presence of its first pastors, Rev. E. P. Roe and Rev. James Marshall, as well as of their successors.

THE DESCRIPTIONS of the seventy-eight Apache prisoners just received at Fort Marion, give no more savage and repulsive a picture than was that of the seventy-five Cheyennes, Kiowas and Comanches who were taken there in 1875 by Captain Pratt. Shall the old fortress be to these as to those, the tomb of their savage barbarism, with a resurrection into Christian civilization?

A NORMAL INSTITUTE for white female teachers of public schools is to be held at the State Normal School in Farmville, Va., and conducted by its teachers, beginning June 7th, and continuing four weeks. A hundred and twenty-eight teachers can be accommodated, which will allow for representation of every county and every city of over 5,000 inhabitants, in proportion to its representation in the House of Delegates. It is to be hoped that there will be a full attendance. These summer institutes are of great value, and have done great good.

WE DESIRE to obtain about a dozen copies of the book, "Hampton and its Students," which used to be sold in the concerts of the Hampton Singers; and will pay a dollar a copy for them, sent to the Treasurer of Hampton Institute.

THE STATE NORMAL SCHOOL for white girls at Farmville, in this State, reports eighty-seven normal students, and sixty-eight in the preparatory or model classes. It graduated its first class of three young ladies last summer. General Wm. Taliaferro has been appointed to the presidency of the Board of Trustees on Dr. Curry's withdrawal, and Mr. Asa D. Watkins as its secretary and treasurer in place of our honored and lamented friend, the late Judge F. N. Watkins, a former trustee of Hampton Institute. Hon. Wm. H. Ruffner, the zealous and efficient principal of the school, ably presents its cause, stating that as its small annuity does not allow it even with the help of \$2,000 from the Peabody Fund to fully carry out the original plan of the institution, of two courses of two years each, one to prepare primary school teachers, and the other high school teachers, the Normal School has [very wisely] devoted itself to perfecting the primary work. This is, as he says, "the most difficult and important work. Here is generated the motive power which is to lift the mass of the people into a

stronger, higher life." Some, he says, deluded themselves for a while with the notion that the work is too slow and elementary, but no such talk is heard now, at least inside the walls. He "wants it clearly understood that the school goes in for quality rather than quantity." "As much as we value knowledge, we value mental training far more." On this foundation, he has a right to call earnestly, as he does, for help from the State and the people to put this school for its young women on a par with similar institutions for young men. It is not only to employ teachers—"thousands of whom could be put to work in white schools in Virginia next fall if we had them"—but for the general education of the women of the State, that Dr. Ruffner eloquently appeals, forcibly saying, "Men make provision for their boys out of the public funds, and for themselves too, but how wretchedly small has been the share doled out to her who deserves everything. This is not similar to that which kept down popular education generally in Virginia until a few years ago. Do justice to the women of Virginia, and every good thing will be developed in the State."

THERE IS NO better evidence of the progress of the colored race in the twenty-five years since emancipation, and of public sentiment in regard to it, than in the following statement from the last report of the United States Commissioner of Education, giving the number of colored people at school in the Southern States:

Public schools	1,002,313
Normal schools	10,771
Institutions for secondary instruction	8,695
Universities and colleges	3,477
Schools of theology	800
Schools of law	99
Schools of medicine	141
Schools for the deaf and dumb and the blind	123
Total	1,026,119

The impetus which this advancement owes to Northern philanthropy and such Government aid as it has had in the Agricultural College land scrip fund, has been an essential factor in the work, and if both are wisely continued and extended the next quarter century should show a progress that cannot now be estimated.

The Commissioner further says:

Almost without exception, the State and school officers of the Southern States are agreed that their States can do no more at present. They admit their increasing prosperity; they point, as they may well do, to the rapid increase in their school funds, amounting, as our tables show, to something over \$2,000,000 since 1882; but over against these facts they call to mind the continued depression of all valuations in their midst, the long prostration of business, their want of school accommodations and of trained teachers, and, above all, the burden of illiteracy which rests upon them, and they declare that this illiteracy cannot be overcome by means of the State and local funds as rapidly as the interests of the particular States involved and of the entire nation demand.

THE BILL BEFORE CONGRESS for the establishment of Postal Savings Banks has humanity, common sense and practical experience strongly in its favor. If it fails now it should be brought up again and again till it is passed. The arguments against it are of minor importance. Nothing that encourages the general habit of saving can hurt savings banks. The interest on Gov-

ernment investments is too low to compete with any other, except on the ground of security. This is little more than the traditional stocking—only a stocking without a hole in the toe, and with the cheering advantage of turning in. The masses of the poor ought to have a safe and convenient place of investment for their hard-earned pennies. While the Postal Savings Bank would give this to the whole country, it would be of special benefit to the colored people of the South. Savings Banks do not spring up there on every cross road, as thick as in New England villages. Instead of that is the grog shop, and every temptation to squander their coppers as fast as they earn them. That they can and will save when they are encouraged to was amply proved by their patronage of the Freedman's Savings Bank. Their bitter experience in the collapse of that effort is not yet forgotten, and would make them shy of the name of savings bank, but one backed by the strength of the Government would be eagerly availed of. When the limit of the five hundred dollar deposit allowed by the bill should be reached, the depositor would look cautiously about for a safe investment—most likely put it into land and a home. Meanwhile he would have been growing in intelligence and thrift, acquiring an interest in social order, and loyalty to his country. True, there are not millions in the project to private speculators; it does not seem to be a way of making money out of the people, and there is an apparent call for expenditure and increase of the revenue, but this is small and temporary; to increase thrift and the habit of saving must increase the wealth of the nation, to give the masses of the poor a direct interest in government securities must increase the safety of the country, turning its dangerous classes into order-loving citizens.

The experiment has already been tried with signal success by England at home and in all her principal colonies, and by France, Holland, Belgium, Italy and Japan. It must commend itself to all interested in the safety and progress of our nation.

A COLORED COLONY of miners in Muchakinock, Iowa, seems to have settled the "labor vs. capital" question very comfortably. From an ex-student of Hampton, who is a miner, we have received a copy of the constitution and by-laws of the colony. A few years ago, some three hundred and fifty colored men with their families were brought from Virginia to take the place of the miners in the large coal mines of Mahaska County who had started a strike. The inducements held out to the colored men by the coal companies and truck-store companies who combined for the purpose, were an advance of money to pay their fares, and put each family into a home of its own, ample time to refund the money, and good wages.

These generous terms and the expectations on which they were based have been filled to the letter. Naturally the colored laborers met with all sorts of opposition from the strikers and other interested or prejudiced people. For mutual protection and to disprove the prophecies that they would be a set of paupers on the county, they organized themselves into a colony with laws and officers and provisions for maintaining law and order, taking care of their own sick and disabled, and burying their dead. The coal and truck companies

aided their plans. The result has been that the Colony has more than doubled,—increasing to 750 miners, and not one of them has cost the county a cent as a pauper or criminal. According to their constitution, "all persons of color brought from Virginia on company transportation shall be admitted as members free of charge, all others shall pay one dollar initiation fee." Besides the colored men, a number of industrious Swedish and Welsh laborers have joined the colony.

Many of the miners are laying up fifty dollars a month. Their employers encourage them to invest their savings in land. A number own a thousand dollars worth in the vicinity. Twenty have gone to Nebraska and bought farms of from 160 to 320 acres each. Some have come back to Virginia and bought farms here. Their improvement has been proportionate in other ways. They have formed school districts, built school houses, and secured good teachers. All their children are in school. They have built churches—the Swedes and Welsh combining, and the colored people building according to their preferences.

Mutual trust and kindness on the part of employers, traders and laborers—the principles of the Golden Rule of Christ—this is all the secret. It is Christian co-operation against oppression on the one hand and communism on the other. It has been an open secret in the world for eighteen centuries.

IN DEALING with races that are behind us in the march of civilization, there are experiences now and then which make one suspect that there may be some Phariseism in our proud boast of universal white superiority. It has been with us the survival of the fittest according to the conditions of the rough and tumble race for life—though the Mongolian may want to dispute that fact with us some time—and we naturally look down upon those who are lacking in the special adaptations which we glory in. On the other hand there is not one of the despised races which does not surprise us now and then by easy manifestations of certain qualities which we are accustomed to call heroic. Are not patient endurance and unhesitating risk and sacrifice of life for others among our rarer virtues? But Miss Collins's picture of the Dakota youth standing night and day on the butte, his body bared to the cold winds, his motionless arms extended to the heavens to bring their mysterious healing down for his dying mother, thrilled, her white hearers most. The "savages" seemed to take it as a matter of course. A small Indian child at Hampton, remonstrated with for some carelessness that might prove fatal, calmly replied "White people afraid to die, Indian not afraid." There is some truth in it. There may be considerable to be said in favor of the higher valuation of life, but there is something to admire too at times in the cool indifference to it.

When Academic Hall was in flames, there was much real courage shown, by both colored and Indian boys, and no lack of brave fellows to rush in after their leader, coolly obey his orders and help in the saving of property. On a windy day of last winter, when a Hampton colored student was drifting out into the stormy Roads in an open boat without oars, his comrades were among the most prompt and gallant to go to his rescue at serious peril to their

own lives. Some years ago, another of our young men working for his schooling at a summer hotel on the Atlantic coast, being seized with a cramp as he was swimming and seeing that the two white young men with him were getting exhausted in their efforts to help him, said "Save yourselves," let go his hold and sank. It is often said here by one who has had long experience with them: "In any sudden emergency, and with risk of lives, I would not want better helpers for courage and presence of mind, than colored men."

Are not chivalrous courtesy and grateful appreciation of kindness, ranked high among our gentler virtues? But Sir Walter found his match in the old Indian chief who seeing Miss Collier perhaps than London streets in the time of Queen Elizabeth, took his embroidered blanket from his shoulders and spread it before the dainty white lady's feet. Both she and Miss Fletcher testify to the gentlemanliness of the Indian guides on whose protection their missionary labors sometimes threw them and the delicate appreciation of their efforts.

We think of gratitude as an acquired virtue. Some one has called it the test of refinement. We hardly look for it in working for our ignorant classes. One of the regulation questions put by visitors at Hampton is, "Do they ever seem grateful for what is done for them?" To be grateful there must of course be some comprehension of the value and cost, and spirit of benefits bestowed. Was such gratitude ever more amply and heartily manifested than by the Chinese servant whose story is told by our correspondent, below.

Hath the white man no advantage then over his brothers in black and red and yellow? As St. Paul says, "Much every way—and first of all because that unto them have been committed the oracles of God," the Christianity which proclaims the fatherhood of God and the brotherhood of man, and sees men's wants only to help them.

But here is the story of the Chinaman.

#### New Years in China Town, CHINESE GRATITUDE—WHICH WAS THE HEATHEN.

San Francisco, Feb. 5, '86. "Yesterday we went, quite a party of us, to Chinatown to see their New Years celebration—very interesting and novel. Gay lanterns hanging from windows and balconies, cleanly dressed, smoothly shaven Celestials; flowers, natural and artificial, especially the fragrant Narcissus which is always a symbol of the day, in profusion. The children were best of all—bits of Orientalism on these sand hills. Such brilliant colors made up their costumes—sometimes red sleeves to a green *pyjama* with a rilliant yellow and purple blue combined. The little girls wore masses of artificial flowers with gilt paper on their heads, and floating ribbons, while their cheeks were painted pink, bringing out the twinkling brightness of their long eyes.

"E's cook, Wong Yew, had invited us to their Congregational rooms, and there we sat and listened to Moody & Sankey songs sung by intelligent Chinese, in both English and Chinese. While the music went on, one piece after another (you should have heard them sing "Pull for the Shore"), refreshments were passed consisting of candied coconut, mink rind, dates, melon seeds, etc.

From there, Wong Yew conducted us about, visiting a woman with small feet, who was richly dressed in silk and jewelry. By request, he led us into a joss house, where under carved wood with banners around and a table before him upon which were fruits and various things, sat Joss himself. The idol represented a stout Chinaman sitting in a chair with hands on his knees, rich garments, a high gilt crown, and long black beard.

"We next visited the girls school, and heard sweet singing, especially from one little girl who sang alone, "I think when I read that sweet story of old." She looked so quaint with her peculiar braids and national costume, but so sweet and touching, as she knelt, folded her little hands and sang the last verse.

"But still to His footstool in prayer I can go."

And now of Wong Yew. The family equi-

lithium has been entirely upset by his magnificent gift to M. of a gold watch—a handsome chased Elgin watch! You know she has taught him music as well as English composition, for about four years, for which he has shown gratitude by various gifts to her and the rest of the family. But his gratitude has grown with the months, and this time he has outdone himself entirely. Just think of it! A Chinaman presenting an American lady with a watch. Even within only a few weeks here, he gave a lovely embroidered bag.

To return to the watch. Wong sent beforehand, a gilt-edged card to announce his coming. After his arrival, he presented mother some beautiful porcelain plates and then turned to M. They say they were overwhelmed, and M. told him she could not take so much, but they saw he would teach him all his life for it. Wong has some connection with a little store, and of course must have more money than he gets simply by cooking. You know he has run E's kitchen for five years or more.

It is strange how strong the gratitude of a Chinaman is, and when they are good servants they are excellent.

But here let me give a contrast. The same evening coming in on the horse cars to bring a present to another member of the family, the car was crowded and Wong Yew stood on the platform which was also crowded. He told me that he was an Irishman, told him to get off the car or he would kick him off!

Which was the heathen? However a gentleman remonstrated and all ended well.

THE BULLETINS published by the Virginia Department of Agriculture, ought to be in the hands of every farmer in the State. In the issue for March Mr. Harrison says:

North Carolina is the most progressive and prosperous State in the South, and her Agricultural Department is credited with being a principal factor in that prosperity. It has, besides the work done in the State, advertised its resources and brought immigration and much capital. I believe the same could be done in Virginia.

Against this he sets the fact that in Virginia, the recent application for the increased appropriation from the Treasury was defeated, as was also the bill asking for a privilege tare of twenty cents per ton on fertilizers. He draws attention too, to the backwardness of the people of this State in offering inducements to emigrants with capital, which he considers is seriously affecting the general development, both agricultural and industrial. He says:

For some months past, and now, there is manifested in the Northern and Northwestern States of the Union a great interest in Virginia as an inviting field for immigrants. More letters are coming than ever before from those States, and from Canada, as well as from Scotland and Ireland, asking for information concerning Virginia. If this could be worked up—if we would advertise extensively and circulate documents—we would probably get a large influx of industrious settlers bringing with them much capital. The refusal to make an appropriation to encourage the influx of whites was a grave mistake. The natural increase of the black race in Virginia is very much greater than that of the whites; there is no doubt of this, even after ample allowance has been made for grave errors in the last census and that of 1870. Unless we have a large accession of whites from outside the State, the blacks will outnumber the whites in a few years—probably within two or three decades.

Almost every other State is working to foster immigration and settle her lands. Virginia stands aloof, saying in effect that she is content as she is; that settlers may stay where they are, or go to other States.

The subjects specially noticed in this number are:

The increased production of tobacco and its probable effect.

The tendency to overcrop.

Dairy Farming.

The various frauds practiced upon farmers by the dealers in seeds and in patent rights for making cyposts.

The possibility of cultivating sumac profitably.

The Cross of the Order of Leopold has been conferred by the King of Belgium upon Hon. Geo. H. Corliss, in recognition of the impulse given to steam engineering and manufactures

by his great inventions. Our distinguished countryman is another instance of the men who achieve greatness not only by genius but by character, to whom outward honors come not as conferring nobility but recognizing it.

#### The End, Peace.

One after another are fast passing away from earth, those brave men of the last generation who upheld the cause of the slave when "Abolitionist" was a term of reproach, and to proclaim the fatherhood of God and the brotherhood of man, and mean it more than half, brought often the severing of church and social ties. One of these just gone to his reward, was Mr. M. N. Waldron, father of Dr. Martha M. Waldron, resident physician at Hampton Institute. The friends who remember his visit to Hampton three years ago, will recall the keen interest and delight with which he looked on all these results of the long struggle for freedom—how the tall form straightened up, and his eyes kindled with the enthusiasms of Commencement Day—enjoying, as few besides the "old Abolitionists" have ever lived to enjoy the full triumph of ideas to which he had given his life, and the friendly reuniting of sundered brethren on the platform of good will and help to the long oppressed.

Mr. Waldron was the son of Judge Waldron, who moved from New England to Central New York, when Central New York was "out West," and the country around Binghamton a forest. The pioneer settler with eleven others built a church in the wilderness, and his son, becoming a member of it at eighteen years of age, was all his life one of its chief supporters, except for a number of years during the excitement of the anti-slavery agitation, when he withdrew from it in protest against its lukewarmness on the great question of the day. All those years he was a priest in his own household, having given up his outward church relations not from weakness but from steadfastness of faith. When the progress of events and ideas brought the church up to his standard, he quietly took his place in it again and his full share of its burdens. He was from early manhood, like his father before him, a prominent and leading citizen in his county, consulted, leaned upon, and looked up to with universal respect, not only for the outward success of his life, but for the mental ability, the integrity, and nobility of character, that led to these. How far were they not contributed to also by the "honorable women" that blessed the old home of his childhood and manhood; the venerable mother who had made the wilderness blossom with home charities, and lived far beyond the age of ninety in vigorous possession of her powers and her cheerful faith, the rare and gentle spirit who as wife of his youth and mother of his children, filled his home with beauty, till two years ago she went before him to the home above. After her death, which broke up the plans for a beautiful new home near a married daughter's at Oxford, Mr. Waldron resided with that daughter till, on the 10th of last month, he peacefully "fell asleep." The lesson of such lives is worth studying; it was written long ago by an inspired pen: "Mark the perfect man and behold the upright, for the end of that man is peace." The end of earth, the beginning of heaven; the passing out, not "into the eternal silence," but into the everlasting song.

#### John Welsh.

Christ's Sermon on the Mount is commonly thought to present an impracticable scheme of living, beautiful as an ideal, possible in heaven or perhaps in the millennium, but out of the question for this working day world, at least with anything like success in

life. What—manly and yet meek, rich yet hungry and thirst after righteousness, attain honors yet be poor in spirit, successful in business yet pure in heart and hands?

The death of Hon. John Welsh, LL.D., our former United States Minister to England, brings before the people the shining record of a life that answers all these questions with an emphatic yes; a life that was of heaven while on earth, whose influence will live on earth though its course has passed into heaven; a life that proves that even this world does homage to purity, honesty and unselfishness. Mr. Welsh was a rich man, but it is not his wealth that is talked of in his praise; it is the fact that for over half a century, the name of the firm of the three brothers, Samuel, William and John Welsh, commission merchants, stood like their father's before them, for the highest ideal of mercantile honor, public spirit and benevolence, as well as business sagacity.

He filled many important public offices, but as has been happily said, "no office that he took elevated him, he conferred honor upon it by taking it." None of them was a sinecure, but every one of them an office of public trust, to which he gave the hardest conscientious work. He was Chairman of the Executive Committee of the great Sanitary Fair at Philadelphia which raised over a million of dollars for the relief of the sick and wounded soldiers of the Union army. He was President of the Centennial Board of Finance, giving his time and influence, money and personal credit, to raise the funds for the great International Exhibition, and doing more than any other individual to ensure its success, then devoting the testimonial presented to him by the gratified citizens to endow a professorship in the University of Pennsylvania. Appointed by President Hayes United States Minister to England in 1877, he filled that high office like all the rest, so as to dignify it in the eyes of the world. His public acts brought him complimentary honors and titles from many foreign countries also, but his fellow-citizens delight to recount as his chief praise, the many services he rendered to his own city of Philadelphia. He was one of the founders, trustees and chief supporters of the University, founded the Episcopal Hospital and contributed \$40,000 to its support, as well as largely to the church of which he was a member. He was President of the Board of Trade for twenty years, Commissioner of Fairmount Park, President and one of the founders of the Mercantile Bank of India, to give needed aid to business men in financial reverses, age or sickness.

While these samples do not exhaust the list of his public services, it would be impossible for any one to enumerate his quiet deeds of private benevolence. No great or small call of human need found his ear deaf or his hand closed. With his brother, Mr. Wm. Welsh, he was warmly interested in the Indian, giving their time and money, and great personal influence to the cause to which his son, Mr. Herbert Welsh, Secretary of the Indian Rights Association, has devoted himself with inherited zeal and self-sacrifice.

He attained great length of days, but their record is not like those antediluvian biographies told in one verse, "and Methuselah lived nine hundred and sixty-nine years and he died." His eighty years were crowded with deeds, not merely with figures on a dial. It was a life of unceasing work and thought for others. Here was the great secret of its success, of a real success in life: the Bible paradox is a living truth—"He that loseth his life for my sake shall find it unto life eternal." For even earthly immortality, one must seek something besides great things for himself. If he would not be forgotten, he must forget himself, and do God's work in the world. The onward accidents of life may vary—they are not what is truly honored, but the man himself.

tional legislators whose positions before the country would lead us to look upon them as ahead of at least a great deal of popular sentiment, instead of behind it and against it, on the great questions of popular education.

In a great free country like this, growing, leaping, bounding, every day and every hour, under the impulses of an ambition and an enterprise exclusively American, and impatient of all obstruction, it is the weakest of wisdom for men playing the role of statesmen to hesitate in so shaping the policy of the Government as to enable the intelligence of the people to keep pace with their responsibilities as the rulers of themselves. In the Southern States of this Union especially, there is a necessity, a demand, an outcry of reason and discretion, for an increase of educational advantages, which shows that in the minds of reflecting men there is serious apprehension lest the lights for our guidance may prove inadequate to the works and the walks before us. There is an alarming degree of illiteracy in the South. The newly-enfranchised race which constitutes so large a proportion of the population in these Southern States may not only mar its own opportunities, disappoint its own expectations, and blight its own hopes, but at the same time it may so weigh down the body politic with its ignorance as to cause the whole country to come to a practical recognition of the fact that the tree of liberty, like all other vegetation, can flourish only in the light, and that darkness, sooner or later, must inevitably destroy it.

The South is doing her best in the direction of education, but she is too poor to do that which needs to be done; and, in the name of freedom and for the sake of her property in the name of humanity and for the sake of the country, in the name of civilization and for the sake of Christianity, she is anxious, she is eager to receive for her educational fund the millions held up to her hopes in the appropriations promised by the Blair Bill.

It is all barbaic nonsense and narrow-minded tyranny to talk about unfitting men for manual labor by bestowing upon them the advantages of education. Such a philosophy as that belongs to the times of the barons and the Bourbons. This country has no soil suited to the germination of the seeds of such weeds. The American people are a free people and a working people, and if they are true to themselves, they will continue forever to be a free people because they are working people. The cultivated head makes the hand more deft. The intelligent mind sees the importance, the worth, the dignity of manual labor.

Let us have the Blair Bill enacted into a law. Mr. R. R. Farr, Superintendent Public Instruction for State of Virginia, prints the Bill entire in the *Educational Journal*, and says, "we regard sections VIII and XVII as of most importance to the educational work of our State. The bill is now before the House of Representatives and it should be at once considered and passed."

Section VIII refers to the establishment of normal and training schools. Section XVII to the appropriation for building school-houses.

The *Norfolk Landmark* takes the sectional view of it, which is always to be regretted and in this connection especially so.

We have pointed out on more than one occasion that the South can get unlimited advice from the North, but that when it comes to voting money it is a very different thing, and we have a confirmation of this in the Blair Bill which illustrates fully the truth of our remark.

Speaking of the outlook for this measure in the House, the *Washington correspondent* of the *N. Y. Evening Post* holds the following language: "The friends of the measure are looking for some strong man in New England to assist in taking charge of it, but have not yet found any one who is sufficiently enthusiastic to please them. Some of the Massachusetts Congressmen who have been disposed to support the bill have grown lukewarm. One who even had a speech prepared in favor of it doubts the wisdom of delivering it. One of the ablest Republican lawyers from New England doubts the constitutionality of the bill. Another, who had been relied upon to support the bill, questions whether it would be wise to vote so much money to be expended in the Southern States."

The italics are our own, and the effect of these is like a lime light thrown on a group on the stage. The message of the delay, and of the efforts to smother the bill, is shown as it were, in a flash by the simple mechanical device of italicizing the conclusion of the paragraph just quoted.

That lets the parliamentary cat out of the bag with the most engaging simplicity, and we feel obliged to the gentleman for his candor. The South is in the Union for purposes of taxation; but when money is to be spent then it becomes a matter of practical exclusion, and to realize this will go far to correct the evil of which we complain.

The *Richmond Whig* believes the bill is to fall a victim to political trickery. The action of the House Committee on Education yesterday, in refusing to take up the Blair bill and postponing further consideration of the measure until the third Friday in April, confirms what was predicted in the *Whig* some weeks ago, that its enemies would endeavor to smother it in committee and finally kill it by dilatory tactics. It has been openly charged since the first announcement of the House Committee that the Committee on Education was packed against this measure in the interest of the tariff reformers, who feared that they would not be able to carry through their pet scheme of reducing the revenue if this bill should pass and it looks very much as if there are good grounds for the charge. At all events, there is a majority of the committee opposed to the bill, and it is reasonable to suppose that their views were known before they were appointed.

We wish to say to the little coterie of gentlemen who have undertaken to shape the policy of the Democratic party and thwart the wishes of the people for their own personal ends, that they are monkeying with a very dangerous weapon. They are likely some day to awake to a realization of the fact that they have not only seriously wounded themselves, but have given an alarm fatal stab to the party for whose welfare they profess to be so solicitous. Seeing the danger that is before them, it now behooves the friends of the Blair bill to take effective means to guard against it. Let them go to work in earnest and adopt measures to thwart the schemes and tricks by which it is sought to defeat this measure. Public sentiment is already aroused on the subject, but it is necessary that it should be brought to bear directly and effectively upon those who seem to have forgotten that there is a political heresee.

The *People's Advocate* (colored) demands a fair deal. The Blair Bill is in peril. Its final passage is threatened by the attitude of the Republican members of the Committee on Education and Labor, one Mr. Campbell, of Pennsylvania, who absents himself from the sittings of the Committee, and two others.

Taylor of Ohio, and Strait, of Minnesota, are opposed to the Bill. We can not see how these gentlemen can justify their acts by any such round-about method. Let them, like men, oppose the bill by arguments and votes before the House, and not by smothering it in the committee. The measure has met the approval of the people all over the country to a greater extent than any other matter that has been before Congress for years.

Several Legislatures have endorsed it, and nearly all the educational conventions have approved it. In view of these facts and the popular reasons urged for its passage, no Congressman, especially no Republican, can oppose it except on grounds which he should not hesitate to publicly give.

Every one is aware of the illiteracy of the country, where it preponderates and of its dangers. It is also true that the states, formerly in rebellion, are not able at the average rate of taxation to properly educate their youth.

The added value to the taxable values of these states in the eight years of the judicial aid tendered by this bill, will enable them to continue the work unaided and to redeem themselves and the country from the reproach and dangers of a mass of illiterate voters.

Will Republican Congressmen who are to get their constituents next fall, stand in the way of such benefits and not expect censure given in reduced majorities, if not by defeat?

Forewarned, forearmed!

The *Philadelphia Press* reports that: The colored people of this city are making vigorous efforts to use all their power to secure the passage of the Blair Educational bill. They have held a meeting, at which strong resolutions favoring the measure were adopted, and a petition containing thousands of signatures of the colored prominent colored people in the city. Copies of the resolutions were also sent to each Pennsylvania representative in the House.

There has been much gratification expressed among the colored people," said Dr. Mossell yesterday, "at the unparliamentary support this measure has met with in the Senate, and the hope is entertained that it may meet with similar success in the House. It is endorsed by the colored press of the country without exception."

We give Frederick Douglass's letter to the *National Republican* entire, for its moderation and good sense make it worthy of careful reading.

Editor *National Republican*: Please allow me a word to your columns in favor of the passage of the Blair educational bill, which has twice passed through the United States Senate, and is now pending in the United States House of Representatives.

Considering the growth of public opinion, the generous expression of men of both parties, I had hoped until a few days ago, that this beneficent and much needed measure would meet with no material resistance in its passage through the House, especially as it met with so little on its final passage through the Senate. But from rumors, too well founded, I am now led to fear that my hopes have been altogether too sanguine. Standing, as I have always stood, and always expect to stand, the friend of every public measure in any way calculated to advance the interests and improve the condition of the long enslaved people of the South, I am warmly in favor of the speedy passage of the Blair Educational Bill, not because it will do all that should be done for the illiterate white and colored classes of the South, or all it promises to do, but as a step in the right direction. In my humble judgment a great mistake will be made, a great wrong will be done, and a great opportunity postponed, if not entirely lost, if this bill does not pass the House. To me it is a bill in the interest of both races, and is a tendency to do away with the spirit of caste and of sectionalism, and to promote the general welfare by diffusing knowledge and enlightenment in the darkest corners of the republic, where it is more needed, and where the people are the least able to secure such knowledge for themselves.

In advocating the passage of this bill I do not overlook the fact that, admirable as it is in its object and carefully as it is framed, it may fail of its object so far as the colored people of the South are concerned. No colored hand will probably have anything to do with the disbursement of the millions given by the government in this bill, mainly in the form of aid for the benefit of colored people. Like the Peabody fund, the Slater fund, the Freedman's Bank, and many other institutions nominally established for the benefit of these people the hands are white that handle the money.

The Germans have a proverb that "They who have a cross will bless themselves," and there is nothing in the history of the institution named or in the history of others that might be named, to contradict this proverb.

But, while I commend the keen vigilance and scrupulous fidelity of Senators Allison, Logan and Edmunds in taking care that the people in whose interest this measure is mainly asked, and freely granted by the United States Senate, shall have a fair share of its benefits, and while, from past experience I cannot hope that, if this bill shall become a law, it will in every instance be fairly and honestly administered, still even if only tolerably administered, it cannot fail to be a blessing to the colored people as a whole.

Something must be trusted to the spirit of justice, honor, and fairness of the Southern people. They will ultimately see that it is good to be honest and true, even to those they have formerly enslaved and plundered, and whom they still defraud of their political rights.

But aside from probabilities as to the administration of this bill, should it become a law, it will of itself have an educational influence, and turn the mind and heart of the nation in the right direction.

It will be, at least, a recognition of a great national duty toward a people to whom an unmeasurable debt is due. It will tell that people, and all others, that the nation has the disposition, if not entire ability, to do the Negro right and justice. It will be in the line of peaceful and inoffensive reconstruction, and will help to heal the wound left by the war, by holding out a helpful hand to the poor of the late confederate states. To the celebrated saying of General Grant, "Let us have peace!" we must add, "Let us have education!" The Negro needs it, the illiterate white needs it, the nation needs it. If the national government had the power to put down slave insurrections, hunt fugitive slaves over state lines, protect slavery in the States while slavery existed, it has the power and the right to assist in the education and improvement of the newly emancipated and enfranchised citizens, now that liberty has become the base line of the republic and the fundamental law of the land.

Neither of the great political parties can afford to let this educational bill fail, and, least of all, can the great Republican party of justice, liberty, and civilization, afford to let it perish or be postponed to a more convenient season.

FREDERICK DOUGLASS.

## SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

## A Member of the Old Aristocracy.

Aunt Letitia Washington had been the faithful servant of one of Virginia's aristocratic families. She had attended the bride and shrouded the dead, had welcomed the newborn babes and soothed the sick and dying, for three generations.

Seated in a quiet arm chair by my fire, she made a picture to remember—erect and dignified, with hands crossed in her lap, talking with tender interest of her "old masters' family, the children and grand-children she had known and loved. Her clean calico gown was stiff as starch cloth and made it; her cloth sack and little fur cape were buttoned close to the throat, and the prim little quilted hood almost concealing the white locks, seemed exactly to suit her manners, a combination of dignified respect and consideration for others. The Waller family, among whom her life had been chiefly spent, all have a great deal of manner, which Aunt Letitia has so completely caught, that it is at times quite laughable. One of these ladies, a person of admirable character, notwithstanding her extreme pride, has a way of clasping her hands, tossing her head, curling her delicate nostril, and casting up her expressive eyes as she inquires in a voice of grand scorn, "And who—are—the—Jenkinson's?" which Aunt Letitia so exactly reproduced as she spoke of the sundry magnates of to-day that I was almost overcome with amusement.

Aunt Letitia, like most of the old slaves, knows nothing of books. It was really remarkable to hear her refined and intelligent conversation, and realize that she did not even know the alphabet. She uses excellent language, a little precise at times, like that of the old Southern people, who held closely to the English of their ancestors.

She does not know her exact age, but counts time by the important events that have come within her observation.

Aunt Letitia's earliest recollections go back to the war of 1812. She was then with other members of her family the property of Judge Bronson, near Williamsburg.

The first scene in her memory was of great commotion about soldiers coming and going. She and other little colored children were permitted to go to the "quarter" to the great house to see their master set off to the wars. The ladies of the family were weeping, servants were putting coffee and salt into little bags, packing knapsacks, etc. There was so much talk of "Red-coats" and the fearful ravages they were making that the children, entirely ignorant of the meaning of all this excitement, were in mortal terror of the land and might come any night and carry them bodily away.

The next impressive event, an occasion to which Aunt Letitia refers with pride, having personally assisted, was the visit of General Lafayette to America in 1824. At this time she had grown to be a "good sized girl," and was employed in her mistress's nursery, taking care of the children under the supervision of an older servant. She gives a graphic description of the reception of the gallant old Frenchman at Yorktown, and the grand pageant she witnessed, holding a white child in her arms, and standing beside her mistress on the platform erected for the spectators. Aunt Letitia declares that she distinctly remembers Gen. Lafayette's appearance; says he looked old and worn, but smiled, bowed, and spoke cheerfully in response to the enthusiastic greeting of the crowd, calling the American people his "children," and telling of the pleasure it gave him to see them in peace and prosperity.

Aunt Letitia says Peter Francisco accompanied Lafayette, and the French general referred cordially to his old "comrade-in-arms."

Francisco made much less impression on Aunt Letitia than his distinguished companion, but he is no less striking in his way as one of the revolutionary heroes than the noble gentleman who had enjoyed all the advantages of birth and fortune in the gay society of France. The Hampton students are doubtless familiar with the story of the adventurous Portuguese, who was sold as a slave in Virginia, and left his master to enter the army, in which he was a famous character. His descendants are among the honorable and prosperous people of the State. Many stories are told of his wonderful strength and courage. Tradition tells that he could dance with his wife, who was very small, sitting on the palm of his hand, and could knock down an able-bodied man with a "silly" on the forehead.

Among the prominent people on York river, from the earliest settlement of the colony, was the Waller family, descendants of Sir John Page.

At the time of Lafayette's visit, Dr. Robert Waller and his brother William were handsome and wealthy young men, notice-

able in the society of that region, which comforts itself for every other deficiency by the quality and abundance of its "blue blood."

Among the ladies conspicuous for beauty and grace on this gala-day, was Miss Julia Mercer of Fredericksburg, granddaughter of General Mercer of the revolution, who was Dr. Waller's companion in the struggles for liberty. Aunt Letitia says all eyes were fascinated with Miss Mercer's charms. She pictured a tall, elegant, refined-looking girl dressed in white muslin, with a blue silk bodice, wearing a white hat, with a long plume tipped with blue. Dr. Waller was captivated with the young beauty, and the attraction being mutual they were soon after married.

I had known Mrs. Waller in her old age and at her death, which occurred recently in her eightieth year, there were many traces of the great beauty which had made her the admiration of all eyes in the multitudes assembled to greet Lafayette.

When Aunt Letitia was very young, she thinks about sixteen, she was married to Mr. William Waller's man, George Washington. George was amiable, intelligent, had a kind, indulgent master, and the marriage promised to be a happy one. The young man had been taught book and shoemaking, which was thought very good fortune for a slave, as an industrious mechanic was enabled to make money on his own account, and was allowed many privileges denied to the ordinary plantation hands.

A short time after the marriage a cloud arose on their horizon, which threatened to blight the happiness of the young couple. They were devotedly attached to each other. George Bronson, the wife's owner, became much "involved," as Aunt Letitia expressed it, and being forced to sell most of his property determined to move West.

He selected such of his slaves as he wished to take with him, and gave up the rest to be sold for his debts. Among those who were to be moved from Virginia were Aunt Letitia's mother with her other child, and among those to be put on the block and sold to the highest bidder, was Letitia, the newly-married wife of Mr. Waller's man George Washington. Sixty years later, when she was asked to recall the emotion with which the bond woman recalled the anguish of that hour. When she was put upon the block, and the coarse auctioneer cried out the merits of the helpless young creature, there were loud murmurs among the crowd, who, though all slaveholders, were not all destitute of human feeling. It was well known that the girl should not only sell his own flesh and blood, but should thus ruthlessly separate those "whom God had joined."

It was well known that the girl should not only sell his own flesh and blood, but should thus ruthlessly separate those "whom God had joined." For a little while the husband and wife endured all the agonies of the parting that might be in store for them, but it was soon happily ended by George's wealthy master becoming the purchaser of his wife. Aunt Letitia says she has long suspected that her being thus publicly sold was merely a trick to extort money from Mr. Waller, whose kindness of heart was well known. Judge Bronson, with his household, moved to St. Louis, where they became prosperous. A year or two later, the Judge wrote to Mr. Waller, proposing to re-purchase his former slave Letitia. Aunt Letitia thinks this must have been done to gratify her mother. Naturally enough she freoded being placed again in the power of the man who had once parted her from all she loved, and as she was devoted to her husband, and very happy in her new home, she entreated Mr. Waller not to listen to Judge Bronson's proposal. Her new owner being as much pleased with his chattel as she was with her situation, the request was readily granted. Aunt Letitia says she soon lost sight entirely of her own relations, and as she never had any children, and her husband is dead, she is now in her old age entirely alone, and does not know that she has any kindred on the earth.

Mr. Waller was very rich, and had but two children, a son and daughter. The son, Mr. Waller, the care of his two children and their fine estate, and the young people became members of their uncle's family, Miss Waller, of course, taking her maid with her. In a few years the attractive heiress was married to Mr. John Speed, a talented and promising lawyer of Lynchburg, where the young couple, to whom fortune had been so kind, began housekeeping.

Mr. Speed could not think of being separated from her maid Letitia, and Letitia could not be happy without her husband, so George Washington was allowed by his indulgent master, Mrs. Speed's mother, to open a boot and shoe shop in Lynchburg, and was soon doing a thriving business. And Aunt Letitia seems to think her life, from the time she entered the Waller family until the close of the war, was

as happy as often falls to the lot of mortals. Among the intimate friends of the Waller's was the Tyler family, and the affectionate relations long existing were cemented during Mr. Tyler's term as President by the marriage of the handsome, wealthy, young William Tyler to the President's daughter. Strange to say this is the only marriage that has ever taken place in the White House.

Aunt Letitia seemed to think it a very natural thing for her young master to marry the President's daughter, and that the honor was rather conferred upon the Tylers in the alliance.

When the war began a great change came over the easy, pleasant life Aunt Letitia's wealthy owners had so long led, and at its close, the luxurious family, who had always lived extravagantly, found themselves reduced to poverty. Their slaves were free, and the large landed estate on York river, chiefly valuable for its fine timber, had been rendered almost worthless by the occupation of the Federal army and the destruction of its fine forests.

Mrs. Speed's husband died soon after the war, his estate was found to be insolvent, and the gentle, refined lady, who had inherited wealth, and never dreamed of the possibility of want, was left almost penniless.

The brother, Mr. Waller, also died after a few years of poverty and care. I had heard much from members of the White family of their own, and Uncle George re-opened his shop. Aunt Letitia was always in great demand with the gentry of the town, where many relatives of her old master still live, as cake baker on festive occasions, lace worker, water, sick nurse, etc., and if Uncle George had kept his health they might have lived comfortably. The old man, however, never recovered from the malaria contracted in the low country. Not long after his return to the hills, he was paralyzed, and lingered for years a heavy tax on his devoted and energetic wife. At his death she was left very poor and much enfeebled by hard work and constant nursing. The poor old lady seems very disconsolate in her last years, and it is melancholy to hear her talk of her own troubles and those of the once prosperous family with whom her lot was cast in other times. She had lived with those who "wore the purple," and are now clad in sackcloth and ashes, and the faithful soul shares their sorrows as she shared their joys in happier days. She wiped the tears from her wrinkled face as she spoke of the reverses of her master's family, and thinking to gratify her, and perhaps to divert her from such sad thoughts, I remarked, "You certainly had nice, refined ladies and gentlemen among your white people, Aunt Letitia." "I had, indeed," she said with a faint approving smile; then, as if to correct my speaking in the past tense, she added impressively, "They was nice and refined, and they keeps it up!"

His sister Ellen and her children moved with them to Williamsburg, and while there an incident occurred, which might have had an important bearing upon all their lives. One day, while at work in his shop, a strange gentleman, really seen to be one of the numerous "Yankee" officers then filling the country, came to the door and asked if "George Washington lived there." Uncle George answered that that was his name, and the stranger, who proved to be Gen. Armstrong, then told him that he was in charge of a school for colored pupils at Hampton, and had been told that the said George Washington had in his family some remarkably interesting children. He asked if he could see them, and when they were brought to him, expressed much pleasure at their intelligent appearance and pretty manners. He then explained that some rich friends of his in the North desired to give a complete education to some particularly promising colored children, looking with interest to the result, as evidence of what the Negro could do under favorable circumstances.

The visitor said these children had been mentioned to him, as just the kind his friend desired to experiment upon, and since he had seen them he was convinced of it. He was a man of good and expressive face, and if educated as a teacher, he predicted a career of usefulness for her. He offered to take all three of the children at once to Hampton, educate them carefully and fit them for usefulness, promising that their families need have no expense connected with them in future. There was much to be considered before taking such an important step. Uncle George and his sister politely but positively refused to part with the children until they could consult Miss Catherine, one of the members of their old master's family. They promised to write at once on the subject and let Gen. Armstrong hear from them as soon as possible.

Uncle George, his wife and sister, had always lived on terms of affection and intimacy, more like friends and companions than mere servants with their owners, and although fully appreciating the blessing of freedom for their race, they were by no means satisfied with the turn affairs had taken. Aunt Letitia evidently thinks to this day that the Government has blundered egregiously somewhere, and that the slave ought to have been freed without reducing

the "quality white folks" to utter poverty and ruin. The whole family were still much under the influence of their former owners. When, therefore, a prompt answer to the letter speaking of Gen. Armstrong's liberal offer and asking advice in regard to it was received, telling them not to think of parting with the children, and asserting that "the Yankee" must have been actuated by some evil motive, Uncle George did not hesitate to accept the decision as final. Gen. Armstrong was at once notified to that effect. It seems dreadful to think that prejudice should have been permitted to decide a question of such importance to the welfare of three promising children. So entirely has public opinion changed in this respect that this affair now excites indignant comment and sincere regret in all Southern people here who hear of it. Aunt Letitia seemed sadly to realize how different might have been the fate of the children she dearly loved, from what it has been, if the offer had been accepted; still she had no voice to blame for those whose advice had been so unfortunate in its results.

Williamsburg not agreeing with Uncle George's health, he and Letitia returned to Lynchburg, where they bought a little home of their own, and Uncle George re-opened his shop. Aunt Letitia was always in great demand with the gentry of the town, where many relatives of her old master still live, as cake baker on festive occasions, lace worker, water, sick nurse, etc., and if Uncle George had kept his health they might have lived comfortably. The old man, however, never recovered from the malaria contracted in the low country. Not long after his return to the hills, he was paralyzed, and lingered for years a heavy tax on his devoted and energetic wife. At his death she was left very poor and much enfeebled by hard work and constant nursing. The poor old lady seems very disconsolate in her last years, and it is melancholy to hear her talk of her own troubles and those of the once prosperous family with whom her lot was cast in other times. She had lived with those who "wore the purple," and are now clad in sackcloth and ashes, and the faithful soul shares their sorrows as she shared their joys in happier days. She wiped the tears from her wrinkled face as she spoke of the reverses of her master's family, and thinking to gratify her, and perhaps to divert her from such sad thoughts, I remarked, "You certainly had nice, refined ladies and gentlemen among your white people, Aunt Letitia." "I had, indeed," she said with a faint approving smile; then, as if to correct my speaking in the past tense, she added impressively, "They was nice and refined, and they keeps it up!"

STATUE OF "LIBERTY ILLUMINATING THE WORLD."

## More Money Needed.

The Committee in charge of the construction of the pedestal and the erection of the Statue, in order to raise funds for its completion, have prepared a model furnished by the artist, a perfect fac-simile of the pedestal, which they are delivering to subscribers throughout the United States at the following prices:

- No. 1. Statue, 22 inches in height—the One Dollar each, delivered.
- No. 2. Statue, 12 inches in height—the One Dollar each, delivered.
- No. 3. Statue, 6 inches in height—the One Dollar each, delivered.
- No. 4. Statue, 3 inches in height—the One Dollar each, delivered.
- No. 5. Statue, 1 inch in height—the One Dollar each, delivered.

Liberal subscribers for the miniature Statues will produce the desired amount.

ROBERT BUTLER, Secretary,  
American Committee of the Statue of Liberty,  
33 Mercer Street, New York.

## SILHOUETTES.

BY ALICE M. BACON.  
Another Sunday Walk.

In the first spring weather all life seems to emerge from its shelters and hiding places and push out into the warm sunshine. The tender grass blades that have spent their winter under ground, the feathery buds that have been in woody mail as a protection against frost and snow, the picnicians who have staid in their tiny cabins beside the fire, the students who have crowded into the library and reading room as a warm, cozy place in which to read, the soldiers of the disabled veterans of the soldiers' home and the gloriously appalled city belles who have haunted the glass piazzas at the Hygeia, all feel the influence of the first warm days and come out from their various shelters to enjoy the fresh air and the bright sunshine that glitters so serenely over the rippling waters of the Chesapeake.

On one of these bright Sunday mornings, ruled by the dominant influence of the spring, the desire to get out of doors, we wandered over to the Soldiers' Home to see the regular Sunday morning parade and inspection. Our walk leads us first through the school farm where the ploughed fields send forth their fresh, earthy odor into the air. The great barn with its closed doors and air of Sunday quiet, the pasture in front where two or three horses and colts are quietly grazing, the plough lying in the furrow ready for Monday's use, all remind us of the world of work in which we live, a world which needs its days of rest and its hours of quiet, but still a world that lies always ahead of us to be done. We pass the wall of the great cemetery, and through the barred gates we look in on the long straight rows of marble headstones that mark the graves of thousands who have sacrificed their lives to their country. If we had but time to stop this morning and walk through those green turf paths and study the inscriptions on the stones, we should realize, perhaps, more strongly than we now, what countless young lives were given to their country in our time of peril. Here is an atmosphere of work finished and forever laid aside, a feeling of rest not for one day or for one year, but for all time. The grass grows green, the trees bud and blossom, the breeze rustles sweetly above them, but still they rest nor come forth into the sunshine under the influence of the spring. Their work is finished and nobly done, and they can rest until the last great hush shall wake them to their aid and greater work that needs their aid.

Around the stone wall of the cemetery and across the little creek that separates the School from the Home, we pass on to the well kept and finely shaded grounds of the United States Home for Disabled Veterans. The central building on the grounds, a great five story dormitory, with a dome whose gilded top serves as a landmark to sailors for miles away, was originally built for a young ladies' seminary. Through the war it served as a hospital and was afterward devoted by the government to the use which it now has. From the iron balconies which run along the front of each story, the soldiers look out upon the beautiful, tree-lined waters of Hampton Roads; a fine weeping willow, dressed in the delicate green veil of its first foliage, stands directly in front of the building and waves its trailing branches slowly in the light breeze. About the main building a cluster of later ones has grown up. Dining room, bakery, hospital, theatre, houses for officers, and additional dormitories for the men, have made a great village where formerly the old Chesapeake stood alone. A sea wall with a terrace and an esplanade, runs along the water front. As we come by the engine house, the firemen are standing in front, in full uniform, awaiting the bugle call to fall in. All through the winding paths are old soldiers, worn and haggard, many of them disabled in some way, and all looking their happiest under the combined influences of the summer sunshine and the clean Sunday clothes. They are assembling along the walk that runs by the sea wall, and soon three sides of a square are formed, one side stretching along the front of the large building, its parallel running along the sea wall, and the connecting side passing in front of the theatre. Twelve hundred men stand in the ranks and wait while the Commandant walks along the lines. The band plays lively airs, perhaps not all of them particularly adapted to the Sabbath day, but calculated at any rate to cheer the veterans as they stand waiting. From our position in front of the Commandant's house, the lines of the square seem never ending as we catch glimpses on all sides of the blue uniforms among the fresh green shrubs and trees. At last the inspection is over, the Commandant retires to his house

and stands on the steps while the whole twelve hundred passes in review before him. It is difficult to give to any one who has not felt it, an idea of the impression produced by these broken, worn out men as they pass by with martial step and hearing and salute the Commandant. Old men all of them, with white hair and beard, what do these old faces represent of the souls and lives within? That they have been hard, wearisome lives, the bent forms show; that many of them have been evil and sinful lives, is only too plainly read from the faces; that others have been lived, where in spite of constant and sore temptation the character has remained good and true, we can judge as we see the honest, manly, deeply lined faces of some who march by. But for better or for worse the characters is made and the work in life is done and these old men are just waiting here for the end to come and the judgment to be rendered on their conduct. The varying shades of the thing they think of the future, as with many a jerked and hobbled but still keeping time to the music of the cheerful band, these old soldiers march on. What tales of still life and twisted joints are told by flensed arms and twisted joints as each soldier in turn flings his hand to the future that they must carve out for themselves both for time and for eternity, but these men have no future for the future, but they have plenty of time for moralizing as the pathetic procession marches by. As it ends we come back to the world and to the old men who march along so bravely to the stirring music of the band.

When we leave our seats the men have broken ranks and scattered about the grounds, and the hand on one of the balconies of the main building is giving a concert. Some of the soldiers are going in to the theatre to mass, and here and there along our homeward way we meet an old soldier, some common at the north, so almost never met in this part of the world) and general Sunday get-up seems to indicate that he is going to mass. The chaplain at the Home is a Catholic priest, but in addition to his services, there are also services every Sabbath by some Protestant clergyman. Any kind of the theatre which can hardly be said to be quite suitable for the purpose. It seems as if for these, seventeen hundred men the government might provide a chapel, but so far it has not seen the need of such a luxury.

As we walk homeward, we stop to look at the great bald eagle kept in a wooden cage by the engine house. The eagle is hobbled about the floor of his cage in a most perturbed and undignified manner and flutters his clipped wings like a disturbed barnyard fowl instead of the indomitable bird of freedom that he is. A monkey grins at us from a neighboring tree, secure from the touch of intruding hands, a gray monkey with a chain tied around his artistically with strip of red flannel. In spite of his mirthless grin, he looks like the embodiment of solemnity, with his wizened, wrinkled little face, on which the cares of this world seem to have felt many a seam and scar.

As we come out from the grounds of the Home back to the school farm, we are not sorry to exchange the retrospective atmosphere of the one place for the hopefulness and cheerful looking of the other. Youth is forward even in its ignorance and poverty, old age in ignorance and poverty is too apt to be hopeless.

## Kitchen Gardening.

Every Tuesday and Thursday noon the swarms of visitors who enliven the classrooms of the Normal School, during their spring campaign at the Hygeia, stop on their way back to the hotel to see the kitchen garden. The garden is a good fortune to hear the Normal School at the hotel or at the Normal School their back drivers are pretty sure to inform them that something worth seeing is going on there. One lady called at the industrial room for further information, as her driver informed her that she must be sure to see the kitchen garden at the Butler, and she was puzzled in regard to what sort of entertainment that might be.

Almost all the world now knows the na-

ture of a kitchen garden class, a method of teaching house work, invented some years ago by Miss Huntington, of New York, for the use among the ragged little street waifs of the city. It has been successful there, and this little school from the parent stem transplanted to Hampton, though somewhat modified in its form, has flourished well in the skillful care of the gardener to whom it was entrusted. Ragged picnicians enjoy the pretty toy beds, washubs and dishes as much as street Arabs, and make just as good use of the practical knowledge gained from the class work. Very neat and bright the little class looks as it stands waiting for the lesson to begin. The six and bright red handkerchiefs tied around their heads. The boys wear white aprons, and most of them have rather a shame-faced look, as if they were not quite sure that house work was a manly enough employment for them. This is just at the beginning, but when the lesson is fairly under way, in all the knotty questions propounded by Miss H., in regard to the how and why things should be done.

One day the lesson will be about waiting on the door. Miss H. stands bell in hand, while the children with their eyes all fixed on her face, sit in their little chairs and wait her summons.

The lesson runs somewhat as follows: "Miss H. Now, Willy, you may take the bell and this card and come and call upon me, and you may think us some message to leave for me. Rosa may wait on the door. But I am very busy this afternoon and shall wish to be excused if any one calls."

Willy and Rosa arise beaming. Willy takes the bell and Rosa takes a little tray and goes back to her seat. Tinging-ling goes the little bell, and Willy's face looks shyly in at the door. A moment later, the presence of mind and good sense of Rosa, who has been waiting, does not answer the bell, but presently pulls herself together and rushes to the door, where the following dialogue ensues:

Willy. Is Miss H. in?  
Rosa. Yes, sir, won't you come in?  
Willy. Steps inside of the door, and Rosa runs off to tell Miss H., then suddenly recollecting that she has not, does just the opposite, she pauses, drops her head on right thing she pauses, drops her head on one side, looks at Miss H. out of the corners of her eyes and shows other marks of confusion. She stands irresolute for a moment, then hastens back to her caller. "Miss H. is in, but she told me to tell you she was out. Won't you please give me your name and your message?"  
Willy (serenely unobservant). I am sorry she is out, Miss H. I am sorry she is out because I wanted to take her out riding."

Willy hands over his card, which Rosa brings triumphantly to Miss H. During the business of transportation the card is blown off of the tray two or three times by the breeze from the open windows, but is at last safely delivered up to her caller.

The other members of the class are in the meantime sitting and waiting with calm exterior, but with their fingers twitching with the suppressed desire to criticise and correct.

When Miss H. calls for criticisms, every little brown hand flashes up into the air.

"She didn't say what you told her to."

"She did not ask him to come into the parlor."

"The card blew away."

"He didn't say what he ought to."

"She didn't start quick enough," are some of the criticisms. After the children have finished, Miss H. points out some faults that they could not see, and then Rosa does the thing over, this time with more confidence and fewer mistakes. Other members of the class are called upon, and show that they have learned by Rosa's mistakes, and so by one lesson after another the children are perfected in the art of waiting on the door. This has been so successful this winter that one small boy has been translated to a higher sphere of usefulness, and now waits on the door of a magnificent mansion not far from Philadelphia. His brightness and skill in the kitchen-garden class won the admiration of one of the lady visitors who negotiated with his mother through Miss H. and with her consent has taken him away from his eight brothers to be cared for and trained in her own family.

Another day the lesson is on setting the table, and Miss H. one of the white-aproned little girls, is sent into the room beforehand to arrange the table to the best of her ability. Then the class march in, followed by the visitors. The little table with its red-bordered cloth and its set of pretty Japan-dishes, stands ready, awaiting criticism.

Miss H. casts an observant eye upon the dishes, and then calls upon the boys' hands, and up goes one of the boys' hands,

and a pair of mischievous black eyes sparkle with pleasure.

"Well, Arthur, what is the trouble?" Miss H. asks.

"She forgot the thumb bowls," is the answer, and Arthur looks proudly at the approval at having remembered and named an article of table furniture with which his kitchen-garden training has but just made him acquainted.

When the fact has been made clear to Arthur that the finger bowls do not come on with the soup, the lesson is continued. Searching criticisms are made, by the children in regard to the manner in which the cloth is laid, the slightest unevenness being noticed at once by the quick eyes. Then the style of arrangement of the dishes and implements is taken up and commented on, and Mary is called upon frequently to give her reasons for placing any dish in any position that it may occupy on the table. How to wait on the table is also taken up, the manner of passing dishes, the manner of removing or bringing on courses at dinner.

"When you remove the cover of the soup tureen, how do you set it down?" asks Miss H.

"Ananias looks up, then rises and says, 'You must sit it down with the handle downwards.'"

"Now, Lorena may tell me why you set it down in that way?"

Lorena looks puzzled for a minute over the problem, then her face brightens.

"You put it down that way so that the perspire of the soup won't run onto the tablecloth," she answers triumphantly, and then looks confused at the peal of irresistible laughter from both the visitors and Miss H. herself, which greets this answer. The lesson can proceed no farther until the teacher has regained her composure. The children all laugh, not because they appreciate the joke, but because they like to follow the fashion, and even Lorena, from her confusion sufficiently to thoroughly enjoy the opportunity for a good hearty laugh with the others.

When the laugh has subsided the dinner goes on. The soup is removed and roast beef, mashed potatoes and sweet potatoes are brought on by the demure little waitress, while the class watch eagerly, so that any mistake on the part of the class may be observed and remembered until the time for criticism arrives.

Just at the end, when the last course has been removed and the "thumb bowls" placed carefully at each place, one little girl clasps her hands in a gesture of despair, and exclaims in a solemn voice, "Oh, Miss H., the tablecloth is on wrong side out."

All the children sit shocked and breathless at this terrible announcement, looking alternately at Miss H., at the table, and at poor little Mary, who is responsible for this terrible mistake—a mistake that can never be rectified now for the whole dinner. The lesson of the class forever, for so great does not treat the little criminal with such severity, but passes over the mistake with great good humor. So the fess is ended, the big bell rings for the close of school, and at a signal, the class rise and proceed to divest each other of their aprons and kerchiefs.

The members of this little class, with all their funny mistakes and innocent remarks, are getting a great deal of valuable information and training, that is going to help them in the hard-working lives that they all must lead when their school days are over. Many of them now carry into their homes ideas of neatness and order gained in this class, that help in making their homes brighter and their lives less hard and dull. If there could be classes of this kind in all the public schools there would be less trouble, both on the part of the mistresses who desire good help about their household work, and on the part of the young people who want to find places where they can earn, by needed labor, an honest living.

## In the Library

1st Student.—Miss B.—is John Hur in?"  
Miss B.—(puzzled)—"John Hur?" (happy thought strikes her). "Don't you mean Ben Hur?"

1st Student.—That's it, Miss, I remembered the name.

2nd Student.—Miss B.—I'd like to borrow Ben She.

Miss B.—(puzzled again). "Ben She" (another happy thought). "Don't you mean Ben Hur?"

2nd Student.—Yes so, Miss, I knew it was something like Ben She."

### Indian Department.

ELAINE GOODALE, In Charge.

Regular Contributors:

HERBERT WELSH, *Cor. Sec'y Indian Rights Association.*

ALICE C. FLETCHER,

REV JOHN J. GRAVATT.

MRS. A. S. QUINTON, *Gen'l Sec'y of the Women's National Indian Ass'n.*

CAPTAIN PRATT'S NAME and salary have been restored, in the Senate, to the Indian appropriation bill.

THE SENATE has increased the appropriations for Indian "assistant farmers" from thirty-five to fifty thousand dollars.

THE CAPTURED APACHES have just been sent as prisoners of war to historic Fort Marion, at St. Augustine. Shall we see a repetition of Captain Pratt's experiment?

A "WELL INFORMED OFFICIAL" of the Indian Department states to a newspaper correspondent that the Indians are "dying out" at the rate of about five thousand a year. His logic, however, is somewhat open to objection. His statement that their numbers have been over-rated is very likely true, but as no exact census has yet been taken, upon what does he base his present calculations?

LITTLE MOON, OF PINE RIDGE Agency, Dakota, a full-blooded Sioux Indian, has recently been sentenced to two and a half year's imprisonment for assault with intent to kill. This is the first instance of the conviction and punishment of an Indian for an offence against another Indian, committed on an Indian Reservation. It marks an epoch in the history of our dealings with the red man.

#### The Problem of the Omahas.

Miss Fletcher makes the following reply to certain points made in our last number, under the editorial heading, "Why not a Citizen?" Her testimony to the condition of the Omaha's carries undoubted weight.

"The Omahas are doing as well as can be expected. They are about entering into self-government. The plan can't be made legal—that is recognized by the Department, because the Omahas are under the civil and criminal laws of Nebraska, and the Department could not recognize a distinct government in the State, nor was it expedient to thrust the Indians at once under the counties. This is a sort of society arrangement, that the Indians may learn something of self-government while yet they are under the protection of the reservation. If they succeed, the Commissioner thinks they can do without an agent in a couple of years. Then the people will fall under the counties. \* \* \* Our Omahas are practically citizens. They can make as good a contract as I can, can sue and be sued, can appeal to the laws and

courts of the State. It may be with them as with me, the question of paying lawyers' fees.

They cannot, however, encumber their land by lease or mortgage, but that is all. It is as though they held no real estate, so far as its being subject to taxes or lien. The plan of leasing their lands to white men would do harm. Only the best lands—those nearest to market—were to be leased, and by that plan the Indian would be pushed back and not have a chance to struggle to his feet.

Then, too, the figures Mr. Davis showed me, furnished him by real estate men in Bancroft, were these. \$300 for a five years' lease of 160 acres, \$400 for a ten years' lease of grass lands. The land yield to the Indian 50 cents per acre for hay, uncut. So for what was offered \$300 for five years, the Indians already get \$80 per year, or \$400 for five years—the same that is offered for a ten years' lease. As for leasing lands for farming—that is not likely at the prices named—\$1.50 to \$2.00 per acre. Good land can be bought for less money and a man is not apt to improve land he does not own.

The people will succeed if they are given time. If all goes well, I shall hope to get the state to confer suffrage on them in a few years, and then they will have received all the law can give. The problem is already largely in their own hands—they need judicious help and not too much of it."

#### The Impending Outbreak.

While certain members of the House were protesting against the extravagance of our appropriations for Indian education, other Honorable gentlemen in the Senate of the United States, called loudly for a million or so with which to increase the efficiency of the army on our Indian frontier. It was amusing to hear Mr. Manderson, Senator from Nebraska, discuss the "impending outbreak" among the Pine Ridge and Rosebud Sioux. According to him, it is only a question of time, and not much time at that, when Red Cloud and his followers will descend upon the defenceless border, and perpetrate on the innocent settlers a series of old-fashioned "Indian outrages."

Mr. Manderson's picture of the savage warrior singing war-songs around his camp-fire and thirsting for the blood of the settler, while just over the line dwells that peaceable and shrinking being, kept awake by the anticipated horrors of a midnight massacre, however it might have thrilled a past generation, will hardly be credited to-day. The modern borderer goes about with two pistols in his pockets, and sometimes boasts of having killed his six men, while the modern savage builds his log house, tills his field, and drives his freight wagon in the U. S. Service.

The Senator from Nebraska does not allege any valid excuse for the threatened trouble. These Indians are amply supported, they are under the care of efficient agents and are rapidly advancing in civilization. What is their grievance? Mr. Manderson suggests the "Dawes' bill," but there could not well be a war about the Dawes' bill, as it cannot become a law without the free consent of the Indians.

He is reminded that Red Cloud's following is in a small minority at Pine Ridge, and well held in check; and he declares in the first place (what is quite

incredible) that the Northern Cheyennes are in sympathy with and will act in concert with Red Cloud; and in the second, that in estimating the number of warriors able to go upon the war path, we ought to include the women and "boys over ten years old!" The absurdity of this statement speaks for itself. Indian women have been known to struggle desperately in self-defence, but we can imagine the contemptuous smile with which the Indian brave would greet this suggestion. And Indian men are not full grown at ten years of age!

The practical answer to these imaginary horrors of Mr. Manderson's creating is that the Sioux Indians cannot go upon the war path, because they have no way of supporting themselves in opposition to the government. They would be "starved out" in a very few days; and they are too shrewd to attempt it except in the most desperate straits. This method of civilizing the Indian by strengthening the army posts on his frontier is, in a word, out of fashion. The Senator from Nebraska is decidedly behind the age.

#### Bishop Hare on the Day School.

PHILA., March 27, 1886.

My Dear Mr. Welsh:

In answer to your inquiry about Day Schools on Indian Reservations, let me say that Day Schools as compared with Boarding Schools are *inferior* to them in the *quality* of the work done, and *superior* to them in the *numbers* reached. The Day Schools are valuable tributaries to the Boarding Schools, for they remove the fear and distrust which Indians feel generally towards white people, and, by giving the children a taste of education, whet their appetite for more and prepare them for better.

2nd. Day Schools on Indian Reservations, as I have seen them, are of two classes, good and bad. The bad are not an argument that the good ought not to be, but the good are an argument and an illustration to those in authority showing what the bad should be made.

3rd. Day Schools on Indian Reservations, as I have known them, fill just the place occupied by our District Schools, among our scattered white farming population. However inferior these white Day Schools may be, the school house is an unspeakable present blessing to any neighborhood, and a promise to and help toward good things to come. There the children receive an education, which is, at least, better than none. There the people assemble and discuss the matters which touch their social and civil welfare. There the traveling minister assembles them for Divine worship. Just so it is with the Day School among the Indians. The discipline often might be better. The teaching is often spiritless and dull. But it is vastly better than nothing. It is above the zero point, though far below the temperature at which mind, as at Hampton, rises into genius and delights us by bubbling over.

Yours sincerely,

W. H. HARE,  
Missionary Bishop.

#### Indian Progress at Siletz Agency, Oregon.

##### AGRICULTURAL.

This Reservation, in point of population and agricultural lands, is a small one, there being only about 650 Indians, old and young, living within the reservation lines; and not more tillable land than will allot to each family a small farm. Nearly all of these arable lands are already occupied by Indian families who are securing a large share of their support from their farms. These Indians are not living in villages or camps in the old way, but are actually occupying lands in severally; and most of them have comfortable and happy homes. Proportionate to the extent of their farms and other facilities they are very nearly as prosperous as the average Western farmer among the whites. There is, however, one difficulty in the way of any of them attaining to any considerable degree of opulence. Their farms are entirely too small. The agent who superintended the great aggregation of the lands originally took entirely

too narrow a view of Indian capacity for improvement; and the result is that many of the most progressive of them are already hampered on their sixty to one hundred-acre farms. It seems impossible to remedy this difficulty now as they are very much attached to their homes and greatly averse to leaving them. Their houses are as comfortable as those of a pioneer settlement of white people, and many of them as well kept. Most of them keep as much stock, horses and cattle, as their lands will support. These items, taken together with the usual number of pigs and poultry, form a very pleasant picture of farm life. But the picture would be incomplete without mention of some of the farm products. These consist of cereals, vegetables, and milk and butter. The principal grain crops up to this time have consisted of oats, for which the soil and climate seem peculiarly adapted.

Many Indians raise excellent garden vegetables, such as potatoes, turnips, cabbages, carrots, onions, squashes, etc., and in great abundance. Nearly all of the families milk cows during the summer months, and a considerable number make butter for their own consumption.

The constant aim at this reservation is to make the Siletz Indians an agricultural people, who will live by the cultivation of the soil; and the results of the efforts already made in this direction have been very satisfactory indeed.

##### EDUCATIONAL.

Perhaps more attention has been given to the subject of education at this agency in proportion to the number of inhabitants than at any other in the West, though there are good schools at nearly all.

The plan of education at Siletz is to divide the time and labor as nearly equally as possible between school and industrial training. Regular school hours are from 9.30 a.m. to 3.30 p.m., aside from this there are regular details of boys and girls for the performance of various kinds of work. Our boys begin work at 7 o'clock in the morning and continue until 9 o'clock, or time to prepare for school. They go immediately from school at its close to their industrial pursuits. Our aim is to arrange the industrial training so as to allow each boy an opportunity to learn the various kinds of work. But as the Department fails to supply the Agency with any mechanical employees we are not able to teach our boys any of the mechanic arts, a thing very much to be deplored.

In point of educational progress the Indian children will compare favorably with most rural settlements of white people. We have one young man about 19 years old who has finished Thompson's higher Arithmetic, and is complete master of it. He has also laid aside the Physical Geography, and is marching with a steady tread through the mysteries of Clark's Normal Grammar. We have a very large class who are well up in all these branches. We have in school two white boys, one the son of the agent, and the other the sutler's son, both about 15 years old, and both regarded as bright boys. They are in the same classes with the Indian children, and they are by no means at the head of their classes. I mention this to show that the Indian children have as logical minds as those of the more favored races, and are as capable of intellectual training as they.

##### SOCIAL.

Socially these Indians are not as well advanced as they should be. A sufficient effort has not been made in the past to induce them to entirely discard Indian social customs and practices and adopt those of the whites. In fact, it is no easy task to induce people into whose composition superstition has, from time immemorial, been drawn from nearly every object of contact, to cut loose at once from their ancient customs which have their foundations in this great blinding mass of superstition, and adopt those which are, to them, meaningless and absurd. It is especially difficult to persuade them to break entirely with their superstitious reverence for the "medicine man," and in extreme sickness the constant tendency among them is to go back to the old incantations; and this is true of the most enlightened of the older Indians. In school we make it a point to drill the children in some of the simpler forms of social etiquette; so that when these children go out and make homes of their own they will be much nearer the social life of the whites than were their parents. These Indians are a religiously-inclined people, and many of them are devoted Christians.

There are many other points of interest which we would gladly mention but for lack of time and space. Hoping that this brief sketch of Indian life at Siletz may serve to remove and dissipate at least some of the prejudice from the minds of some of your readers I will close by wishing you the largest success in your Indian school work at Hampton.

J. S. McCAIN.

Supt. Institution.

SILETZ, Oregon, March 10, 1886.

## Incidents of Indian Life at Hampton.

"When can I music lesson again?"

*Geography Teacher*—"What are the chief exports of South Carolina?"

*Student*—"Pine lumber, tar, pitch and turpentine—and pine-apples!"

*English Teacher*—"Give me a sentence using the word 'elbow'." *Answer*—"Miss Carrie Elbow came to breakfast this morning." "A sentence using the word 'present', meaning 'a gift'." *Answer*—"I am always present at roll-call."

The sewing-room presents a busy and attractive scene just now with the girls' new spring and commencement dresses well under way. The older girls choose and make their own quite independently, and usually with a good deal of taste.

Thirty Dakota Bibles, a gift from the American Bible House, have just been presented to those of our pupils who can read in their own language and who understand least English. They are a great help in the Sunday school classes of "new" boys and girls.

Two of our young married men, who have been at Hampton four or five years, have just returned to their homes in Dakota and Nebraska, in time for the "spring planting." One took his wife with him, looking amazingly improved by her stay at school; the other's help-mate remains to graduate in June, when she will join her husband.

To the Holman Committee and all whom it may concern. Three letters received on the same day from three returned Hampton students at Cheyenne River Agency, show clearly the extent of their "relapse into barbarism." One is 1st Sergeant of Police at the agency; one has been engaged in herding, taking care of "3,000 cattlemen"; one is anxious to secure "1 uniform pants"; and the last two want very much to return to Hampton, for as one of them naively remarks—"I am very sorry I did not joiners."

## Another "Relapse."

Mr. Burt writes from Crow Creek: "Samuel C. is an apprentice in the blacksmith shop here and is doing very well indeed. I have known him for over ten years and have always considered him as one of our very best young men. He is very quiet and steady. He is living with his old grandmother and his sister and younger brother. He says he wishes to help his sister and so he desired to use his 'tool money' for that purpose. He is not, he says, in need of anything in the tool line. The family are all Christians, and are trying to live like white people, so I suppose he wishes to help his sister dress like a white girl."

Samuel is a Hampton boy.

## "Sisters' Club."

Badges of bright ribbon are noticeable of late, planned conspicuously to the apron fronts of the smallest Indian girls, who wear correspondingly bright looks on their faces. One of them explains these phenomena very lucidly as follows:

"Whina girls are going to be sisters, and they not going to fight each other so we have these ribbons. And we not going to get mad, if we don't get mad we will have stars, and twelve girls this is the name, Sophia, Edna, Emma, Mamie, Fannie, Addie, Nettie, Grace, Annie and Felicia and Alma and."

Your friend  
LAURA FACK.

## Horse versus Cow.

A regular debate on the comparative usefulness of the horse and the cow was a feature of our last literary meeting. Four boys and girls of the Normal School took part—two of them Seniors, and all spoke well. At first the horse, which is certainly most attractive to the Indian, seemed to be getting the better of the argument; but the "points" made in the closing speech on the cow, which was very witty and quite "brought down the house," turned the scale in behalf of that gentle domestic animal. The judges decided in its favor; which is, perhaps, as well for Indian civilization. "Give them cows instead of horses, that's the whole story"—as some one has said.

## At Haskell Institute.

Lawrence, Kas., Mar. 12, '86.

Some very interesting meetings were held at this school last month. Ministers of Christ of all denominations came out in the nights and preached to us about Christ. Many boys and girls were converted and accepted Christ as their Savior. I took all the names down on a piece of paper who wished to be baptized. Over 140 children were baptized in the name of Christ. Fontinelle and Nellie Keokuk, ex-Hampton students were among them.

We have prayer meetings now twice a week, and many of the young Christians take part. Every boy and girl seems in earnest in trying to love and serve Jesus; always willing to help one another when in trouble. The other day I received sad news from Pawnee, telling me of my mother's death. I wept and wept, and when some of my Pawnee boys found it out, they came to my room and prayed for me. I felt strengthened at once, and I will always remember Him as a dear friend, when in trouble.

Colonel Grabowski has returned. He went to Washington to represent the institution. Nellie (Keokuk) is doing well in every way, and she was asking me the other day about Hampton, and that she would like to go back there. Do you think they will take her if she pays her way? If you think she can be readmitted, let me know so I can tell her to write to General or yourself. I think she has enough money to take her there. I think she will be better off than at home. She is now in the highest class; and I think will graduate in the spring, then go home. She is studying some books used in the Middle class.

JAMES R. MURIE.

## A Lesson on Southern Products.

Our readers may be as much interested in these productions of the Geography class as they are in those of the Southern States. The first writer depends chiefly upon the evidence of his own senses:

## GOOD TO TASTE.

South products, What are they? They are rice and tobacco and sugar cane are found in the Florida and rice in Texas and Louisiana. I don't know where the tobacco grow I think the tobacco plant in West Virginia. I never see plant of rice and tobacco. I see plant sugar cane it is very good to taste and I see how to make the molasses.

## "HAS TO PICK WITH HAND."

The Southern products are Cotton, Sugar, Rice, Tobacco. The Cotton States are Alabama and Mississippi and Texas, and the finest cotton are in Sea Island of South Carolina, and when the cotton ready to pick hand, that reason they get the Negro to pick the cotton and women and children they take their basket, put on their shoulder, and one time one man made a machine, and his name was Eli Whitney, and he made the machine so they could go fast. The sugar states are Louisiana, Florida, Texas and the greatest sugar state is Louisiana, and the sugar and the leaves cut them, and then tied them into bundles and they take over to mills or sugar house, and then they mashed them in the iron rollers and when the juice come out they boil it and they stir it.

G. D.

## "A VERY GREAT BUSINESS."

Cotton is largely grown in Alabama, Mississippi and Tennessee. They make calico, muslin and a great many other things with it. When it is ready to pick they go between the rows and pick it out of the pod. Long time they used to pick it off of the seeds, but this was very slow when done by hand. About 200 years ago a man by the name of Eli Whitney invented a machine that could do this kind of work very quickly and this was the cotton gin, then the cotton raising was a very great business in the Southern States.

Rice is most largely grown in South Carolina, Georgia and Louisiana. It was raised here at first until a sea captain brought it here from an island called Madagascar near Asia, he gave it to a gentleman and the man gave it to some of his friends and they planted it and it grew, very well but they had to let water run all over it so the sun could not dry it up. They would leave under the water until it would sprout, then they would drain the water off, that is the way they would raise it. Rice is the food of one third of the human family.

D. C.

## "NOT MUCH GOOD."

Tobacco is raised in Virginia, Kentucky and Tennessee, but it is not much good, that is all I can say about tobacco to-day.

L. D. S.

## "USED BY MANY PEOPLE."

The Southern Products are tobacco, cotton, sugar and rice. The tobacco is found in Virginia, North Carolina, Kentucky and Tennessee, and it is used by many people in telling it and getting money for it.

The cotton grows in Alabama, Mississippi and Texas. The people cultivate the cotton and when it is ripe, they pick the cotton. The cotton is inside of a shell or the pod, and inside of the cotton are the seeds and it was hard to get them out and it cost a great deal to do it so these people they went to Africa and got some Negroes and made them slaves to pick the cotton. They had sacks by their sides and when between the rows to pick cotton and when they got to the end they put it in big baskets and carried it to the gin house. There is where the seeds are taken out. After that the seeds are spun and woven into cloth, such as calicoes, muslins, and cotton cloth. The Negroes used to pick the seeds out with their hands but a New England man, Eli Whitney, in the 18th century made a machine which could do the work fast and cheap.

The sugar cane needs a very hot climate to grow in Louisiana is the most sugar state, by the Mississippi river you could find sugar plantations and when it gets ripe the farmers cut it and ties it in bundles and takes it to the mill.

A. D.

## The Santee Mission.

I am going to tell about our school. There are thirteen buildings on the Mission, and there are four big buildings which are for the scholars, one is for the large girls, called "Dakota Home," and is called "Bird's Nest," and that is for the little girls. And the "Young Men's Hall" is for the large boys. "The Cottage" for little boys. There are thirty-five large girls and twelve little girls, and sixteen young men and fourteen little boys. Last winter there were 170 scholars. I don't know how many there will be this winter. They are building a dining hall where all the scholars are going to eat, and they expect to get it all done by Christmas, and they want over 200 scholars more. I am staying at the "Dakota Home." I like this school very much, and I will tell you why I like it. I like it because they taught us how to be Christians, and first thing they teach us here is Christianity. We always have prayer meeting every Tuesday evening, and one of the girls takes charge of it. Miss Webb asked me to take charge of it so I did. I like to do it because it is one of the Lord's works, and at sewing society some girls take, and once Mrs. Riggs asked me if I can take charge. I was glad to do it. I have been to two other schools before I came, but they don't teach them as they do here. I guess this is the best school of the Dakota Mission. I have been here five years, when I first came here they did not have any blacksmith's shop, nor carpenter's shop, nor dining hall. They have something very nice at Dining Hall that we don't have in other buildings. It is the elevator.

Since I stay here I learn something. When I was little girl my sister used to say: "That is Sunday," in Dakota, and I don't know what the means, but I always go with her, and when we were going in I used to be afraid, but I never said a word. But

since I come to this school I know better, and I am not afraid, and I am one of the members of this church. I am glad that I am led to Christ, because now I am happy. My father and my folks don't know why I am here, but I know they always say that they want me to talk English, that is all they want, but I wrote to my father and told him that he must not think that way, and he wrote to me and said he wanted me to do what is right and grow to be a good woman. I was very glad when he said that. I can do lots for my father. I had a mother, but she don't stay with my father, so then I always say I don't have any mother, because I am a missionary. When I can I am going to study Christian while I am staying here, so then when it is time for me then I can do it. I am very glad to follow Jesus, because he keeps calling us every day to be his disciples, but if we don't listen to him, go off and do something wrong, then he is very sorry. Jesus says he will never turn us away. We are going to have Catechism classes. They don't have anybody to tell them of our dear Father in heaven; some people don't have nice things as we have; I wish they would send their children to school; I am thankful for what the teachers have done for us. I am going to try and do as my teachers tell me to do this year; I am going to ask God to help me and all the teachers; we say our prayers and go to bed, and in morning we have Sabbath School and Dakota meeting, and these two before noon, and in afternoon we have English service, and in the evening Dakota meeting; in school the teachers don't allow us to whisper and chew gum and talk out loud only when we are reading and talking to our teachers; I think this is the best school; we don't talk Dakota; we don't know whether the boys talk English or not; they don't let the little girls talk Dakota either.

When we get up in the morning we open our beds and windows, then go down to the dining room and sit down to eat, and after breakfast we go up stairs and make beds and sweep the floors, and I wash the dishes in the dining room; some girls wash dishes in the other room; they wash only what they use in cooking and plates; two other girls and I wash only the cups and saucers and knives and forks, and some go to washing and ironing, and some to other works. Miss Webb is gone away, and Jennie Cox is going to take care of us for three days. We can sew and knit stockings and mittens and some other things, sew dresses and aprons. Mr. Riggs is the principal of this school. The name of this school is Santee Normal Training School.

NANCY DOCTOR.

## DENTISTRY.

Dr. T. H. Parramore,

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King Street opposite Barnes Hotel.

JAMES PYLE, NEW YORK.

## The Ogallala Sioux.

INDIAN TRADERS—THE "ASSISTANT FARMER"—GOING BACK TO THE BLANKET—"THE CHEYENNE CAMP"—BOARD OF COUNCILLORS—A TEST CASE.

We leave behind us the ration house, with its pervasive odors of coffee and bacon, and pass out to find everywhere groups of women, children, and ponies—lounging over the counter of the trader's store, which is strewn with calico and finery, gossipping about the gates, or mere dashes of brilliant coloring in the distance as they gallop over the brown hills. The women all ride astride, and in the loose Dakota garb, with leggings of buckskin or flannel, and commonly a gay shawl wound about the waist, look very picturesque and not at all unfeminine as they do so.

The licensed monopoly of these "Indian traders" is one of the standing grievances of the Indians. Dr. McGillicuddy had to a certain extent given them the benefit of competition, and added greatly to their convenience by establishing six trading-posts in remote parts of the reservation. To the great disadvantage of the interests, the present administration has removed these six Republican traders, and put two Democrats in their places!

The "assistant farmer," appointed for political reasons, appears to be about the most useless invention yet devised for the civilization of the Indian. Old Red Cloud, who is as shrewd as he is undeviating, originated the tolerably well-known satire: "The Great Father, sends out men to teach us farming. They sit over the office stove all winter and draw their pay; but when spring comes they get out and go home." Dr. McGillicuddy sketches the six gentlemen who were sent to Pine Ridge to instruct the wild Sioux in the noble art of agriculture with a few telling strokes which are in no means lacking in humor: "The first was a mild old gentleman from Tennessee. He appeared to mean well; but he didn't know the difference between a subsoil and a breaking plough. The second, early perplexed me by a note in which he stated that he would like an 'o-r-g-o-auger.' The Doctor informs us that if he were allowed to appoint these 'farmers,' he could get intelligent, practical men from the country, about, whites or half-breeds, acquainted with the language, the crops, and the Indians, for about one-half the salaries of the present incumbents.

As westroll leisurely about, we get now and then a glimpse of the somewhat involved machinery of the system on a large agency. The wheels seem always to be well oiled and running smoothly. A petitioner asks for a ration ticket for his brother, who has recently exchanged from Rosebud. The Doctor informs him that a "transfer" from agent Wright will be needed—a formality necessary to guard against the pos session of duplicate tickets. An effective tribute is paid to "compulsory education" by a splendid specimen of the blanketed Sioux from a remote village, who approaches to proffer his humble "excuse" for a sick daughter, who is unable to attend school. If he did not go, the excuse, he would not be allowed to draw her rations! We enter our walk at the office, perfect in its order and appointments, and study the list of Indian police and the ingenious language of "calls" by means of an electric bell, while the Doctor systematically fulfils his contracts with the long line of "freighters" waiting stolidly for their pay.

"How do you succeed with the Carlisle boys, Doctor? Do any of them go back to the blanket, as they say at the East?" "Well, I rather think not; we don't give them the chance." "How do you mean?" "We follow them right up with a policeman. It is a theory of mine that a boy carefully educated at Government expense owes something to the country that educated him. So soon as a young man returns from Carlisle or any Eastern school I call up a policeman and say to him, 'Do you see that boy?' Well, you keep your eye on him, and if you ever see him wearing a blanket, bring him up to the Agency and clap him into the guard-house! Yes," the Doctor continues, "we have one Carlisle student in the carpenter shop and another appoint in our boarding-school. I shall make a point of employing as many as I can at the Agency. On the whole, they are doing remarkably well."

A drive to the wild "Cheyenne camp" creates a picture of a break. There are probably no more typical Indians living than this band of 500 Northern Cheyennes from Indian Territory, fresh from the war path, unbroken by customs, and are forcibly planted in the midst of another and a hostile tribe, speaking a foreign tongue. They are with us, but not of us," Dr. McGillicuddy says. "It is very difficult to do anything with them. About a year ago we were induced to scatter out—the rest are very wild—all living in lodges, won't send their

children to school, dance, all the time—in short, Miss Goodale, you will get all you want of the genuine savagery, and the aboriginal red man!" It is not an easy matter at first to discover this primeval encampment. The slightly rolling prairie, bare of any landmarks, the misleading "trails" and absence of trails, perplex us for a long time. Two or three ponies tethered out on the bluffs, reveal the true direction at last, and making a sudden turn, we find ourselves all at once in the midst of the Indian village. A huddle of white canvas lodges, on the banks of a little stream, surrounded by a wild growth of "timber"—as they call it, though here we should say underbrush, its site is evidently planned with the old time view to shelter and concealment. Not a glimpse, not a sign of habitation betrays itself to the traveler till within a few rods of a noisy and populous village.

Populous and noisy it certainly is, swarming with children, alive with dogs, and brilliant with curious costumes. The wild little half-dressed creatures, who are swinging from the branches of the trees and scattering like parakeets, pause for a minute to return our stare. Although it is broad daylight, the monotonous beats of the dance drum resound from a neighboring tent. We cannot speak a word of the dialect of the people, and these wild Cheyennes know very few words of Sioux. A visit, such as ours, is an almost uneventful in their lives, and doubtless suggests matters of official importance. You could scarcely expect from them anything less than restraint and respect. However, an old patriarchal-looking Indian in a blue army cap, of a suit him oddly enough, approaches with dignity, and hospitably invites us, by means of signs, to enter his lodge. A lad wrapped in a discolored cotton shirt, with bright eyes and wild hair, comes forward to hold the horses.

We find the interior more characteristic than any we have yet seen among Indian dwellings. Low couches, ingeniously woven of willow and heaped with blankets, serve as divans by day and beds by night. Among them is gorgeous Navajo, scarlet and white and black and blue, which has some found its way up from Arizona to these Northern tribes. Heavy belts and helmets and other handsome articles of Indian work decorate the circular walls of the apartment. A fire smoulders in the center, with a pot of coffee beside it and a huge unsavory-looking soup-kettle. Two women, one of them young and pretty, recline on the couches, dressed in loose garbs of gayly-colored calico, with graceful flowing sleeves, great belts of leather, ornamented with hammered discs of German silver, brass bangles, and a profusion of earrings and ornaments. These are, as we presently discover, our host's two wives. They invite us to be seated, and we exchange friendly smiles and gesticulations. The old gentleman in the army cap proceeds to open with much ceremony a brass bound leather trunk and hands to the agent one or two worn and yellowed papers, which apparently possess a cabalistic value. Both are written in English. The first, as we unfold it, proves to be a sort of recommendation of our friend Red Eagle, from his former agent in the Indian Territory, who gives him an excellent character. The second—how odd it is sound as the Doctor slowly reads it aloud for our benefit, while old Red Eagle gives vent to a series of delighted chuckles. It runs something like this: "My dear uncle—I am doing myself very well indeed. I can English all the time. I feel very sorry whenever I think about you. I wish you would try to keep yourself and not live in the old Indian ways. It is good plan to try to raise something for ourselves. You ask me to come home, but I am not come home for some years yet. I want to learn something. I wish you would try to be civilized. From your nephew, \_\_\_\_\_ And it is dated at Carlisle school!"

Mrs. Red Eagle, No. 1, has, meantime, appealed unintelligibly to her husband and again by signs to the Doctor. Finally she takes from her own little box a pair of very pretty beaded moccasins and presents them to me with the utmost grace of kindness. We all shake hands heartily and depart from the midst of this wild tribe of recent "hostiles," who greet their uninvited guests with such simple hospitality and unassuming friendship.

On the way home I ask the Doctor if he ever carries arms. "Never," he says, "the reservation. I shouldn't think of visiting one of these border towns without a revolver in my hip pocket. I once had a little altercation with a man on the train, and when he had left, a judge of the Territorial Court with whom I was riding, casually remarked that it would be necessary for me to kill that man some day, and that whenever I found it to be so, he (the judge) would swear that it was done in self-defense! I have been present at Indian councils, however, when there was a good deal of excitement, in Red Cloud's village and all over the reservation, and it never occurs to me to arm myself."

Slight disturbances of the peace on this agency are dealt with by the Board of Commissioners, too in number, appointed by the Indians. The Indian police would never act as judges in a court of Indian offences. A few weeks ago there was a case of assault with intent to murder—a crime much less serious than Handsome Elk's aggravated case at Lower Brule—and the promptness and efficiency with which it was investigated by Dr. McGillicuddy indicates a difference in the administration of the two agencies which is by no means favorable to the former. Little Moon, who fired at Cut Meat in the course of a quarrel at the beef issue, the last passing through his blanket and killing a horse, was immediately arrested, put in irons, and is now awaiting his trial at Deadwood, in the Black Hills, the nearest county seat; in spite of the fact that he took refuge in the "opposition" camp and was protected by Red Cloud and his faction.

The phraseology of the new statute, taking cognizance of Indian crimes, is so prepared as to leave it in doubt whether these crimes are brought into the Territorial or United States Courts; and in the former event no appropriation is made to cover the expense of trial. It is not likely that the county will assume the cost of keeping order over the reservation, and thus the law is in danger of becoming a dead letter unless the language of the notorious "Ninth Section" of the last Indian Appropriation Bill be amended. Dr. McGillicuddy has by personal effort and influence, secured the trial of his prisoner, but it does not follow that every Indian agent can do as much.

ELAINE GOODALE.  
in N. Y. Evening Post.

## The Dakotas' Ancient Foes.

MANDANS, REES AND GROS VENTRES—A LONG CHASE—A GAY CAVALCADE—CALLS FROM HAMPTON BOYS—A DRIVE AMONG THE FARMS—A VILLAGE OF ANT HILLS—INTERIOR VIEWS—POOR PETER—BURYING IN THE AIR—AN INDIAN FUNERAL.

For many miles along the Missouri, traces still remain of the ancient fight of the Mandans, Rees and Gros Ventres before their ever victorious enemies, the Sioux. Huge rings, not yet obliterated by the rank growth of the prairie grass, mark here and there the sites of the circular Rees-houses, which could not be "burnt," like the tents of the Arabs or the tepees of the Dakotas, but, hastily abandoned, were left to slow decay in the dry air, or to quicker destruction by the enemy's torch or the all-consuming prairie fire. Thus pushed from camp to camp through the wilderness by the "requirements of the stronger," the remnants of the three tribes combined for mutual defence and made their last stand on the east nose of the Missouri ninety miles above the present site of Bismarck. There they were discovered by the explorers Lewis and Clark in 1805, and there they have as yet been able to hold their own against the persistent march overtaken by a mightier wave of progress advancing on the same old savage principle that might make right.

The little steamer Benton, creeping up the river along the sinuous curves of the Big Muddy, fast on a bar twenty-four hours, luckily so close in shore that half her freight could be put off to float her, lying up at night, puffing or punting along at a speed of four miles the hour by day, accomplished for me and my fellow-traveler the hundred and twenty watery miles between Bismarck and Fort Berthold in three nights and four days. Who says the Missouri is "monotonous"? It is as fascinatingly changeable as well, if I were a man I might say—a woman; provoking you with shallows, defying you with depths, belying all your charts, here to-day and there to-morrow; tossing a saucy sandbar across the channel you gazed so smoothly down yesterday, and quietly removing mountains to take its own way round you down the other shore; swift, irresistible, whirling you south, north, east and west, till you lose your points of compass, but coming out all right at last, and, in spite of days by land, sailing you on in full vigors, heart, satisfying to the thirsty soul! Nevertheless, instead of a rhapsody on the Big Muddy, I was more inclined at the end of that last trip—the demoralizing effect of turning so many corners—is provoked to write a dissertation on the evil of following friendly advice. But for that, should we not have made Fort Berthold in four days, as it is to say, by mud?

Here we are, however, and a gay cavalcade is drawn up on the bluff to receive us. Certainly the wildest set we have yet seen—"prancing ponies, riders in full fig, the most gorgeous of blankets, striped this way and that, like Joseph's coat of many colors; scarlet leggings, painted faces, jingling ornaments, hair stuck with eagle's feathers or streaming to the waist in multitudi-

nous narrow, ribbon-like bands, stiffened and curiously dotted with paint—as that they proved to be jute—a fine crowd! As they posed and dashed about on their ponies in all their grace and glory, we felt that we had been spared the disappointment which visitors to Hampton and Carlisle sometimes express—we had seen "real, live Indians," in the midst of the scene. Agent Gifford's horse and buggy stood patiently waiting, and with courteous welcome we were soon safely ensconced in the latter and on our way to the Mission House, where we were expected and were hospitably entertained for the four days of our stay.

News travels fast in an Indian settlement. Before night a Hampton boy had called "In blanket do you ask? Decidedly not, but in full citizen's dress, which he always wears, and talking English fluently as when he left Hampton. We had many more calls of the same kind before we left, but this I will speak again. The next morning Major Gifford gave me a pleasant drive on the reservation among the farms. As can easily be understood, the Berthold tribes have peculiar obstacles in the way of their progress. Raids of the Sioux from the south and west, and the Crees from the north, and of horse thieves, white as well as red, have kept them all these years huddled for protection in a close village swept now and then by epidemics, one of which of small-pox, about twenty years ago, was so terrible that the American Encyclopedia of 1870 declares the Mandans to be extinct. That was a mistake; a remnant was saved. And even here the new impulse is felt. Industry means peace and progress. The Sioux having turned their spears into plowshares, the Crees having their hands full, and the horse thieves taken care of by the white settlers' vigilance committee, the Mandans Rees and Gros Ventres are beginning to flourish.

THE NEW TRAIL OF THE PLOW.  
As we drove over the breezy prairie, the agent told me that since last March nearly one hundred families have "scattered out," more than half of them are permanently established, and all, by putting up a house, enclosing land, or at least breaking ground, have made a start and pledged their purpose to go ahead. Two-thirds of them have broken even from three to ten acres each, all have put up hay enough for their stock, which consists usually of from two to five ponies and a cow, with some few oxen, about twenty yoke in all. Most of the new farmers are scattered far beyond the limits of a morning's drive. I saw some of them, however; some good fields and some good breaking. It is said out here that the Indian farmer breaks land better than the white man. He is apt to neglect the second or third plowing—the "back setting" and "cross plowing," as they call it—but his first breaking is handsomely done. It is a great thing to him and he gives the whole of his mind to it. Now when you consider what it is to "break" this prairie sod, and look at the young Indian farmer with his small hands and muscles untrained to severe labor, and his pony as little used to it as he, that speaks very well for him. Imagine one of the "feathered darts" of Black Bay with his hand on a breaking plow for the first time, and his "look back" before he was half way through his first furrow, and if that furrow was as straight as these I see in Dakota, he would deserve almost as much praise as the Indian—no, quite, of course, for shall Puritan ancestry count for nothing? But I'm afraid he'd never win it.

We met an Indian pioneer moving, with all his family and furniture in one cart, to the new home on the prairie; exchanged a cheerful greeting, and drove on to see the "agency farm," until recently the only field of Indian farming operations, and still the chief one. It was cultivated this year by forty Indians, after the land was plowed by the agency teams, the seed supplied partly by the government and in part by themselves. They have raised this year 8,000 bushels of wheat, over 3,000 of oats, and over 5,000 of potatoes. Many have their own corn and potato patches near home.

The harvest field presented a gay scene as we drove through it just at nooning. The women and children who always turn out to help the work or see the fun on thrashing day, were gathered in picturesque groups around their heaps of embers and roasting corn. Well filled sacks and piles of golden grain lay here and there. The merry whirr and rattle of the thrashing machine ceased, the great horizontal wheel slowed up, and the tall young fellow, posed like a statue of Phæton on his hub, set loose his fiery steeds and, throwing down the lines, jumped off and came to meet us—the second of the Hampton boys I had surprised in this elevated position this summer. Yes, he knew me, though I was unexpected, and it is four years since he left Hampton; a delicate compliment, which only an Indian can always give and always expects to receive. "Tom's a first rate fellow," said the agent. "He has always done well; industrious, manly and steady. He ought to have a better chance than he can

get here. He would be worth thirty dollars a month, and his board to an Eastern farmer. "Why not a Western one?" I asked. "Couldn't he go off the reservation and hire out anywhere like a white man?" He looked more like one than like an Indian. "He could," was the reply, "and I'd like to have him—in the right kind of a place. He has been herding cattle for much of the time, but he needs some urging to go out for a new start, alone among the white people. He doesn't realize what he could do." I had a talk with Tom, and think I fired his ambition somewhat, but, as the agent says, he ought to have for the start "the right sort of a place."

Driving on to the mill we found an industrious couple, man and wife unloading their summer's harvest into the granary. The mill ground 20,000 pounds of flour last year. This year, for the first time, the Indians cultivating the common field will have more flour than they need for their own use and be able to sell some.

There are 1,037 Indians on the reservation. They have no treaty with the United States. One was drawn in 1873, but the department refused to ratify it. Their dependence for subsistence is chiefly upon the gratuitous appropriations made every year by Congress. These have been \$40,000 annually for the last four years; but the appropriation for 1886 is \$25,000. There are \$10,000 in annuities, \$75,000 in household articles and small tools; and \$25,000 in subsistence rations—beef, mutton, pork and potatoes, flour and a little coffee and sugar. A balance of \$5,000 falling to the credit of the agency last spring, from a failure of a contract, was spent at the agent's advice in stock cattle and agricultural implements. More are needed. The agent thinks the appropriation now too small.

The reservation is an Executive Order reservation: a large, fertile tract, lying on both sides of the Missouri. The worst feature is that it has never been surveyed, and its boundaries even are unknown. Major Gifford has asked for a survey. Congress last year appropriated \$500 toward it. This last year appropriated \$100, but it is not upon it that he asked again for a survey, but the appropriation was said to be about exhausted. It is increasingly important that one should be made, now that the Indians are scattering out over the reservation and the whites coming in. The Indians have scattered for from fifty to sixty miles up the river for proximity to timber and water. On the other hand, whites are squatting on the southwest portion of the reservation, very near it. The Indians do not understand as the gravity of the situation, but it is evident that there is opportunity for trouble ahead if the boundaries are not defined.

#### THE VILLAGE—INTERIORS.

I made several visits to the Indian village a half mile from the Missouri. About two hundred log cabins and some twenty-five of the gorgeous, circular teepees are systematically huddled for defence; the narrow streets or alleys constantly branching and intersecting, and such that every one is fully commanded and a raiding party attempting to ride through the village would be dropped every man. Some of the houses and stables on the outside of the village are inclosed in high stockades for further protection. A contagious or epidemic fever in these close quarters would make great havoc. Experiences of the kind and the constant urging of physicians, missionaries and agents have produced some effect, and the streets and houses were far cleaner than I expected to find them.

It would be easy to lose one's self in the labyrinth of intersecting ways, but with Maj. Gifford's kind escort I had a most interesting stroll through the village, "making calls on the aristocracy," and getting novel impressions at every turn. Many of the house tops were adorned with colorful offerings to the gods—bleaching buffalo skulls and mysterious bundles elevated on poles, thrust at divers angles into the dirt roofs. Sometimes many yards of new calico, or robes and blankets, the owner's best, had thus been sacrificed to the powers of the air. Each of the tribes has its own section of the village, the Mandans and Gros Ventres affliating more with each other than with the Rees. They are both, in fact, as their dialects show, branches of the great Sioux family. The Rees—more correctly Aricares—are distinct, and, with the Pawnees, form a family of the Smithsons, cannot be classified with any of the other tribes of American Indians. They are the most progressive of the three tribes in the villages.

Paying our respects to Poor Wolf, Chief of the Gros Ventres, who visited Hampton a few years ago, we received a cordial and dignified welcome and were introduced to his wife. She was grieving over the departure of a daughter for the boarding school

at Santee, Neb., but poor Wolf said cheerfully, "I want all my young people to go to school; this little girl is the first when he is big enough," patting the baby grandchild, with whom the grand mother was consoling herself. Poor Wolf is a very intelligent looking man, a pair of gold-colored spectacles adding to the dignity of his citizens suit. He is thoroughly progressive, and though he has not fully decided to accept Christianity for himself, I saw him the next Sunday with his wife at the Mission Church, of which his daughter at Santee is a valued member.

#### POOR PETER.

We had one more call to make. It was on poor "Peter." We found him, as we expected, at his bed, sick with consumption. The pathetic feature of his case, however, was something else. Here was a man of forty, perhaps, who for half his life at least had worn the dress, and done the work, and borne the humiliating lot of a woman in an Indian tribe—all because he had failed in the cruel test of the sun dance, to tear his tortured muscles loose from the hooks on which he hung, fallen and asked to be taken down. He had borne without protest or complaint all the toil and mortifications of his life-long sentence, as civilized people bear other conventional tyrannies claiming a divine right. But poor Peter had no comfort, a real one to him, though it seemed to add another touch of pathos to his case. He had been a married man, and his only joy was a strong man and brave—"very brave" whispers poor Peter, with a patient smile, from between his woman's braids, and lifting his wasted arm in its woman's sleeve to point us to where the tiny type hung.

#### SERVING IN THE AIR.

Our way home led past the strange "graveyard," with scarcely a grave in it; only ghastly rows of scaffolds, eight or ten feet high, on which the dead lie bound in blankets or rough boxes, a weird sight, but thus—in the rough boxes, and quickly turning into human forms in the dry air. As I stood in the yard an Indian woman came in with a square box on her back and deposited it at the foot of a new scaffold. Going off, she soon returned with another woman carrying between them the body of a little child in a blanket like a hammock. Arranging a few bits of cloth as a pillow and bed for the little one, they laid it in the box and proceeded to nail it up. A girl scattered up with a piece of new calico, and the box had to be opened to put that in—an offering. It was nearly nailed up again when another woman approached, and as she drew near, broke into a mournful wail. She was the mother. Another wail arose and the father appeared. The two women went steadily on with their work and quickly bolstered the box into its place with ropes. The wailing went on as I left the place. This was an Indian funeral. That night, and other nights, from my bedroom I could hear the wailing of the mourners in the dark and cold field. Many times still I saw the wailing themselves with knives, expressing their sorrow in Oriental style.—H. W. LUDLOW, in Boston Journal.

#### A Spring Harvest.

From our Youngest Contributor.

I feel that same apology is due my readers for introducing the time worn subject of a school commencement, but when I see in how praiseworthy a manner these little entertainments are conducted, I feel sure it will be of interest to those who are friends of the colored race, to hear how creditably the scholars of the colored public school in a little village in Virginia, conducted such an entertainment.

On Tuesday evening, March 30th, in spite of heavy rains, the town hall was quite full of both white and colored friends of the school and the scholars, to see the school commencement. At eight o'clock, the entertainment opened with a song which was excellently sung by the school. Every scholar was neatly dressed. The girls wore white with bright ribbons, chiefly—everyone seemed determined to make the audience enjoy the evening as much as possible.

A prayer by the Rev. N. M. Dyer was followed by a chant by the school. Several bright recitations and dialogues came next on the programme.

Among the most entertaining of the dialogues was one called "Why do girls outstrip boys," between Clayton Allen and Lizzie Snoden.

A third song, "Golden Years," was sung by the school in a bright and spirited way. Many of the dialogues which came next were so irresistibly funny as to send the audience into roars of laughter. Some of the thrilling recitations which followed changed the amusement to serious interest.

Next came a stirring song by several boys. Among the best of the dialogues which followed was "The Bum Run Guards," which was admirably executed by a trio of boys.

After another dialogue, "Eight Little Boys from Nonsense Land," Hattie Simpson recited "Is it Anybody's Business?" This was considered one of the best performances of the evening.

Several songs and dialogues, all of which were well worthy of notice, must be passed over for want of space.

The crowning success of the evening was a recitation by Marie Allen, a little tot, hardly more than a baby. Her dress was of crimson which was well suited to the verses she recited so well, concerning a "Little Robin Red-breast." Her tones were not altogether free from a baby-lisp, and she appeared very small indeed, standing on the stage all alone, but she shone herself with great self possession and did not seem to be in the least embarrassed. This recitation brought down the house.

More music and recitations followed. The exercises closed with a very pretty and graceful "broom drill," by a number of girls all in blue dresses with dainty pink aprons, which made a very pretty uniform.

This was a most creditable entertainment. Teachers, who for so many months have labored patiently and bravely, that at the end of the session they may see so encouraging a reward of their labors not only for the minds and bodies of their pupils, but also for their souls, by the daily lessons in reading and spelling, they have learned lessons in true Christianity, honesty and truth, both by the precepts and examples of their teachers, in whom are due the most earnest thanks of their pupils and of everyone who is interested in the colored race.

H. H. D.

#### The Trade of West Africa.

Our good friend and the friend of Africa, Mr. Edward S. Morris writes:

Philadelphia 2d month 17th, 1886.  
S. C. Armstrong.

#### Dear Friend:

Your notice from the office of your "Southern Workman," at hand this a.m., and with pleasure I enclose one dollar to renew my subscription to March, 1887. I hope to do this every year as long as I live. I read the "Workman" with pleasure and profit and then send it to the Anna Morris School, Anthoning, Liberia, West Africa, where it is appreciated. You will be pleased to learn that my hand Cotton Gin, Spinning wheel and Loom safely reached Liberia in December last and went to work on New Year's day—at the school. Orders for this hand machinery already from the Vey tribe in the rear of Liberia.

Truly will it be to the natives what you said in the "Workman" April, 1885.

Not only fraternally, but ever gratefully yours,  
EDWARD S. MORRIS.

Mr. Morris's circular states, concerning the trade of West Africa:

The four British settlements on the West Coast of Africa and the American-African Republic of Liberia, each of which is within five weeks sail or three weeks steam from the shores of England or of the United States, are gradually rising in importance as centres of Christian civilization and commercial emporiums.

The Gambia River is said to be navigable for upwards of four hundred miles, through a rich and luxuriant country. Comparing the imports and exports of 1859 with those of 1869, the former show an increase of £71,386, and the latter an increase of £78,200, total increase in the trade of ten years with the Gambia and Great Britain £149,606. The revenue amounts to about £25,000 a year.

The trade of Sierra Leone has made rapidly advanced.

Exports and import both have doubled in ten years. The annual revenue is between £70,000 and £80,000.

No official returns have been made, since 1865, of the imports and exports of the Gold Coast and of Lagos. The annual public revenue of the former is estimated at fully £200,000, and the custom duties of the latter at £40,000. Lagos is now the chief seat of trade for the Niger countries.

The declared value of British exports to West Africa is about £1,000,000 yearly to above two millions of pounds sterling.

There is, in the absence of formal reports, abundant evidence of a considerable im-

provement in the commerce of Liberia. The coffee crop of last season was unusually large. The barque, *Thomas Page*, lately reached New York from Monrovia, with a cargo of palm-oil, cam-wood, ivory, sugar, and coffee. A planter on the St. Paul's river, who came in her, is reported to have brought with him two hundred casks of sugar on sale, all raised and manufactured and owned by himself. A few years ago, he was dependent on his daily earnings as a house-painter in Columbia, S. C. A vessel recently arrived at Boston from Monrovia, heavily laden with African products, and sailing under the Liberian flag—the first time that it has appeared in that harbor! A superior quality of indigo and palm soap, the latter in odor resembling that of the iris or violet, may soon be expected from Liberia.

The future greatness of the trade of West Africa, is not to be estimated by the tardy growth of the last quarter of a century. Our knowledge of the vast interior is widening; facilities of communication now exist in countries hitherto unknown; steamers navigate the far-landed Niger; the natives on and near the seaboard have greatly improved in manners and customs; the English language is extending, and a large number of young men are in course of education and preparation to act as agents in the extension of legitimate trade and pure Christianity.

Our government has expended several millions of dollars in preventing the shipment of slaves, which object has been effected on the entire West Coast of Africa. It has, however, done nothing directly for Liberia, and it continues to ignore the great opportunity which that republic, with its half a million of inhabitants, and five hundred miles of sea front, and an almost unlimited interior, presents, to the country in which it is situated, in perpetuating republican institutions, and extending the commerce of the United States. Liberia, nursing into a powerful nation, may appear small and insignificant, but who can tell the influence for good it is destined to exert over Africa and the colored race?

The admission of Liberian products, in Liberian vessels, free of custom duties; the encouragement of fine steamers, carrying the mails, between American ports and those of Western Africa; and a thorough exploration and opening up of the country immediately interior to Liberia, are ways in which West Africa may speedily be made a civilized region and a remunerating commerce secured, repaying us by its trade tenfold the cost of all our efforts and advances for its benefit.

#### A Night Scholar's Composition.

Some of the readers of the "Workman" may be interested in the following impromptu composition, written by a member of the advanced class of the night school. The story was suggested by a series of pictures, but otherwise the pupil had no help. The composition is published entirely without correction.

#### THE NARROW ESCAPE.

The following item appears in one of our leading papers the other day. It was read, by a man who had several small children which made him feel somewhat uneasy on their account. He took the paper home, and calling his children to his side, read the story to them which ran thus. On the 15th inst. Harry Davis, Rev. Davis's son who is about six years of age, was allowed to go fishing, unaccompanied by any one save his dog. He had been fishing some time, when going too near to the edge of the bank, a portion of the earth gave way precipitating him in the stream. He would undoubtedly have drowned had it not been for his noble dog who leaped in after him catching him by the clothes, just as he was sinking the exhausted boy with him. In the meantime, his parents having become anxious over his long absence, his father started out to see if he could learn the cause. On arriving near the stream, he saw his child lying motionless and motionless on his back, and a cruel father saw this he set out on foot until he reached the spot, then he took the child's hand in his and was overjoyed to find a feeble movement of the pulse. He rubbed his numb limbs until he restored them, then he carried him home. A doctor was immediately summoned and after a careful examination pronounced him out of danger, relieving the distracted parents of their terrible anxiety. All this time the children have been listening attentively. Then the father gravely advised them never to go near the water again, lest some older person take care of them, alluding to this as a lesson.

## Virginia School Report.

Great labor and care have been expended in the preparation of the Virginia School Report for 1885, and it contains much that is valuable and interesting; full and well classified statistics upon a great many points, well digested in summaries and reports based upon these. Looking through the ponderous pamphlet, and turning down a page here and there, at points of interest as they meet our eye, the first we have thus marked for second reference are the condensed reports of county and city superintendents. A line or so, or word or two, from each, gives the gist of their view of the progress in public opinion on the free school system. Almost without exception they read "Favorable," "Generally favorable," "Increasingly favorable." A very few report some opposition, but in the minority, or not openly manifested; only two report general disfavor, in one case because of already popular private schools. As one correspondent says, "The masses love the public schools, taxpayers willingly support them, and would do more if the law allowed it; the politicians try to out-do each other in loyalty to them, while a few—always becoming fewer—still 'their old tune against them.'" The Superintendent of Montgomery County says, "Give us the Blair Bill; our people almost universally, and irrespective of political parties, are demanding national aid to our public school system."

As to progress in school work, the statistics show steady and remarkable advance in four years. In 1881, the number of white schools has increased 719, colored 474, total increase 1,193, and yet this remarkable increase has not met the demands of our school population. The enrollment in 1881 in white schools was 162,087, with 3,939 schools, which is about 41 pupils to a school. In 1885, the enrollment was 194,735, an increase of 32,148, with 4,658 schools, or an average still of about 41 pupils to a school. "This shows conclusively that no more schools were opened than were needed to accommodate the white children."

"The enrollment in the colored schools is remarkable, and shows beyond question that their school facilities are not sufficient, as it will be seen that in 1881, 76,958 colored children were enrolled, with 4,443 schools, which is an average of about 50 to a school; in 1885, 109,108—an increase of 32,149 were enrolled, with 1,917 schools, which is about 57 pupils to a school; indicating that notwithstanding the schools increased 474, the facilities were not too great to accommodate the increased enrollment." The summaries show a corresponding increase in average attendance, and improvement in every detail of school work. The female teachers exceed the males by 55, and the proportion is steadily increasing. "One reason is that women are more successful, and average higher as teachers than the men; another reason is, that they are as a rule paid less for the same work." The beauty of this fine pair of reasons is appreciated by Mr. Farr, who says, "This may seem to be economy, but is a disgrace to justice, and ought not to exist."

From the Peabody Fund, the State received last year, \$6,775; viz.: \$2,275 for scholarships, \$500 for Hampton, \$2,000 for the Farmville Normal School for white girls, and \$2,000 for Teachers' Institutes. Of these have been held five, three white and two colored; and all attended and successful. At the Danville colored Institute "the attendance was so large and regular that it surprised the most sanguine; the enrollment was 175, representing 19 counties, the largest, with one exception, in the history of colored institutes in the State. The most unbounded interest was manifested from the beginning." Among the eight names given honorable mention, "some in every way remained during the entire session and displayed marked ability," we notice with pleasure the names of three Hampton graduates; viz.: Wm. F. Grasty, Danville, Va., A. B. White

Whitlock, Halifax County, Va., and Amaza J. Drummond, Lexington, Va. Of the colored institute at the Virginia Normal and Collegiate Institute, the report says, "The enrollment was 137, and a more energetic, cheerful and devoted body of teachers was never convened in this land."

The need of more schools is strongly urged. The report shows that to give all the children of the State equal school facilities, 1,095 more schools are needed, 529 white and 566 colored, or a total of 7,670 schools in the State. The attention of all who favor fairness is called to the discrimination made in many districts and counties against the colored children. The tables show that they are not accorded equal school facilities, that there is an average of 128 colored children to each school opened for their accommodation, and only an average of 70 to each white school. The statistics also show the "startling fact" that even now, only 56 per cent. of the white school population, and only 41 per cent. of the colored are enrolled in the public free schools, and that the percentage of average daily attendance is only 33 for the white and 23 for the colored.

A very interesting feature of the school census taken last year, is that, by Mr. Farr's wise interpretation of the law, it takes account, not only of the school population between the ages of five and twenty-one, but of children from one to five. As Mr. Farr truly urges, "This is of the greatest importance, for, unless we know the number of children under the legal school age, how can we with prudence arrange for the constantly-increasing demands for the children who year after year arrive at the legal school age?"

"By these statistics we find that the illiteracy of the white school population between five and twenty-one years, is 30 per cent., and that of the colored 53, and if we include the population under five, we find that there are 464,200 whites, and 349,751 colored, making a total of 814,331, under twenty-one; that of this number, 225,062 whites, and 227,911 of the colored population under twenty-one years of age cannot read." "We know of no way to generally remove the illiteracy of our adult population over twenty-one; as a rule that will stand as a canker in the body politic, a source of much danger to the State. But there is every reason why the State and nation should remove the illiteracy from our young generation. The safety and progress of the State and nation demand this, to say nothing of humanity and religion. It is not remarkable that the illiteracy of the colored school population is so much greater than that of the white. When we remember that in this State, they have only had the advantage of some fifteen years school facilities, their progress is wonderful, deserving of the highest praise, and shows conclusively that they have the capacity to acquire an education, and all they need is fair school facilities."

The census further shows that "a large majority of the parents in the State are natives of the State, and that the farmers exceed all other professions by 22,690."

The report contains also the record of the interesting proceedings of the third annual conference of the superintendents and principals of public high schools of the State, held at Richmond, an account of an educational Reading Association started for white teachers, an account of the State educational exhibit at the New Orleans Exhibition, a number of historical sketches of the progress of schools in the various counties, many of them quite interesting, and the official annual reports of the Virginia Military Institute, the Agricultural College at Blacksburg, the Normal School at Farmville, the Virginia Normal and Collegiate Institute at Petersburg, and the Hampton School.

This report is the last in Col. Farr's term of office. It would be difficult to

find a more faithful, devoted and efficient officer than he has been for these four years in his laborious and important office of State Superintendent of schools.

THE TWILIGHT CLUB of New York is a unique institution. It has no fees, no constitution, no by-laws, no president or other officers except a secretary who like the Mikado's Lord High Executioner, seems to combine all necessary executive powers in his own very efficient person; arranging the dinners, and the speeches, supplying the topics for discussion and much of the wit, his own or others' which he summons and sits up. Its inspiration was Herbert Spencer's speech on the "gospel of relaxation." Its members, all hard worked young men from every profession and many occupations, meet once a week, dine together at six and go home at nine or ten to their families. The intervening hours are spent in lively discussion of some subject of the times, or "shop talk" from various members on the methods or experiences of their various specialties. The dollar each one pays for his dinner is the only expense to his pocket for all the entertainment including, the feast of reason and the flow of soul. Its success is attested by a three years vigorous life and a membership now of over four hundred all told, with an average attendance of about fifty. Sometimes they are invited to bring their wives with them. No wife certainly need be jealous of a club where "water flows like champagne" and wit without the inspiration of wine. The *menu* themselves are literary curiosities, and the condensed report of "Ninety Dinners" is a palatable reading. We are not surprised that the grateful diners have combined to show their appreciation of their indefatigable Secretary, Founder, Prime Minister, Lord Chancellor, etc.—who by the way, is Mr. Charles F. Wingate, sanitary engineer, whose expert services have contributed to the sanitary improvements at Hampton Institute, and whose voice has been heard in the club meetings in the interest of Hampton—by surprising him with the present of a wonderful *necktie*, constructed of six one hundred dollar greenbacks, with a scarf pin designed from the badge of the Club. We congratulate Mr. Wingate, and wish there were a Twilight Club, with as efficient a secretary in every city.

"LIBERIA—SOME IMPRESSIONS OF ITS CLIMATE, RESOURCES AND PEOPLE, FROM PERSONAL OBSERVATION AND EXPERIENCE," is the title of a small volume recently published by Mr. T. McCants Stewart, formerly professor of mathematics in a South Carolina State Agricultural College, and late "general agent for industrial education in Liberia." It has an introduction by another representative colored man, Dr. G. W. Samson, and is made attractive by good printing and some illustrations. The principal facts in the history of the American-African Republic, with Prof. Stewart's own impressions of its present condition, prospects and hindrances, its best policy and ultimate destiny, are put together in a readable way, calculated especially to interest and assist those who contemplate emigration to their mother country, Africa. The difficulties in their way are too clearly told to inspire much enthusiasm, and Prof. Stewart has no wish to induce any general exodus, feeling that the desirable emigrants for Liberia are those who have intelligence, education, industry and some capital. Just these naturally are most likely to be contented with the position they have attained here, unless they become persuaded that the qualities which have gained them their present advantages will carry them further in Liberia, or they are inspired with a sentiment of patriotic or missionary devotion to the land of their ancestors.

## A School Among the Pi Utes.

Miss Elizabeth Peabody, the well known enthusiastic friend of the Indian, sends us for publication, the following clipping from the Boston *Transcript*, giving an account of a visit to a school taught by the "Princess," Sarah Winnemucca:

LOVELOCKS, Feb. 25th, 1886.

Miss Peabody—A few of the principal residents of Lovelocks, having heard so frequently of the Pi Ute school and the aspirations of the princess, concluded, after a little cogitation, to verify in person the truth of these prodigious reports. As a few of the party were unable to attend during the week, the children were kindly retained on Saturday for our enjoyment.

The site of the school building is about two miles from the town, and so unpretentious is it in appearance that a stroller would look upon it as a quiet, rural home instead of the labor field of your worthy beneficiary. When we neared the school, shouts of merry laughter rang upon our ears, and little dark and sunburnt faces smiled a dim approval of our visitation. After a brief conversation with the princess, we seated ourselves comfortably, evidently feeling that

"Come what come may,  
Time and the hour run through the roughest day."

Speaking in her native tongue, the princess requested the children to name all the visible objects, repeat the days of the week and months of the year and calculate to thousands, which they did in a most exemplary manner. Then she asked them to give a manifestation of their knowledge upon the blackboard, each in turn printing his name and spelling aloud. It is needless to say, Miss Peabody, that we were spellbound at the disclosure. Nothing but the most assiduous labor could have accomplished this work. But most amazingly did I rudely stare (and most of our party were guilty of the same sin) when these seemingly ragged and untutored beings began singing *gospel hymns* with precise melody, accurate time and distinct pronunciation. The blending of their voices in unison was grand and an exceedingly sweet treat. We look upon it as a marvelous progression, and so gratified were we that we concluded to send this testimonial containing the names of those present. In order that you may know of the good work the princess is trying to consummate. Considering that only six weeks have been consumed in effecting this much [It is six weeks since the house was completed, the school out of doors had existed longer, E. P. P.] we feel that any further assistance would be well deserved and profitably expended by Sarah. One of our party, Captain Cook by name, addressed the children upon the usefulness of knowledge and its power in the world. When the princess had made proper interpretation of this speech, their bright eyes seemed to say in response, we are, though still in the bud, the flowers of the coming dawn which perfume the golden mosses of the oak.

I remain very respectfully

LOUISA MARZEN.

## How Local Option Works.

We take the following interesting testimony to the benefits of local option no license laws, in the state of Maryland, from the columns of the *Local Option Standard* of Ashland, Va., which has taken pains to collect them.

Extract from a letter of the Hon. Geo. Wm. Brown, Chief Judge of the Supreme Bench of Baltimore City, of the date of May 11, 1881: "Beginning in Maryland with Caroline county, it has gradually extended over about half of the State with remarkably favorable results in diminishing drunkenness and crime, and promoting general prosperity, and morality. Wherever it has been adopted it seems to be firmly established."

The *Baltimore American* says: "It is substantial, valid, unmistakable reform. The evidence of this lies in the fact that in the counties where prohibition has prevailed, the people, even including those who originally opposed it, would not have it done away with under any circumstances." Rev. E. L. Hoffecker, of Cambridge, says: "The 'no-license' law is a success in Dorchester. A member of my church, running

## AND Hampton School Record.

VOL. XV.

HAMTON, VA., JUNE, 1886.

No. 6.

### Eighteenth Anniversary of Hampton Institute.

It has passed into a proverb at Hampton that "this anniversary is the best one," at least that in the flush of its special enthusiasms, somebody will be found on every occasion to express such honest conviction before the day is over. This year, we thought beforehand, would be an exception to the rule, with a graduating class less than one third as large as usual. We thought so still more when the day dawned dull and lowering, and the threatening clouds soon destroyed all hopes of that fair show of sky and sea and shore which has come to be known as "Hampton commencement weather." That the accustomed declaration was heard at least once before the close of the exercises, speaks well for the successes which veiled the deficiencies.

In spite of the showers which deepened the green of leaves and the glow of petals while suppressing all attempts at similar gaiety in human apparel, larger numbers than last year, assembled early to attend the exercises; and these were carried out according to the following programme:

#### MORNING EXERCISES.

##### INSPECTION OF STUDENTS' ROOMS.

At half-past eight o'clock.

##### INSPECTION OF STUDENTS IN RANKS.

At half-past nine o'clock.

#### INDUSTRIAL EXHIBIT OF THE SCHOOL.

In the Stone Memorial Building.

##### THE NEW MEMORIAL CHAPEL.

Dedicated, at ten o'clock.

Sermon by the Rev. Mark Hopkins, D. D.

#### AFTERNOON EXERCISES.

##### MUSIC.

SALESTRY: "My Childhood and Womanhood."

Susan La Pléche, One of the Hampton Yearling Girls, Graceland Class.

"My Childhood and Womanhood."

Annie B. Hunter, Bates, N. C., Grad'g Class.

"Practical Education for Our People."

Thos. N. Baker, Wallington, Va., Class of '85.

##### MUSIC.

"The Colored Child, Since 'Twas, Graduating Exercises."

Charles Pickett, Since 'Twas, Graduating Exercises.

"The Steeple Orphanage."

Annie B. Hunter, Chatterbox, Term, Class '85.

"Indians of Today."

Recitation in Costume, Indians of various classes.

"Old and New Virginia as a People."

Rev. Wm. Thornton, Hampton, Paviors Class.

PRESENTATION OF DEMOREST MEDAL.

HALLUTAN CHORUS.

"A Rejoice and An Oath."

Mr. R. H. Hamilton, Hampton Institute, Va., Class of '79.

"My People."

Daniel Fire Cloud, Since 'Twas, Crows Creek Agency, Ind. Class.

Interpreted by Alex. Bates, Bates, Va. Class.

VALUABLE: "My People."

Martin Woodlin, Since 'Twas, Graduating Class.

##### MUSIC.

PRESENTATION OF MEDALS TO GRADUATING CLASSES.

By Rev. M. E. Storer, D. D., Vice-President of the Board of Trustees.

The parties following their leader on the

rounds of inspection of rooms, found every

boy standing in soldierly attitude beside his

bed, ready to give the military salute to his

officers and then to smilingly answer visitors' questions and show them the characteristic decorations of his room. Such

wonders in the way of bed-making, some

thought, are seldom seen. Some had added

carpets, curtains, pillow shams, pictures,

book shelves and brackets of their own

manufacture, that gave their rooms a very

home-like air. One favored young man had

decorated his pillow with a beautiful bunch

of roses, let us hope without thorns. Hurrying

from their rooms at the bugle call, the

boys formed in ranks and were inspected

by as dauntless a phalanx of visitors between

the first drops of a shower.

#### INDUSTRIAL EXHIBIT.

The Industrial Exhibit was certainly one

of the successes, fuller and more artistically

arranged perhaps than ever. Tall sheaves

of grass and grain, masses of rich clover,

burly cabbages and asparagus, eggs four

inches long, strawberries with three bites

to a berry, showed something of the

condition of the Home and Hemenway farms.

Farm carts and wagons stood outside the

door the work of the wheelwright and black-

smith shops, whose table within was strewn

with mysterious hoes, chains and pincers,

and a variety of articles whose utility and

harmlessness had to be taken on trust by

the uninitiated, and whose uses suggested

only thumb-screws, gags, and similar

instruments of torture. Above this table and

in the wood-working department, hung

creditable specimens of mechanical drawing, a class in which was started a year ago. A model yacht in full sail suggested that Hampton had added ship building to its industries and arts, but it is the work of a very young builder in the carpenter shop on the order of a very young capitalist in Boston and destined to brave the billows of the Fog Pond on the Common or as peaceful waters.

A new feature in the exhibit is that of the Technical class described in another column, which, with only a few weeks experience, made brave display of its crude but hopeful achievements. A very pretty exhibit was that of the carving class which has made good progress. A beautiful desk, the work of its teacher, was the chief adornment, but there were also very pretty boxes, shelves, bread-boards, alms-plates, paper knives, and other articles carved in relief or intaglio, the work of colored and Indian girls and boys. There was also the usual display of native Indian art in pottery, painting, bead work, etc. The cooking class should be included in the art exhibit. One beautifully frosted cake showed the knife thrust of some enquiring visitor who doubtless wished to assure himself whether the material was marble or sugar. The Knitting Department succeeded as usual in being ornamental as well as useful, offered everybody the mitten and varied the somewhat monotonous character of its productions by a show of hands upon the wall in the decorative style of an armory or the Church of the Eleven Thousand Virgins in Cologne, with thumbs turned up and down, and fingers pointing to every quarter of earth and sky to form the monogram of the H. N. A. L. and other rare and beautiful devices.

The Tailoring and Shirtmaking department made its usual display of school uniforms and other suits, and shirts of all styles which, neatly laundered, illustrated more than one hatch of the students in the industries. The Indian girls had their special table of nicely made and washed and ironed garments. The Shoe and Harness shops made a good exhibit of boots and brogans, belts and bands and the like, of qualities varying with the demands of Back Bay and the Plains.

Amid the shining show of tin cups and coffee-pots for Indian agencies, a splendid revolving squirrel-cage made vain appeal for the sympathies of a Holman committee for the untamable child of the wilderness destined to pant in its treadmill, and sigh for his original barbarism, unmindful of the weathercock pen suspended over his head. The Huntingdon Industrial Works gave a more hopeful lesson in evolution, the civilization of a wild pine tree; first, the raw material, the log three feet in diameter, from the great sawpits; then the round, unseasoned board; then the seasoned, planed and matched ones; tails and boxes for the "refuse," strou beams to hold up the house; panes, doors, window frames, tables and chairs for its uses; delicate turned work and scroll work for its adorning, with the crowning beauty of the finished, worth more than the whole log from a small part of which it was made, since labor and skill make value, is American citizenship a squirrel-cage, or a temple into which all the trees of the forest can be wrought for strength and grace?

#### DEDICATION SERVICES.

At ten o'clock a thousand people at least assembled to listen and to take part in the dedication of the beautiful new Memorial Chapel. The school choir was massed in circular seats behind the reading desk on the platform, the rest of the school in the side blocks of seats, the visitors occupying the centre. Appropriate hymns were sung and the opening prayer was made by the Rev. Mr. Holmes, a colored minister from Richmond. The sermon was preached by the Rev. Mark Hopkins, D. D., of Williams town, Mass., ex-president of Williams College. It will be found in full on another page, and will also be printed in pamphlet form. The noble presence of the beloved and venerable man seemed itself to bring a benediction to the place, and links its future to the hallowed past. The dedicatory prayer was made by the Rev. Dr. Strieby, and the house was thus offered and set apart to the service of God. The service was concluded with Handel's Hallelujah chorus, sung by a large chorus of students,

the whole school joining in the full harmony. It was rendered with a precision and effect remarkable considering the short time they have been practising together and the difficulty of training in the intervals of study and work such numbers, many of whom do not read music. Great credit is due to their trainer, Mr. Rathbun, band master at Hampton Institute.

It may interest friends who have not seen the new Memorial Chapel to hear that it is a very perfect specimen of Italian Romanesque architecture, built of brick, a hand some red brick outside and cream colored brick within, filled in with brick made on the grounds. The great arches are upheld by massive stone pillars, the seats so arranged however, that very few do not command a good view of the platform. They and all the wood work are of yellow pine and made on the place. The windows are of "cathedral glass" in gilded panes and border and inner circles of graceful design in blue and yellow. A light here story added greatly to the effect, which as a whole, is one of most perfect and quiet harmony, an atmosphere of worship and peace. The room will seat eight hundred at least very easily. Let no one think that this perfection of square tower one hundred and fifty feet high will have a chime of bells and an illuminating clock whose light will be visible beyond the Cape. A spontaneous gift, it is a noble memorial to the benevolent man who departing wished to leave blessings behind him, and the generous giver who is carrying out that wish beyond any mandate. Let no one think that this perfection of beauty in the house of God is thrown away upon these Negro and Indian youths. With reverent natures open to religious impressions, its simple beauty of outer adorning of simple form, where there are no shams, but every part is and does what it seems to be and do, we believe will have salutary effect. It is fitting and fortunate that the most beautiful building on the grounds, central to the front, should be one specially set apart for the worship of God. The afternoon exercises were held as usual in the gymnasium, which was also to a memorial Mr. Frederick Marquand, who gave it in his life time to the school.

On the Washington boat and U. S. steamer Dispatch had arrived in the morning, ex-Secretary Teller and Mrs. Teller and members of the Committee on Indian affairs of both Houses, Senator Maxey of Mississippi, and Representatives Cutcheon of Michigan, J. H. of Missouri, Nelson of Minnesota, Perkins of Kansas, and Allen of Massachusetts, Libbey of Virginia and Haley, Delegate from Idaho, accompanied by Col. Irving of Kansas; Mrs. Burrows, wife of Representative Burrows of Cambridge, Mass.; Alice Fletcher, Miss Kate Foote, and other ladies. Among the other visitors were Mr. and Mrs. John Jackson Schultz of New York, Rev. Dr. Sabine, Mrs. Henry Rose, Mr. W. B. Lent of New York, Rev. Dr. and Mrs. Child of Washington, and Capt. Boutelle of the U. S. Coast Survey, Rev. Dr. Henry of Philadelphia, Rev. Mr. Holmes of Richmond, clergymen and prominent citizens of both races from Norfolk and Hampton, officers from Fort Monroe, Mrs. Barrows of the *Christian Register* represents also the Boston *Journal*, Rev. John Harding of the Springfield *Republican*, and representatives of the press from Norfolk and Hampton, besides our trustees, Rev. Dr. Strieby, and Mr. Chas. Meade of New York, Mr. Robert Ogden of Philadelphia, Rev. Dr. McKenney of Cambridge, and the State Curators Col. Thomas Tabb, Hampton Va., Rev. J. William Jones, D. D., Richmond Va., Gen. R. L. Page, Norfolk, Va., Rev. Wm. Thornton, Hampton, Va., Rev. J. H. Holmes, Richmond, Va., Rev. W. G. Alexander, Portsmouth, Va.

The opening prayer was offered by Rev. Mr. Holmes of Richmond. The exercises were interspersed as usual with music, chiefly by the always favored plantation melodies. The Hallelujah chorus was also repeated.

The salutatory, which had been completed for as usual by a few of those standing well in scholarship, deportment and ability, was awarded this year to a young Omaha girl, one of the three sisters of Bright Eyes who are members of the school, two of them in the grade of classical studies, and these two a married woman whose husband has just gone West to prepare the home for her and start his farm. Gracefully welcoming the friends whose presence means so

much to the Indian and colored students she gave them a very pretty sketch of her Indian childhood and purposes for the future. This will be printed by request, with extracts at least from other essays of both Indian and colored students in the July number of the *Southern Workman*.

A pretty contrasting sketch of a colored girl's childhood and womanhood followed. The others of which we have not room here to speak in detail, were in the simple and honest strain which we are glad to observe is generally expected of the Hampton student's essays. Mr. R. H. Hamilton, one of the original band of Hampton singers, and for seven years connected with the school, now about to start in business for himself, gave a sketch of his life and work since slavery, and his hopes for his peoples' future. Rev. Mr. Thornton, one of the most respected colored ministers ever in Hampton, expressed his obligations to the pastors' class of which he is a member. The Indian speech of Daniel Fire Cloud, one of the Indian householders at Hampton, was heard with much interest. It also will be printed in our next number. The programme was further lightened by the recitation—albeit in rather solemn tones—of Miss Goodale's verses, by a row of Indian boys and girls who, in costumes which our Western visitors must have recognized, declared their desire to be civilized. The Indian young man who graduates this year spoke for the already civilized Indians, a specimen of whom he is. The valedictory, awarded like the salutatory, was well delivered by a young colored man of pure African type, from Philadelphia. He gave an interesting sketch of the mission work of the students' association among the needy in the neighborhood in which he has borne an active part.

The Demorest gold medal presented, as last year by Mrs. J. W. Demorest of New York, and awarded by the faculty to the Senior passing the best examination in Junior studies, was fairly earned by Susan La Flesche.

The young Indian salutatorian thus doubly honored, came timidly forward amid the thundering applause of her school mates and the audience, and stood with downcast eyes before General Cutcheon, who rose to meet her with the medal in his hand. "Were you too much overwhelmed to know what General Cutcheon was saying to you, Susan?" some one asked the next day. "I heard what he said to me," she answered, "but it seemed all like a dream—a happy dream, to judge by Susan's face. General Cutcheon said—"

"Miss La Flesche: Your principal, General Armstrong, in behalf of the teachers and trustees of the Hampton Institute, has done me the honor and given me the pleasure of presenting to you this token of appreciation. You have now finished the prescribed course, and passed the ordeal of your examinations, but this medal is not given to you for general excellence, but for the excellence with which you have laid the foundations, mastered those fundamental requisites of education which you must need. I understand, as I listened with great pleasure to your essay, that it is your intention, after leaving here, to study medicine, that you may minister to the physical and bodily welfare of your people, but as you go out to enter upon the more serious and exacting work of life, you will find that in the foundation work of life lies its crucial test. You will yourself become part of the foundation work for your people. But I know you already appreciate how great a thing it is to be one of the first women of your race to go out to lay its foundations. You must build yourself into their foundation. So I charge you that you regard this as your great duty, to make yourself a part of this work, to live for your people, to devote yourself to them for this world and the next. You will often feel lonely, but I charge you to remember that you are not alone, that in doing this duty faithfully you will always be with the majority. As another has forcibly said: 'One with God makes a majority.' Beneath you will be unseen arms, around you an unseen strength, and ever present with you, to uphold and sustain you, an unseen host. And I bid you, in this strength, and before this great cloud of witnesses, to go forth and build foundations go which your race can be built up securely and permanently."

Remember that these foundations are first, individuality—which makes us regard ourselves as men and women before regarding ourselves as a tribe or people. This betrays individual responsibility, and individual growth and progress.

[Continued on page 74.]

## Dedictory Sermon.

BY REV. MARK HOPKINS, D.D.

"What hath God wrought?"—Numbers xxiii, 23d.

When these words were uttered a great work had been wrought. The Israelites had been in bondage in Egypt. While there they had been the occasion of the ten plagues to the Egyptians. They had been brought forth with a mighty hand. The Red Sea had opened before them. The smitten rock had poured forth its waters. The manna had descended. The law—that marvellous law which is for all times and for all people—had been given from Sinai. The people had once reached the borders of the promised land, and because of unbelief had failed to enter in. They had then wandered in the wilderness for forty years till every faithless man had died, and now they had come again to that border, and their tents were pitched on the plain of Moab, eastward of the Jordan.

Overlooking that plain was Mount Pisgah. On the top of that were seven smoking altars, and on each of these had been offered a holocaust and a ram. Near these altars stood the King of Moab surrounded by his princes, and by his side stood Balaam, who had been sent for from the mountains of the East to come and curse Israel. Already had he once withdrawn from his hurried sacrifice to hear the message from God, and had returned with a blessing instead of a curse, had uttered the strange prophecy so strangely fulfilled, "So the people shall dwell alone, and shall not be reckoned among the nations;" and had expressed the wish, so often expressed since, "Let me die the death of the righteous, and let my last end be like his." With this the king could not be content, but said unto him, "Come, I pray thee, with me unto another place from whence thou mayest see them; thou shalt see but the utmost part of them, and shalt not see them all, and curse me them from hence." "And he brought him unto the field of Zophim, to the top of Pisgah." Thence he beheld them, the encampment of millions of men spread out before him, the nation brought out of bondage and of ignorance about to enter upon the promised land, and to take its unique and solitary place among the nations. Well might he then exclaim, "What hath God wrought?"

Yes, a great work had been wrought, and God had wrought it. Not by aspirations for liberty, or heroic strivings of the Israelites had this been done. It had been done in opposition to their craving for the flesh pots of Egypt; in opposition to their tendency to idolatry which led them to worship the golden calf at the very foot of Sinai, and despite the unbelief and cowardice of a whole generation of men who perished in the wilderness. As in all cases where men have been raised from a low condition, it was by an interposition from without and above themselves. God had done it.

And as the prophet, standing on the heights of Pisgah, and looking over the encampment of the Israelites could but exclaim, "What hath God wrought?" so may we, standing on these heights of time, and looking back over twenty-five years, and also looking at what we now see around us, make the same exclamation. Thus looking back, we see four millions of colored people in bondage in these United States.

The system of slavery had become organic. It was recognized in the Constitution, was imbedded in our institutions, and had become so intertwined with the domestic and social relations of the South, and with the trade and interests of the North, that its removal seemed impossible. Still, it was in utter contradiction to the sentiments of the Declaration of Independence, and to the spirit of our institutions. Accords of our political and social relations. Not more annoying was the presence of Moses and Aaron to Pharaoh than was the constant intrusion of this subject to the politicians in every political gathering, and to the religious and charitable organizations in their councils. It embroiled everything, Church and State, politics and religion, and scarcely were the ten plagues of Egypt more disastrous than were the disturbances and disagreements throughout the whole country from this cause. Of these disturbances and derangements the outcome was the greatest civil war the world has ever seen; and the emancipation of the colored people. Then this nation took a new departure under new conditions. In many respects there was deliverance to the master as well as to the slave. The slave, whether wisely or unwisely, was at once made a freeman with the right to vote. The Constitution was made to conform to the spirit of our institutions so that it could look the Declaration of Independence in the face and not blush.

New adjustments began to be made, new duties, new responsibilities, new possibilities, equivalent to the result of our institutions, and to the nation as a whole, and now, looking at what is around and about us, we may well say, "What hath God wrought?"

Yes, this work too was wrought by God. The train was laid by no human hand, and the result was not designed. There was no formal declaration of war. It only needed that Sumpter should be fired on, and the country was aflame. The war was to be transient. It was to last but thirty days. But there were forces in the air beyond human control. Every one felt that. Somebody delayed, and somebody hindered, and the war went on. It would not stop, it could not stop till the great crime of the nation had been atoned for by its best blood, and emancipation was proclaimed. The result was thus providentially from God; but morally, and more immediately it was from Christianity. It was from God as manifested in Christ. If Christ had not lived it could not have been done. Imbedded in our Constitution as slavery was in our whole system, it could have been thrown off as alien under no other religion. Mohammedanism would have perpetuated it. So would Brahmanism and Buddhism. Nothing but the idea of manhood as established by Christ, of the idea of man as in the image of God, as a person, as thus having rights, and of his value and destiny as belonging

ing to a moral and an eternal kingdom could have been the basis for the strong revolution that was felt against the system, that wrought for its overthrow, and is still working for the removal of its effects.

Again, if we look back over these same twenty-five years, we may notice a marked change in the attitude of the people and government of this country towards the Indian tribes, and also of the Indian tribes towards the people and government of the country. The history of these tribes from the first is a sad one. From the landing of our forefathers at Plymouth attempts were made to Christianize and civilize the aborigines. They were made by Eliot, and Sargeant, and Edwards, and Brainerd, and others. The American Board sent missionaries to the Cherokees and Choctaws with marked success. But in general the effect upon the Indian of his contact with civilization as it has pushed him westward, has been deterioration rather than elevation. The policy of the Government in recognizing them as independent, or quasi independent nations, has been supposed by many to be a mistaken one. Certainly, if treaties were made with them they should have been carefully observed. They were not thus observed; and because of this the Indian writhed under a sense of wrong. If we take with this the deceptions and abuses of unprincipled white men, always numerous on the borders of civilization, and for which the Indian has no adequate redress, it is not surprising that there came to be in large bodies of Indians a settled antipathy to all white men, and a sullenness bordering on desperation. Nor, if we add to this the fatal proclivity of the Indian for intoxicating drinks, it is surprising that there should have been treacheries and the most fearful atrocities on the part of the Indians, or that these again should have awakened a prevalent feeling among the whites on our western border that the Indians must be exterminated. The Government is making inquiries and devising means, and seeking to appropriate faithfully and in the most judicious manner adequate funds for their good. The whole nation is in a measure awakened to their past wrongs, their present rights, and to what is their need for their future well being. Indians, too, on their part, see the necessity that is upon them for a new departure, and are ready and anxious to send their children to school, provided for them.

What is to be the future of these tribes we know not, but we rejoice to believe that a brighter day is dawning for them, and in view of the changed attitude in which I have spoken, and of what has already been done, we may well say again, "What hath God wrought?"

Once more, standing on this ground, and looking back over only seventeen years, and then looking around us, do we say that a great work has been wrought.

Seventeen years ago next July the first public examination of this school was held. It was held at the part then taken by myself, and by Williams College. Through three men who were also its graduates, I should not be here to-day. Those men were General Armstrong, General Garfield, then Member of Congress, and Mr. Alexander Hyde, of Massachusetts. The school had then been under the charge of General Armstrong for one year and he had invited us three, together with the Rev. B. G. Northrup of the Connecticut Board of Education, and Mr. Alexander Hyde, of the Massachusetts Board of Agriculture. There were also present Mr. Strieby and the Rev. George Whipple, who represented the American Missionary Association which then had an important interest in the school. There were, of course, no general public was pressing, consulted earnestly with reference to the future methods and prospects of the school, and then the Committee provided for and adopted a report. That report gave an account of the location of the school, of its history, its object and plan, of its condition and prospects, and commended it to the favor and confidence of the public.

The work wrought here since that day has been threefold.

And first. A great preliminary work in providing buildings, and farms and implements, and apparatus has been done. At that time there were upon this ground but two dwelling houses, some soldiers' huts, an old mill fitted up for the purposes of the school, and the Butler School-house in the distance. Now, in addition to the two dwelling houses, there are forty-five buildings; twenty-nine for the Academic and boarding departments, and sixteen for the Industrial department. To be appreciated these buildings must be seen. Of those in the Academic department Virginia Hall, giving only the thousands, cost \$88,000; Academic Hall, \$37,000; Winona Lodge, \$30,000; Girls' Cottage \$15,000; Wigwam, \$11,000; and, omitting the others, Memorial Chapel, now to be dedicated, \$55,000; the whole amounting to \$329,000. Of these, the Memorial Chapel completes the circle, and is the last of buildings in this department that will be needed for years to come. Of this it should be known that the whole cost is from the estate of Mr. Frederic Marquand. It should also be known that it was not mandatory, and that Mr. Munroe, who would otherwise have received the money, has generously and gladly carried out the wish of Mr. Marquand. In the Industrial department, the Huntington Industrial Works cost \$25,000; and the Hemenway and Canebrake farms, \$20,000; the whole in this department amounting to \$45,000. Of the Industrial department it may be said that no one can go through it without surprise at the number and extent of its departments, and the perfection of its work. The interior of this chapel has been finished chiefly by the students; the me is true of the Gymnasium, the Hospital; and the work would do credit to mechanics anywhere. If it cannot be fully said of this department, as it can of the sawmill in the Huntington Industrial Works, that it furnishes the food that

keeps itself in motion, it does that very nearly, and in addition sends out skilled mechanics.

Again, a great intellectual work has been done here.

It was no small thing, when experience had as yet opened no pathway, and clamorous voices were heard on every side, each advocating a different method, to devise a system of education having for its objective point the elevation, up to the intelligence and industry and thrift required for self-support and average citizenship in a free republic, of a mass of people, ignorant, improvident, and unused to the demands and restraints of self-imposed work. This was to be done, and yet the education was to be so limited as to be practicable in point of expense, and so as not to disqualify by over education the teachers who were to leave the masses. Such a system, combining instruction in letters with manual labor in agriculture and the mechanic arts, has been devised, organized, and persistently maintained. It was not, perhaps, absolutely new in any one of its features, but it was a new combination devised with reference to a special work. This combination has vindicated itself by results, and has so far commended itself to the public generally that it is now beginning to be felt that the same method should be carried into our common schools as the best means of awakening interest, of training the perceptive faculties, and of gaining practical power.

The third form of the work is moral. I say moral, not as undervaluing the religious work, but because of its far-reaching tendency to diminish the generation that separates morally from religion, and which is among the most serious obstacles to the progress of the colored race. This superstition is not that of signs and portents that are supposed to relate to events in this world. It is what may be called a religious superstition, and the essence of it is to attribute efficacy to outward acts, forms, ceremonies, penances, emotions, that neither spring from love, nor improve the character. The universal tendency to do this indicates a wrong bias in our nature. True religion—the love of God and of man—is simple, rational, universally and necessarily beneficent. A child can understand and practice it. The wayfarer man though a fool can not err concerning it. But instead of this we see men seeking immunity from the consequences of guilt by outward acts and forms which they call religion, but which can only sink them deeper in degradation. The saddest part of history is that which shows a large portion of our race kept down and crushed by the reversed action of the very powers given to man for his highest elevation. These powers are the religious nature and the intellect acting in combination. Whatever heights man can reach he must reach through these. But what we seek is the intervention of men claiming to be priests fostering and perpetuating ignorance, and, with mingled fanaticism and cunning, organizing, in the name of religion, vast systems of superstition. Once established, these systems become sacred. The associations which ought to connect themselves with the worship of God in spirit and in truth are transferred to useless, or cruel, or unwholesome rights and forms. Through superstitious fears property is gained and service demanded, and humanity becomes a blind Samson grinding in its prison house. To uphold such a system, there is no violence or deceit to which men will not resort, and they are even in the name of the religion which was founded by the Prince of Peace, and whose essence is love. This form of superstition, to some extent prevalent everywhere, could not fail to be especially so among a people who retained many of the heathen traditions and customs, and whose religious teachers are often unable to read the Scriptures. To enforce it upon such a people that industry, honesty, temperance, purity, truth, are so essential a part of religion, that there is no true religion without them, is a great work, and one that must be done. To this work constant reference has been had in the instruction given here. The underlying and uplifting power of Christian truth as the only adequate support of a pure and all pervasive morality has been insisted on, and thus the influence of the Institution in this regard has been wisely extended.

As will be seen from the Report of General Armstrong, to which I ask special attention, there have gone out from this school, thus equipped and taught, five hundred and eighty-four who have taken the full course, of whom five hundred and fifty-five are now living. Besides these a hundred and fifty who did not complete their course have done good work as teachers, and hundreds have been benefited by a few months or a year or two at school. Of those who have taught the past winter two hundred and forty-two have been enrolled as public school teachers of Virginia. That is nearly half the number of colored teachers employed in the States, and an equal number can be taught in other States. By the best estimate we can make, colored graduates of Hampton taught the last year twenty-five thousand Negro children, and yet the school is still far from able to supply the demand for teachers. Of those who have not been taught in the common schools thirty have taught in the higher institutions, twenty-five have become ministers, ten lawyers, five doctors, a hundred have become farmers, or gone into business of various kinds, and forty have been made a good reward. One of the graduates have made a young woman, and among the best results of the school has been their influence upon family life. Of the whole number five-sixths are members of Christian churches, and it is believed are living right and respectable lives.

Turning to the Indians, we find that one hundred and eighty-nine who have been here from one to five years are now at their homes. Of these twenty-two have died, and hundred and sixteen have done very well, fifty-five fairly well, sixteen badly, from twelve

## SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October.

Printed on the Normal School Steam Press

by Negro and Indian students trained

in the office.

S. C. ARMSTRONG, H. W. LUDLOW, M. F. ARMSTRONG, } Editors.

REV. H. B. FRISSELL, Chaplain, Mr. W. N. ARMSTRONG, Mrs. ORRA LANGHORNE, MISS ALICE N. BACON, F. N. GILMAN, Business Manager.

Terms: ONE DOLLAR a year IN ADVANCE.

The "Industrial South" and "Southern Workman" Together for One Year, \$2.00.

Entered at the Post Office at Hampton, Va., as second class matter.

HAMPTON N. &amp; A. INSTITUTE.

Eighteenth Annual Report of the Principal, For the School and Fiscal Year ending June 30th, 1886.

To the Trustees of the Hampton Normal and Agricultural Institute.

Gentlemen:—The school and fiscal years, to close, the one June 15th, the other June 30th, have been on the whole satisfactory and encouraging. Numbers have slightly increased, but are still close upon six hundred; nearly one-fourth are Indians, and two-fifths are young women. All but twenty-three (day scholars) are boarders from abroad, representing thirteen states and territories; average age, 18 years. There are in the corps of officers, and instructors in class rooms and workshops seventy persons, teachers being about equally divided between the academic and industrial departments. For full statistics of attendance and other information I refer you to Miss Mackie's report as given below.

The work of the school is presented typically, an arrangement which, I think, offers fewer unnecessary details while giving a more rounded idea of the whole. Though many sided, it has run smoothly, and with more perfect organization, greater precision in the duties and relations of the business departments, and more careful supervision, it is likely to become a simple, easily managed system; much progress having been made in this direction of late years. I regret however a tendency to take too much for granted, and would urge the trustees to a closer scrutiny of the work, especially in the line of the duties directly assigned to them.

I will refer first to matters that are special to the current year, and to our pressing needs, then to the Negro and Indian questions in general, to Graduates, and lastly to the routine work of this the eighteenth year of the school.

## MEMORIAL CHAPEL.

The completion of our beautiful Memorial Chapel, a gift from the estate of the late Frederick Marquand, will, so far as I can see, bring to an end our system of large and costly buildings; for any additions which are likely to be needed from time to time, will be small and comparatively inexpensive.

Central to them all, the church expresses the Christian ideas on which the school is founded and to which it is forever dedicated. From its beginning in 1868 till now, while flying the flag of no sect, it has done for its students a special religious work, the fruits of which may be seen in many noble Christian characters, in self-denying missionary workers, in hundreds of men and women who have gone out from here to stand steadfast in the midst of terrible temptations, laboring not only in the public free schools of the South, but in churches, Sunday-schools, and societies of various descriptions, for the welfare of their people. Two have been missionaries to Africa.

On the 16th of this month services were for the last time held in the Chapel in the National Cemetery, built during the war for the inmates of Camp Hamilton Hospital, sometimes 10,000 in number. Outgrown, in decay, and in the way, it is after eighteen years of use as a school chapel, to be torn down and replaced, in a more convenient location, by a most beautiful memorial chapel. The liberality of this gift, its timeliness, and its architectural fitness, are equally happy inspirations.

That the dedicatory sermon should be preached by the Rev. Mark Hopkins, D. D., is also in accordance with the associations of the occasion. In 1869, as chairman of a committee of visitation, of which the late Pres't Garfield was a member, he wrote the first statement which brought this school, then in its second year, fully before the public. No man is better able than he to speak of the growth of this undertaking, for no man better understands the conditions which, from its inception to the present day, have controlled it.

## KING'S CHAPEL HOSPITAL.

From the proceeds of a fair held last fall by the young ladies of King's Chapel, Boston, a much needed and most satisfactory, one story frame hospital has been built and completely fitted up to accommodate sixteen patients. It is to bear the name of the church whose gift it is, but it will always have a special and tender association with a lovely life, whose last hours gave inspiration to the hands and hearts of those who worked the first sick of two races at Hampton might be cared for.

## A NEW CORLISS ENGINE.

The Industrial Department has been presented with a new and very perfectly built Corliss engine and boiler, the gift of Mr. Geo. H. Corliss of Providence, R. I. It will supply power for the Pierce machine shop, with iron and brass foundry and grist mill to be attached, when there shall be funds to furnish the needed outfit, for which about five thousand dollars will be required. Instruction in wood work is well provided for, but in iron and metals the opportunity is very inadequate. In view of the mineral wealth of the South and the probable future demand for Negro labor in that branch of industry, this need is important.

## TECHNICAL SCHOOL.

With a grant of one thousand dollars from the Slater fund, which covers about one half the yearly expenses and is expected to continue annually, a shop for Technical training in the use of carpenter's tools, was opened in March last in charge of Mr. Frank Colcord who supplemented six years of experience as a practical mechanic with a three months course in carpentry and blacksmithing in the Boston School of Technology and a two months course in bricklaying and plastering in the New York Training School. We are under obligations to Gen. Francis G. Walker, and to Col. R. T. Auchmuty for their kind interest and aid in this matter. Ten benches are fitted up completely with carpenter's tools, and lessons of two and a half hours are given to classes of from six to ten, including both young men and young women, the latter entering into and appreciating it quite as much as the former. The practice is good for both and has been much enjoyed, though some allowance must of course be made for novelty. The entire Senior class of fifteen has two weekly lessons, sixteen Indian girls have each a weekly lesson, and eight Indian boys have four lessons a week. All are taught to use the hammer, the plane, the saw and chisel, also the principles of simple housebuilding and how to make useful articles for home or school use. Blacksmithing will be introduced next year and bricklaying and plastering during the summer.

The work is far from perfect; but it admits of high development and will

keep pace with the demand of the two races for advanced technical training; our industrial system in its present shape affords it an excellent basis for future growth. During our first year ten hours a day are given to productive labor in order to pay personal expenses and earn funds for future school needs. From this the only alternative is the unwise one of charity, and we press always the labor course upon our students, finding that they also gain from it much in skill and strength of character. During the last year they are taught the use of various tools to make them "handy" and efficient in the various exigencies of their struggling lives, and while in this technical training nothing is earned, much is learned. Some will apply for a higher grade of instruction and should have it.

## STEAM HEATING.

For two years a Committee of the Trustees has been studying the best method for heating the two and a half millions of cubic feet of space in our dwellings, for cooking the food for our six hundred boarders, and for supplying the six steam engines used in the laundry, for pumping, in the printing office, barn and shops. Of the two sets or "nests" of boilers now in use, one is nearly worn out; the plan is wasteful of fuel and labor and increases the risks. Economy and safety demand the concentrating of all boilers in one place, which only one central fire for all purposes for twenty buildings. The gas works should also be moved to near the same point. To carry out this plan will require, besides a new 120 horse power boiler, not less than two thousand feet of large steam supply pipes, eight or ten inches in diameter at the start, with twice that length of laterals, wholly outside and underground, to reach the buildings, all of which however, except the church and hospital, are already piped. With some saving from pipes already laid, the cost of the new plant will, I think, be not less than ten thousand dollars. The action of the Committee in mapping out and initiating the work to provide for all prospective as well as present needs is submitted for the approval of the Trustees and for the especial attention of the friends who have, in times past, so cordially responded to the necessities of the school.

## STEAM FIRE ENGINE.

In this connection I must refer to the need of a steam fire engine of the second class, the cost of which, including freight and new hose, would be \$3,500. While there are \$260,000 of insurance in the best companies on our forty buildings, and many precautions are taken by way of well placed barrels and buckets of water and "extinguishers," a fire brigade and by watching, yet the school is liable to incalculable injury by fire. The extent of our risks, the height of our buildings and the large force of students always at command, justify, I think, a large sized fire engine that would ensure the safety of adjacent buildings should any single one take fire. I hope for early relief from anxiety in this matter, and am happy to say that measures to obtain a new engine are now being taken.

## Expense and Endowment.

The amount to be annually raised for the support of the school by contributions, exclusive of any public or regular source of revenue, is about fifty thousand dollars. The annual cost of the school for the past three years has been nearly the same and I expect no material increase of it in the future. The chief expense is that of giving six hundred pupils instruction from books and in the practical arts of life. The entire corps of seventy officers and teachers, having cost last year \$42,433.00. There is a loss or actual burden of 25 per cent. in the \$44,000 worth of work for which students are annually credited, and this must continue so long as instruction is as much regarded as production. This includes all loss from non-productive labor. Add to this loss of

\$11,000, the yearly cost of repairs, minor improvements, insurance, and incidentals, say \$12,000, and we have a total annual cost of about \$65,000 towards which we receive regularly ten thousand dollars a year from the State of Virginia and five thousand from interest on invested funds. The \$167.00 paid by the U. S. government for each of 120 Indians meets the cost of their board, clothing, books, etc. Negro students pay their personal expenses chiefly in labor, having been charged last year \$53,973.92 of which \$44,085.31 were paid in labor, \$4,780.66 paid in cash, \$2,723.36 cancelled by beneficiary aid, and \$2,286.59 transferred to ex-students' account to be paid up by them after leaving school. In this respect there has been steady improvement. Not over fifty per cent of their debts are bad.

By efforts which perhaps can not always be kept up, the school has aided its way and out of debt. To relieve in part the present strain of raising funds and to give the institution a basis for the future, I believe that a General Endowment Fund, of five hundred thousand dollars, should, if possible, be secured, the interest of which should be applied primarily to the general expenses of the school and to backing up the Industrial Departments which so largely give character and value to this work.

This would leave the field open, as it now is, for the scholarship gifts of seventy dollars each, which have annually yielded about twenty-five thousand dollars.

The constant personal effort and attention by way of visits, public meetings, etc., required to maintain these scholarships, and to make up for those who each year discontinue is likely to be relieved in time by an encouraging tendency to establish permanent scholarship foundations of fifteen hundred dollars each, the interest of which forever gives one student his tuition, leaving his personal expenses still to be defrayed by his own labor. Meanwhile our work for scholarships and other gifts helps in forming a public sentiment which is vital to the Negro and Indian questions, as it is to all questions which concern the people of this country. Gradually, I think, the work of educating the white race to its duty, which is the hardest part of our undertaking, should diminish, and my own personal energy and all our resources be then applied to these "despised races" who, hundreds of years behind us on the line of progress, need all the help we can give them, and like us, will always require strong and well-equipped institutions to fit their youth for the demands of American citizenship. There is no end to work like this.

## Of the Negro.

Parties are loosening, personal interest and influence are more and more decisive in political action. Reasonably well assured that he is secure in the rights he has so far attained, the colored man has in most of the Southern States no longer serious anxiety on election days. I think that, on the whole, the Negroes are less devoted than formerly to politics, which are becoming the specialty of a few, and that our black population is forming itself into strata. The highest, that is the best third or fourth, are progressing, gaining rapidly in education, property and character, while the lowest third or fourth are stationary in miserable conditions, or worse, still in slowly sinking into lower depths. There is a large well-behaved middle class, who take life easily, and work when they must; they are laborers and producers and add much to the wealth of the country, but lack ambition, are careless of the future and must be moved by forces from without, rather than from within. The hope for them lies in the good management of landholders and employers of every kind and in the lifting influences of a practical Christian education.

The earnest, capable school teacher can both directly and through their children, instruct in and inspire them to, better things. The graduates of Hampton and other institutions, dur-

ing the last sixteen years have proven this. The black race is strikingly responsive to the influences about it. Its condition in the South corresponds to that of the surrounding whites, it shares in their prosperity or adversity and has kept pace with the stronger race in the growth of "The New South."

The Negroes just now need *Light* more than *Rights*. In their darkness they are, especially in the far South, suffering untold evils from the credit or contract system, through which, partly by their own fault and partly from the advantage taken of them, tens and hundreds of thousands of them are kept in fixed and hopeless poverty harder to bear than their former bondage. Dismayed, they blindly seek some change and their restless movements from point to point result now and then in an "exodus," while there is always the possibility of some new development. Imposed upon by others, helpless under their own appetites and passions, they appeal to our sympathies more than do those who are literally blind, for we must never forget that they are in no sense responsible for their own ignorance. The recent temperance agitation under "local option" laws passed by various Southern states, Georgia leading, is a most hopeful sign. Experience has proven the success of prohibition in country regions, and the Southern population is largely in the country. While not hard drinkers, the blacks very generally drink, and keep themselves poor by the yearly consumption of the value of thousands of farms and homes. Today, they need emancipation from whiskey as much as twenty years ago they needed it from their task-masters, but I count upon prohibition only as one weapon among many which should be used in fighting this battle. It is not political pressure, but moral inspiration which will gain the day, and it is only as the former is used as a means to an end that I can give it my hearty support.

The movement in this state is active, and I trust for the reasons given that the influence of Hampton and its graduates will be potent for prohibition. By no means the least encouraging feature of this agitation is that it brings colored and white voters into friendly relations, the indirect good of which can hardly be over-estimated.

The nation which freed and enfranchised 4,000,000 of slaves, thereby creating most serious and dangerous political conditions, has felt its responsibility and has from time to time attempted to do something towards cultivating the intelligence and moral sense of its new made citizens. The "Blair Bill" is the last expression of this feeling and has failed.

Undeniably a better measure might have been prepared. Too much was asked for in too short a time, and this mistake gave some justification to the cry of "pauperizing the South." The fifteen millions given by northern charity for southern, chiefly Negro education, have had a tremendous mental and moral result. The three and a half millions of government money used by the educational department of the Freedmen's Bureau between 1865 and 1870, was the means of teaching a million black children to read and write. It did broad foundation work for the institutions which were to follow it, and, in my opinion, wise and legitimate means can be found for using national aid against that worst enemy of Republics, an ignorant population. The need of it for the enormous mass of illiterate blacks and whites is unquestionable; there is danger in neglect of them, and we who know what the trouble of the past has been, see the trouble ahead and feel that the worst is yet to come.

#### Of the Indian.

A better public sentiment is the sign of the times. The earnestness of the administration and the awakening of the people justify the hope of a wise solution of the Indian problem. With some differences as to details it is generally

conceded that citizenship is the end to be attained, through supplying its conditions, lands in severalty, law, and a good practical education to all.

Legislation through which the Indian may advance more rapidly in the next ten years than he has in the past fifty, may be hoped for, and the century of blunders will then be over.

There is no salvation in acts of Congress in themselves, but when certain important conditions shall have been created by the "Dawes" and other bills, the problem will become an executive one and the real work will take a fresh start, for already much has been done by missionary effort and by the few thoroughly efficient government agents who have been long enough in office to understand the conditions.

*Rights* for the Indian will be assured as soon as our legislators are ready to break his bondage to pauperism and degradation and treat him as a man. *Light* for the Indian will dawn not only as liberal appropriations for education shall be made, but as competent men and women shall devote their lives to teaching him to meet the requirements of Christianity and citizenship. Educators whose appointments depend upon political influence change, of course, with the change of party. So far the average time of appointees in the Indian service, has been, I think, about two years. It seems to me that, until the rules of the civil service shall be made to apply to those who are trying to help the Indian, no more can be expected of agents and teachers than has already been done, and while in the past, this in some few cases, has been of high value, it is still very far from what it should be.

From personal observation of the principal agencies in the Northwest and Southwest, I am convinced that a higher order of men in charge, with greater security as to their positions, is indispensable, if we are to make a success of the Indian's expected chance to have lands in severalty, and to become a man, and just here lies the shadow on the fair prospect.

The retention in the service of over twenty of the sixty Indian agents appointed by the last administration is excellent and hopeful, and there have been changes for the better, but the loss of some valuable agents is to be regretted.

Men, more than laws, have power for the good of the Indian, and men as much as measures should be the cry. Satisfactory legislation may be delayed, but under good agents thousands of Indians have been and thousands more may be placed on allotted lands, valid title to which must be sought from Congress till they are granted. The danger of losing all that has been done is a serious setback to all efforts on the reservations. Even the ration system, by aiding only those who send their children to school, affords a leverage in favor of education. But the trouble of applying this and other helps is so great that only the best and noblest men will undertake the infinite care of it, overloaded as they are by heavy and vexatious office and routine duties.

The only permanent and telling force in Indian progress has been one which is independent of the Government. The lifelong labors of men like Bishops Whipple and Hare, the Rev. Messrs. Williamson and Riggs and scores of others, including many of the Catholic faith and not a few noble women, have laid the foundation of all that is hopeful in the Indian of our country.

The work done for Indians in Eastern schools received a shock when a few weeks ago a Special Committee of the House of Representatives, after a thorough investigation, declared through their spokesman that all but a few now in government employ, of those who had gone West from Hampton and Carlisle schools, had relapsed into their former state, and even into worse barbarism, or words to that effect. I refer you to the statements of Miss Ludlow, given below.

Fortunately, she had made last sum-

mer a special two months' tour to ascertain the precise condition of each Indian pupil who had returned from Hampton to Dakota. The results were absolutely contradictory to those of the "Holman Committee." The reports of competent agents like Major McLaughlin and Major Gassman, in Dakota, and the personal observations of Revs. Messrs. Frissell and Gravatt of the Hampton School, confirm Miss Ludlow's statement. Our work for Indians is, I think, stronger for the attack on it. An unexpected friendliness was found in Congress and among the people. The liveliest interest is constantly kept up by letters to and from those on the Reservations, for we cannot watch them too closely.

I hope to go carefully over the Dakota field next summer. Some of our best results are in Indian territory, where our graduates as a whole are doing well; some of them very well.

This year's health record of our Indians has been most gratifying; they thrive in this climate, and on our food, and gain steadily. There has been but one death. Not a single serious trouble, and much mutual benefit has come from the mingling of 500 Negroes and 130 Indians since 1878; on the whole the school is better and stronger for it. It is a scheme for the civilization of two races who are both part of our nation, and as such deserves, I believe, a fitting support.

#### Of Graduates.

Detailed reports are made below, but as their record is the final test of this school's work, I summarize the facts:

*Of Indians*, one hundred and eighty-nine of them after a course of from one to five years returned to their homes as follows: 132 to Dakota, 12 to Nebraska, 4 to Missouri, 30 to Indian Territory, and 11 to Arizona; 25 a little over 12 per cent. have died. Of these 106 have done very well, 55 fairly well, and 16 badly; from 12 there is no report. This does not include 11 just returned to Dakota and 2 to Nebraska. They are employed as teachers, farmers, carpenters, blacksmiths, harness-makers, wheelwrights, shoemakers, teamsters and clerks. About half of them are in government service. A number are going to school on or off the reservation and 15 or more of the young are at home with their parents. The girls, one third of the whole, are teaching, or at home; ten have married well. The majority of our Indian graduates are steadfast, but many are fickle and changing. About a tenth are bad, but not one has become prominent in evil ways.

*Of the Negro Race*, five hundred and seventy six have, since 1868, taken the full course, of whom 522 are now living. Of these over ninety per cent. have taught school. To this number should be added at least 150 who failed to complete their studies but have done excellent service as teachers, to say nothing of hundreds whose few months or year or two at school have made them better men and women.

Of this effective force of 672, three-fourths (about 500) have taught the past winter, 242 being enrolled as public school teachers of Virginia; an equal number have, I estimate, taught in other states.

The rest are accounted for as follows: In higher institutions 8, in the government service as clerks and employees, 21; farmers, tradesmen and in business for themselves, 60; ministers, 17; lawyers 9; doctors 3; editors 5. A few have not been heard from.

Not all have done well; fifty have failed to make a good record. One third are young women. The intermarriage of graduates and the resulting home life are among the happiest effects of this work; 171 have married. The family is the unit of Christian civilization. The mingling of sexes in school has proved most satisfactory.

The great majority have acquired property. They have voted as they chose, but, as a rule, have kept out of active politics.

Five sixths of them are members of Christian churches; and are, I believe, leading right and respectable lives.

They are a power for good, a leaven that will leaven a large lump. I estimate that Hampton's graduates last year taught at the rate of fifty pupils to every school, 25,000 Negro children.

The public free school system of the South offers a noble career for the better class of colored youth; we are still far from able to supply the demand for teachers. Half of the year they are liable to be thrown on their own resources; hence the need of practical training to fit them to take care of themselves between sessions.

#### Work for the Current Year.

This is set forth in the following reports and descriptive accounts

I ask your attention to them as follows:

- 1st. Report of Miss Mackie, Lady Principal, in charge of Normal Classes.
- 2d. Report of Miss Richards, in charge of Indian Classes.
- 3d. Report of Miss Baldwin, in charge of Night Classes.
- 4th. Report of Miss Hyde, Principal of the Butler School.
- 5th. Miss Bacon's general review of the Normal and Night Classes and of the Butler School.
- 6th. Miss Gbodelle's description of the work and life in the Indian Department.
- 7th. Miss Ludlow's report on Indian students who have returned to their homes.
- 8th. Rev. M. Gravatt's sketch of his Christian teaching.
- 9th. Miss Kenwill's account of the social side of student life.
- 10th. Annual medical report of Dr. Waldron, School Physician.
- 11th. Miss Ludlow's report in detail on the industrial operations of the School.
- 12th. Miss Cleaveland's report on Graduates of the School.
- 13th. The Commandant's (Mr. Curtis) annual report on military matters.
- 14th. Rev. Mr. Frissell's report as Chaplain and Vice-Principal of the School on various sides of its life, but especially on its moral and religious work.

It is hoped that this presentation of the year's work will be clearer and more effective than that of previous years.

#### In General.

The following named gentlemen have been appointed by his Excellency, Fitz Hugh Lee, Governor of Virginia, as Curators of this Institution as a State Agricultural College, to serve for four years from January 1st, 1886.

The last named three are, according to law, colored.

Col. Thomas Tabb, Hampton, Va.

Rev. J. William Jones, D. D., Richmond, Va.

Gen. R. L. Page, Norfolk, Va.

Rev. Wm. Thornton, Hampton, Va.

Rev. J. H. Holmes, Richmond, Va.

Rev. W. G. Alexander, Portsmouth, Va.

Our relations with the State have been from the first, cordial and satisfactory. Since 1872 it has appropriated \$10,000 yearly to the School, this being interest on the Agricultural College Land Scrap Fund.

The Board of Education and County Superintendents have, without regard to politics, co-operated for the welfare of this work. I hope to repeat next month my trip of last June, giving the time, however, to the central and western part of the State, instead of the southern.

I found in Danville, Lynchburg, Farmville and Burkeville, southern men of both parties and color making common cause to bring about through popular education brighter days for this Commonwealth.

I regret the action of a portion of the community of Hampton in making ex-

traordinary, and, I believe, incorrect statements in support of the claim that they are oppressed by the industrial competition of this school, which has expended in this locality for labor, material and general purchases, not less, I estimate, than \$400,000.

The Normal School, Hygeia Hotel, Soldiers' Home and Fort Monroe, have, as a matter of fact, made this community prosperous, I personally, urged at Richmond, the appointment of the Investigating Committee which they asked for, which is to sit in June.

A narrow spirit in regard to enterprises, undertaken by "outsiders," has been an injury to some parts of the South, and must pass away before better information. I am glad to state, however, that the Hampton Institute has been generously recognized and appreciated by the majority of its neighbors.

A few important changes are expected in the corps of teachers. I regret exceedingly the resignation, in response to home duties, of Miss Charlotte L. Mackie, matron, who has been the longest in service of any of our lady workers. Her sixteen years of efficient care of colored girls in their living and work, and of the Students' Boarding Department, has been a noble contribution to the progress of the race. The loss of her services will be deeply felt.

The Rev. Richard Tolman, who, sixteen years ago, became Chaplain of the School, and after a successful ministry of seven years, resigned on account of his health, but has made his home here, and has done most valuable work, leaves this summer for a Northern home with the sincere regrets and good wishes of all who knew him. His wisdom, influence and work, will be much missed, as will be the members of his family who accompany him.

Thanks to the loyalty and generosity of its friends, the School may reasonably hope to pay its way this year and is out of debt.

Its workers approach the close of another session with gratitude for the past and with hope and faith for the future.

Respectfully submitted,

S. C. ARMSTRONG, Principal.

#### Normal School.

In anticipating the school work for the present session, 1885 and 1886, at the close of our academic year in June last, the question we asked ourselves was, "Shall we have a Senior Class?" We had just promoted to the senior year 34 young women and 28 young men with the injunction, "Go and teach one year before returning to your last semester of study at Hampton," and we felt a little uncertain whether our roll of students for the coming year would embrace more than the two lower classes, Junior and Middle.

In October, 12 of our former pupils, representing three different classes, answered this question for us by returning, some after several years of teaching, to complete their course and take their diplomas.

The enrollment given below shows a slight increase of numbers over last year, and as the present senior class is about one-third of the number we usually graduate the increase has been in the lower classes, including also the evening and Indian Schools.

#### NORMAL STUDENTS.

Young Women.	Colored.	Indian.	Young Men.	Colored.	Indian.
Senior Class, 4	2		Senior Class, 8	1	
Middle, " 52			Middle, " 82	10	
Junior, " 86			Junior, " 69	10	
Indian Sch., " 39			Indian School, " 59		
Night, " 72			Night, " 144	4	
			Pastor's Class, 20	1	
	214	50		329	83
Total, 264			Total, 412		
			Grand total, 676		

Greatest number enrolled at one date,	628
Smallest number enrolled at one date,	573
Average attendance enrolled,	596

No name is entered in the catalogue of a student connected with the school for less than one month.

Our record of attendance for the present year has been the best we have ever made. Owing to the unusually fine fall and winter, and with no sickness to speak of either among pupils or teachers, the attendance enrolled has been as follows: The highest number at any one time, 628; lowest, 573; average, 596; while the daily average in the school-room has been 98% of the total number enrolled. Such promptness in attendance not only ensures progress for the student, but also the accomplishment of the work with the minimum waste of the teacher's strength. Hampton can afford irregular attendance in the school-room less than most of her sister institutions, owing to the industrial features of the school, which takes every student out of his class one day in five.

The number of teachers employed for strictly academic work is 32, 16 in the Normal, 9 in the Evening, and 7 in the Indian School.

The question is often asked us, "What do you teach your pupils?" I think our curriculum of study corresponds very nearly with what in Northern schools is known as the Grammar Grade, but as the large majority of our pupils will never have any chance for study beside what Hampton gives, we have introduced some higher studies, not usually found in a Grammar Grade, with the design of opening up lines of study that a bright student can pursue by himself later. Arithmetic and grammar are the two studies by which we grade our classes. We accept as students those who know very little of either of these branches, if they have got a good start in the very rudiments of an education, reading and writing. To an ordinarily bright scholar the education we offer is a thorough drill in arithmetic, written and mental, which for three-fourths of our pupils requires three years. To those who do complete a "Practical Arithmetic" satisfactorily in two years, we give in the senior year the choice of elementary algebra, or arithmetic continued in a higher text book.

A very thorough course in grammar, for two years is followed with a study of literature, English and American, also the literature of the Bible. Political geography for a year and a half is followed by Physical geography for half a year. Natural history is taught orally in the Junior Class with objects often of the student's own providing. This year there has been an unusual interest shown in this study, partly, perhaps, because the pupils have been able to study the organization of animals by dissection of subjects more than in previous years. When it came time to lay aside the study some 16 students proposed to continue it as an extra lesson, making time out of their recreation hours for three lessons a week. This study is followed by physiology, and later by the present philosophy for a year. The study of "Methods of Teaching" is taken up in the Middle year, and in the Senior the pupils practice teaching in the "Training School," which is connected with the Normal for this purpose.

Mechanical drawing and bookkeeping alternate with each other in the Senior year, and Civil Government and Political Economy follow each other as half-year studies. Recognizing that the true foundation for all education is the Bible, we make Bible Study a daily exercise for the Junior and Middle Classes, the Seniors, as stated above, take it in connection with their literature. Reading, writing and spelling, are also daily exercises throughout the course.

This is an outline of what we try to give our students in a three year's course; to many of them it is a work of four rather than three years. The fullness of the course in the limited time, has not unfrequently been questioned if not criticized by those who are acquainted with the catalogue. In vindication of the thoroughness with which we try to do our work, would say that our classes are divided into sections averaging about 30 students each. These sections vary very much in scholarship. They represent three grades. Owing to the sifting, or grading process, which is done for the whole school regularly three times a year, and which may be done at any time in an individual student, whenever a majority of the teachers so agree, these sections change very much during the Academic year, the object being to place each student where he, or she, will make the most progress. Take our Junior Class, for example, which is divided into six sections. The first, or best of these sections is made up mostly of students who applied

as candidates for the Middle Class, but fell a little short, in their written examinations, of making this class. The lower sections, on the contrary, are, as a rule, made up of students who have not had more than a few months of schooling and to whom the art of reading is still so laborious, and the struggle to pronounce the words requires so much attention, that but little idea of the meaning is gained. While the starting point for the six sections is the same, the ground covered by the year's work varies very much. For instance, in arithmetic we expect the two upper sections of this class to go thoroughly over Common and Decimal Fractions and Denominate numbers, that at the beginning of the Middle year they may take up Percentage, in which case they are able very nearly to complete the arithmetic in this year. The two next lower sections rarely go beyond Fractions. They represent a class of students who acquire slowly, will probably make their promotion to the lower sections of the Middle Class and eventually take the studies of this year twice. The two lowest sections of the Junior Class as a rule repeat that year. There it will be seen that only one third of those who enter our Junior Class pass through the three classes of the School with our conditions or repeating one year.

I venture to say few students anywhere have their time more fully occupied than the Hampton student. Rising all the year round at 5:15, they are ready at 7 o'clock to assemble in the various school-rooms for an hour and 20 minutes of study. This ended, a recess of twenty minutes follows, during which the boys fall into their military companies for inspection, and the girls go to some household work which is to help pay their school bill. From 8:40 to 12 they are passing constantly from one class to another. The noon recess which lasts from 12 to 1:30 has, during the winter, been the only time found available for classes who were anxious to learn to sing by note, and these gave readily 20 minutes of their recess for this purpose. From 1:30 to 3:45 the school is again convened for class exercises, every student having seven daily recitations. On its dismissal for the afternoon, the boys have military drill twice a week, and the girls a cooking lesson once a week of two hours each. The six o'clock supper is followed by Chapel Prayers and this in turn by another study hour from 7 to 9.

When the retiring bell rings at 9:20, I think there are few students who do not heed its summons promptly, thoroughly tired with their exertions, mental and physical, and conscious of having well earned the rest which awaits them.

To a people not accustomed to close intellectual effort such constant study would defeat its own aim by wearing out their physical strength, but here is where our industrial system comes to the rescue, and not only gives the needed rest and relaxation, but at the same time enables the student to help pay his board bill while it trains him in some useful handicraft. It is not uncommon experience to find many of our students stronger physically at the close than at the beginning of the year, undoubtedly the result of the regular habits of plain wholesome food to which they have grown accustomed.

There have been 31 Indians in the Normal Department this year against 21 last year. Some of these are in the highest sections of the several classes to which they belong and have made a very good record for scholarship. As a rule the Indians in this branch of the school have done well and made as much progress as could be expected of students who do not know well the language in which their text-books are written.

From the 62 boys and girls who were promoted to the Senior class in June last, we have heard from nearly all as striving faithfully to put in practice the teaching received at Hampton. All, except a few who were under age, succeeded in obtaining schools. Many are teaching on first grade certificates and a half a dozen, whose schools have already closed, have returned and joined the present Middle Class and are making good in the present school year.

Not until another year has passed can we report fairly on the success of the plan adopted by the Trustees in June, 1884, of requiring a year of teaching before graduation as a part of the Hampton course.

A new feature has been added to our work this year in a shop which has been opened to train both boys and girls in the use of the common carpenter tools. We have hardly made much more than a beginning, but there is an eager interest on the part of all to whom we have been able to teach a year of teaching before graduation and a half a dozen in the week learning to use tools, which will enable them to add very much to the comfort and conveniences of what in many cases, are the badly appointed school rooms in which their future work is to be done—to say nothing of what they can do in the same line in their own little homes.

MARY F. MACKIE, Lady Principal.

#### Indian School.

The Government appropriation for this year allowed Hampton 120 Indian pupils instead of 100 as heretofore. Besides the students who receive board and clothing from the Government there has been a variable number on the list of those supported by private charity. The first of November, just before a party of eleven returned to the West, we had on our rolls 142, including one boy in Mass. At present there are 127, 78 boys and 49 girls.

Among them are four married couples and three babies, eight couples having been here during the year. These represent the following tribes:

Sioux	77
Omaha	21
Winnebago	3
Arikaree; Gros Ventres & Mandan	3
Delaware	1
Comanche	1
Chickasaw	1
Oneida	1
Pottawatomie	4
Ab Shawnee	2
Chippewa	1
Wichita	1
Sac and Fox	2
Pima	1
Menominee	1
Shinnecock	2

Average age about 17 years.

Three new parties arrived during the summer, one from Nebraska, of thirteen Omahas and Winnebagoes, under the escort of Noah LaFlesche, one of twenty-two Sioux from Dakota with the Rev. Mr. Gravatt, and one from Indian Territory consisting of fifteen boys of various tribes, with Mr. Talbot.

In the fall a party of seven came from Ft. Berthold and Standing Rock Agencies, Dakota.

Since the opening of the fall term twenty-four have returned home on account of expiration of time, delicate health or some special reason. One only, a little orphan child from Cheyenne River, has died.

As will be seen from the Doctor's Report the health record has been remarkably good.

Quite a number of the new arrivals this year were able to enter at once the Normal course, with the colored students, who come with the avowed purpose of fitting themselves for teachers. To secure these advanced pupils from the Mission and Agency schools at the West, who have already stood the test of school life near their homes, and have shown special aptitude for study, or for the mechanical arts, should doubtless be one of the chief aims of Eastern schools. Thus a band of trained teachers and assistants will be prepared to reinforce the all-important work at the West. The long journey across the Continent is itself an education. A year, or even a summer, in an intelligent Christian home at the North gives these Indian children a draught from the very fountain head of our civilization, and it is in ways such as these we believe, far more than in a little more or less facility for mere book learning, that the importance lies of bringing Indians East. If ere long they are to be citizens of this country, should not their leaders at least, know more of it than can be gained from the camps of the West, or even its frontier towns and schools?

An escort of one of our parties, several years ago, seeing the amazement of their charges at a rough two or three storked building near the spot where they first took the railroad, delivered to the woman who acted as interpreter a glowing description of the architectural wonders of Chicago. Her eloquence fell flat; the latter translated only a few cold words to her auditors. On being asked the reason, the laconic response was, "You lie." But this same interpreter, on reaching the great city, buried her face in her hands when playfully reminded of her impeachment of the lady's veracity.

Taking out, however, the 25 pupils now in the Normal classes who work two days in the week like their colored classmates, and the 8 boys in the Night school, who from choice work all day at trades or farming, and study in the evenings, there are left for the Indian classes proper 87, 36 girls and 51 boys. These, with two or three exceptions, divide the day between study and work.

The Indian school is graded in seven Divisions, one of these, the Third, having been subdivided into two sections, the A section reciting in the morning with the First, Second and Seventh, the B in the afternoon with the Fourth, Fifth and Sixth. All study English, reading and arithmetic, the three algebra classes using Franklin's Elementary Arithmetic. For beginners Wentworth and Reed's number book has been found useful. The First Division, numbering 19, have been reading "Story of the Bible" with much interest. They have used Patterson's Elements of Grammar and Swinton's Introductory Geography. Some oral instruction has been given them in United States history, the

teacher narrating facts and stories and writing on the board events to be copied into note books, and memorized by the class.

The Second Division of 12 is following hard after the First, using now the same books with the exception of the grammar. Instead they have sentences to compose, and stories to write, these to be corrected by the teacher.

The Third Division of 17 have used Franklin's Second reader in the A Section, and the Book of Cats and Dogs, during part of the year, in the B. This gives some hints of natural history as well as easy reading matter. Their English studies consist of conversation, letter writing, etc., varied for a time by simple oral lessons in geography, illustrated by the moulding board.

The Fourth of 13 members read in Monroe's First Reader, while the Fifth, of 12, are in Franklin's First.

The Sixth Division, numbering 7, is composed of very young children, one speaking very little English, others using it with perfect fluency. They are reading in Appleton's First Reader. As a basis for conversation in their English class they take some of the Kindergarten occupations, a friend in the South having generously loaned the low table and chairs, while one in the North kindly furnished the Kindergarten gifts. The small fingers of our Brownies seem to take as kindly to moulding clay, and weaving gay colored papers as the fairer children of Northern nurseries.

The Division for beginners is the Seventh, with 7 members, some having come only last fall. They have been taught largely from the blackboard and by means of objects and actions. Appleton's reading Chart has been used and Prang's pictures for object lessons have been very helpful.

Much of the study hour work for our Indians is written out by the teacher on slips of paper or put on the board for them to copy. The need of school books better adapted to Indian pupils has been previously recognized in these Reports, Readers, no less simple, but more sensible, with stories better worth remembering, histories and geographies with hard words and involved sentences eliminated, and arithmetics with their examples in analysis more nearly within the range of our scholars' experience. At the same time we realize that only those skilled themselves in teaching Indians could well prepare such books, and if all Government schools were rigidly bound down to the use of a single set of books, however judiciously compiled, they might be hampered, and thus fail to produce the best results possible.

Longago Hampton answered, to her own satisfaction at least, the question, "Can the Indian be educated?" Another remains, "Can the Indian be the educator of his own race?" It has lately been affirmed on the floor of Congress that very little can be done in this direction, owing to the "absence of control" over his own people.

From our point of view, limited to be sure, yet good so far as it goes, we beg leave to differ from the opinion there expressed. We have found that some are so head and shoulders above the majority, that they are naturally hailed as leaders, and firmly and gracefully hold the reins of control over others.

This year an Indian boy in the Normal school, speaking English perfectly, an officer in the battalion, and one who has spent some time during his four years course among refined people at the North, has been janitor of the Wiygam, not only daily inspecting rooms, but preserving order, calling the boys roll at night, and conducting their evening prayers. A young Indian girl, who received her diploma at the last commencement, has taught two classes in the Indian school, and has had charge of the Winona dining room, where about twenty of the girls have taken their meals. During the summer, when most of the teachers are absent on their vacation, the help of our advanced Indians has been most welcome, several of them teaching in school, one of the girls running the Winona laundry, and one of the boys looking out for the evenings at the Wiygam. The work thus put upon them has not only been done but well done.

Constantly by these Indian boys and girls is expressed the wish "to help my people." We believe this thought, however crude in its conception, a powerful lever for uplifting these children, and from what we have seen and heard, we have the strongest hopes, that in not a few instances their aspirations will be realized, and they will go back, not only "to be ministered unto, but to minister."

JOS. PHILIP E. RICHARDS, in charge.

### The Night School.

At the opening of the term in October last, there were more than the usual number of applicants for admission to the Night School, but it was found that we had not the full force of strong, able-bodied men necessary for the heavier work required. In consequence of this, some of the two hundred applications which had been refused during the summer were reconsidered, but only in favor of those who were physically able to take such positions as were vacant in the saw mill and for the heavier farm work.

From this it will be seen that the class of work students is gradually changing; instead of the older and stronger men who were anxious to work a year or so, meanwhile learning what they could of reading, writing and arithmetic, we have, as a rule, a younger and brighter class who are more anxious to learn the various trades taught here. Some features of this change are very desirable, and as long as the counter-irritant of hard work is applied so effectually through the day, there is little fear that the overflow of animal spirits will be excessive enough to prevent good school work during the two hours of the evening session.

The attendance has been much more regular this year than for some years past, and the number dropped—39 this year against 53 during the same time last year—shows that the numbers have not been so fluctuating.

Total attendance,	220
Males (four Indians),	148
Females,	72
Number in school October 15, '85,	225
May 1, '86,	192
Males,	130
Females,	62
Average attendance for year,	190

Of the number now in school—53 were members last year. From this statement it will be seen how large a proportion of the Night School is new material.

We have had the same number of classes—eight—that we had the previous year, although during part of the time, the lowest class has been sectioned, as it was too large to be well taught by one teacher in the limited time of the evening session. The aim is to have each class number not more than twenty but with one or two exceptions they have all been considerably more than this.

Owing to an increasing conviction that what our students need more than anything else is a thorough drill in the foundation work, only two sections have been allowed to prepare for the Middle Class of the Day School as compared with three in the year. One class is pursuing middle class work, while the five remaining classes are taking the work preparatory to entering the Junior Class of the Day School next October.

The course of study has practically been that of last year. In all of the Preparatory Classes, the "Story of the Bible" has been introduced as a reading book, in accordance with the extended work of this kind in the Day School. Alternating with this, we have used "Stories of American History." In arithmetic they are simply prepared on the four fundamental rules, which is what is required for admission to the Junior Class. In language there is no prescribed limit, but just as much is done in this direction as possible, for in this subject, of all others, our pupils are most deficient.

A great deal of attention is paid to dictation exercises, considerable of the time for spelling being used in this way. For not only do the pupils learn correct spelling, punctuation and arrangement of their work, but they gain in mental discipline as well.

The Junior Classes pursue the same work that is laid out for the corresponding classes of the Day School, with the exception of natural history.

The members of the advanced class are required to read the text books of the Middle Class in the Day School, and while naturally the amount of work accomplished is much less, the aim is to have it of the same kind, and in two or three years to accomplish what is done in one in the Day School. Already they have had final examinations in United States history, common school geography, and the grammar required of the Junior Class.

In connection with this class, mention should be made of two boys who had been promoted to the Senior Class of the Day School, and who subsequently entered upon a four years' apprenticeship in the printing office. As there is no place for such pupils in the Night School proper, a course of reading and composition has been laid out for them, and as there is a probability that such cases will occur in the future, a Chautauqua Class has been proposed to meet the difficulty.

The work of the Night School has been done at far less disadvantage this year than in previous years. This is owing to two facts: first, the small amount of sickness

both among pupils and teachers; and second, the fact before mentioned, the regularity of attendance, which is in a large measure dependent upon the first. The mechanical drawing, which was only started last term, has been continued this year. One division of seven boys, who began last year, has worked entirely with instruments and in upon more advanced work; while the other division of eleven has been working at the foundation work of elementary problems. As only an hour and a half one evening in the week can be devoted to the subject, it will readily be seen that progress must be slow, particularly as the pupils have no knowledge of drawing before taking it up here. And yet, the class has been composed almost entirely of mill and carpenter boys, but next year it is the plan to include also all of the blacksmiths and wheelwrights and those belonging to the engineer's department.

The branch of the Night School at Hemenway Farm has numbered thirteen boys and two girls, which is about the usual number. These are included in the statistics given elsewhere. We have endeavored to "practice what we preach," in having the school taught by one of last year's Middle Class members. This year the teacher, who had complied with the regulation recently made regarding teaching before finishing the Normal course. This class has made satisfactory progress, and the boys seem to enjoy their life at the Farm, although their work there is hard.

Consistent progress has also been made in music. It is true that only two lessons of ten minutes each have been given, but these lessons have been improved to the utmost, owing to the zest with which the scholars enter into them.

As often as weather and other duties have allowed, the girls have gone to the Gymnasium Saturday evenings for a drill in marching under Major Boykin. They have thoroughly enjoyed, and at the same time it has been most profitable for them, as drill in walking properly and standing erect are very important for them.

Amusement has often been expressed that the work was able to accomplish what he does after an hard day's work. The only explanation seems to be in the fact that it is an entire change, and based upon one of nature's fundamental laws. It is true that a pupil is so fatigued bodily, as to be unable to overcome the weariness, and it is also true on the other hand, that an unusually ambitious boy will be overheard conjuncting a verb while hoeing in the garden, or perched on a fence watching the cows, will meanwhile furtively study his reader. These cases serve to show "how it is done," and also that our pupils are willing, literally, to work for an education.

Occasionally one of the younger boys expresses his mind to the effect that he has no time to play. This, it is to be regretted, is too true, particularly during the winter, and while our day remains only twenty-four hours long, and while all of those twenty-four hours are required for work, study and sleep, it remains a puzzling mental problem, how to extend the work of the evening session, and at the same time give opportunity for recreation, as the evening session is shortened to an hour and a half, and the students are not required to retire as early as during the winter months. That industrial education is becoming of more and more importance in the opinion of practical, thinking men, probably has occurred to but few of those who apply to learn trades here, but that they are worth more to themselves, and consequently to other people, they are beginning to see. And when they comprehend that honest work is mainly and womanly, and that something besides mere book knowledge is necessary to elevate their race, they have made a great step forward. That this lesson is being learned is shown in various ways, particularly by the unanimous verdict of those who have struggled through their probation as work students, which is, "I've never been sorry I did it," as well as by the graduates who frequently find that it is very convenient to know how to do something besides teaching school.

ANNA G. BALDWIN, in charge.

### The Butler School.

The Normal School owns the land and building, and nominates its teachers. The County Officers appoint and pay them.

With the first of October came the Butler children from 6 to 13 years of age tired of four months vacation and ready to take up work again.

The average number on roll during the county school was 300 with an average daily attendance of 280.

The children have been unusually regular in attendance and are here being very few cases of suspension or expulsion. For the last month (public funds being exhausted) the school has been a pay school, and an average attendance of 200 shows that many

care enough for an education to be willing to pay and work hard for it.

The long my experience with the Butler the more I am convinced of the importance of making it more of an industrial school. The majority of the children will never get through the Normal School. Many must go to work at fourteen or even before and others are not capable of taking the Normal course. If therefore they could be taught to do something which will make their service valuable, there would be more chance of their finding good homes and they would be able to earn honest livings.

The girls need the Kitchen Garden taught in the most practical way they need a cooking school that they may know how to cook and prepare the common articles of food, they need a sewing school that they may learn to make and keep in repair their own clothes.

What to do for the boys is more of a problem on account of the expense which industrial training for them would necessitate. I wish, however, that they might be taught to do something better than drive hacks, or stand around with their hands in their pockets doing nothing at all. It seems as if one day in the week might be given entirely to industrial training for the older boys and girls. The trouble would be to make both parents and children see the importance of the step. Many of the former object to having their children in the "Kitchen Garden Class" because they think they are being made servants. Permission from the County Officials and their co-operation in enforcing the step would be necessary.

The usual Kitchen Garden class has been kept up during the year and I feel that it has done much for the few children who are in it. I wish, however, that twelve boys were seen waiting on the door and table so won the heart of one of the lady visitors that he was taken up North to do this work in a beautiful house just outside of Philadelphia. This answers the question sometimes asked: Is it practical to teach boys the Kitchen Garden?

The older girls have had lessons in sewing once a week, but this is not enough. No one teacher can give a sewing lesson to advantage to a class of forty or fifty girls. Each girl needs much individual attention, therefore industrial classes should be small. With a school as large as the Butler and with an insufficient number of teachers, just how to secure industrial training to the best advantage is considerable of a problem, the solution of which is of the utmost importance to the swarms of colored children growing up around Hampton.

ELIZABETH HYDE, Principal.

### Review of Class Work.

There have been few changes made in the schedule of studies since last year's report, and the school work would seem perhaps to a visitor to be exactly the same as last year, but each teacher can see in her own classes slight changes in the manner and matter of her teaching, and changes also in the manner and spirit of the classes that she meets. The pleasure of teaching lies in the endless variety of human nature with which the teacher is brought in contact, and the constant improvement that may be made by the teacher's experience in presenting the same subjects to different classes year after year. As a result of these two variations, it is scarcely any monotony about the work of teaching, even when the same subject has to be presented three or four times in one day. But though the work of teaching is not in itself monotonous, it is difficult in a report to show where the variety lies, or what advances are made in the work from year to year.

Perhaps as good a plan as any for showing what the work is that is done on the school grounds, will be to begin with the most primary grades, as represented by the Butler and night school, and to show just what preparation is given to students there who enter the Normal School, then to take up the successive years of the Normal School, and try to show what influences are brought to bear upon the students while in each year, and at the end perhaps to follow our graduates into the beginning of his work as a teacher in some little primary school among his own people.

In the new cruciform, wooden building called the Butler school house stands just at the point where the road across the school farm to the school turns off from the main thoroughfare from Fort Monroe to Hampton. Into this building at nine o'clock every morning, from Monday to Saturday, from October to May, the neighboring settlements of Slabtown, N. C. and Chesapeake City pour their swarms of yellow brown and black children. Some ragged and dirty, some whole and clean, all jolly and cheerful, they come gaily in when the bell rings and throng the benches of the school marching feet. This is the raw material, a material that has to be smoothed and sifted and sorted over before any portion of it is ready for the great machine at the Normal School to even begin to work on. With a bright student and

all circumstances favorable, the preparation so far as advancement in studies is concerned may be completed in four years. That is, after four full years of study at the Butler, a bright child would be able to pass the entrance examinations at the Normal School. The work so far as the primary branches, reading, writing, language, and arithmetic through long division are the only subjects required for admission to the Normal School, and these can be mastered sufficiently to pass the examinations in the first four years of the Butler course. But in spite of this fact the Butler is not a very large feeder to the Normal for the following reasons: Though the Butler child may have gone over the required ground, he is not fitted in other respects for entrance to the higher school. Students at the Normal School, though they take for the first two years only studies that belong to a grammar grade in our Northern schools, take them in such a way that an older mind is required for their apprehension than the child after the four years of Butler training possesses. The reasoning faculty of a child is not sufficiently developed, nor his power of application sufficiently under his control, for him to take up the Normal School studies even of the junior year in the way in which it is expected that our students will take them up. In the Normal School every student is expected, not only to take up a study so as to be able to recite, but to know the whole thing so as to be able to teach it. In addition to the fact that the academic part of the school requires adult minds in its progress, the industrial part requires strong, well-grown bodies. For these reasons mainly, no Butler child enters the Junior Class, but the advanced class. In the Butler takes the Junior work in two years, and so sends its scholars to make up the Middle Class in the Normal after six years of Butler training. This is the case with the brightest scholars. The duller ones more often take the Junior and Senior years of preparation. This is the process of polishing and sorting, intellectually, that goes on not only at the Butler but at every school that tries to send scholars to the Normal. They are sorted mentally and physically as well, by the years of training and discipline that they must have, but in a day school, the teacher's influence must be greatly outweighed by the home influences, and the homes from which these children come are too often influences for anything but goodness and purity in their lives. Hence, though they can be sorted, by sending away the bad, there is little hope that the school influence can do much to reform or improve where there is a strong bias toward evil on the part of the scholars, a bias often checked by the religious influences. There is plenty of religious teaching as it is, among both parents and scholars, but it is too often a religion that regards more the emotional part of the nature than the moral, and so has little in the way of checking the evil tendencies of these growing lives.

If in the Butler we see a department where the raw material is slowly and steadily polished and prepared for Normal, in the Night School we see another department, which, working on entirely different material is still accomplishing somewhat the same results. The material in the Night School has certain advantages over the Butler. Students in the Night School live on the school grounds, are surrounded on all sides by the school influences. They are mostly grown men and women who have an earnest desire for an education, a desire so earnest that they are willing to spend their days in hard work on the farm or at the mill, or in some of the many shops on the place, and so store up money in the School treasury to pay their bills when they shall enter the Day School. In the meantime they study and recite for two hours in the evening after their long day of hard work. This hard-earned privilege they are by no means willing to waste, and so in the Night School we see the most patient, hard-working, single-minded devotion to the subject before the class that we find in any class on the school ground. In the Night School there are eight carefully-graded classes. The examination for admission requires of the applicant simply reading, writing and arithmetic through subtraction, but, as many who are prepared to enter the Normal School are unable to enter on account of pecuniary need, and others who would enter are at work all day learning trades, there are classes of all grades, from those so low that two years of work will be needed before the Junior studies can be attempted, up to a class of bright boys who are learning trades during the day, and in the evening fitting themselves for the Senior Class. In this Night School we see the material from which many of our best students are made. There is a certain amount of grit and pluck needed for doing successful work in the Night Class, which comes in study in good stead when he comes to the more opportunist studies of the Day School. A visit to the Night Classes will show any one at once what I mean. Perhaps the first thing to strike a

visitor is the fact that here we are dealing with grown men and women, not children. The air of absorbed interest on the part of the students is another point which commands attention. The classes in the Night School are attentive and eager, but the night student sees and realizes the importance of the moment of the precious two hours appropriated to study. Sleepiness, after ten hours' work, is unknown among them, though in the Day School, teachers sometimes complain of a difficulty in keeping all the students awake. In consequence of this earnest spirit on the part of the students, of a corresponding desire on the part of teachers to use every moment to the best advantage, and of the thorough and careful grading of the school, it is astonishing to see what results are accomplished by these two hours of study a day. Many of our best students in the Middle Class this year came up direct from the Night School, and prove what good work is being done there.

The Night School, while preparing students mentally, has better opportunities than the Butler can have for working at the moral nature of those within its charge. The students are in the school, and surrounded on all sides by the many influences by which the school works upon its students. Beside the wholesome reforming or strengthening power of days spent at hard physical labor, and evenings of study (days and evenings to which Satan must find it "difficult to insert his proverbial 'mischief'"), the discipline and training which takes the student's whole time, and lays it out for him, the moral training, the inspections, the roll calls, the religious influences, the cheering talks, both by members of the school faculty and by guests, in chapel or school room, the library, with its fund of information or stimulation, the social life, the joyments of the school life; all these come to the night student as to the day student, and have their share in building up, strengthening, and stimulating his moral nature. In the Night School the students acquire not only the learning necessary for admission to the Day School, but often a certain moral stimulus which makes them helpful and reliable when placed in the regular day classes.

But now let us suppose that our student has safely passed his entrance examinations into the Junior Class of the Normal Day School. What training will be given to him, and what will be expected of him during his first year there? If the student thinks he has come to school to have an easy, do-nothing time, he soon finds himself mistaken. There is work, hard work, and plenty of it to be done, and there is danger of summary loss of his opportunities if he fails to take full advantage of the studies of the Junior Year as they appear in the catalogue as follows: "Reading, Monroe's Fourth Reader, Swinton's Supplementary Boys of '76, Penmanship and Spelling combined, Practical Arithmetic, to Percentage, Mental Arithmetic, Natural History (Oral), Geography: Guyot's Intermediate, Map Drawing, Grammar, 'Graded Lessons in English,' Reed & Kellogg, United States History, Science."

This is the list of studies of all of them studies that come very early in the course of a bright child at the North. Let us go for a little while into the class rooms and see what they are taken, and what is done upon them by these grown up children under our care. Reading, for instance,—what is there in the reading classes that makes them different from similar classes at home? When I speak of similar classes I use the word "similar" in a somewhat limited sense. I do not think that there are classes exactly similar to these anywhere in the country. The students, ranging in age from 15 to 23 or 24, stumble and fall on words that would never stop a child at twelve with the advantages given in the schools of any large northern city. There is a lack of flexibility in the organs of articulation, as well as a total unfamiliarity with many of the commonest words, that at the beginning often makes the hardest teacher quail at the work before her. Many times the discovery is made that the Negro accents a speech or sentence so differently from a white person that it is almost impossible to make them read quotations or dialogues in any way that approaches at all the teacher's ideal. At the beginning the work of teaching is very slow. Gymnastics have to be practiced before the reading begins, hard words have to be picked out, pronounced, and spelled, questions must be asked to see whether the story or subject of the reading has been made clear to the students' minds, exercises in articulation and enunciation are practiced by the whole class, or by individuals, as the case may require. Great patience is required both on the part of teachers and students to carry on the study and keep up the interest. The reading is greatly in the different sections. The first reads well and intelligently, and the sixth reads hardly better than a child from his native land, as well in respect to pronunciation and clearness of utterance. Of the six sections into which the Junior Class is divided, it is expected that most of the

scholars in the first two will enter the Middle Class at the end of the year, a large portion of the next two will have to repeat their Junior Year, nearly all out of the two lowest sections will be unable to go farther, but will be advised at the end of the year's study to give up the thought of obtaining more book learning. In consequence of this expectation and of this careful grading, the work gone over by the different sections in a year varies greatly, and though at the beginning of the term all the classes are together, at the end, they are a good way apart.

Perhaps there is no branch of the school work which seems in the outset more hopeless than the effort to teach the students the use of correct English. Many of our students, in fact, the greater part of them, come from homes where no pure, correct English is ever spoken. With all the habits of continual misuse of language with which they enter the school, it seems almost impossible to teach them the right use of words. In addition to the absolute misuses, which the study of grammar and composition aims to correct, there is also a limitation of use which is even more perplexing, and which every teacher has to meet. It is a limitation in her own department. In the limited vocabulary possessed by most Southern Negroes, one word has to serve such a variety of purposes that its exact meaning is almost entirely lost, and any new word which is defined by a word already known is very often twisted to new uses for which it was never meant. How to teach fine sense of meaning in language is a problem that comes to every teacher in the school, though, of course, to the teacher of grammar and composition more than to others. Day after day, year after year, the student must learn to use his words. Year is to make as thorough a study as possible of the verb in all its various forms, and to combine with this study such exercise in composition and letter writing as will give to the student a practical and correct use of whatever language he possesses. The drill in correcting general errors in composition, is not the least valuable part of the year's work. The students take great interest in the language work, and show that they appreciate pretty thoroughly their own shortcomings in this direction.

The studies of the mental and written arithmetic, are always both interesting and interesting. There is an element of certainty in the fact that two and two are four that gives the mind a resting place and a sense of security not to be obtained in following a verb through the intricacies of its conjugation, nor indeed in any other department of study. Hence, even the duller are already victims of some disease, grow stronger under the school regimen. They are pointed out, are always sure that sooner or later they can avoid those mistakes. Perhaps in no department of instruction is the normal character of the school work more clearly seen than in the instruction in arithmetic. There is no learning of rules or doing things because the rule says so. Every step is reasoned on, and must be thoroughly understood before the next one can be taken. Of course, by this method, and with such minds as many of those in the Junior Class are, the progress is slow, but it is sure, and the thorough drill of the arithmetic makes the students more exact and better able to follow a train of reasoning in their other studies.

Geography taught by means not only of text books, but of map-drawing, moulding in sand, outside reading, photographs, anything and everything that the teacher's ingenuity can devise for making the text book's descriptions vivid and impressive, is a study that serves well to broaden the mental horizon. In the Junior Year special attention is paid to the geography of the United States. The map-drawing not only impresses the geography lesson very thoroughly on the mind, and gives skill to the fingers, but is an invaluable accomplishment for these students who, when they come to teach, often have to manufacture the greater part of their school-room furnishings. If they can draw their own maps they are no longer bound down by circumstances in the representation of the country whose geography they are trying to teach, is an invaluable accomplishment for any teacher.

Spelling and writing lessons are combined, and with tolerably good results. Perhaps one of the most difficult parts of the English language is its spelling, even to those whose familiarity with other languages gives them some clue to the right way of spelling. The spelling of most words, but with our students every new word learned is absolutely new, and the mere spelling of it is a matter of guess or of arbitrary memory. There is no reason why a word should be spelled one way rather than another, and often habits of mispronunciation leads to habits of misspelling words that are quite simple.

During the present year a new departure has been made in regard to Bible study, and twenty minutes in the morning have been devoted every day to reading in the Story of the Bible and recitation on the previous day's reading. By this process the Junior Classes have received much more familiar Bible history down to the time of David, and will be ready in the Middle Year to take up the Bible itself and graduate with a pretty complete knowledge of the book as a whole. Regarded as a piece of literature, and as a help to the understanding of all allusions that they will meet in their subsequent reading or study, there is nothing that can be to them of the same value as thorough knowledge of the Bible. As a moral stimulus, and a ground for religious belief, it is expected that this training will be of immense practical value among this people whose religion is too often a product mainly of the emotions and of the imagination.

Beside the Bible history, United States history is one of the studies of the Junior Year, and the interest shown in this study, especially by the boys, shows how truly the Negroes feel their privilege of American citizenship. They study American history as the history of their country, the heroes of colonial and revolutionary time are their heroes, and exploits of the early discoverers are the means by which their freedom and civilization were made possible. The Negro is nothing unless he is an American, and the history of the gradual settlement and growth of these United States is as interesting to him as it is to the direct descendants of the settlers themselves.

I have been able to give but a brief outline of the first year's work in school, touching only the most prominent or difficult points in the teaching and learning of the first year, a faithful student of average ability should find his mental horizon greatly enlarged, his powers quickened, and habits of carefulness and exactness in speech, thought or written work, pretty firmly established. During this year he should have learned to apply his mind regularly, and for tolerably long periods to the task of absorbing ideas or reasoning from ideas already obtained. His hours of application to study have been as follows: Morning study hour from 7 to 8:30; morning recitations from 8:30 to 10; afternoon recitations from 2 to 4; evening study hour from 7 to 9. That is, eight hours of mental application a day. If it were not for the wholesome physical labor that toughens the muscles and develops the frame, few of the students could stand the strain, but as it is, there is very seldom a case where ill health seems to arise from overwork, but as the rule students, unless already victims of some disease, grow stronger under the school regimen.

The long summer vacation, occupied usually by our students in labor at some employment that will bring them a little fund with which to pay part of their school expenses during the coming term, gives to the students an opportunity of testing the practical value of the knowledge already obtained and they generally return in the fall with an increased desire to study and improve. The first part of the Middle year adds few new studies to the Junior schedule. A taste of English history is given in the reading classes, where Dickens' *History* is read with pleasure and profit. For the rest, the studies begun in the Junior year are continued, the Bible lessons being lengthened to forty minutes and taken from the Bible itself instead of from the "Story of the Bible."

With the second term of the Middle year, many of the old studies are laid aside and new and more difficult ones taken up. Physical geography takes the place of the completed "Intermediate," instead of U. S. History, lessons in the theory and practice of teaching are taken, and the Bible lessons laid aside are replaced by instruction in physiology. To the students whose only experience of science so far has been a half term of natural history at the beginning of the Junior year, this sudden plunge into physical geography and physiology is at first rather appalling. Physiology, in its methods and reasoning, much like natural history and geology, seem to take that with little doubt or questioning, but in physical geography they are confronted for the first time with all the great scientific theories in regard to the universe, and the dose is too large to be swallowed all at once. For the first few lessons in regard to any of the great natural laws, a skeptical frame of mind prevails, hard questions are asked with a view to shaking the teacher's reasoning at some point, but after awhile the student insensibly absorbs the reasoning into his own mind, his attention is called to simple everyday facts which tend to prove theories advanced, and soon he is firmly convinced that the earth is a sphere, that the planets revolve around the sun, that the air flows from areas of high pressure to areas of low pressure, and so on. The next step is to apply each theory and show the practical working of the law in a given case. This is more difficult, but once learned, it gives the student a feeling of power over

his knowledge that is of immense benefit. Sometimes whole recitation periods are spent in asking questions, and giving answers, each student asking one question of any student on whom he chooses to call. This is so to every one in the class in absorbing occupation and one from which much profit is derived.

Perhaps there is no study in which the Middle Class takes more pride than their practice teaching. This is not simply a necessary part of a good education, but it is professional study. At the beginning of the second half of the Middle year, every student suddenly comes to regard himself as a prospective teacher, and as such, looks upon his practice teaching as the important study of the term, and upon all his other studies as opportunities for gaining material for teaching. There is a marked increase of interest, in all studies for this reason, and many a student, who has obtained the desired idea for himself, continues asking questions and receiving explanations because he is not quite sure yet that he could teach that point in his school, which is now ever present in his mind. This half year of practice teaching can of course take up only very hurriedly and simply the fundamental principles that underlie all teaching and the study of the best methods of teaching the branches usually taught in primary schools. To this, at the close of the term, is added some advice on school discipline and management. The students during this term can be given no practice in the training school, when upon promotion to the Senior Class they go out for their year of teaching before their last year of school, they have had no experience, but only the theories that they must now proceed to put in practice. That the theories in themselves are a help, is proved by the experience of the class now in the field, and perhaps the more valuable experience of the Principal of the Butler school, who has had during the year two members of last year's Middle Class as teachers in her school.

At the close of the Middle year, the final examination once passed and the promotion attained, our students must go out for a year and try what they can do with the knowledge already attained before they come back to graduate. This part of the school programme is an experiment as yet, and as such, perhaps it will be well not to say too much about it but wait until next year's Senior Class shall have proved whether this step was wise or otherwise. It is the hope and expectation of the school authorities that students will return more conscious of their own deficiencies and more earnest in their desire to make good through work of their last year in school.

There is a great step between the studies of the Middle and Senior year, and often students who have done fairly well in the Middle Class prove unable to take and digest Senior studies. The reading takes up stand-ards and authors and so helps out the study of English and American literature which, super-sedes the grammar work. In connection with the literature work are compositions that are written, so that the language work is not dropped, only changed somewhat in its form and character. The study of ancient history serves to give them a retrospect and to help them out in their understanding of all literature with which they may come in contact. Natural philosophy gives them a new and more thorough look into the wonders of nature than any study yet taken up. By means of experiments and practical examples all the laws are illustrated and brought within the scope of the students, but this study often proves a stumbling block to students who have done fairly well so far. The girls, especially, lacking the boys' practical experience in regard to the working of physical laws, are very apt to feel discouraged and unequal to the exertion necessary for mastering difficult points. However, when the theories are once mastered, and their practical working once proved and made certain to the minds of all, there is no lack of interest on the part of any and a new line of thought and interest is opened to all who finish the year's work in natural philosophy.

In political science too the work is on an entirely new field, and the facts to be dealt with are facts out of the reach of most of the students. The teacher has not only to teach them to reason from known facts, but in many cases to gather the facts and help out the students' reasoning. The study of economic laws require a kind of reasoning upon a class of facts that puzzle the minds to which these things are totally unfamiliar. The study of political science, too often seems to the girls entirely useless so that their interest flags as soon as any serious difficulties present themselves. To the boys the study seems useful and desirable but they can follow only a little way on account of the often abstruse reasoning that leads up to the conclusion. Only the principal and best proved theories are taken up. Much of the time is spent on, the study of the relations of capital and labor, the discussion of the main arguments for free trade

and protection, the study of money, banking and credit. The government of the United States is studied in detail and this year the class has been taking up briefly the study of the principal European governments comparing them with the government of the United States. The year's work in Political Science is but the opening of a door through which few of our students ever pass, but by means of which additional light is thrown upon their work.

Perhaps the feature of the Senior year is the Practice Teaching in connection with work in the training school, where every student in the Senior Class is obliged to teach a variety of lessons under the eye of a carefully trained teacher who criticizes at the end the student's work. The training school is a branch of the Butler which occupies a room in one of the Normal School buildings. In it are classes of all grades, from the grown boys and girls who are preparing for admission to the Middle Class at the end of the year down to the babies who are just learning to read "I see a cat," off of the blackboard. Here a practical familiarity with the method is added to the theories which the students learn in the class room and when they graduate they have gained much experience of thorough, orderly methods of school work. The mistakes, in-to which they may have fallen, are pointed out, and they are given an opportunity to correct them and form new and better habits of work before taking their final exit from the institution.

The moral training of this last year in school is rounded out after commencement by three weeks during which the Senior give up almost all other school work and devote four periods a day to the study of methods. This Institute has heretofore been conducted by specialists invited from the North, but this year the work will be shared among the regular teachers. When our graduates go out from their Alma Mater, the upmost thing in their minds is the profession upon which they are about to enter. The whole school course leads up to it, and at the end, particularly, everything else makes way for it.

In this brief review of the school work I have been unable to touch on many of the influences that the school brings to bear upon its students, but I must not leave unmentioned one means by which the student enlarges at will his own mental horizon. All the work mentioned so far is compulsory, every student must do it or he will not receive his diploma. In the crowded lives, there seems sometimes cause for wonder that the students do as much reading as they do outside of their required work. In the library alcoves, the well thumbed books that adorn the shelves show what work is being done by some of the students voluntarily for their mental improvements. Look at the worn bindings of the books! The history alcove see how the popular biographies, particularly those of great Americans are read until they are ready to fall from their covers. In natural history the books that we possess do not begin to meet the demands of the students, and this year a number of books loaned by the teacher in that department have been devoured with eager interest. Fiction, too, is read in quantities; the taste in that direction seems to be improving and I think a better class of books has been read this year than ever before. Standard works by good authors are rather taking the place of the trashy works, owing to the care of the librarian in calling attention to the better class of fiction. Ben Hur, Ramona, the Prince and the Pauper, George Eliot's works, these are partly taking the place of T. S. Arthur and his like. The reading room too is much patronized and the giving of news items in the morning by the students themselves has caused a considerable run on the daily papers. The monthly magazines are read more than ever before and the finely illustrated articles in Harpers' and the Century are of great use to the geography students.

These briefly given notes on the academic work, take up simply the outline of the work. Its main points and the desired and expected effect of each year of the course are all that can be taken up in a report like this. For the proof that the work is of some value to the students who enter and pass through the school and to their people as well, we can only point to the long list of graduates who have gone out from among us and are teaching successfully, or at least acceptably, in all parts of the South, about half in Virginia. That the school is not perfect, the graduates themselves show, but that it has done much, and will in all probability do more, toward enlightening the ignorance of the Negro race, is a statement that few, even of its enemies, could deny.

ALICE M. BACON.—Teacher.

### The Indian School.

The value of a Report from the Indian school at Hampton ought perhaps to depend upon the comparison as well as the recording of facts—upon conclusions no less than upon the facts. Indian education has thus far been largely experimental in its methods as well as in its results. There are signs that the time has come for these scattering experiments to crystallize into a system—indications such as the proposal, in Congress and elsewhere, to secure a convention of Indian school teachers and superintendents, for discussion and comparison of views. Anything which will tend to unify and codify the special knowledge and experience gained by a few, and to create a standard which all who teach in Indian schools shall be expected to reach, will largely benefit the Indian.

AT HAMPTON we all make a study of Indian nature, and of the processes by which it may be developed and hardened into character. There is a bright half breed remarked the other day, "It takes time to build up a man's character. It's like building a steamboat—there are a lot of little things—it's a long job—but when the machinery is all right, the boat runs easy." The whole discipline and training of the school furnish so many sets of hammers working ceaselessly at the building of character and training, strengthening every part. The most practical morality is closely connected with religion in the teaching of the school. The Indian is easily accessible on the religious side, he is reverent and imaginative, and being also fairly logical and honest with himself, thoroughly believes that a change of life is as essential as a "change of heart." There is little doctrinal teaching; the aim is to lay down the broad principles and teach the great historic facts of Christianity.

This work is carried on upon all days and all occasions; at the opening of school, morning and afternoon at morning prayers for the whole school; at the brief "family prayers" for boys and girls just before retiring; at the Thursday evening meeting; at church times on Sunday, and, perhaps best of all, at the Indian Sunday school, where the "new" boys and girls use the Dakota Bible and are taught in their own tongue, through an interpreter. The most adroitly classes in the Indian school use this year the "Story of the Bible" as a regular reading book, with very happy results; another class has studied the Hampton Hymnal, a part of the term, getting a grasp upon the meaning of words and phrases which had before brought to them only vaguely sacred associations. By the effort and influence of the teachers the elements of duty, if not of religion, are made more or less a part of every lesson.

THE STUDY OF ENGLISH is the most characteristic and interesting on the Hampton schedule. There must be more or less language work in every class—even in arithmetic—but in its systematic development as a study, as far as my observation extends, Hampton is somewhat unique. In the Western schools which I have seen, this valuable and various drill does not by any means assume the importance which we give to it here. The poorer ones attempt to teach Indian children to read and write, and teach them to read and write by rote, and the result is a mechanical reading by rote, with almost no attempt to grasp the sense. If the children are to have any idea what they are reading, it must be literally translated into Indian! We aim to give them from the first the use of the English language—to make it a flexible instrument in their hands—and we work up to this by successive steps, making each one as far as is possible, easy and comprehensible to them.

The first step, as it is found in the lowest divisions, is the teaching of a great number of words by simple object lessons and the acting out of verbs. The articles are taught along with the nouns, the personal pronouns with the verbs, adjectives by comparison of objects, and there is soon evolved the simple sentence—such as "I see the black cat"—all of which may be expressed in dumb show. The use of the relatives, interrogatives, etc., is more abstract—but it may be brought out with a little ingenuity.

The next step is usually the formation and memorizing in various forms—interrogative, negative, etc., of easy letters and sentences. Construction is very difficult for the Indians. English syntax is wholly unlike their own—and we have found no better way to bridge over the gap between the two languages than by familiarizing ear and tongue with a great number of ordinary combinations, before requiring them to make any for themselves.

When they can carry on, unaided, a fair conversation, the work is changed to drill in grammar or regular English composition. Picture-lessons, stories read and written out from memory, and oral lessons in geography and natural history are valuable means to the latter. This is the sort of work done this year in the Second Division. The study of English grammar does not usually begin

until we reach the First Division, representing about three years' work; although simple drill in recognizing name-words, action-words, etc., may come earlier in the course. There is a good deal of originality in the methods used by different teachers at every step—and even grammatical dry bones are clothed upon with fancy and humor.

Two somewhat foreign elements have made themselves felt in the Indian school this year, and especially in the language work. The half-dozen little children, between the ages of six and ten years, learn to talk very much more rapidly and easily than their elders, while they are of course left behind in mathematical and other studies requiring mental grasp. This difficulty in grading has led to the formation of an "infant class," who are "drawn out" by certain of the Kindergarten methods and who use the Kindergarten gifts and occupations. We have also an appreciable number of boys and young men who have associated with the whites and speak English with readiness, but who read and write it little or not at all. Their minds are described as of course unsuited to their needs, and a distinct grade in English will no doubt be established for their benefit.

THE CLASSES IN READING of course include a great deal of language work, as our pupils must be taught to recognize a word by sound and by sense, as well as by sight. We teach the word as a whole and do not leave it until the pupil can read, write and use it. This is necessarily a slower process than that of learning to read in a known tongue. We use Appleton's chart this year in the lowest grades, and leave three sets of readers—none of them entirely satisfactory for the use of grown men and women. A great deal of time and energy is expended in the effort to secure the proper pitch of the voice and a distinct pronunciation. There are some sounds in English—the *r* and the *th*, for instance—which are almost impossible of articulation by the Indian tongue. The early stages of the work present other stumbling blocks, such as the rising inflection at the end of a question, unknown in Dakota. The Indians write easily and beautifully as a rule; and constant practice in written lessons makes them good spellers.

IN MATHEMATICS the Indians excel. Their work is usually accurate, but in analysis they are weak, from lack of confidence in their English. We do not use the Grube method to any considerable extent, except in the "infant class," successfully taught by an Indian girl graduate of Hampton. Lessons in number are fitted to the very young minds, and to demand a free use of language to interpret them. Young men who have been in school but a few months read numbers up to billions, and work in addition and subtraction. They are able to master the four simple rules, on an average, within two years. Our First Division has begun on the work of the Junior class in fractions and the Indians are usually up to the mathematical standard of admission to the Normal School, before they are at all able to keep up with English speaking classes in English studies.

Geography is the class of culture par excellence! Hampton introduces primary work in geography very early in her course, teaching it with the globe, the sand-table, and to demand a free use of language in enlarging the ideas as well as in stimulating the power of expression. Later on, it affords endless resource and variety of occupation to the developing mind of the Indian. The First Division has spent the entire year on North America. They can not only name, locate and spell all the capitals and principal cities of our States and Territories, but they have a good general idea of the form of government, products, commerce, and people of the country in which we live. This is educational in a broad sense of the word.

THE STUDY-BOOK should not be overlooked in a resume of our opportunities and successes. A boy who was asked why he valued the Eastern school more highly than the Western, replied: "Because we have study-hour at Hampton!" Hampton's long evening study-hour is quite an institution—varying somewhat from the evening work at Carlisle, or at any other Indian school with which I am acquainted. It is worth while to observe here the close application of the Indian and his capacity for independent study. I am not sure but that it would be well to tax this capacity more severely than we have usually done. A large proportion of oral teaching, and the incessant effort to make each lesson spontaneous and interesting may easily lessen the enthusiastic teacher to do most of the work herself. The dryer or more mechanical teaching is sometimes the learner's better mental discipline. I think however, that when, if at all, on the right side, when we meet the demonstrative Indian a little more than half way.

THE INDIANS IN THE NORMAL SCHOOL—a larger number than ever before—have proved themselves, on the whole, to be cap-

able of using their advantages. Mentally, there are many of them equal to completing this or indeed a much higher course, but the ambition to graduate and the devotion to hard study is not always so strong as we could wish. At about this stage the old difficulty about language comes up again in a new form which is doubly discouraging. We naturally use with beginners the simplest and most conversational English, and after three years or thereabouts, when the young Indian has fairly mastered this everyday speech, he suddenly discovers that there is another English language which is wholly beyond him—the English of the books! The first sentence which meets your eye in the book or newspaper at your elbow, contains at least three, or four words which are not in his vocabulary and to whose meaning he has no possible clue. I take one at hap-hazard. "I am aware that the mere external cast of any particular time or place furnishes a very inadequate basis from which to generalize the future." "Is this, too, English? Then I am no nearer understanding it than I was three years ago," thinks the thoroughly puzzled Junior, who had once fondly imagined that he "knew English."

LESSONS IN VOCAL and instrumental music have been encouraging features of the school work this year. The students are apt to smile when we speak of our "musical Indians"—but prejudice to the contrary notwithstanding, they have proved themselves as an interested pupils. Mr. Rathbun has given singing lessons twice a week to the whole morning school and reports enthusiastically upon their quickness and progress in part singing. About twelve boys and girls are learning the parlor organ, and two or three have shown decided talent. Some can play already, with a good degree of correctness, the hymns and other parts of a church service. This training will be of great value to them at home.

THE BOYS' TRADES and the girls' household industries are considered by the authorities equally important with their advantages in school, although they are not always placed on a level with them by the students themselves. This is a matter of slow growth. It is not unusual, however, for a young man who has done fair mechanical work for several years, to develop with comparative suddenness a love for and mastery of his trade. "John has made a long step forward this year," says the head of the Indian Training Shop of one of his carpenters. "He thinks about his work and goes ahead without waiting for orders; if he can't make it come out right, one way he will in another. He has asked me the other day if I was going to put up any small frame houses this summer. I saw he wanted the job, and I think he is capable of taking the change of it. If he stays out his time, he will not only be a good carpenter, but able to give instruction."

Of another he says: "He will do just what and how you tell him, and then he will stop, and fold his hands and wait for directions. Ambition and pride in their work are qualities which need to be developed in our Indian apprentices. They are doubtless dormant in the Indian nature, and ought to be strongly awakened. We have seen this year here but a few months is eager to write to his father, 'I can make a tin cup,' or another diffidently but proudly hopes you will notice the table he has made for the office—'all myself'—it is a good sign of progress."

The carpenter's trade is most popular among the boys. It is also the most generally serviceable to them at home, and this shop has the larger proportion of workers. Some of the boys on the farm have applied for further opportunities to plow, and perform some of the more important farm operations.

A new feature of the industrial work this spring is a school of Technology, where classes of girls and small boys learn the elements of carpentry, or the useful art of "how to be handy about a house."

THE GIRLS AT WINONA have made their usual progress in domestic art. They keep their rooms, as a rule, in excellent order, and they are more prettily arranged this year than ever before, owing to the amount of simple decorative work done by the girls in their "Fancy-work Class." "Scrubbing-day" is apparently the happiest of the week, and it is delightful to see them, in rolled-up sleeves and tucked-up dresses, laughing and singing over their back-breaking task. The laundry work is beautifully done by even the smallest among them, and when each brings her pile of clean clothes, washed, ironed and mended, for inspection on Friday evening, the white, even piles would put to shame many a professional washer. There is no skirting; even the sheets are as smooth as pocket bandkerchiefs.

The sewing-room turns out a vast amount of work in the course of the year. The girls, as might be expected, take a true feminine satisfaction in this department. From the remotest corner, with her plain, straight cal-

ico gown, made every stitch by her own hands, "button holes and all," to the girl's "Senior party," they all take a wholesome interest in "looking pretty" and enjoy the well-deserved smile or word of praise. All learn to make and mend every useful article of woman's wear, and to sew well both by hand and machine. That the Indian women are peculiarly dextrous with their fingers is proven not only by their highly ornamental work in beads and porcupine quills, but by their extreme aptness at all the prevailing fashions of art needlework, from the simple outline stitch to the difficult "Kington embroidery." Their two years in the Fancy-work Class has produced some highly successful results.

Cooking lessons are popular among the girls and most of them can make good bread and are in a fair way to become accomplished queens of the kitchen department, which is by no means to be neglected in the homes of the future.

SOCIAL LIFE among our Indians centers at Winona, and there is a great deal more of it than at most schools. The freedom and individuality of our girls' lives, outside of school hours, is somewhat striking, and requires a wise oversight to keep it from degenerating into carelessness. Each girl preserves her independence through the possession of a room, which is shared with one or occasionally with two friends; each makes her own clothes—chooses them so far as she is able—and washes and irons and mends for herself, and is taught responsibility for and pride in her personal belongings. Reading and play hours much liberty is allowed; and while one will curl herself up in a corner with a book and another devote every leisure moment to practice on the parlor organ, most want to be out-of-doors whenever the weather will possibly allow it; and for that matter, the rain is a purely artificial barrier, which they must be patiently taught to heed.

There are various friendships and parties and cliques among the girls, as a matter of course. There is also a social element in the form of several organized societies—such as the "Ladies-Hand Club" among the older girls and the "Sisters' Club" for the little ones. The first holds its separate meeting once a month. The girls hold a weekly prayer-meeting among themselves, led by one of their number. The "Fancy-work Class" is the occasion of a pleasant little reunion.

"Saturday nights" are the social events of the week. Twice a month the boys are invited to Winona for an evening with the girls—an evening diversified by games, marching, conversation, or literary and musical exercises. The unlearning of Indian etiquette, and the establishment of easy yet not too familiar relations between our young men and young women, is considered an important lesson, only to be learned by a guarded but natural and pleasant intercourse. The boys and girls meet at the table, for half an hour, if they choose, on Sundays upon Saturday evenings and holidays and on such rare and joyful occasions as the annual "Indian picnic." The result seems to justify the experiment; at any rate their manner toward one another gradually grows to be nearly all that could be desired. It may be mentioned that the Indian is a ceremonious being, given to some social virtues in a high degree, and that he adapts himself with considerable ease to customs and manners which are strange to him. The true Indian—an instinctive gentleman—is seldom embarrassed or awkward in society. The debates, recitations, songs and dialogues of our "literary" meetings are good practice as well as good fun, and are regarded as such. They are sometimes arranged by teachers and often chosen by the performers themselves.

LIFE at THE WIGWAM has its features of interest. The boys' rooms, as disclosed at the "Sunday morning inspection," display a good deal of the taste and character of their occupants. We discover here a lover of poetry; there, an amateur on the violin; again, an eye for pictures or decoration, or an original artistic talent. The Wigwam reading room, planned and furnished last year by teachers and friends, has become an established means of quietly influencing the boys as well as of instruction and entertainment. It is a very attractive corner, indeed, with its plants and flowers, its pictures, its organ, its well-filled book shelves and various knick-knacks—quite an oasis in the desert of bare floors and hard benches. Along these benches are covered with groups of boys playing checkers or "Fif-Four-Four," reading the newspapers, talking and laughing—never boisterously; and a group around the organ are singing hymns in English or Dakota, the whole presents an animated scene.

As the season advances, ball-playing, quoits, rowing and other out-of-door sports abound, during the afternoon, all but the very best and delicate ones. This, of course, is as it should be. There remains

the quiet half hour after study hour, when the "Wigwam Father" meets the boys to settle their little difficulties or listen to their confidences, to tide over a hard lesson or give a bit of needed advice. Then come the brief evening prayers, conducted by themselves—there is a simple, touching little prayer, the deep masculine voices sing a verse of a hymn—then a clatter of boots and a hubbub of voices and good-night!

The little boys, twelve in number, room in Division A, under the care of a house-mother of their own. They are about as reprehensible as most youngsters of their ages—and probably no more so!

THE COTTAGES, to the number of six, are more home-like than ever, and more a settled feature of Indian life at Hampton. Cheerful with children, bright with books and pictures and music, always neat and attractive, they put a pleasant picture of domestic life before our young men and young women. We hope that they may prove an "object lesson" in home-making not only to those who live in them, but to all who live within the circle of their influence.

ELAINE GOODALE, Teacher.

### Report on Returned Indian Students.

Since 1880, 203 Indian students have been returned from Hampton to their various homes in the West, chiefly to Dakota Territory. Thirteen of these have left to recent times, but no report can be made upon them, though we have heard pleasantly of their safe arrival and good intentions. Of the remaining 190, the details of voluminous specific records may be condensed into the tabular form which gives to dry statistics their own charm, of brevity and clearness. Arranging the various grades of schools on the one side, and on the other, the number of each that have been—most of them not continuously—in Government employ, with the totals set side by side for convenience of comparison, it will not be difficult to judge of their significance in connection with the statements recently made in Congress that not one of all the returned Indian students had been found who had not gone back to their original barbarism and worse, except a few who were employed by the Government.

Omitting the thirteen just gone back, there have been returned from Hampton: To Dakota, 137; Indian Territory, 20; Nebraska, 12; Arizona, 11; Wisconsin, 4; Omontaga Reserve, New York, 1.

### RECORD.

Students returned.		In Government employ.				
BOYS.	GIRLS.	TOTAL.	BOYS.	GIRLS.		
Have done						
Very well.	75	31	106	37	31	6
Fairly	37	17	54	13	11	1
Indifferent	1	4	5	0	0	0
Ret to bl'k	2	4	6	0	0	0
Unacc't for	10	2	12	0	0	0
Grand to.	134	56	190	54	47	7

Of the 190, 19 have died, of whom 1 had done badly, a very finely and the rest, generally as well as possible in their feeble state. The tribes represented, Miss Richards has elsewhere enumerated. Half of those in Indian Territory were our first returned students, the St. Augustine prisoners. With one exception, they were not returned directly from Hampton, and spent but little more than a year here. Their almost uniformly good record is to the credit of Captain Pratt's training in Florida and Carlisle. About two-thirds of the rest completed a three years course at Hampton.

Nine included in this report are now again at Hampton for a further course, having done well for a year or more at home. One other is preparing to study medicine in New Hampshire, and another is studying for the ministry in Alexandria.

As to the statements of the Holman committee, it is interesting to note that instead of the wholesale return to "worse than original barbarism," asserted, only six out of all the number have returned to the blanket and but 12 are reported as "bad, i. e. vicious and troublesome, though keeping, to civilization's dress." The committee declared that they failed to discover a single one who had not thus "lapsed back," except a very few who were employed, in other words supported, by Government. It is pleasant indeed to see that of the 54 Government employees, two-thirds have done very well, and less than one-tenth badly. One would think the natural force of argument would be that since the Indians show such appreciation and make such good use of the chances to work furnished them by Government, it might be a good plan to furnish them more. This is indeed just what we saw at every agency I visited last summer in Dakota, Minnesota and Wisconsin; by every agent, teacher, officer and employer who seemed at all interested in his charge. Again and again I heard it said very earnestly, "I should be glad to set twice as many boys to work if

there was work for them." "It would not only benefit the Indian, but be a direct saving to the Government itself, in hundreds of articles that now have to be procured and thrown away for want of workshops. It takes a Congressional Committee to shut us, 'Indians go back to barbarism unless we give them a chance to use what they learn, therefore let us take away their chance to learn also.'"

But our tables do not give the logicians even this round to stand on. They show that while few more than a quarter have ever been in Government employ, over half have done very well, and over four-fifths very well or fairly well. Like other young people—like most people indeed—they want some encouragement in beginning a difficult new life. A good agent can give them this, even without Government employment—better of course with it. Such encouragement the sixty-nine on our Honor roll not in Government employ have not lacked. All are at work except a few disabled by illness. A few are clerks in positions obtained for them by the agent off the reservation, some are attending school on or off the reserve, several have returned to Hampton for a further course. The girls are useful in their parents' home or their own. Eight have married well; one a fellow student from Hampton. One of the boys is a useful teacher in a mission day school, his salary paid by a full blood Indian Episcopal minister who supports himself by his own hands, and gives away much of his own small stipend. By far the most of the boys are farming, and most on claims of their own. As handsome a wheat field as I saw in Dakota was cultivated by a Hampton boy who had the good sense and courage to give up his Government clerkship to take up a claim and work it himself.

The Government positions are as clerks, interpreters, teachers, scouts, policemen, herders, farmer's assistants, and at the trades, chiefly carpenters and blacksmiths. In building the little houses now constantly going up on the reservations, and in mending implements, there is always abundance of work. Fifteen are teachers, industrial and other, six of them girls. I saw more than one school room presided over with dignity by Hampton students, and listened to some excellent teaching.

A few are interpreters, but to be a good interpreter requires more perfect command of language than to be a teacher. A teacher can prepare his lesson beforehand, but an interpreter has to be ready for anything and ought to be able to render delicate shades of meaning, which comparatively few of course are able to do.

Of those reported as doing badly, we do not give up all hope, and at the same time are not as surprised as we are sorry when their ranks are recruited from the class of "retrograde," which includes many "light weights," easily moved and dependent upon surrounding influences—less hopeful possibly than some of the "bad" ones who are, as Bishop Hare puts it, "in their green apple state," but not unlikely to mellow and mature into good fruit. Even since my statistics were made up, a few such interchanges have occurred, which I did not think it worth while to upset the figures to record, as they make no material difference in the totals, and may not be permanent for good or ill. One interesting change has been in one of the four Dakotas among those described as "retrograde." John Buffalo was at Hampton but part of one year and was sent home on account of ill health. He was apparently in consumption when he came here, and we did not wonder that he went back to his accustomed easy dress, when he went home. He has improved in health, and his pastor Mr. Gravatt, was surprised a short time ago by receiving an illustrated letter from him in the Sioux language, announcing the fact that feeling better, he had "thrown away" the blanket and started anew on the white man's road. He would like to send his picture in his citizen's suit, so, as there was no photographer at hand, he had painted it himself. It is a successful work of art, judging by the interest it excites.

By far the largest proportion of our Indian students come from Dakota, and excepting the Omaha reservation in Nebraska, it is the most hopeful to return them to. The Wisconsin agencies (and the same may be said of the Omontaga) are suffering from past mistakes. One has a hopeless feeling there. The Indians ought long ago to have been ready for citizenship and have received it. I wondered sadly there if history will repeat itself and its blunders in Dakota. The Indians show such appreciation and make such good use of the chances to work furnished them by Government, it might be a good plan to furnish them more. This is indeed just what we saw at every agency I visited last summer in Dakota, Minnesota and Wisconsin; by every agent, teacher, officer and employer who seemed at all interested in his charge. Again and again I heard it said very earnestly, "I should be glad to set twice as many boys to work if

sition since. He interprets quite well and I think is honest. He is married. He had never done anything for himself. Stago writes himself, in a handsome, clerk's hand to one of his teachers. "I am interpreter for Captain Pierce and I get in three months, \$1500. And he is very good man and the Indians like him very much. Now I stay here in San Carlos every month, and Miss G. I am going tell you something. I have been get married the Indian girl she is very nice girl. And Captain Pierce he will go to make school here. I am just same yet, and try very hard to learn some more English. Your friend B. F. Stago."

The sources of information for my report have been the detailed accounts, name by name, furnished us at intervals, and recently by the agents, letters from missionaries, letters from the students themselves, particularly to Miss Cora Folsom who, appointed special correspondent of Indian returned students has entered with zeal upon a valuable work for which she is especially well fitted; and finally my own experiences in Dakota and Wisconsin last summer, visiting all the agencies from which we receive students, and seeing over fifty of them and most of their homes.

One pleasant impression I received there was of the loyalty which they seemed generally to feel for Hampton. Everywhere they hastened to come to see me, with affectionate inquiries about the school, and frequent expression of a desire to return to it. I found Hampton pictures fastened upon their little mirrors. They wanted to assure me that they were trying to live up to Hampton's teachings and I thought they were. Some who had fallen away from them showed a shame-like regret. They me, that was taken as a wholesome sign. They were most interested in a suggestion of Mr. Gravit's that they should form a Hampton Boys' Club, for mutual encouragement.

I don't know whether they have been able to carry it out. They were pleased also with an offer I made them, to place on exhibition in the Industrial room strong's consent—a specimen they would send of their handiwork—boys' or girls'—or their agricultural productions, or pictures they would draw of their little homes or school houses, or that were taken of themselves. I sent home some fine stalks of wheat from the field I have mentioned above in this report. It seems to me that with some encouragement, and not much expense, both these suggestions might be sufficiently carried out to be of much help and incentive to them, and an answer that could not be gained to the sneers and misstatements that are obstacles in their difficult upward path.

HELEN W. LUDLOW, Teacher.

### Christian Work Among Indians.

Religious work among the Indians has gone on as usual. As with white people there are seasons of great hopefulness and times of discouragement, of sunshine and shadow. Four have been confirmed in St. John's Church by Bishop Whipple, making the number of communicants thirty two. Others have joined the school chapel and will be reported by Rev. Mr. Frissell. One has gone from Hampton to enter the Theological Seminary at Alexandria, Va. Ten or twelve go with me to sing at the services held for the men at the Soldiers' Home, to sing songs of peace with the men who, perhaps, waged war against their fathers.

These Indians are generally conscientious. Missing some from communion, I learned they did not come because they had been smoking, thus breaking the school law and committing, as they understood, a sin. I again wish to acknowledge the valuable assistance so kindly given by the teachers in the Sunday-School.

J. J. GRAYVAT,  
Rector of St. John's Church.

### Home and Social Life.

The busy routine of a Hampton student's life leaves small leisure for either home or social pleasures. A glance at their private life may not, however, be without interest. The girls occupy two large buildings, where they live directly under the eye of their teachers. The boys' quarters formerly consisted of two neat looking cottages some distance from the main building. These long ago overgrown, and now the site of Academic Hall, the tower of the Mill, even the barn, shelter scores of these "backers after light" who certainly have passed the initiatory rite of success, if the garret,—that home of poets and presidents,—can help them toward it.

The rooms of all students are subject to daily inspection, and although the dust,—that despair of housekeepers,—is often all too conspicuous, yet in general tidiness they will, I think, bear comparison with boys' rooms in any similar institution.

A Sunday morning inspection made with the Principal and Commandant reveals the fact that many little details which do not grace the week day room.

At ten o'clock on Sunday morning every boy is in his room ready to receive the visitor, and the door opens, the occupants arise and give the military salute, standing straight and smiling alike through praise and censure.

The appearance of the room is a very good indicator of the tastes of the occupants. The little attempts at embellishment and decoration are often pathetic. They are very fond of color, and there is hardly a room so poor that it is not bright with some kind of picture, often a gay advertising print. Christmas cards and photographs abound. Where they all come from is unrevealed mystery. The decorations, if not exactly high art are on the whole, not in bad taste. They give the place a cheerful, homelike aspect, and stimulate in the possessor a wholesome pride in the condition of his room.

It is often surprising to see how quickly a little library is collected. These private libraries frequently boast ponderous volumes such as "The Royal Path of Life" or "The Road to Success," revealing the ambition of their owners to wrest from their pages the secret of "rising." Though large books seem to be most prized, we found in one library the whole set of John Alden's Elzevir Edition. Half a dozen volumes of American poets adorn the shelf in a room whose occupant could not read his own name when read with great expression and appreciation. A volume of poems at Christmas is growing in favor as a gift made by one student to another.

A set of rules pinned to the door of the room of a student who was too popular to be able to have any privacy in his own house, and who was consequently often reported for disorder, is not without humor. It is something like a travesty on "Don't," or "Never" or both, but was quite original with the author. Here are some extracts:—

#### RULE I.

Come right in without knocking as that is the most perfect symbol of a well bred young man.

#### RULE II.

Next, you will sit down without an invitation, as it is not gentlemanly to wait for an invitation.

#### RULE III.

If you wish blacking or blacking brushes, soap, broom or dustpan—come right in and help yourself—don't ask any questions.

#### RULE IV.

Be it as you wish to sit down—as a matter of course sit on the bed, as chairs were only made to lie on.

And so on through ten rules. These were again parodied by a boy from Sierra Leone whose queer foreign diction and extraordinary spelling gave an additional touch of humor to the original. A very popular amusement among the boys here as everywhere is the game of base ball. Occasional contests with varying fortune take place between the "Normal School Nine" and neighboring clubs. Croquet and quoits are also played with a relish whose ratio corresponds with the rarity of the opportunities for such relaxation.

The daily military drill and inspection tell quickly on the general appearance of the boys as regards their bearing and dress. One can almost tell the class to which a boy belongs by a glance at his shoulders and shoes.

The same is true of the dress of the girls. Their clothing is usually made more neatly and worn with more taste after a year or two of school. During the last winter there has been a weekly drill for the girls in the gymnasium. The benefits of it are already apparent in their walk. Another year a regular system of gymnastic training will be introduced to meet a long felt need.

A visit to the girls' rooms is more encouraging from the standpoint of cleanliness. Here the floors are always white; the bureau with its pretty cover and pincushion in the tidest order; books, pictures and little ornaments arranged neatly; and a general air of homeliness about the place.

Consider the very limited time at their disposal after the duties of the day,—the number of garments made, of books read and of letters written is truly astonishing. One can but wish that more of these tidest order were apparent in the open air. Personal neatness is not all that is employed in some of the manual labor for a part of each day makes other forms of exercise less imperative.

The dining room is the great theatre of social life at Hampton. The most earnest

advocate of the religion of sociability at meals, would have nothing to complain of in this tantalizing laughing company. It is indeed a merry scene the visitor looks upon at noon. The constant stream of conversation and laughter proves that all are making the most of their opportunity. The only exception of a rare evening at Thanksgiving, New Years or some like holiday occasion, the dining room is the only place, and the meal hour the only time that the boys and girls have an opportunity for social intercourse. So engrossing are the requirements of society at table, that a boy who had been promoted from the small room, where only work boys sit, to the great hall with four hundred of his mates, asked to be returned after a day's trial. He had not been able to satisfy his hunger and attend to social demands at the same time. Though the fare is of the simplest, it is often discussed with considerable grace. While their table manners are by no means above criticism, they evidence a refinement that is sometimes wanting at more luxurious boards. In a walk down the whole length of the long hall I did not once see a misuse of the knife. The rawest material from the West were doing excellent if awkward execution with the fork.

They have a pretty custom, at Christmas, of giving the regular school dinner to the poor of the neighborhood and providing themselves with a many-coursed repast. Their skill in the culinary art is at this time fairly let loose and the tables groan beneath the results. The various clubs vie each other in the decoration of their boards, all do their best attire, and the dinner continues through several hours.

The social evenings before mentioned are eagerly looked forward to and thoroughly enjoyed. At such times surprising articles of finery are brought out of mysterious places, the poorest student looks neat in his clean linen, and one may find a lady's dress and coat, even has been seen.

The old time plays of "Little Liza Jane" and "Rain a Little, Snow a Little," have decreased in popularity of late, and have given way to what are considered more genteel games or to the aristocratic promenade. The chief characteristic of these old games was the singing of a weird refrain—"Rain a little, snow a little, 'Ain't you to rain no more" or "O little Liza, little Liza Jane, Come with me across the sea. Little Liza Jane,"—repeated ad infinitum, and accompanied by a great clapping of hands and shuffling of feet, and dancing of partners. Oddly enough the Indians have adopted these discarded games of their colored brothers and sisters and play them with great zest and enjoyment.

"Walking for the Cake" continues to be a popular amusement and a profitable one to the happy couple who are adjudged to be the best walkers in the friendly contest; while such games as checkers, dominoes, and letters always hold their place with the more quiet members of society.

The monthly Temperance meeting, though quite able to sustain itself on its own merits, yet owes its present popularity in part to the fact that it affords another opportunity for the social converse, the boys being allowed the rare privilege of sitting with the girls and of accompanying them home. This is in goodly also a good opportunity when in going to or returning from school, scores of dripping umbrellas shelter the happy heads that hasten with unwonted slowness.

The May Party has long been among the most and most attractive of our social gatherings. In this land of roses it is the custom to decorate scores of wands and bouquets of white-robed, flower-bedecked girls walk in pairs through the long floral arch to do homage to the sovereign of the evening. After appropriate coronation ceremonies same is escorted from her high place by a favored knight, and the evening concludes with social pleasures.

As a rule, our students are very fond of "speaking in public on the stage" and frequent applications are made for permission to give an entertainment. One proposed this year for the benefit of colored orphans in Chattanooga Tenn., was carried out in the most successful manner. The performers and good results for the orphans. The programme was repeated in part another evening, and the proceeds devoted to the poor in the vicinity.

The enjoyment of the performers is naturally great in the hour of their triumph, but the labor of learning and rehearsing overtaxes the already too busy student, and this phase of social life is rather discouraged. The general feeling existing between the students is that of good fellowship. Considering the large numbers placed in such close relation to each other, the cases of serious disagreement are exceedingly rare. Indeed there prevails among them a commendable spirit of Christian forbearance and helpfulness.

MARGARET KENWILL, Teacher.

### Report of Physician.

The health of the school has been exceptionally good during the year. No deaths have occurred among the colored students and but few cases of serious illness. The absence of the usual manifestations of malarial disease has been marked. The health of the Indian pupils has also been good. But one death has been recorded among them—that of a delicate child, from hereditary disease. The non-appearance of pneumonia during the past season has been an exception in the winter experience of the school. Other pulmonary diseases have been less frequent in appearance than usual, and milder in type.

Five Indian boys and one girl have been sent home on account of ill health. These cases were all of pulmonary consumption, but were not too far advanced to forbid the expectation of partial recovery in their own climate, and, judging from past experience, ability to make valuable use of the instruction already received at the school.

Whether the Indian or colored school be considered, the small percentage of sickness during the year, is worthy of note. It is evident that in the present arrangement of the school and distribution of its students, the large numbers represented do not weigh seriously in the balance against health,—otherwise the health record of the year, however favorable other influences might have been, could not be satisfactory. In dealing with the physical condition of these two races, peculiarly unfavorable conditions are inevitable. The first and most influential of these conditions is the hereditary constitutional tendency to scrofulous disease, the heritage from generations of uncivilized or semi-civilized ancestors. This underlying weakness is a factor which, in prognosis, is hard to be forgotten, but to which civilization tends constantly to eliminate. The second antagonistic condition is a marvellous ignorance and want of experience in the most common hygienic daily life. The third is infinitely curious and numerous manifestations. It is this which, in a large proportion of cases, opens the door to the constitutional enemy, and it is this which civilization is the best therapeutic measure for the Indian. Civilization will strengthen his body as it does his mind. The value of the instruction of the School, and the adoption of its regular habits is shown by the improved health of the older classes. As a rule, the first year's class shows most sickness, the Senior Class comparatively little.

Of the substantial sanitary improvements of the year, one of paramount importance is the permanent breakwater which has been constructed in front of Virginia Hall and Winona Lodge. This reclaims a strip of low marshy land six hundred and fifty feet long, with an average width of fifty feet. Over a large part of this, tide water rose and fell, with the inevitable deposit of more or less sewage. This evil is now corrected, the increased depth of water and action of the tide being sufficient to keep clean the outer side of the breakwater. Another improvement is the system of drainage also has been improved and is in excellent working order. It is fair to assume, aside from the influence of a season much more favorable than the present, that the improved health rate of the year is conclusive indication of the great value of these and all sanitary measures.

A beautifully constructed hospital, with ample room for sixteen patients, has been provided, for the greater comfort of the sick among the colored and Indian boys, by the generosity of the congregation of King's Chapel, Boston. It is completely and daintily furnished, by the same untiring givers, and is appropriately named King's Chapel Hospital.

M. M. WALDRON, M. D.

Resident Physician.

### Review of Industries.

The year has been, on the whole, a prosperous one to the industrial department of the school, especially in the chief elements of its success, practical aid to those who seek an education and their practical training for the duties of life and in habits of industry and self dependence. The Night Class for work of the students is more and more pressed with applicants and we look to it more and more for the best material in the school. In making the round of the shops, the almost uniform, spontaneous testimony of those in charge, several of whom are Southern white men, to the good spirit and improvement of the student employees, is very noticeable. It is evident that the young colored people of the South appreciate the opportunity to make their own way in the world, when it is set before them, and we believe there is a growing disposition to give them employment.

### HUNTINGDON INDUSTRIAL WORKS.

Mr. A. H. Hume, Manager.  
The SAW MILL, Mr. W. T. Westwood in charge, has cut two and a half million feet

of lumber three or four are registered now in the school in the Pastor days and two Mr. Westwood a ministers do well disposed all One worked all in school. of lumber this year, and employed thirty-three colored students, of whom twenty are regular hands working all day and attending the night school, and thirteen are now in the day classes, and work each two days in the week. Two of them are studying in the Pastor's hall, and work four half days and two whole days of each week. Mr. Westwood says kindly of them: "The ministers do well. Indeed this is the best dispositioned set of hands I have ever had. One worked all last year to keep his sister in school—one of the best workers I've had." The work has been as usual, sawing lumber, making laths, matching flooring, ceiling, siding, making fruit boxes, crates, etc. Owing to general business depression, business has not been as brisk as usual, but the prospects are good. As I sat in the office a young man called to bring "Jim's love" to his former boss, who seemed pleased to receive it and wished me to add the interesting item that "Some of our Hampton graduates who have worked their way through the mill have now become its customers. We have furnished material for one or two churches and school houses for them, and are supplying two churches now, on order of two graduate teachers both in Gloucester county. One of them has been very enterprising. We furnished material for one church for him and it burned down, and he is building it again with the same material." The WOOD-WORKING DEPARTMENT, Mr. James A. Brinson in charge, employs 17 colored students, of whom 13 are regular three year apprentices in the night school, and a work two days in the week. Five are regular outside hands, white men, have also been employed. This department has done all the carpenter work on the new Margaret Memorial Hospital, the floors, roof, doors, window frames, pews, etc., and this has required the employment of 14 extra outside hands, colored and white. The students have also been employed on the machine work, and one doing mill work with the journeymen. Mr. Brinson says "We have all the work we can handle, and it is increasing all the time, and there is better quality of work done, and the students are very encouraging. Some are as good as journeymen." One or two can take a job and carry it right along."

## AGRICULTURAL DEPARTMENT.

Mr. A. Howe, Manager.

The "Whipple" or Home Farm, employs in care of barn, stock &c., 13 regular hands, colored Night students—three more than last year—and for farm work, 42 colored boys from the day classes of the Normal school, who are divided into five squads, each working a day and a half in the week. Twenty-two Indian boys, who are under the direction of Mr. George Davis, four half days, learning various kinds of farm work. The crops last year of early vegetables were very abundant, corn was good, wheat not up to average because of rainy weather at seeding time, oats the finest we have ever raised. This spring we have 43 acres in vegetables, the rest in corn, rye, oats and clover; in all 120 acres under cultivation, on most of which we got two crops. The main job of the year, done by the students outside the regular work has been filling in and grading land formerly used for brick yards, now all brought under cultivation, about three acres.

The "Hemenway" and "Canebrake" farm, under charge of Mr. Charles Vanison, a graduate, has employed this year, ten boys, with two girls for housework, all regular hands, attending the Night Class taught on the place by a young man of last year's Middle Class.

The farm is steadily improving. It produced last year 4000 bushels of oats, 700 of wheat, 2500 of corn, and 40 tons of hay. This year it has 98 acres in oats, 55 in wheat, 107 in corn, 40 in grass, the rest in pasture. This farm is of great advantage and convenience to the School, working in with the Home farm in the pasturage and fattening of stock and supply of feed and provisions. On both we have now 100 head of cattle, besides three Ayrshire, Durham & Jersey cows; 150 hogs, 190 colts, 197 sheep and lambs, 150 fowls and 800 young chickens. Since November an average of 25 head of cattle a month have been slaughtered, and in all 140 head of cattle, 800 sheep and lambs, and 9 tons of pork. Some of the animals are raised on the place, some bought and fed. Early in the year the milk and the usual amount of milk has been supplied to customers.

Besides its profitability already suggested, the Hemenway farm has been for a very useful adjunct in training our "untutored" Indian youth into obedience to law and order. A few weeks removal from the excitement of large numbers, and instruction in the atmosphere of "Shellbanks" at work with steady going, English speaking associates, under the firm and kind management of Mr. Vanison, has worked admirable results. The boys are happy there, both colored and Indian, and to listen to the plantation songs poured forth

sometimes with a richness and abandon that is not heard even in our school hours of six hundred, is a treat to be remembered. The BRICK YARD has turned out 700,000 bricks, and disposed of its whole stock for use in the new Memorial Chapel, for building the new better school, and for general use on the place.

## GIRLS' INDUSTRIAL DEPARTMENT.

Miss M. T. Galpin in charge.

In this department, household linen and undergarments are made up, and the mending for 350 boys is done by a detail of 54 girls from the Normal school each working 1 day a week with 15 night students working all day. Some weeks there are from sixty to seventy-five garments to mend, and 160 pairs of stockings is the average number. All the under clothing and linen is also marked in this department.

The girls are credited by the amount and quality of their work. The number of articles cut and made up to April 1st, is 2,510. Twelve dozen dolls have also been dressed for sale. On the first of January dress-making was taken up, the girls being taught the trade according to an excellent system of cutting by a scale.

The Tailoring or shirt-making branch of this department under charge of Mr. R. H. Hamilton, has employed, at tailoring, of day students, 7 colored girls; of night students, 7 colored girls, 2 colored boys and 1 Indian boy; at shirt making, 5 colored girls. Uniform shirts of regulation flannel, work suits of Kentucky jean, overalls, flannel and cotton shirts are made in this department. The total number of garments this year has been 44,411. The quality of work has been better than ever before.

Mr. Hamilton, who is a graduate of the school and was one of the original "Hampton Singers," has been in charge of this department for the last seven years, as well as of the school choir. In his departure to enter into business for himself, he takes the good will and best wishes of all at Hampton.

## HOUSEHOLD WORK.

Miss C. L. Mackie, Manager.

The branches of this department are the Teachers' Home, School boarding department, Diet kitchen, Laundry and Cooking school. In all no outside hand has been employed this year, except one colored woman in the teachers' laundry. With this exception all the work is given to the students.

Sixteen colored boys, night students, are employed as cooks, bakers and assistants in general housework, and 40 colored boys from the day classes as waiters, with care of the dining rooms. The day school girls wash dishes, set tables and take care of the whole building.

The teachers' kitchen, near this year, is a new and convenient, and kept in excellent order by the student chef who has learned his art of bread making and bread winning in the school. A new diet kitchen and dining room, bright and sunny, give better facilities than ever for the care of students needing special diet.

It is worth the unusual exercise of will power, to get down to the students' kitchen by half-past five in the morning, and see the huge dishes of baked beans and bacon and watch the great pans of corn bread drawn from the oven for the school breakfast, and interview the many cook, and learn that he gets up at one in the night to make his oven fires to bake his bread, and use two-thirds of a barrel of coal for one, and 130 pounds of meal for the other; that he bakes 32 pans of corn bread for breakfast, 32 for dinner, and 39 for supper; and for the white bread four times a week, a barrel of flour. One hundred dozen of eggs are used a week at certain seasons. Hearing these gigantic estimates, the cook's athletic proportions seem to grow upon you, and you feel like Jack of the bean stalk, and look shyly at the yawning oven's mouth, till you remember having seen the amiable ogre reciting spelling to a little woman the night before. To work ten hours by day, and attend night school had seemed "plucky" in the work students, but this night work of brain and hand both must be a harder strain. "I get three hours sleep at night, and as much as I choose in the day, and it is only for a night. I expect to go into the day school then, the cheerful giant explains. He looks quite strong enough to stand it."

The Laundry, superintended by Miss M. A. Wheeler, employs 25 girls of the Night Class all the time, 6 more part of the time, 63 girls from the day classes, each working one day in the week, and one boy, a night student. All are colored students.

The work of the "teachers' home" as well as the school washing has been done here this year. Small pieces are washed by hand, the large by three washing machines, two Crawfords, one Oakley, and one Keating. The other machines are a centrifugal wringer, and French mangle. All these run by steam power.

The Cooking School, Miss Bessie Morgan in charge, has given instruction this year to 70 students, the girls of the Middle Class, and a selected number of Indian girls, 35 of each race. There are ten classes of seven each, the Indian girls attending in the morning and the others in the afternoon. They are taught plain cooking, chiefly such as the colored girls and more advanced class of Indians might do in their own homes. They learn to make bread, cook meats and vegetables, make soups and stews, make tea, coffee and chocolate, and some simple puddings and cake, learn to make and serve simple breakfasts, dinners and teas; also to cook for the sick, make gruel, beef tea, porridge, custard, etc.

Miss Morgan can see "no difference between the races. Some girls have taste and talent for it and some have not." The interest, and the quality of work have, however, improved since last year, owing she thinks to a change of arrangement which gives the workers a chance to enjoy the results of their skill. With the exception of dishes made to order, the good things made can now be purchased by students at the price of cost of material. Very little is left unsold. Besides this, on one day each week, the class whose turn it is feasts joyfully upon the dinner it has cooked and served, with due attention to etiquette and table manners. One bill of fare for one day each week, comprised beef stew with dumplings, vegetables, biscuit and a corn starch pudding. In due rotation this privilege comes to each class some three or four times during the year, and is enough to sweeten toil through the intervals.

A visit to either the colored or the Indian class is a pleasant experience; the kitchen neat as wax work, doors and windows open to the breezy greenness outside, the gentle teacher, the busy maidens in their clean cooking aprons and caps, the tempting dishes and appetizing odors. Seven young cooks did not seem to be enough to spoil the broth. Everything stirred up and steamed up, and baked up, and cleaned up, the class sat down with pencils and receipt books to write down the directions, what they had done, or were going to do, for future reference. Looking over one of these receipt books which may yet perform a mission in some Indian village, I found that it contained, in very legible writing, a "timetable for boiling vegetables," a table of weights and measures, then receipts and directions for boiling eggs, cooking salt fish, baked beef, raised cake, making new biscuit, Graham bread, dough nuts, boiled custard, Indian meal gruel, beef stew, hash, boiling potatoes, and beef heart.

Miss Morgan explains, "It is to give principles, foundations, general ideas and facility, with a thorough knowledge of the most important things as bread-making, etc., and in the end, to give the students taking a fuller course to prepare them to teach in a colored mission school of the Episcopal church in Norfolk and we have sent out several colored girls who are giving satisfaction as cooks in private families in the North, earning their future schooling. Several Indian girls are as capable."

## INDIAN GIRLS' INDUSTRIES.

The special industrial training of the Indian girls in sewing, laundry work and house work is described in Miss Goodale's report, and I need only to refer to their share in the busy life of the school, where all are workers.

## THE KNITTING DEPARTMENT.

Mr. F. N. Gilman, Manager.

This is not a girls' industry as one might suppose. Eighteen boys are employed in making on the Lamb hand machine, an average of 12,000 dozen pairs of mittens the year, taken at a fixed price by a Boston firm. Eight girls do the finishing off. All are colored students, twelve of the boys and six of the girls from the Night Class. There has been great improvement in the girls' work this year. The boys have done more, and better work on the average, making from 75 cents to \$1.50 a day. They are paid by the piece. Some industrious boys working two days in the week and at odd hours have made \$13 a month. The work on the machines is too hard for our girls. The boys make up the difference. The room where they work in the Stone building is very large and airy, and they sing over their toil. One told me that he can turn out five dozen pairs a day. Three dozen and a half is the usual limit.

## INDIAN TRAINING SHOPS.

Mr. J. H. McDowell, Manager.

Given on account of the coming of the Indian students, these shops furnish ample facilities for both races.

The Carpenter Shop, under a white foreman has employed through the year, an average of 12 Indian boys, of whom 6 work half days, 4 two whole days, and 2 are night

students working all day; and 1 working 2 days in the week; also 3 colored night students. The department has had the contract of building the new King's Chapel Hospital for colored and Indian boys, and has also built four new Indian cottages, a new oil house, and tank house. Its other work has been repairing buildings and furniture, making school furniture, 49 new beds, 28 tables 4 seats, etc., and fitting up a Natural History class-room. The shop has been somewhat hampered by an unusual proportion of new hands, but fewer changes have been made for lack of aptness, and the general spirit has been good.

The Paint Shop employs 1 colored and 1 Indian night student, under a white instructor. They have painted King's Chapel Hospital, the Indian cottages, and done much other work, glazing over 1000 lights, etc.

The Harness Shop is under charge of a colored foreman, a student in the Night Class, who is doing extremely well in the position. It employs also two other colored night students, and 3 Indian boys. Its work has been filling a contract for 165 sets of double plow harness for the Interior Department, making besides, 12 sets of single buggy harness, 1 set double carriage harness, 3 sets cart harness, bridles and halters, and repairs for the farm and neighborhood. This has been the best year of the shop in the spirit of the employees and the amount of work done.

The Tin Shop, under a white foreman has made an equally good record. It employs 1 colored apprentice from the night school, and 4 Indians from the day classes. It has made 16,444 pieces of tin ware on contract for the Indian office, 350 for the school, 60 for the neighborhood, and unsolicited orders, 2000 lbs. of galvanized iron work, 10,350 sq. feet of tin roofing and 1,625 lbs. copper valves and flashing for the new Chapel, besides repair work.

## WHEELWRIGHT AND BLACKSMITH SHOPS.

Mr. A. Howe, Manager.

These shops, under white foremen, have employed an average of 6 colored boys, half of whom are night students, and 12 Indian boys, one of whom is a night student. Their spirit has been generally good. The work has been as usual, making and repairing carts and wagons used on the place, horse-shoeing and general repairs in its line, with some outside work.

## PRINTING OFFICE AND BINDERY.

Mr. C. W. Belts, Manager.

This office has employed 14 regular hands, viz: 5 colored boys Night students, 3 Indian students, and 6 white students, and four colored graduates, one of them a girl type setter. The bindery employs two outside hands, one veteran soldier from the Home, and one young white woman. Two or more soldiers are also employed as compositors in press of work. The students' work has not been satisfactory this year; of eight who started last year five were dismissed from school this year, and four new hands were taken in at intervals of two months. As the apprenticeship is for four years, this has been a serious hindrance. The Indians, from their imperfect English, receive more benefit than they give for a long time.

Of the graduates, one has full charge of the press; another is a journeyman who worked in the N. Y. Globe office for a while. All learned their trade at this school. The regular work of the year has been the printing of the *Southern Workman*, *Alumni Journal*, and the little paper of the Indian students, *Thoughts and Talks*, monthlies; the *Home Bulletin*, issued weekly, and *American Liberty*, quarterly, from the Soldiers' Home, and the *African Repository*, published by the Colonization Society. The job work of the year has been as usual, from the Hygeia Hotel and the vicinity, but none has as yet been received from the friends of the Institution in response to the request for it at the beginning of the year. It would be a great help. The office is capable of producing any class of ordinary job work, at prices that compare favorably with those of any city. With the exception of the want of a new cylinder press, the office is fully equipped. The present one has been running twelve years, has been added to from time to time, and is in a weak condition, the being now old-fashioned, its parts, if it should break down, as it is liable to, could not be replaced: A new one would cost \$1,000, giving the old in partial exchange.

## THE SHOE SHOP.

Mr. E. F. Coolidge, Manager.

Mr. Coolidge, expecting to give up the shop, desires to complete its report up to May 1st, instead of April 1st as the others do this year.

It has employed on an average during the year, 14 regular hands, viz: two colored boys one colored girl and ten Indians; a white journeyman, and occasionally other

outsiders from the Soldiers' Home. One of the colored boys is in the first year of his three years' apprenticeship, a night student; the other works two days a week. Two of the Indians are night students, one on his second and one on his first year's apprenticeship. Eight Indians work half days. The girl is a night student.

The work done for the twelve months up to May 1st has been as follows: There have been made 26 pairs of fine quality of shoes, for school officers and teachers; for colored boys 290 pairs of shoes; for Indian boys 240, this is an increase over last year; for colored girls 78 (55 more than any previous year); for Indian girls, 172 pairs (about the average number). On outside orders, mostly unsolicited, 26 pairs. There have been repaired, for officers and teachers, 170 pairs; for colored boys, 631; colored girls, 390; for Indian boys, 232; Indian girls, 250; for outsiders, on unsolicited orders, 75 pairs. The total number repaired is 1765 pairs against 1655 last year; total new ones made, 1,026 against 800 last year. This is a very close estimate.

Of those made for students, about 90 pairs have been custom made by measure, and of finer quality, at prices from \$3.50 to \$5. Every pair of these equals three of brogans, in the work of construction.

Indian boys are paid from 25 cents to \$4 a month. This is rather a reward for good conduct than wages. Half is given to them, and half is saved to be spent in tools when they return home. Colored boys are able to earn from their board alone (estimated at \$10 a month) up to \$26 without board. The girls have been paid less, but more favored, their time not deducted if out for sickness. The present year is six months, and is getting \$10 a month.

This has been a good year. The work has given more satisfaction than ever, and the students have done well, both races. There has been a pleasant state of feeling, and all has gone well. Special attention has been given to fitting the students.

The school has had no Government contract for shoes for two years now, but a steady increase of school work has filled the time well, and is proportionately more valuable to the school, the whole of the work being done by student labor. In fact, as it has been last year and this, the shop would not have had time to fill a government contract, without employing outside help. Three years ago last October, the shop began to make girls' shoes, and they are made as well as Northern shoes are. Before that time only brogans were made. The apprentices have thus learned finer work. They have done well. "Crow Boy, a Sioux from Cheyenne River Agency, Dakota, has missed only five ball days since a year ago last July." This is certainly an unusual record for an Indian worker.

#### THE GREEN HOUSE.

Mrs. E. F. Coolidge in charge.

This is as yet a small industry, but is also of small expense, and capable of much development, for profit as well as pleasure. It has employed one colored boy this year, a night student. Only about \$30 have been spent for stock in the last two years, mostly for roses. By cultivation, and gift, it has, however, largely increased. The sale was small this spring, owing apparently to the lateness of Lent. Connected with the green house is a rose garden, for sale of flowers to summer visitors.

#### ENGINEER'S DEPARTMENT.

Mr. C. J. Jackson, Manager.

This department has employed 15 hands, viz: eleven colored students, one Indian, and 3 outside hands. Five of the colored boys are night students, all in their first year of the four years' apprenticeship. All the other boys work two days a week. Three of the colored boys have to do night work, in charge of fires, steam heating and engines. The work this year has been the care of steam heating, engines and boilers, the gas works, and the plumbing and sanitary work. For new work, there has been piping the new Chapel and Hospital for five iron bedsteads and fifteen new radiators, constructing a new system of drainage for Virginia Hall, and the erection of a new boiler and a forty-five horse-power engine, presented to the school by the Honorable George H. Corliss. The students have done fairly well, and of them extremely so.

#### WOOD-CARVING CLASS.

Miss Kate Baker in charge.

Learning the graceful art of wood-carving are three Indian boys and one colored boy who work regularly, two more colored boys and five or six colored girls coming in on outside time as they are able from four to six. Two of the Indians work afternoons, the other two days a week. The colored boy is a night student.

Miss Baker notices no race advantage. It is a matter of individual taste and talent she thinks. The Indians get more easily discouraged and the colored are more easily noticed, however. The girls do not handle tools as readily as the boys at first, but are more persevering, she thinks. The character of the work is better this year than last, showing more natural talent. The colored night student who started last October has shown an unusual degree of this and does very good work. The students are paid by the piece according to the quality of their work. The pretty boxes, picture frames, book shelves, paper knives, bread boards enricheled with the prayer for daily bread in mysterious looking Dakota words, contribution plates and other dainty productions of skill, form, with the Indian pottery painting in untutored native art, an interesting attraction to visitors in the Industrial Room below.

#### THE TECHNICAL CLASS.

Mr. F. W. Colcord in charge.

This class, especially mentioned above in the Principal's Report, is Hampton's youngest industry. It was started this year, with the object of giving some of the boys who do not learn a trade, girls as well as boys, an introduction to common tools, which shall save them from the utter helplessness with which one sometimes looks at hammers and nails. It is some of the minor emergencies of life. It will be of especial value here where our girls as well as boys would often be glad to be able to mend if not to make their school furniture. The training of eye and hand to quickness and steadiness must have some, reflex influence too on mind and character. The classes are made up of the smaller Indian boys, Indian and colored girls, ten or fifteen boys who have not learned by a trade, and there is also a class for the lady teachers of which a few have availed themselves. It is too early so to criticize their work, but it causes more amusement than admiration; but undaunted they go on trying to fill the world with a little more saw dust, and saw their way (if they can't see it) through all hard knots, to future glory.

Besides the above named industries there is various employment for a number of janitors, orderlies, general duty men etc.

#### IN GENERAL.

While pecuniary profit to the school is a minor consideration in its manual labor system, every shop and industrial department is run with the effort to at least make both ends meet, if possible with justice to its higher purposes. Some are able to do this and some show a credit balance.

A higher object, always put before the other, is to help the student to an education. But for this it would be often cheaper to employ steady outside labor of men instead of boys and novices. The students, both colored and Indian, receive pay for their special conditions. The pay is by the piece when practicable and according to the quality of work. An Indian made in the harness shop last month—fairly earned—\$18.75, the largest wages that have ever been paid to an Indian student here. In another shop the combined earnings of the Indian boys in one month were \$78. Half the Indian's wages is always kept for tools when he goes home. The colored foreman gets \$30 a month salary and often \$2.50 on extra work. Two colored journeymen made last month \$24 each. On an average, the regular work boys can make their board and \$10 a month. The total earnings of colored students, boys and girls, in the last fiscal year amounted to \$4,085.31.

The girls cannot work as hard or as steadily. The night student girls can make about \$3 a month besides their board, the day class girls, from \$4 to \$6 without their board. The girls are helped more from the beneficiary fund, and are able with its aid to work their way through the school as well as the boys do.

The highest object of the industrial system is to cultivate habits of industry, self-help and self respect; to make men and women. This it does, and no better need be said for it.

HELEN W. LUDLOW.

#### Report on Graduates.

Six hundred and ten names of graduates and ex-students now stand on my list of correspondents. With the exception of a very few, whose address I was unable to learn, a circular letter was sent to each of these last fall. Letters in reply have been received from a little over one third of the number. I have been gratified at hearing from some of the earlier graduates of the school, who have not heretofore responded to my letters. I think that many are learning to appreciate the importance and advantage of keeping up, in this way, some connection with Hampton and its teachers and friends.

I have not much that is new to record.

The letters tell the same old story of a hard-fought fight with ignorance, superstition and vice, especially in the rural districts. It is the country school-teacher who sees the least hopeful side of the Negro question. In the larger towns, cities, where he can attend without the exposure that comes from walking several miles in winter weather, scantily clad, where school houses are comfortable (though crowded), and teachers have the advantages of social intercourse, the work appears in its most encouraging aspect. It is the young man or woman in some out-of-the-way place, with his miserable apology for a school-house, his utter lack of school apparatus, his distant and often times uncomfortable boarding place, the lack of interest on the part of the parents, the absence of congenial friends, the discouragingly short terms, the tardy payment for his hard work—it is such a one who calls for our sympathy and challenges our respect, as we hear him bravely saying, "I do not only willing to work in a cause like this, when I see so much is needed, but I am willing to spend a large part of my earnings, if by so doing, I can better the condition of those who are so very needy." One young man who has taught in the Schofield School at Aiken, S. C. and who has also spent a good deal of time in the country teaching, thinks that "no one can get an idea of the true condition of the colored people by simply travelling on the rail-roads and visiting towns and villages. The people who visit and hear me have a fair idea of the condition of the Negroes, forgetting that Aiken has had a school regularly every year since the close of the war, and many parts of this country the colored people have never had a school properly taught six months since the war."

A more encouraging report comes from another part of the same State. At Monk's Corner, S. C. where one of our graduates has been teaching ever since he graduated in '81, the county school runs but three months, but the people support the school seven months longer. He adds, "We went to work and built our own school house, and furnished all our own supplies the first year."

A bright young girl, who has been teaching so steadily since leaving school that she feels "quite old in the cause," writes that she is now teaching "in the worst part of Georgia" and says "I used to think that wonder if one person are not going backward."

Eight tenths of those from whom I have heard have been engaged in teaching this year, or have been fitting themselves more thoroughly for work among their people. One of the Indians, who graduated in the employ steady outside labor of men instead of boys and novices. The students, both colored and Indian, receive pay for their special conditions. The pay is by the piece when practicable and according to the quality of work. An Indian made in the harness shop last month—fairly earned—\$18.75, the largest wages that have ever been paid to an Indian student here. In another shop the combined earnings of the Indian boys in one month were \$78. Half the Indian's wages is always kept for tools when he goes home. The colored foreman gets \$30 a month salary and often \$2.50 on extra work. Two colored journeymen made last month \$24 each. On an average, the regular work boys can make their board and \$10 a month. The total earnings of colored students, boys and girls, in the last fiscal year amounted to \$4,085.31.

A large proportion of graduates have taught regularly ever since leaving Hampton. Here and there the pressure of other numbers of the school has kept some of our claims drives an earnest student in some signs. A young man who has been teaching the same school ever since leaving Hampton in '80, has now married and settled down in the place, farming in the summer and teaching in the winter. Last year he raised about 7,000 lbs. of tobacco, worth from \$7 to \$25 a hundred.

This last winter has been an unusually severe one, in the South, and many children have been kept at home in consequence. I have received many urgent appeals from sympathizing teachers for help for their poor little flocks, some of which I have been able to answer by the help of kind friends here at the North. I know of nearly thirty schools to which boxes or barrels were sent at Christmas time.

Individuals in New Hampshire, Massachusetts, Connecticut, New Jersey, New York and Washington have all furnished help in this pleasant work. A little society in Maine has engaged a box to be sent to some of our Indian graduate teachers next Christmas.

I shall be very glad at any time to furnish names and addresses to any person who may want to engage in this work. There are many "good little children" down South that have never been rewarded by a glimpse

even of Santa Claus, fond as he is of such, and some nativity ones to whom possibly a promised visit from that good friend would be an incentive to virtue.

Will not some of our little friends, here at the North, help to fill his box, and say his expenses down there next Christmas?

A. E. CLEVELAND, Correspondent.

#### OF READING MATTER FOR GRADUATES.

This branch of the graduates' department is closing the year with satisfactory results. There have been more letters received than during any former year, the number amounting to nearly 500. The new addresses of those graduates who wrote at all, were sent in comparatively early, and by the 1st of November the work was all under way. And here we may thank our kind Northern friends for the invaluable assistance they rendered our work this year—keeping our shelves stocked with excellent reading matter. We feel, that to them is due the growth of this work among our teachers.

There were eight large barrels of books, papers and articles, suitable for Christmas gifts waiting for us, when we returned to the work about the middle of October. By the 1st of December letters were received almost daily asking for some little assistance in "getting up" Christmas trees, so that these barrels were particularly valuable.

There have been received between fifteen and twenty barrels and boxes of substantial reading matter for distribution. About a dozen good-sized boxes of Christmas gifts, and books for S. S. libraries have been sent off. Two libraries have been started with the contents of boxes sent from here, and number of schools have been helped with odd school books. One large box of magazines, in fine condition, was given to the librarian to be bound for our own library.

There have been sent out from October 17, 1885, to May 3, 1886, 2,000 rolls of reading matter, each roll averaging from fifteen to twenty papers of various kinds—religious, educational, secular and illustrated, for teachers and pupils; also, many magazines.

The letters on file for these seven months show a sincere appreciation of the papers sent, and many of the teachers write that the pupils are eagerly on the look out for the rolls, and know about when to expect them.

Children's papers are even more in demand than reading for the teachers. As illustrated S. S. papers, "something the children can read themselves," that can be used for rewards or on "speaking days." So that when the files of children's papers have begun to get low, we have sent them out as carefully as possible, and watched impatiently for some Sunday School to come to our aid; and it has been rather curious to notice how invariably we have been able to fill the almost empty shelves "just in time."

To those who wish to help this work in the coming year, we would say then, send us children's papers of any kind and in any quantity. Christmas cards are also very acceptable. Several hundred such very beautiful, large enough to hang upon the school room walls, were sent out during the year. Pictures of every kind are very useful. The expense of sending out this reading matter has been met by the Hampton School, and has amounted in the postal department to about \$30 a month. There has also been the freight expense on the boxes sent from here to graduates.

Some of our Northern friends have written for names of those needing books, and have sent directly to them from private charitable societies or from Sunday Schools. We are always glad to furnish any one who wishes to help in this way with the name of some deserving worker in the cause of education among the colored of the South.

RUTH G. TILSTON, in charge.

#### Department of Discipline and Military Instruction.

The Department of Discipline and Military Instruction, after months of perplexing problems and trying experience, can present a report of satisfactory progress during the school year 1885-6.

Two years ago the Battalion sustained a serious loss in the removal of the army. The loss of this Institution, a loss, however, in large measure compensated by the increased efficiency, sense of responsibility and development of character on the part of the cadets themselves, and the support of the school. A still further blow to the military organization was occasioned at the beginning of this year by the decision of the Board of Trustees requiring the members of the Mid-

die. C taking gradu a stro of die and t The trust last a year that am ment of a lar and Indian at the history of difficulties bo If under s been made, a year can be sl courage ment. On 1st, it usual. die Class to teach for one year before taking the Senior studies. This, with the graduation of the Senior Class, removed at a stroke nearly all the commissioned officers of the Battalion, as well as those trained and tried in the regular line of promotion.

The return to the West of most of the trusty and English-speaking Indian cadre last summer, at the expiration of their three years term of instruction, again crippled that arm of the service: while the enrollment of a larger number of Colored and Indian students, than ever before in the history of the Institution, increased the difficulties both of military and moral discipline.

If, under such conditions, progress has been made, and any improvement over last year can be shown, it should offer great encouragement to the friends of both races.

On the opening of the school year, Oct. 1st, 1885, all the male students were, as usual, promptly enrolled for military duty. The Battalion thus organized consists of four companies from the Normal and Indian schools, and two additional companies formed from the members of the Night School, or Work Department, and mustered, when first formed, 68 officers and 284 men. All have been fully officered from their own number, and are placed under the command of Mr. Arthur Boykin, a graduate of the school, acting as Major.

The military duties performed have consisted mainly in attendance upon roll-calls, inspections, marching to meals, drilling without arms, guarding the school premises, and care of the grounds. The department of "internal economy," including care of rooms, personal cleanliness, habits of neatness and order, general bearing and good behavior, has received special attention.

The companies imposed on members of the Day Schools have been required to fall in regularly for marching to meals three times daily, for company drill under their own officers after school once a week, for battalion drill once a week, and for company drill on Friday, for inspection in the ranks every morning before entering school, and for the more critical inspection and formal review on Sunday afternoon before marching to divine service. Each company has also its allotted section of the school grounds, which it patrols every Saturday afternoon, and clears of rubbish and the unsightly accumulation of the week. A regular detail of officers and men for guard duty is made daily by the Adjutant.

The cadet members of the Night School, on account of their industrial occupations, are necessarily exempt from all military duties, save those of marching to meals and Sunday inspection.

The maneuvers of the battalion in front of Virginia Hall at noon before the students enter dinner, at which time they are accompanied by the school band, have been witnessed by crowds of visitors, and attracted marked attention.

We have been fortunate this year in securing the assistance of 1st Lieutenant Albert Todd, 1st U. S. Artillery, now stationed at Fort Monroe, as special instructor in drill. The battalion has had the benefit of his criticism and suggestions every Friday, when the weather would permit, and when that was impracticable the officers have received a separate drill in the Gymnasium. The result is evident in better form to the ranks and a general improvement in military exercise.

The matter of wearing the cadet cap, and the purchase of school uniform have been pushed this year with more vigor than before. It is to be regretted that the poverty of the students prevents their earlier providing themselves with uniform pants and coat, and offers thus an obstacle to a more trim and soldierly appearance of the ranks for much of the term. By the close of the year, however, the majority of the cadets from the Normal and Indian departments are provided with such uniforms, and present a creditable appearance at inspection. It is hoped that further improvement in this respect may be made.

The officers of the battalion, in most cases promoted rapidly from the ranks, have responded heartily to the necessity for increased zeal and energy on their part, and have labored faithfully and successfully to enforce better discipline in the ranks than had before prevailed. Daily reports from the 1st Sergeants, and weekly ones from the Captain, have been material aids in this direction, while the regular weekly officers' meeting has afforded opportunity for discussion of mooted points in tactics or discipline, and for stirring talks by the Principal in the line of special duty.

The difficulties mentioned above as existing this year, in connection with the organization of the battalion, have been equally felt in the exercise of discipline and control. Raw recruits cannot at once fill the places of old and tried officers, accustomed to command and to obey. Nor can the ignorant and the savage from the cane-brake and cattle-trail yield without a struggle to the restraining influences of culture and civilization.

The course of justice the first four months of the year was through no primrose path. Not all of the Negroes admitted justified their recommendations, and some of the new Indians proved an unfortunate selection. Sterner measures than of old, and punishment new in the history of the school, have been called in to support its authority. The civil arm has more than once been invoked, and the door of the Guard House has occasionally closed upon a rebellious brave. Several students, both colored and Indian, have left the school under discipline, and the work of sifting the undesirable and the unruly early in the year went vigorously on, until the few turbulent and intractable spirits were no longer among us.

Early in the fall an epidemic of threats of violence passed like a wave over the school, and finally subsided after finding one offender in the hands of the county authorities. And later in the term the introduction of liquor into the Indian dormitory by a new-comer and old drinker, swept away the good resolutions and trusted principles of a few.

But the good behaviour of the school soon righted itself. The ill-disposed were few in number, and quickly culled out from the mass of earnest, devoted minds. In spite of apprehension early in the year caused by the loss of the trained and experienced, and the unpromising character of many who entered in their place, it is not too much to say, that the new students as a whole have more than justified us in receiving them, and that the order and discipline of the school have not suffered from the shock. They have been absorbed into the system and assimilated to our living organism, until, with changed and softened characteristics, they have become bone of our bone, and flesh of our flesh.

Especially gratifying has been the rapid reformation of more than one student who one year ago was considered incorrigible, and his dismissal in disgrace a mere matter of time.

A temporary transfer to the Hemenway Farm has in several instances been followed by marked success. In that atmosphere of quiet, self-control and hard work, the demeanor has softened, defiance faded from the face, and a return to rectitude been both easy and rapid.

In the control of the students, their constant employment in study, work or drill, has rendered many stricter methods of discipline unnecessary, and the most efficient means employed have been those furnished by the students themselves. The duty of maintaining school order and discipline has been in large measure delegated to the officers of the battalion, both commissioned and non-commissioned, who have exerted their personal authority in suppressing disorder and correcting evil. They have not been called upon in vain, nor shrunk from disagreeable lines of duty. As a means of moral education to the officers, and with the design of raising the standard of justice throughout the school, an Officers' Court was appointed about the middle of the year, to supplement the routine discipline at the office. Its proceedings and sentences have been submitted to the Commandant for approval, have been marked by dignity, firmness and fairness, and the penalties imposed have been, as a rule, fully as severe as those emanating from the Faculty.

While each student takes all the care of his own room, each of the nine dormitories occupied by the boys has been in charge of one of their own number, also an officer in the battalion, who has been held strictly responsible, not only for the neatness and good appearance of the building, but also for the maintenance of quiet and good order and the general observance of school regulations on the part of the inmates. The rooms are inspected daily by the janitor in charge, three times per week by a lady teacher, and formally, in the presence of the occupant, by a school officer every Sunday morning.

The experiment of placing the centre division of the wigwam, containing some fifty Indian boys, under the care of a student from Indian Territory, with a Sioux from Dakota as assistant, has resulted in producing the model dormitory of the school, in which the occupants of the several rooms vie with each other in the neatness of the beds and spotlessness of the floors, and into which we invite visitors not only without fear, but with special pride; a remarkable contrast truly to the floor of earth and filthy interior of the Western lodge from which it is named, but only a fair and visible expression of the change wrought by the training and culture in the thought and habits of the inmate.

The discipline of the year has brought the school into conflict with one portion of the outside world. Self defence and the protection of our pupils, after the failure of due warning and protest, compelled a resort to legal measures to suppress the sale of liquor to our Indian students. A public sentiment was cordially shown in our favor, the effect was healthy on the community at large, and the result was a cessation of the

traffic as far as it affected the school.

Difficult as has been the discipline of the past year, it cannot be called a failure. Where a few have fallen out by the way, we believe the movement of the vast majority has been that of steady progress towards a higher and nobler life. It has been manifest in feature and bearing, as well as in order and obedience. Pathetic have been some of their struggles with temptation, their penitence when vanquished, their renewed efforts to overcome. With only darkness behind them, and with their eyes but half opened to the new scene, thrown largely upon their own honor, with few direct rules to restrain them, and subject mainly to the authority of those of their own number, the wonder is, not that a few fail to stand the test, but that, out of such unpromising and uncouth material, characters of strength and beauty are so rapidly developed.

The Commandant gratefully acknowledges the cordial support afforded him the past year by the faculty and teachers of the institution, who have made distasteful duties pleasant and lightened many a dark hour.

He feels also under special obligations to Mr. Arthur Boykin. Acting Commandant during the summer vacation, for so cheerfully assuming the routine work of the school during the illness of the Commandant in the winter, and so acceptably filling his place.

Geo. L. Curtis,

Commandant.

#### Report on Religious Work.

The Hampton school aims to be thoroughly undenominational in its religious work. The school church with the Apostles Creed as a basis flies sectarian banner and has among its members the representatives of all the denominations. During the summer in the absence of the Pastor, Rev. J. J. Gravatt, the Rector of St. John's church in Hampton, fills the pulpit, and the Baptist and Congregational ministers supply it at other times when the financial condition of the school makes it necessary for the pastor to be absent in the North.

In the church services it has been found that responsive prayer, reading and chanting are helpful in bringing the students to take part in the worship. The silent prayer of the Friends has also been adopted.

In the moral and religious work of the school the whole corps of officers, teachers and instructors takes a part. Quite as effective sermons are preached by the farmer during the week as by the pastor on the Sabbath. The Commandant assisted by the corps of officers chosen from among the students quite as much for their moral character as for their proficiency in drill forms an important factor in the work of applied Christianity.

The foreman in charge of a large number of the trades, himself superintendent of the whole, Methodist Sunday school in Hampton and prominent in the temperance work of the place, makes himself felt in the moral and religious training of the students. The principal officers and teachers are engaged in the Sunday school, social meetings for prayer and in the missionary work as are also the resident graduates.

In the Pastors' Class on the school grounds (of whose working and need of further accommodation I speak below) all the white pastors of Hampton with the exception of the Methodist clergyman, who is cordially in sympathy with it but is detained by pastoral cares, take part in teaching their colored brethren. The colored pastors themselves thus become important allies and helpers in the work of the school.

It seems to me a matter of thankfulness that by its farms, workshops, military organization and class rooms, as well as by its Sunday school and church, Hampton is able to apply Christianity to the bodies of these students as well as to their minds and hearts. It is fortunate not only for them but for the people among whom they go to work as teachers. The record of the past year shows that the five hundred teachers that Hampton has sent into the public schools have not been contented with improving the minds of their pupils but have tried to better their physical and moral condition. They have made themselves felt in their homes, teaching them how to live, to cook, to farm, as well as instructing them in their higher duties to the church and the state.

The Hampton school is fortunate, too, in dealing with the representatives of two races who with all their faults are possessed of moral earnestness. The boy or girl who is willing to work all day and go to school in the evening, as is the case with all the members of our Night Class of 170 and has been with many of the higher classes, has usually some purpose in life. The school has refused fifty applications from the city of Washington alone during the past year,

for the very good reason that Washington had plenty of schools of her own and Hampton ought to work for more needy parts of the South, but for the additional reason that we have learned by experience that most of the students from the large cities come because their parents send them and not so much from their desire to improve. While bright and smart, they are usually lacking in moral force and turn out badly. They are usually of little value in the moral uplifting of these races, which is the great object of the school. One of them, writing back from here to a friend in the city, and with much disgust, "There is nothing at Hampton but work, work, work, from morning till night." The severe requirements of our industrial system seldom suit them and they fall out by the way. Hampton draws its students from the country districts where the people have to work hard for a living and are in dead earnest for an education.

Our Indians come, usually, from the same earnest class. They come of their own free will and represent the enterprising, progressive part of their race. It shows considerable of an interest in an education that they are willing to venture across the continent to attend the white man's school.

I think that Hampton is fortunate, too, in having the two races together here. It makes the Negro think of other wrongs besides his own and gives him opportunities for missionary work among the members of another race here on the school grounds. A graduate on returning to Hampton, alluding to the narrowness which characterized many of the leaders of his own people, and with thankfulness of the influence which here at school in broadening his interest and making him think of others besides his own race.

Not less important is the influence of the Negro upon the Indian. I believe that the children of the red man learn many lessons which would be impossible to teach them without bringing them in contact with the people of another race.

The Indians teach in the colored Sunday schools of Hampton and take part in the missionary work among the cabins of the colored people. Thus their sympathies are broadened. In their "Lend-a-Hand Club" the Sioux were foremost in proposing to help Philip Slater, a member of the Omaha tribe, the life-long enemies of their people, who had gone back from Hampton with his family, whose house had been blown down in a cyclone and all his household furniture destroyed.

The letters from the returned students show that they do not lose this missionary spirit after their return, but go among the old and poor on the reservations, bringing them help and comfort.

The religious work at Hampton not only has special encouragements but also special difficulties on account of the previous conditions of the races with which it deals. In many cases the blacks have considered the Ten Commandments as imposed by the whites in the same way as slavery, a code of rules which they had reason to believe the white man did not observe but considered admirable for the control of the blacks. It is not strange that they do not always consider the duty of telling the truth, binding. Many of the colored students come up with the thought that the white man has a right to the truth only under certain conditions. Any betrayal of one another to the whites is considered sinful to the last degree.

The experience of the last year has brought to light some of their peculiar ideas. Some of the best boys in the school when caught in an act which was contrary to school laws though not in itself morally wrong, persisted in an untruth in a way that surprised us. On investigating the matter more thoroughly we found that they excused themselves to their own consciences on the ground that the promise they had made one another was much more binding than any they had made to the whites. Besides this, they took refuge behind the right of a criminal in a court of law to plead not guilty. To make a colored student understand that he ought to tell the truth when caught in a wrong is not easy. Something of the same sort is true of the Indian. He does not consider that he owes the truth to all men. The old idea of loving one's friends and hating one's enemies, of owing the truth to those whom they consider friendly but being justified in lying to their enemies, prevails very largely among them. I believe that notwithstanding this apparent lack in their conceptions of truth there is among them a love for truth and justice. An Indian will usually do a piece of work in the shop well however long it may take him. He cares very little for the appearance. He seems to have a standard of his own to which he desires to bring his work. Otherwise he is not satisfied. With the other race the bad effects of slavery are shown in the inclination to be content with

there is no report. These are the facts, and facts are what we need and desire on this whole subject—the truth, the whole truth, and nothing but the truth. By their fruits ye shall know them. The final test of this school is the work of its graduates.

In speaking of the threefold work wrought here I have said nothing of the money expended for the support of teachers. If we add the amount given for this to that given for the outfit of the school the whole will not fall short of a million of dollars. And all this without debt. The incubus of that dreadful word does not rest here. Nor have I said anything of the teachers themselves, who have not wrought chiefly for money, coming, for the most part, from cultured and refined homes, meeting for a long time with sympathy, and not seldom, in former times, with aversion and scorn, they have laid upon the altar of this service an amount of self-denying and heroic labor that can find its reward only in a sphere where money is not the standard of value. The whole country owes them thanks.

It is not, however, the chief object of Christianity to promote the political or social well-being of man in this life. It will do that incidentally, but its chief object is to provide for the forgiveness of sins; and to prepare men for a kingdom of righteousness, peace, and holy activity and joyful service in a kingdom where Christ shall be King; and shall reign forever and ever. It is because we trust that this work will be here promoted that we rejoice as Christians in the gift of the Chapel that is now to be dedicated. We trust that here will be taught and promoted a Christianity as narrow in its creed as revealed truth, and as broad in its love as humanity. We trust that here, where three races and nearly every denomination are united in work, sectarian division, feeling may be merged in loyalty to Christ, and that the Babel of names may give place to that 'only Name under heaven whereby we can be saved.' We might then have here not a Baptist, or Methodist, or Congregational, or Episcopal, or Presbyterian church, but one whose designation should be 'The Church of Christ' in the Hampton Normal and Industrial Institute. Such a church would be a branch of the one universal church of which Christ is the head—may we trust that here many shall be prepared to join that one great army of the redeemed who shall sing the song of Moses and the Lamb, and who, looking back with thankful and adoring wonder upon the way in which they have been led—shall say, 'What hath God wrought?'

Looking then at the whole work done on this ground, we say that it is a great work. Whether we regard the givers or the teachers, we say too, that if Christ had not done this work, we trust it would not have been done. Outside of Christianity there is nothing like it, and since that is kept alive in the world only by the Spirit of the Living God, we say again, 'What hath God wrought?'

But while a great work has thus been done on this ground, a great work remains to be done not only by the Institution, but for it. As we have seen, its growth has been marvelous. It has already accomplished much, and as at present organized and equipped, may go on for some time and accomplish even more. But an endowment is needed. The central indomitable, wise energy, fertile in expedients, comprehensive in plans, that has had so much to do in bringing the Institution up to its present point cannot continue always. If the Institution is to do its present work it is the hard lot of Gen. Armstrong, upon whose head there are more gray hairs than time has put there, to raise, each year, from the gift of a Christian and philanthropic people the large sum of fifty thousand dollars. This, probably, no other man could do. The work of the Institution we would not have diminished, but it is much increased. In my judgment, and in this Gen. Armstrong agrees with me, the Institution has now reached the limit of best supervision and most efficient work. But with its buildings completed and its system systematized, it can, with an adequate endowment, continue to work more efficiently and beneficially as experience shall be gained. Five hundred thousand dollars are needed. Of this one hundred and six thousand have already been given. Shall the rest be provided? I believe it will be. I do not believe that those who have put their hand to this plow will look back. I do not believe that God, who has wrought with them, and done so much for the cause by them, will now forsake that cause. In this day of enlarged benevolence, and of fortunes that go up into the millions, it can hardly be after so much has been done, that the friends of humanity will see this Institution crippled, or will fail to furnish means by which the wheels of its progress shall be kept, if possible, in steadier and more rapid motion in all coming time.

The work done here has had, and will continue to have an intrinsic value worth all its cost, but we regard it chiefly as it is related to a greater work which is to be done, not by this Institution only, but by all institutions, and all influences that can be brought to bear upon it. As a nation it is still with us as it was with the Israelites when they were encamped on the plains of Moab. As they had yet to fight many a battle before they could possess the promised land, and had then to settle the claims of the different tribes and to combine them into nationality, so we have yet before us a great, and in some respects, not dissimilar work.

From the plains of Moab where the Israelites looked forward to their promised land, they went up and took possession of it, but only as God was with them. When they were faithful to Him, and He wrought with them they prospered. One chased a thousand and two put ten thousand to flight. When they forsook Him and He withdrew His aid they fell into decline and were smitten before their enemies. Their whole history is but an alternation of prosperity and disaster as they did, or did not, serve God, till at length they so far fell into idolatry and conse-

quent wickedness that He gave them over into captivity. He sent to them His messenger, rising betimes and sending them, "But they mocked the messengers of God, and despised His words, and misused His prophets, until the wrath of the Lord arose against his people till there was no remedy." And so it was with the Jews after their return from captivity. They did not relapse into idolatry, but they did fall, partly, as the Sadducees, into infidelity, and, partly, as the Pharisees, into a self-righteous formalism whereby they made void the law of God, and crucified His Son, and persecuted his followers till the wrath of the Lord again arose against his people till there was no remedy. The walls of Jerusalem and of the temple were thrown down till not one stone was left upon another, and the Jews, retaining as by a miracle their nationality, have been a scattered and an oppressed people till this day. Throughout their whole history they stand before the nations as an object lesson to teach them that there are retributions for nation's in this world, and that without God they cannot prosper.

This is the one lesson that we are to lay to heart if we are to do the work that is set before us. That work is to consolidate the nationalities and races that now inhabit these United States into a free and permanent government under which manhood, as in the image of God shall be respected, and the right of every man to life, liberty and the pursuit of happiness shall be conceded and maintained. Something more is possible, but at present such a government, with the marvelous control now given by science over nature and the decorations of an art, not yet developed, that shall blossom over the breadth of a continent, is the promised land to which we look forward.

Can this land be possessed? Can the work involved in its possession be done? The answer is, in spite of the antagonism of races, the traditional hostility of nations, the diversity of language, the prejudice of color, the apparent conflict between the interests of capital and labor? Can it be done despite the undermining and disintegrating efforts of intemperance and licentiousness, and fraud, and of the ambitious and sensuous and debasing tendencies hitherto rampant?—There are the Canaanites that are to be fought, not externally, but internally. The question has no relation to that of amalgamation or whether the races and nationalities shall be mingled in schools, in churches, in social relations, in trade even, or shall move on in parallel lines as the Rhone and the Arve flow on without mingling towards the same ocean, where all differences are lost. It refers solely to the maintenance of those rights of our common manhood which the Declaration of Independence declares to be inalienable. Before our own great government has ever conceded and maintained these rights, our own has done it but imperfectly and is yet untried, and if this work is to be done the capacity and possibilities before did the idea of the right of every man to take part in the government enter as a factor into politics. The ancient republics were really aristocracies with restricted citizenship. Never was there such capacity for the production and distribution of wealth, or for simultaneous and organized action, never such an oceanic breadth of a free people in their sectional interests and local government, many as the waves, in their central governments, one as the sea.

Can then this work be done? Yes. The capacity for it is in man. He readily conceives of it, and whatever he can conceive of morally that he can become and do. The obstacles are wholly in him. Look at those I have mentioned. Every one of them is wholly in him. We need then, only to know the requisite changes in him, and how these changes can be wrought.

And here it may be remarked, that if a change in men be the thing needed, it is obvious that not much can be expected from mere organization, mere re-organizing the same. On this point there is no little delusion. Organization is essential. Government itself is organization. But organizations differ as they do or do not pre-suppose and involve changes in men, and having for their object to promote the changes, literary and social organization involve them. But under a free government organization neither pre-supposing nor involving any such change, but having for their object to promote the interests or protect the rights of special classes, are generally mischievous. They are narrowing in their effect upon those who enter into them, and provoke antagonism in others. They involve expense for meetings, and the support of officers and organs and generally so become the centres of intrigue and corruption, if not of socialism and anarchy, that their total effect upon society is disastrous rather than beneficial. Especially is it undesirable that there should be among us any organization that tends toward a division into permanent classes or that would prevent a free movement from the lowest stratum of society upward, or from its highest stratum downward, according to industry and merit.

Passing then to the changes needed in man, I observe that where there is ignorance that would disqualify a man from being intelligent in the political and social state specified, there should be a change from ignorance to knowledge. This opens a vast work before us in this whole country, and particularly for this and similar schools. There must be knowledge. They must be so far educated as to know their rights and the value of liberty, and its dependence upon law, and to be capable of being, not a dead weight to be carried, but a vital force in the progress of society. But a man may be the student of the law, and be an obstruction. Knowledge is simply instrumental. The burglar, the gambler, the counterfeiter, have knowledge, and the more they know the more dangerous they are. The thief and liar know they do wrong, but they do it. The theory that knowledge, trained intellect, what is commonly called education, is sufficient, breaks down at once and wholly under the fact that men are so far from doing as well as they

know. It is a prevalent theory, but till knowledge and conduct correspond it will be delusive.

But if a change from ignorance to knowledge be not sufficient, what more is needed? A change is needed in the directive rather than in the instrumental powers. We need, back of knowledge, that choice which shall guide in its use to the best ends, and in seeking those ends shall subordinate all that is lower to that which is highest. We need a change of character, of that which is the deepest love, so that men shall love God with all their hearts and their neighbors as themselves. If such a change can be wrought it is self-evident that the needed work will be done. "Love worketh no ill to his neighbor." If those of different races and nationalities were to love each other as themselves, if the employer were to love the employed as himself, and the employed were to love the employer as himself, it is plain that every man over this broad continent would be secure in his right to life, liberty, and the pursuit of happiness. This is the indispensable condition. As this is approximated society will approximate perfection. Till this is aimed at, and, in some measure reached, men will only roll the stone of Sisyphus up the hill to have it return upon them.

Knowing then the change that is needed in man, we only need to inquire further how that change can be wrought.

And here we say that Christianity can do it, and nothing else can. As we have seen, knowledge can do it, and so can other religion can. There is not in one of them anything that tends to awaken in man an aspiration towards such a promised land as we seek. If such aspiration exist it is in spite of the religion, and because the germs of it are in man himself. There is not one of them that tends to form in man a character that would fit him to enter such a promised land. There is not one of them in connection with which society is not either stationary or in a process of development downwards. The supposition that there is in man, apart from Christianity, a tendency to any permanent progress sufficient to remove the obstacles from man himself, is baseless. Christianity alone can do it. Comparing Christianity with other religions the difficulty is that their fruits are constantly judged by the doings of those who are not Christians. Christendom is not Christian, and there is no wickedness like that of nominal Christians. If their atrocities and crimes of greed are not greater than those of heathendom, which may be doubted, their light is greater, and so they are more wicked. Rightly applied "By their fruits ye shall know them," is a correct rule of judgment, but if arsenic were to be labelled flour it would be hardly fair to impute to flour the effects of arsenic, and yet this is the logic, either wicked or stupid, which exultant infidels apply to Christianity when they charge upon that the wickedness of nominal Christians.

Christianity then is our only hope. That it is the object of that to produce in man love to God and love to man cannot be denied, since those two comprise the sum of the law, and of the commandments of Christ. Paul, too, said that without love he was "nothing"—no Christian. This love is so of the essence of Christianity that without it there is no Christianity.

Are there then in Christianity, motive forces and a power such that we may hope that men increasing numbers, and finally, all men on the face of the earth will be brought to exercise this love? We say Yes. We say it because, in demanding that love Christianity is coincident with the deepest philosophy of our nature as finding its perfection and highest good, both individual and social, only in this. It is the only condition of a perfect social state here, and a chief element in that heaven to which we look forward in the great future. We say yes, too, because Christianity reveals to us and in the relation of a Father, a God who is love, and love begets love. "Every one," says the Apostle John, "that loveth, is born of God." We say yes, again, because there was, in the coming, and life, and death, of the founder of Christianity the most stupendous example of the love of God and of man of which we can conceive. "Greater love hath no man than this that a man lay down his life for his friends;" but "God commendeth his love to us in that while we were yet enemies Christ died for us." Love begets love. "And I, if I be lifted up, will draw all men unto me." Once more, there are in Christianity not only natures consonant with our nature, but there is in connection with it, an ever present personal agent working through these natures in accordance with human freedom and the purposes of God. I have spoken of Christianity as having in itself, as a system, the requisite power, and so we speak. But it is not Christianity that does the work. It is Christ. Christ has come, and lived, and died, and risen from the dead, and ascended to the right hand of God. He reigns. To him all power is given. He is the Savior of men not only by what He has done, but by what He is doing now, and it is only as He shall give more copiously the spirit that He shed down at Pentecost, that there will be raised up an army before whose shout every wall of opposition shall fall down. Let such an army go on as did Israel of old, not carrying with it destruction, but adding to its ranks as it marches till every man from ocean to ocean shall be a Christian, and, since the least that a Christian can do is to give every man his rights, we should have at once a social order and a government, in, and under, which every man would be secure in his right to life, liberty, and the pursuit of happiness. He would be free to work out his own best good in his own way. We should then have the promised land of which I have spoken. It would be the promised land of the statesman, for all that statesmanship can give with the best material, it would be a good land, far better than the present, but would not give us the milk and the honey.

As I have intimated, Christianity would do for us something more. It would give us the right to have all his rights, and to pursue his own good in his own way, and quite another for every man to be actuated by a spirit of love and good, will that would lead him to minister in every possible way to the good of those around him. This, statesmanship knows nothing of, but this Christianity lays upon every man the obligation to do. Our present state is one of such advancement, if every man would give his rights it would be far more advanced, but the coming in of this active love would be as then morning rises upon high noon. The entrance of the morning purging the mountain tops and then flooding the valleys it but a faint symbol of the light and warmth that would permeate every stratum of our social life if the heart of every human being were a radiating centre of love to God and love to man. That would be Christianity. Nothing short of that, and if this land, from the Atlantic to the Pacific, and from the lakes to the Gulf were inhabited by such Christians there would go up as never before the exclamation, "What hath God wrought?" Whether this is to be, I know not, I only know that such is Christianity, and such would be its result. It is from this learning of Christianity on the social and political wellbeing of our country together with the peculiar relations of this Institution to that well-being, that we rejoice as patriots in the gift of this beautiful and commodious Chapel which is now to be dedicated to the worship and service of Almighty God. It is patriots who have built these buildings and women point out from these teachers, and that rejoices to-day in a completed instrumentality which will keep our country from the danger of ignorance and vice in the Negro race that was so strongly set forth by President Garfield in his last address. It is a tendency which gives its chief interest to this day and to the work done here. Let us see large numbers of young men and women point out from this Institution as teachers, and carrying with them not only the light of letters, but the light of the living power of a Christian religion, and the strength of our hope for the country in the future conflict that it will turn a source of danger into a source of strength.

[Anniversary Exercises concluded]  
To these colored people, I would say, there is no royal road in this land to wealth and success. For white men, and all men, the only road is industry, frugality and honesty, by doing right. Don't believe for one minute that the only aim in life is preferment and honor, and that the only way to get the best place in the affection and heart of the people. Your great orator, Frederic Douglass, used to say that if for many years his constant earnest prayer that God would emancipate him, but day by day as he repeated that prayer his assistance came, and he could realize that God was ever listening to it; till one morning, as he was walking down the road from his master's place, he came to him that he might keep on walking, and he walked on, and then ran, and he kept on running and walking with his face to the north star. Then he realized that God was with him and was answering his prayer. And the lesson is to you all, that God is with those who help themselves.

At the Principal's request that all who had been pleased to hear such friendly expression of sentiments from Western men should manifest it by saying *Amen*. The honorable gentlemen of the effectiveness of their words.

The Principal recalled the earnest efforts of Senator Teller, while Secretary of the Interior, to call the attention of Congress to the great debt of \$4,000,000 we actually owed the Indians, urging its claims again and again. If he had had his way there would be twice or three times as many Indian children in school now as there are. He asked the Senator to speak.

SENATOR TELLER'S SPEECH.  
"Ladies and gentlemen—I trust you will not be alarmed. I will not keep you long. I declined to make a speech, but General Armstrong insists that I shall say a few words. I have only ten minutes of the success of Indian education, the most skeptical cannot deny. There is some danger that we become impatient to work like this. This is a day of push, a day of railroads and electricity, and we are apt to say that success doesn't crown effort as rapidly as it should. The fact is, a nation is not born in a day, no history has recorded such a thing. The colored race is just only twenty-one years old—it is only twenty-one years since the war closed—and I agreed heartily with the young man who said that no other race had ever made such rapid progress. The Indian race is younger than the colored, if we go back to the first great efforts made for them which were laudable and wise."

I know our great colleges were started to educate the Indian race, but they began at the wrong end, with purely intellectual training. No nation has ever risen but by labor. The Romans had a proverb that "Labor is luxury." Many don't believe that, but it is true. No nation is great till it can labor. When you have taught the Indian to labor with his hands, you have made an important step in his elevation. The Negro, because he was compelled to labor, has made more progress. He became disciplined in the labor of the hands, and was prepared for labor with the brain. I was struck with Dr. Hopkins' text "What hath God wrought," and the thought occurred to me that God's "large benevolent" through human agencies. God never civilizes a man, he puts it into his heart, and others heart to work out his civilization.

You may attend Hampton school and get all the perils for each on himself—man or woman. Your race won't move till each moves. Public education is essential to civilization, for all races, but it will not alone civilize. You must have character and moral worth, respect and obedience to authority. I once saw a great building in Chicago, "large benevolent" moved up bodily a story's height. It was not done by one lift, in one place. The many hands moved together and lifted a little at a time. So if each man and woman will do his part and personal duty, the great race edifice will rise. What is the condition of the colored race depends on the colored man and the colored woman. So it is with the Indian race. The past efforts for them were on one side. We put the boys at school and kept the girls at home. Once, and we don't feel lost at all, but very much at home. We are all very glad to have been here.

the race. Educated parents will have educated children—not that they will inherit education, but an educated man will make every effort and sacrifice to give his children an education. Mr. Perkins of Kansas said to you, young men, don't aspire to political preferment. I know you will have great temptation to do so, but remember that true greatness comes only from the discharge of duty.

I would say one word on the Indian question. You may civilize the Despatch. It is true that it has been slow. It took a long time to recognize the fact that we owed it to these people to give them an education of hand and head and heart. In 1879, I was a member of the Senate from a Western State, and I remember that I had said that the only good Indian is a dead Indian. I never uttered such a sentiment in all my life. I applied to my record. While I was Secretary, I doubled the number of Indian children in the schools, in this country. I put figures before the Senate of our great debt to the Indians.

Public interest in the Indian has been greatly aroused since 1880. Wherever there was nothing, we now appropriate more than a million of dollars. We have built up institutions with bright Indian children; as in Lawrence, Kansas, and public opinion is behind Congress, and what Congress does is liberally than ever. I know that it was said that the appropriations were in danger; I know that carmen men said that it was no real danger, but that public opinion was behind them.

We passed in the Senate, and it now hangs in the house, with little hope, I fear, of success this term, a bill appropriating \$750,000 for the education of the colored people. I noticed a wholesome thing in the discussion; that men even who did not vote for it considered themselves insulted if it was hinted that their State was not providing for the education of its citizens to the extent of its power, without regard to color or race. No man puts out his hand to do a good work, but lifts himself too. No man can imagine that public opinion will let this great work go back. When a boy of that color comes here to-day, and so many come year after year; it shows that public sentiment is rising, and in a few years there will be no more of this kind of thing. The secret of success is individual effort, individual obligation, individual responsibility.

REV. DR. HENRY OF VIRGINIA.  
Invited to occupy the time that still remained, Dr. Henry playfully deprecated his "lot always to make the last speech," and then proceeded to justify it by making a very bright one. He had come to Hampton to visit an old friend, a Virginia gentleman, Colonel Tabb, who had offered as one inducement, the Hampton Commencement. He found he had many personal associations here. When a boy of that color, having a passion for collecting autographs, his father had named as one of the great men of the country, Dr. Mark Hopkins. Dr. Hopkins kindly responded to his request, with not only his signature but the words, "My young friend, become a greater and better man than any whose autograph you solicit."

Twenty-six years ago, when a student in the Theological Seminary, he heard the most impressive missionary address he ever listened to. It was by General Armstrong's father. When a delegate from the General Assembly of the Presbyterian Church, to Washington, in its Committee on Indian affairs, some years ago, no man received them more kindly than Secretary Teller. Dr. Henry enforced the Senator's words of individuality by a good story of a country clergyman who went to the city to find a good model to improve his own style, and after bearing Dr. Taylor, Dr. John Hall and others, settled on Dr. Talmadge as having a style most effective, and at the same time the most easy to copy. The Sunday after his return, the people were astonished to see the pulpit removed, but when he arose and announced the hymn, and then said, "Let us pray!" in thunder tones, the deacons quite convinced that their quiet little pastor had gone suddenly crazy, rushed up on to the platform, carried him home by force, and put hot water bottles to his head. The moral was, be yourselves if you don't want hot water bottles on your head. The Doctor concluded his speech with another good story. "I was once called to Canada to deliver a Sunday School address. Just as I was going on to the platform, I was requested to make inquiry for a child who had been separated from her mother in the crowd. Little Mary Wilson. Has any one in the room seen her. Her father thinks she must be in the room. Will any one who has seen her please make it known?" No response was made, and then to one's astonishment, a little girl walked out of the front pew to go home with her astounded father. "Why is this little Mary Wilson?"—why didn't you answer when everybody was asking for you?" "Oh, I ain't little Mary Wilson that was lost. They were asking for little Mary Wilson that was lost. I ain't lost—I'm here!" We are all here to-day, and we don't feel lost at all, but very much at home. We are all very glad to have been here.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygieia is four stories in height, substantially built and comfortably furnished; has two Otis hydraulic elevators, gas and electric bells or Creighton's Ann Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equaled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 45° in winter, and 52° in spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by Hampton romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygieia.

For further information address by mail or telegraph.

H. PHOEBUS, Prop.

The audience rose and joined with the school in singing "Praise God from whom all blessings flow." The benediction was pronounced by Rev. Dr. McKenzie of Cambridge, and one more Hampton Anniversary was ended.

Total	601.

A little more than half are girls; average age, 17 years.

Its object is the practical Christian education of these two races; especially, the training of teachers.

It is a private, chartered institution, owned and controlled by a Board of seventeen Trustees, with a majority of no denomination. It is aided by the State as an agricultural school, and the Government pays \$167,000 apiece annually for 120 Indians; but it needs from private charity every year for its support, the sum of fifty thousand dollars.

About half of this has been given in the form of Annual Scholarships of seventy dollars a year, which pays the tuition or cost of education of one who pays in labor for board, clothing and books.

It needs a partial endowment fund.

Five Hundred Thousand Dollars are asked for that purpose.

Circulars and general information sent on application to the Principal.

### Hampton School Record.

VOL. XV.

HAMPTON, VA., JULY, 1886.

No. 7.

We acknowledge, with thanks, the gift from our generous friends, Messrs. Harper's Bros., of a handsome copy of Stormonth's Dictionary, for the Normal School Library.

The new Amoskeag steam fire engine has arrived. It was built at the works in Manchester, N. H., and has sufficient force to throw a jet of water over our highest buildings. It is named in honor of the ex-treasurer of the school, Gen. J. F. B. Marshall, and supplies a long-felt want.

The school term for 1885-86 closed June 17th, with the reading of the names of students promoted from lower to upper classes. Owing to the fact that the Middle Class of last year went out for a year's practice in teaching before taking up the studies of the Senior year, the graduating class numbered only fourteen. Sixty-six students were promoted from the Middle to the Senior Class, and ninety from the Junior to the Middle. Those just promoted to the Senior Class will take a year out in the field. They have had a thorough drill in practice teaching, and are well fitted for their work. Some of the Middlers of last year have succeeded so well, and secured such good places, that they do not expect to return. The universal testimony on the part of the Class, so far as heard from, is of satisfaction with the new plan.

The annual teachers' institute, held after the anniversary, was conducted this year by home talent, under the general direction of Miss Hyde. Several of the teachers of the vicinity availed themselves of the opportunity of visiting the classes. Twenty-five Indians went North on Monday last to spend the summer on farms in Berkshire Co., Mass., and about twenty-two more will return to the Institute early in July.

On the 16th of May last, the Rev. Richard Tolman preached in Bethesda Chapel the Baccalaureate Sermon to the class of '86. The occasion was for many reasons an impressive one, and for those of us to whom his voice has been for so many years associated with Bethesda Chapel, it contained many elements of sadness. It was his last sermon, in an official capacity, to the school, and it was the last service held by the school within the walls which, frail and shabby as they are, are still sacred with associations which no architectural beauty or convenience can replace.

Mr. Tolman's work for the school receives warm and universal recognition; his work in the neighborhood has, up to the day of his departure, been active and constant. The estimation in which he is held has been shown in many ways; among others, by the presentation to him of a handsome gold-headed cane, bearing the inscription, "Presented to Rev. Richard Tolman, as a token of respect, by the Hampton Baptist Church."

The good wishes which follow him to his new home in Arlington, Mass., go hand in hand with regret for his departure from a field where he has been for so long a power for good, and in which his place will be hard to fill.

Our next number will contain the story of Bethesda Chapel, gathered from the lips of those who have known it best. We feel that by right of its varied and unique associations, it can claim a place in the annals of the war and of the freedmen, for many of whom it has been in the highest sense a centre of light, and to the early friends of the Hampton school no cathedral service, however rich in pomp and ceremony, could have meant so much as did our last simple service under its worn and crumbling roof.

A faithful worker in and for the school, Mr. Robert H. Hamilton, has just left us, wishing to take for himself a more independent position than any which here offered itself. He went out in February, 1873, as a member of the first troupe of "Hampton Singers," and ever since his splendid voice has formed a background to the school choir, which will now be sadly missed. After his graduation, in 1877, he taught for about a year and a half in the Butler school, and then entered the Industrial Room of the Hampton School, where he soon rose to the head of its Tailoring department, a position which he satisfactorily filled until he resigned in May last. He is one of our graduates whose career we shall watch with deep interest, and for and of whom we hope for good things. The extracts from his essay delivered on Commencement Day, which we had intended to give, were crowded out of this issue, but, with extracts from the speeches of some of the graduating class, will appear in our next number.

It is now nearly a year since the visible beginning of the series of labor disturbances which is just now at its height, and still the air is thick, and whether we turn our eyes to the past or the future, there are few of us who can see clearly through the dust and tumult which surround us. The symptomatic upheavals, which, for want of a better name, we call "strikes," are as far as ever beyond the comprehension of most of us, and it is only here and there that some disciplined mind and conscience can be found and trusted to trace out the causes which have created the existing conditions, and to point out possible remedies for them. False prophets are upon every side, and the war of words which goes on above the deeper and more terrible war of facts, is waged for the most part blindly and with untimely weapons. We all feel that we are in the grasp of some tremendous and mysterious power, and even here in the South, where most of the questions raised are not immediately pressing, we know that our immunity is only for the moment, and that for us too the day of reckoning must sooner or later come. It is only the closest study of the issues involved, and organized action in the right lines which can help us, and the "Southern Workman" would be unfaithful to its name, and the cause which it represents, if it should shrink its responsibility in this respect to its readers. We give up our, "Southern Items" this month entirely to various views of the labor question, and would be glad to hear directly from some of our Southern, especially our colored correspondents, upon this complicated subject.

#### Editorial Correspondence.

Staunton, Va., May 29th.

This is the second of a series of trips I propose to make annually, in May or June, to important points in this State, in order to look into the work of Hampton graduates, and also to see and study things in a general way.

At Charlottesville, last Thursday, I drove to the well-known "Miller School," where 50 boys and 50 girls, all white, from ten to eighteen years of age, are having a complete and practical training. On a fine and fertile farm of a thousand acres, well wooded and watered, is a system of large and spacious buildings, splendidly appointed and well arranged. Col. Vawter, who is at the head of the school, being absent, I received every attention from his assistant, Prof. Baylor (Prof. Physics and Electrical Engineering). Recitation, dining, and dormitory rooms, library and offices, laundry, and the various living departments, are all that can be wished. Practical chemistry is thoroughly taught; special attention is given to agriculture; bee culture is illustrated. But my special interest was in the mechanical department, where work in wood and iron is carried on. Excellent furniture is made by the boys, under a competent cabinet maker. I saw handsome sets of walnut furniture, chairs, tables, etc., with a variety of cheaper articles. The boys, under instruction, build at least one steam engine a year, and make a good deal of useful hardware, such as jack screws, grinding and drilling machines, emory wheels, etc. The leading men in the iron shop are graduates of the Worcester, Mass., School of Technology.

The articles made are usually sold, but production and sale of goods is altogether a secondary matter, the chief point being always the training. This is made possible by the school's enormous income of \$70,000 a year, all being the gift of one man, Samuel Miller, who, I was told, used to work on this very farm, as day laborer, at twelve and half cents a day. He invested his small earnings in business in Lynchburg, became a successful merchant, and died a millionaire, leaving his property mainly to this school and to an Orphan Asylum in Lynchburg.

In his will he provided that the "Miller Manual Labor School" should be for the benefit of the children of Nelson and Albemarle counties, 1st, orphans: 2d, half-orphans: 3d, those too poor to get an education in any other way.

The drive of my way from Charlottesville and back was through a rolling region of red soil, especially adapted to grass and grain crops and stocks. Thrifty farms and pleasant attractive homes lined the road. On the higher ground the view was panoramic, the Blue Ridge mountains flanked us and stretched away grandly in the distance, hill and valley lay between, and fresh and fascinating views completely chained the eyes at every turn. The people have a right to be in love with their land. "The prettiest country on the globe," said mine host. The ride from Charlottesville to Staunton, along the Blue Ridge spur, with the Piedmont valley lying below us and beyond the "Ragged Mountain," reminded me of the view from Lake Mohunk Mountain House, being however much more extended.

The University of Virginia is finely situated, and well repays a visit. Its buildings present, I think, a more stately and symmetrical ensemble than those of any institution in this country. The high rotunda, with its library and portraits of famous Virginians, stands like a king among the other buildings, which seem to shrink from any competition with it, and to do it homage. With nearly 400 students, and a very able corps of professors, it is doing good work for the State and country. The colored schools are in a rather dingy but serviceable building, where in reconstruction days Northern women taught the young colored idea how to shoot with effect, since a little boy, whom I saw there sixteen years ago (my last visit), is now its Principal. With two other Hampton graduates as assistants, and a competent colored woman, he has about 200 children under his care. The Principal, Mr. Benjamin Tonsler, receives \$40 a month; Messrs. Kelso, Ewing and the others, \$20. The term lasts ten months. I saw good work in Algebra and every sign of mental capacity

in the children. Mr. Tonsler, who has taught here for twelve years, ever since he left Hampton, says that seven of his former pupils are out teaching now, and three more will go out next year. Over nineteen-twentieths of the colored children in this school, and I believe in the colored schools of the South generally, leave their books for a life of manual labor, and yet the universal course of instruction and study has no reference whatever to this essential fact. As a means to an end it is far from what it should be and common sense and experience call loudly for more practical instruction.

With the Normal School with-in reach of every capable child of the 300 in attendance at the Butler School in Hampton, less than one-tenth enter it; the rest go to work, or caught to. The need of fitting them to work was never so felt as now, and was urged by its Principal, Miss Hyde, in her Report published in the June WORKMAN. Wherever I have been, or enquired, there is the same state of things, too much book, too little of tools and of practical ideas. The colored teachers of this town tell the same story. There have been 400 colored children in school, for nine months of the year, in Hampton, for the past six years. Not less than 500 have, in that time, had a good elementary training. But twenty out of the whole number have gone to higher schools or become teachers. What is true of the Butler free school of Charlottesville and of Staunton, is, I think, true generally of free schools for both races. What can be done?

We shall attempt an answer to this question next year, at the Butler School, by giving the girls instruction in sewing, in household work—a complete full-sized bedroom being fitted up for that purpose—and in the elements of cooking. In visiting colored families our teachers have become convinced that the genius of the Negro race for cooking is undeveloped, and that the comfort and value of their homes will be much increased if their children can be taught to cook. It is hoped that 15 or 20 of our boys can be brought into the Technical class of the Normal school, but where there are no such opportunities within reach the teachers must be taught the use of tools, and wherever they go must give it to their children in simple, economical ways. I think we can succeed in doing this. Helping a few well-chosen and well-drilled graduates, at a yearly expense of from \$50 to \$75, in such wide awake towns as Lynchburg, Staunton, or Charlottesville, might so win the interest of local school officers as to secure public aid for technical work in the free schools, just as the public school officers of Boston were converted to cooking and carpentry in the free system by Mrs. Hemerway's admirable illustration of them at her own expense. The technical teaching in the "Starr King" Schoolhouse will by-and-by lead all New England. I regard it as Hampton's special mission to infuse, if possible into the public schools, for both races in the South, working directly through the teachers, ideas of skill in labor and the use of tools.

Nothing is surer than that the blacks will not lag far behind when they see that the whites are getting ahead of them. The stimulus which they are already receiving from colored schools is one of the most interesting phases of Southern education.

So much for criticism and suggestion for these schools.

#### WHAT GOOD ARE THEY DOING?

While I was vigorously "pumping" some Hampton graduates in this and other points there passed us the Chief of Police of Staunton, Capt. Waters, who fought under Gen. Lee till Appomattox. He spoke with marked interest of the colored schools, and said that the children of those who had been educated made no trouble, were not generally on the street, or disorderly, and declared his belief that they were learning faster than the white children. Those who did not attend school often made trouble. The chief offence among the colored was quarrelling and fighting, arising from their excitability and love of talk. Few, he said, drank to excess, but plenty of money was spent in liquor. The teachers, and that their pupils were generally kept at home by having lessons to learn and work to do for their parents, who needed all the help they could get. I have no doubt that what is

[Continued on page 80.]

## SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

## Local Option in Lynchburg.

A stranger coming to Lynchburg about this time might fancy himself in one of the so-called "fanatical" towns of New England. An election to decide the question of license or no license for the city, is to be held on the 26th inst., and for weeks past the all-pervading topic of conversation among our people has been "Local Option."

The agitation has increased to fever heat as the time of the election draws near. In some respects the popular excitement bears a different aspect from any public question of this kind here. All the old lines are obliterated; there is no talk of Republican or Democrat, Radical or Conservative. For once sectarianism is laid aside, and Methodists and Baptists, Presbyterians and Episcopalians, forget their peculiar systems, and act together; the lines of sex are ignored, and men and women absorbed in the interests of humanity forget to talk of male or female, the duties of man, or "the sphere of woman." Strangest of all, the color line is broken. It is well known that the Negroes, composing half the population of the city, had the balance of power at the polls, and "liquor and anti-liquor," "wet and dry" factions are eagerly seeking their votes.

Human nature affords many curious studies to those who have time for such pursuits, and interesting opportunities are given just now to the "Radical," who a few years ago was denounced and proscribed in Lynchburg for seeking to arouse the attention of colored people to the importance of education, to observe the ardent Democrat, who is intensely "wet" or "dry," to-day cajoling the colored voter by every means in his power to cast a ballot on his side.

"I see the niggers have got you," said General Early, in his peculiar snarling voice, to a gentleman who has always been counted among the Democrats, and is now a working heart and soul for "Local Option." "Yes," said the lawyer, as he wended his way to a public meeting where the temperance speakers were to address a colored audience, "we want the colored vote, and we are going to get it just as you and Senator Daniel worked for it in the canvas last fall!" "Old Juba!" had nothing to say to this remark. For weeks past every paper in the city has been filled with the all-absorbing topic. The advocates of license have astonished their opponents by taking the Bible, a volume in which it was supposed they took little stock, as their shield and defense. Editing epistles, bristling with Scripture, have issued from bar-rooms, and texts have been hurled from dens that decent people pass hastily by without looking to the right or to the left. The liquor dealers have developed the most devoted interest in the colored people, the more remarkable that it has been by the press and public speakers, asking if they are willing to give up their schools, which "depend on the revenue from the sale of liquors!" When this subject had been ventilated, they turned to "personal liberty," and urged the value of freedom in terms worthy of the old abolitionists, whose standpoints they have suddenly assumed. The sensitive "pocket nerve" has been touched at every point, and every sort of argument has been used to prove that the whole welfare of our city and country depends on whiskey. As the "world, the flesh and the devil" have been marshaled on the "wet" side, the "dry" people have realized that it behooved them to be up and doing, and they have worked with vim.

There is a thrifty and vigorous branch of the Y. M. C. A. in Lynchburg, which has a "Ladies' Auxiliary" society, and is a power for good in the community. About two weeks ago the Christian Association secured the services of Moody and Sankey, the famous evangelists, for a three days' visit to the city. Immense crowds attended the services held three times a day, in the forenoon at the colored churches, in the afternoon at the Opera House, with "over-an-hour" meetings conducted by Mr. Sankey at a Methodist church near by. A choir of one hundred and twenty trained voices, made up of various elements, led by the Rev. Mr. Coulbourne, a Methodist minister, now known as "The Moody Choir," sang at the Opera House. The evangelists were here from Wednesday until Saturday, and for the time the whole community seemed occupied with them. The streets were thronged with people in holiday attire going to and from the services, and the names of the distinguished preacher and singer were on every lip. It is said the advocates of liquor license showed great depression after the Moody meetings, and declared that whilst they had before the meetings deemed their cause sure of success, by the time they closed the result seemed very doubtful.

The temperance people did not rest with this effort, but without giving the public time for a reaction after the evangelists left, they have up to this time continued a series of public meetings, where well-known and popular speakers have addressed large audiences of white and colored people. W. Norton, of the Baptist church, Senator Colquitt, of Georgia, Lieut. Gov. Massie, and Rev. Mr. Taylor, of Richmond, the latter a colored minister of the Methodist church, the orators mentioned, some of whom have a wide reputation, have followed each other in quick succession.

Last Sunday afternoon Mrs. Sally F. Chapin, of S. C., was announced to speak at the skating rink, which holds fifteen hundred people, and has been used by most of the speakers for local option. Some of the most ardent of the temperance people hesitated as to inviting Mrs. Chapin to speak for the cause. Lynchburg is extremely conservative in regard to the progress of woman, though of both races among her citizens, who are doing good work in their day and generation. When I see these noble women bearing not only their own burdens, but helping to lift those of others who are weary and heavy laden, I am sometimes reminded of a body of the early Christians, who were visited and kindly encouraged by the apostle. When the welcome guide and leader in the ranks of the disciples "if they had received the Holy Spirit," they meekly responded, that they did not so much as know if there be a Holy Spirit. So these worthy women, often set and hindered, by bounds set for them, do not so much as know that they have any rights. The woman's "C. T. U." of Lynchburg, is a branch of the National Society of that name, and it is due to the efforts that Mrs. Chapin, pronounced by the press to be "the most effective speaker yet heard on the temperance question," came to Lynchburg.

I quote from the Lynchburg *Advocate* some comments upon Mrs. Chapin and her address:

Mrs. Chapin is a South Carolinian by birth, and her southern accent is very pronounced, though pleasant to the hearing. Her voice is sweet and well modulated, and she shows thorough training as a speaker. Her gestures are graceful and well-timed. She is well advanced in years, is a thorough judge of human nature, and her address showed she has had large experience in the world. She is also a close observer, and is devotedly in earnest. Her dress is plain but elegant, and her carriage is graceful and stately. She is a typical southern woman in every respect.

The speakers' tribute to the valor and bravery of the southern soldier, and the devotion and heroism of the southern woman, awoke a responsive chord in the breasts of her audience, and caused rousing applause.

In relating some of her experiences made travels, the speaker said she never made social visits, but had dedicated her life to the work of temperance, and would continue to do so to the end.

One of the features of the meeting was a song sung by Rev. Mr. Coulbourne, of the Methodist Protestant Church.

The introduction of Mrs. Chapin by Rev. Mr. Hannan, was chaste and eloquent, and worthy of this most generous host. The crowd in attendance was immense, estimated all the way from fifteen hundred to two thousand, and was composed of many prominent ladies and gentlemen of our city, and many visitors from abroad.

There was also a large crowd of colored people in attendance, and they seemed to enjoy the meeting very much.

The scene at the rink was a striking one. The large building was densely crowded, the number of white and colored hearers being about equal. White and colored ushers wearing blue badges met at their seats, and perfect order prevailed. The singing was very sweet indeed, and the hymn, "Only an armor bearer," particularly impressive, the great congregation joining in the chorus:

"Surely the Captain may depend on me,"  
Though but an armor bearer I may be.

The colored people present were highly respectable looking, and every grade, from the well-to-do and stylishly dressed merchant's or farmer's family, to the good old "aunt" in a calico sunbonnet, and venerable "uncle" in homespun, were present. Mrs. Chapin, a Methodist minister, now known as "The Moody Choir," sang at the Opera House. The evangelists were here from Wednesday until Saturday, and for the time the whole community seemed occupied with them. The streets were thronged with people in holiday attire going to and from the services, and the names of the distinguished preacher and singer were on every lip. It is said the advocates of liquor license showed great depression after the Moody meetings, and declared that whilst they had before the meetings deemed their cause sure of success, by the time they closed the result seemed very doubtful.

Time would fail me to give even an outline of Mrs. Chapin's admirable address, which was listened to with unflinching interest. I have only space to repeat one incident. The speaker gave a striking account of a visit she had made to the convict camps of the South, where the wretched prisoners are made to labor on public works, and often most cruelly treated. At one of these camps where over three hundred prisoners, white and black, male and female, were in the pens, at the time of Mrs. Chapin's visit, the ladies were permitted to see and talk with the convicts. Among the stolid and sometimes almost brutal looking prisoners, Mrs. Chapin said she was grieved to observe a fine-looking old colored man, whose appearance at once told him to belong to a very different class from most of his companions in misery. His intelligent face and dignified manners proved him to be one of the old house-servants of the south. "Why, uncle," said one of the ladies, in tones of distress, "is there no place for you; what are you doing here?" "Mistus," was the sorrowful answer, "whiskey has been my ruin; in old times I was my master's dining-room servant, and kept the key of his wine cellar. I got to be too fond of drink. Two years ago, when I was too drunk to know what I was doing, I killed my own cousin, and now I am sent to this place of torment for life." The ladies spoke to the wretched man in terms of sympathy, and urged him to look upward from this scene of punishment to the rest beyond the grave, where sins are forgiven, and peace forever remains. They turned away to talk to other prisoners, and as they were about to leave the woful place, the old butler begged for one word more. He approached the edge of the enclosure, and with the hearing of a dog, he had placed three tin cups of water. "Ladies," he said, in tones which went to the hearts of his hearers, "this is all a poor prison can offer you; it is all I have. Let me thank you for the only kind words that have been spoken to me since I came to this dreadful place, and implore you to pray for me that my time may be short."

Many brightened lives tell the dismal story, "Whiskey has been my ruin."

## My Childhood and Womanhood.

SALUTATORY BY SUSAN LA FLESCHE, OF THE GRADUATING CLASS.

Our Friends:—We welcome you to-day to our anniversary exercises, and we hope that you will enjoy them as much as we enjoy seeing you here.

Our honored Trustees: As with glad and grateful hearts we look into your faces, we remember the noble work which you have done for us, we remember the help which you have given to our races through us, and our hearts are strengthened anew in our resolve to do our best in working for our people. We cannot express our gratitude to you, but we trust that our future actions may tell it for us.

Dear friends, your kindly interest in the welfare and progress of two races was here represented by you, and you have here represented homes, and we thank you for your interest and for the pleasure of your company. Your presence in this house has always meant a great deal to us, but it means more to us to-day than ever before; for in Congress a short time ago the question was agitated whether the Indian is worth civilizing, whether the work that Hampton and Carlisle are doing for us is worth carrying on? You have given your valuable testimony to-day, and we appreciate and thank you for it. It is to the American people that we look for help, and your faith in our civilization, which you show us to-day, gives us greater encouragement to go forward. Again we welcome you.

## MY CHILDHOOD AND WOMANHOOD.

Imagine if you can, out in the wilds of Nebraska, in the year of 1866, a solitary farm-house standing on the banks of a large creek. On the opposite side of the creek, a white house, the Indian had camped. A white man by the name of John Oakes, with his wife, occupied the farm-house, and there was then only that single house, where now a large town called Oskola, named probably after the old farmer. The old couple must have been very lonely, for they seem to have welcomed even Indians for their neighbors. An Indian man sat behind the tent making little bows and arrows, while four or five children were gathered around him absorbed in watching him as he rapidly completed his work. This was the place where my childhood began, and where I lived until we went back to our old home on the Reserve.

The Omahas lived in villages then, and were not scattered over their farms as they are now. They did not live in tents, but built themselves little houses, evidences of their beginning struggles for civilization.

But in the summer time some lived in their tents. One of the first distinct memories I have of my childhood is, when I was first sent to the mission school. The mission was a white stone, and stood on a high bluff overlooking the Missouri. It is one of the most picturesque places I have ever seen, and the mission has done a grand work for Indians. I was so small when I first went to school, that when I went to sleep the big boys used to put me inside the high old-fashioned desks they used in those days. I can't say as I learned very much, for sometimes the teacher used to put a newspaper over his head, and lean back in his seat and repose in placid slumber, while one of the little heathens took up the book and tried to "teach the young idea to shoot." One day, when the teacher was away, the heathen tried to live up to their light. In the long summer evenings we would watch the young men at their different games. Quilts especially were quite a pretty game, as it showed off the well-proportioned forms of the young men, and the handsome, stalwart young boys looked very fine and picturesque as they braved their blankets, gracefully and handsomely, and playing with their right, they vied with each other, encouraged no doubt by the presence of the young maidens. Then as the sun went down behind the hills leaving purple shadows, and as the evening meal came from every house, and we reluctantly wended our way homeward, still glad to go to supper. Then peace and quiet descended on the village, only now and then the bark of a dog that indiscreetly article of an Indian village) revealing the fact that some young brave must be lurking around the resting place of the maiden of his choice.

After a while the Indian village broke up, as the dawn of civilization crept nearer and nearer, and the Indians scattered over their farms on the Reservation, and to cultivate the soil. My father secured a farm of 160 acres, and built a house. Although we were rather young, still father taught us to work. We planted corn, hoed potatoes, and planted and weeded vegetables. When harvest time came the Indian men help each other, while the women cook for the harvesters. Sometimes some of the men used to laugh at the five young girls and learn glad and eager to help their father and all they could from him. I am sure we were glad to work with them, because they were so kind to us. Oh! for the delight of those days, as the reaper cut down the golden grain, and we went eagerly forward striving to see who could keep nearest the machine. The harvest field held a fascination for us partly, I suppose, because we believed we were helping; but that fascination did not extend as far as carrying water, for it was a weary, toilsome walk, clear down to the spring and back again under the hot sun, through the stubble, barefooted, and we were happy to see the little mortals when our dreaded work was finished. One of my sisters cut 30 acres of wheat once, and another one could keep up to binding almost as well as any man. We were when the signal to stop was given, and gathering the water pails we all went home to supper. After the horses were staked out on the hills, the groups of tired men gathered around the camp-fire to talk and rest, while the women were interested in their children, and paused only now and then to listen to the talk of the men. I have rarely ever seen such a beautiful sight, as when standing on the top of a high hill, looking down on a field of harvested wheat, we watched the moon rise, flooding the valley with silvery light and casting deep shadows around the trees. When November came we husked the almost endless rows of golden corn, and when the cold nipped our fingers we were glad to get back to the warm fire.

But all this time our school education was not neglected. My father and mother are not educated. They cannot speak English, but they felt the need of education, and did not want us to be educated, and sent us to the Agency school, three miles away. The neighbor's children used to wait for us, so 15 or 20 of us, arrived in time for school at 9 o'clock. I think we were conscientious children, for there were temptations enough to stop and pick flowers, chase butterflies, and run away if we chose, but we rarely ever stopped. When school was out at 4 o'clock we had a gay time rushing home over the prairies; feeling free to loiter, and sometimes reaching home at sunset. We had no playthings, but we were content with more things, which we could amuse ourselves with, than the skill of man could provide. Sometimes in the morning we used to go off and play in the part of the mothers, while the boys, on imaginary horses, shot imaginary buffaloes with their bows and arrows. We used to make dolls of clay and mud, and of all nice and pretty shapes as you would care

Contributors.

Terms: ONE DOLLAR a year IN

ADVANCE.

The "Industrial South" and

"Southern Workman" and

Together for One Year, \$2.00.

Entered at the Post Office at Hampton, Va., as second

class matter.

Subscribers are reminded that the "Work-

man" is reduced to eight pages during the

next four months, resuming, in November, the

twelve page form.

The Southern Press. Both Sides.

During the past six months the

Southern papers have contributed their

labor question and the difference of their

point of view from that of the North-

ern journals makes their suggestion and

criticism particularly interesting.

The Industrial South, gives us, in a

late number, two editorials which are,

as is usual with this journal, thought-

ful and strong.

CONSERVATISM IN THE SOUTH.

In view of the recent socialistic troubles

in the Northwest and of ominous signs of

similar agencies of disturbances in other

quarters of the northern States, the serene

aspect of the southern States, all along their

side, must present itself impressively to the

mind of every reflecting man in both sec-

tions of the Union. The contrast is striking,

and it cannot fail to be observed. What is

the reason for this difference in social health-

fulness between the northern States and the

southern States? What is the cause of this

demarcation of two great sections of a com-

mon country by a line of limitation to tran-

quillity and repose and security on the one

side which is the line of limitation to

quarrel and apprehension and insecurity

on the other side? The answer is

easy; the North has huge cities, and

the South has not; North is

filled in, though not yet filled up,

with large towns and contiguous villages, in

some of the States almost the compacting

population as it is so dangerously compacted

in other lands where revolution has been

shown to be the natural result of the

volcanic elements of human passions

heated into explosion under the influences

of a crowded Community and in

the South it is not so; the North

has its engorgements of gold in the hands

of individuals, while in the South there are

no such colossal fortunes, no moguls, no

nabobs, but a people moving along together

upon a financial plane with fewer and

lesser inequalities, perhaps, than can be

found in a similar extent of territory

elsewhere in the civilized world. Such are

the reasons why the southern States are

just now differing so widely from the

northern States in social conditions.

And each of these reasons is a generic

reason with many special reasons involved in

it. The South is agricultural, and therein

lies her conservatism. Her great fields, her

vast forests, her freedom from such big

cities as New York and Chicago as the nests

and nurseries of socialistic venom, her rural

population, the teachings and

preachings of her leading men from the

earliest history of the country, are all com-

bined to make her people the most law-abid-

ing, the most liberty loving, the most con-

servative of any free people in the world.

Besides, in the North money makes classi-

fications among men in social life. In the

South a poor man may be more, than the

peer of his rich neighbor if he is superior to

him in virtues.

LOW PRICES AND MODERATE PROFITS.

The war produced a big and feverish

excitement in all departments of business

especially in the North, and afforded op-

portunities for inordinate gains and the rapid

accumulation of fortunes. Men became ac-

customed to large profits and learned to despise the slow and moderate increase of substance that normal and wholesome trade may be expected to yield. The frenzied excitement of the war period were followed by convulsive fluctuations till the long collapse came from which the country has not yet fully emerged.

Natural incidents of this condition are low prices, full times and narrow margin of profits. Trade under such circumstances has slight attractions for those who have tasted the intoxicating delights of successful speculation and suddenly acquired wealth. The gambler accustomed to high stakes finds no pleasure in play when the wages are low and the chance of large winnings impossible. But even this disposition will exhaust itself, and the natural craving for action will bring the holders of idle capital into the field again. It is against the nature of money to lie still. Its currency forbids it. It must circulate. The present stagnation will therefore cease, is ceasing visibly, though the movement is slow.

But the period of low prices and moderate gains is by no means one of unrelieved evil. On the contrary it is not certain but that the great bulk of mankind are able to live most comfortably when prices are low, and it is true that it is at such periods that enterprises upon solid foundations are built to endure, are most apt to have their origin. The more the element of risk and the gambling spirit are eliminated from business the more sound are the operations of trade, and the more pervasive the benefits that accrue. We may then take comfort from the assurance that low prices and moderate profits are not incompatible with the working and improvement of the people, while the discipline they exert in enforcing economy, prudence and painstaking has a wholesome effect in moulding the best type of business men.

That the immunity from serious trouble among its laborers, which the South now enjoys can only be permanent as the conditions which produce it shall be made to keep pace with development on all other sides is shown by such items as the following from the *Lynchburg Laborer*.

We learn the several lodges of Knights of Labor are upon the eve of organizing a district assembly. We are indeed glad to hear of it; first, because there are seven male assemblies, and two female, out of which a district assembly may be organized; we think that we ought to at once organize; second, that it will further the interest of labor; third, that it will bring the several lodges into a closer relation, thereby making 'hem work in unison. We must not waste any time in talking, but let us organize a district assembly and organize one.

It is rather curious to notice how unfaithfully, in the South as well as the North, we all talk of "American institutions" as possessing an abstract power to protect us against social disorganization. The *Vicksburg Weekly Herald* says:

The socialists—a strange name for bomb throwers—are an organization, the fundamental principle of which is, that all property ought to be held in common. They claim that no man, or set of men, have an inalienable right to land, which belongs only to God. They therefore believe in upsetting all property, dividing it out and starting anew.

As Mayor Harrison said, the bloody occurrence in Chicago, the deed of the socialists, was something unprecedented in the United States. And we may add that the Mayor of Chicago said, there is no shadow of an excuse for such organization in this country. This is a free country, and wages are higher, compared to the prices of the necessities of life, than they ever were before. The socialist can never be tolerated in any State of the United States, for their principles oppose the very essence of American republicanism that government must be carried on by the people, for the protection of their lives and property.

It is encouraging to see that the legal authorities of Chicago have taken hold of the dangerous organization with great promptitude and determination. Men, who hold to such revolutionary opinions, express them and attempt to enforce them, should be punished to the fullest extent of the law.

The *Richmond Whig* also trusts to the "atmosphere" of a free country.

The objects of the Knights of Labor as expounded by Mr. POWDERLY are such as commend themselves to the approbation of every one having at heart the best interests of the working classes, but there is no doubt, as he admits, that the abuses which have crept into the order have prejudiced the

views of many people against it. The boycott, for instance, is something so foreign to the genius of our institutions and so repugnant to the American idea of personal liberty, that it can never find favor among our people. It may be tolerated in some extreme cases but that is all. Mr. POWDERLY voices the almost universal sentiment of American freemen when he says, "I hate the word boycott." No order which relies upon any such means for enforcing its rules, regulations, or decrees, can long prosper in this free country. The dread of its application may spread terror for awhile, and thus make it temporarily effective, but the liberty-loving instincts of free American citizens will finally assert themselves, and the boycott will be consigned to the execration which it deserves. We thank Mr. POWDERLY for the brave words, "I hate the word boycott."

The *New York Freeman*, however, believes that laborers everywhere, whether black or white, should make common cause, espousing each other's wrongs, and so far as possible uniting for the same end, without regard to the inequality of pressure upon the two races.

We have taken the position that the colored laborers of the United States cannot afford to antagonize white laborers when the latter are on a strike for whatever cause! We regret to see so good a man as Mr. T. McCants Stewart go wrong on this question, as does also in a recent issue of a local contemporary, basing his article on the views advanced by us in our issue of May 1. Of course Mr. Stewart has an American citizen's right to go wrong on any question at all. But despite Mr. Stewart's endorsement of the proposition advanced by the *Enterprise*, that colored men should make themselves officious in taking the side of white strikers, we still pronounce the doctrine pernicious, the practice of which would intensify the antagonism between white and colored labor, so long a bone of contention, but which happily is giving way to a more just and reasonable state of things all over the country.

The best and most forcible endorsement of the position here taken is furnished by the action of the white workmen of Baltimore, as reported in the *Baltimore Daily American*, to which Mr. Isaac Myers, of that city, was so kind as to call our attention. We advise Mr. Stewart and the editor of the *Enterprise* to read the following item from the *American*:

"The workmen gave a practical illustration of a boycott at the picnic on Monday afternoon. Soon after the procession broke up in Schuetzen Park a number of the colored men taking part in the festivities went into the Mansion House to get some refreshments. This portion of the building property on the ground is never included in the privileges, and when the thirsty workmen asked for drinks, the man in charge turned them down. Thereupon the colored men went out and made complaint of the treatment they had received. The committee in charge, without delay, placed a subcommittee at the door, and would not permit any one to patronize that bar or eating saloon. The means they took were effectual. Business at this end was literally cut off. The rest of the concerns gained by the operation, as their well-filled tills showed when the festival ended."

It must be borne in mind, to properly appreciate this manly action of the white workmen of Baltimore, that color prejudice is nowhere in the Union more firmly entrenched and rampant than in Baltimore.

We agree with Mr. Stewart, that labor organizations are not to be sustained in the more odious directions they make upon employers in conducting their private concerns. But this has nothing whatever to do with the question here combatted, as it affects the relations of white and colored laborers, whose interests are mutual and identical from every point of view. The proper course for us to pursue is, not to further antagonize but to do all we can to harmonize these interests; and any advice calculated to produce a contrary result, whether given by Lawyer Stewart or the editor of our contemporary, is pernicious to the very last extreme, and is to be discontinued by all thoughtful persons.

The *Norfolk Virginian* believes in that universal panacea for political evils, the ballot, though its suggestions as to the application of it to the present difficulty are too vague to be of any practical value.

President Cleveland, in his message to Congress upon the subject of harmonizing capital and labor, made a sensible suggestion when he declared that one of the most efficient agencies in such a work would be found in the positive representation of labor in government. The *Philadelphia Record*

voices our own sentiments when it says that if the labor agitation do not bear any fruit in the election of representatives to Congress and to the State Legislatures in November, they may be set down as practically fruitless. There is no legitimate method of remedying public grievances in this country, except by action at the ballot-box. The ballot is to other means of effective agitation what the Gatling gun is to single-shooting weapons, and the laborers are to other voters what the Gatling is to single-shooters. They have everything in their own hands, without the trouble of agitating or binding themselves together in oath bound leagues.

The *Richmond Planet* speaks a word for colored labor as contrasted with white, and draws certain comparisons which are not without meaning.

The action of the Anarchists in Chicago will be condemned by every right-thinking person. These foreign fanatics are opposed to any government at all believing that each man should be allowed to do as he pleases. Their using of dynamite and deadly weapons should show the country at once the dangerous elements we have in our midst. While sympathizing with Ireland we oppose the use of dynamite in advancing their cause. We feel that the authorities cannot be too severe on such scoundrels that would descend to such methods. We believe that a sufficient quantity of hemp would be thoroughly just to mete out to these demons. Yet this is the element with which some of our hot-headed "bloods" talk about supplanting colored men.

What think the South of them now? The black man has endured all privations and abuse, worked faithfully for his oppressor, and to-day stands forth as one of the most remarkable examples of fidelity and Christian forbearance known to modern times. Instead of butchering, he allows himself to be butchered; instead of hating, he allows himself to be hated; instead of cursing, he allows himself to be cursed. Bloody Christ, where nearly twenty of our brethren were butchered, remains fresh in the minds of the people, and yet if we protest, or speak bitterly of these outrages, we are said to be arousing race prejudice, and are told to desist. What are these white murderers arousing? White men, imagine your lives in our places. What would you do under like circumstances? Here are your foreign paupers, there your Negroes. Which will you choose? We hope to see the liberal minded people of this country awaken. We have been grossly treated and most outrageously wronged. Had a colored man thrown that dynamite bombshell, the black people of Chicago would have paid for the act with their lives. Will any liberal minded man deny it. We condemn the outrage, but in God's name give us justice; accord us fair-play.

## Class Ode.

BY H. H. HARRIS.

Member of the Graduating Class.

Here as the evening shadow falls,

The sun's last rays decline.

We meet beneath these sacred walls,

To plant our Ivy Vine.

Now fade our school days into night,

Now breaks our happy band.

Now the command—go carry light

Where darkness veils the land.

Dear Alma Mater, though from thee

To distant lands we go;

Our Motto—Truth and Right shall be,

For thou hast taught us so.

Deep sink thy precepts in our heart;

Thy hand shall point the way;

The lesson that thou didst impart

Shall be our staff and stay.

Then hie we to our battle field,

God's hand our loins shall gird;

He makes us strong and gives fresh zeal,

By His incarnate word.

I hear the thrilling accents call

From Midian's burning tree—

Go forth and break the bondman's thrall,

Go set the captive free.

Dear Class, we drop a parting tear,

Perhaps no more to meet.

Till in a blest eternity

Our Savior's face we greet.

Then to the harvest let us go

And reap the golden grain;

And when our mission ends below

We'll join the heavenly train.

## Southern Workman.

### Indian Department.

ELAINE GOODALE, *In Charge.*

Regular Contributors:

HERBERT WELSH, *Cor. Sec'y Indian Rights Association.*

ALICE C. FLETCHER,

REV JOHN J. GRAVATT.

MRS. A. S. QUINTON, *Gen'l Sec'y of the Woman's National Indian Ass'n.*

AGENT MCGILLYCUEDDY, of Pine Ridge, Dakota, has been suspended, and Maj. James Bell, of the 7th Cavalry, placed in temporary charge of this Agency.

FIVE HUNDRED of the Rosebud Sioux want to visit and trade ponies with the Crows. Agent Wright has refused his permission, and as they declare their intention of proceeding without it, some trouble is apprehended.

EXAGGERATED REPORTS of Indian outbreaks in the Southwest continue to reach us. Gen. Miles is still pursuing the small band of hostiles into the mountains. It is said that a reward of \$500 has been offered for the heads of hostile Apaches. We hear that Robert McIntosh, a returned Hampton student, is interpreter for Gen. Miles.

THE 27TH and 29TH of MAY were days assigned for the consideration of Indian legislation in Congress. The committee had agreed to take up in the order named, Senator Dawes' land in severalty bill, Senator Dawes' Sioux bill, and the bill for the relief of the Mission Indians of California. These important measures have been most unfairly crowded out by the oleomargarine discussion, and unless the friends of the Indian are more than commonly active, the session will close without their having received any consideration. The first two bills especially have been fully discussed in the newspapers and by the Senate. They have more than once passed the Upper House, and their flagrant neglect by the present House of Representatives is a great wrong to the Indian.

#### The "Confidential" Clerk.

Dr. McGillycuddy dies a political martyr to his convictions, having refused to submit to the action of the Department in the appointment of Agents' clerks. He practically sent in his resignation when he declined to accept the new clerk appointed for him. "Justice to my bondsmen and myself," he wrote, "will prevent my plucking the gentleman on duty." Was this step justifiable or not? Let us look into the present policy of the administration in the matter of Agents' clerks.

It has been said that an Indian Agent has greater opportunities for speculation than any other official in the Government service. It is for the ostensible purpose of lessening these opportunities that the Department takes upon itself the appointment and dismissal of the head clerk, making frequent changes, and transferring clerks from one Indian agency to another, in order to prevent collusion, make the clerk independent of his chief for his position, and place him, as it were, as a spy upon the other's actions. This looks feasible on the face of it, but it does not seem to work well in practice. Supposing that the Agent and the new clerk were both rogues, there is nothing to hinder their collusion for dishonest purposes. Where their interests may so easily become identical, it would hardly answer to set a thief to watch a thief. But it is upon the honest and able In-

dian Agent that this new system bears with almost intolerable weight. He is under heavy bonds for the right discharge of his trust. His accounts are complicated. When he has a clerk on whose experience and integrity he has learned to rely, it is a humiliating, inconvenient, and almost unendurable thing to have him suddenly removed without cause and a new man put in his place. Few business men would submit to having their confidential clerks arbitrarily dismissed in this way. This is the position in which Dr. McGillycuddy found himself, and he refused to accept it. Other men have grumbled and submitted. Dr. McGillycuddy's course was characteristic. It is needless to say that it was not conciliatory, but we incline to think that it was wise. He has entered the only effective protest against a policy which most friends of the Indian consider ill-judged. We regret the step, not so much for his own sake, for he is an able enough man never to be at a loss, as for the sake of Pine Ridge Agency. It may be difficult to find another man in civil life who will control successfully the uneasy "Red Cloud faction." The Indian service has lost one of its strongest, if not its strongest, Agent.

#### Friends of the Indian at Washington.

A meeting addressed by ex-Gov. Long, Senator Dawes, Mr. Herbert Welsh, and three Indians from Hampton.

WASHINGTON, D. C., May 1st, 1886.

The public meeting in behalf of Indian civilization is among the signs of the times. It has become an institution. A number of interested, or willing-to-be-interested, people get together from time to time, usually in church—no matter of what denomination—and listen to addresses by as many gentlemen prominent in the Indian work as can be induced or compelled to ascend the platform. These meetings are usually of a very general character, and may be taken as the cause or effect—or both—of a popular agitation of the Indian question. The view expressed and their reception by the audience mark the growth of public sentiment and public intelligence. I attended last night an "Indian meeting" of this sort here in Washington, held under the auspices of the Women's National Indian Association. A sympathetic audience and plenty of good speakers insured success. After a few prefatory remarks, followed by prayer, Senator Hawley, the chairman, introduced Walter Battie, a Sac-and-Fox man from Indian Territory, and a student at Hampton. In a quiet, manly way he spoke of his past—the neglected childhood—the wild life as cow-boy and then of his coming East "to see the world," and the influence of his school toward greater earnestness and the wish to elevate his people. His present intention was to go home and teach for a time, and then to return to the East for the "higher education." Battie was followed by ex-Gov. Long, in a cool, clever, easy, pointed address. He was perhaps the most finished speaker of the evening. He said: "These young Indians from Hampton—this young man who has just spoken to you is an object-lesson on the Indian question. In dress, in speech, in intelligence, in a frank, modest, manly bearing, he would compare favorably with one of our own young men. Compare him not with the Indian as he was fifty years ago, but with the Indian's chances ten years ago; not the traditional notion, but the actual fact. The Indian problem is practically solved, although it is not yet definitely settled. Our legislature, with the senior Senator from Massachusetts at their head, have largely embodied in law the wise solution. The Indian is no longer to be an outcast, or, worse almost than an outcast, a ward of the Government; but a citizen, protecting his own rights and equal to his own needs."

I need not remind you that it has been a long and sorry history, servile to him and dishonorable to us. To-day the Indian, proud, reticent, shy—seldom at his best—yet proves himself apt at manual and intellectual labor. It has been said that the educated Indian does not succeed at home, that he must be employed and "upheld" by the Government. To serve faithfully in Government employ, to carry out Government work, is to do well. His carelessness in first at home may be no more criminal than that of the college student who appears on the old farm in his shirt-sleeves. The Indian is learning to put brains above brute force, to appreciate the value and use of wealth. The selfish greed of some Indians is

only a part of civilized human nature. The tribal relation is giving place to individual entity. A striking feature of Indian life is the general absence of violence and disorder. What is this but civilization? We have only to go as we have begun, and we shall soon welcome the Indian among us as a citizen and a brother."

The next speaker was Daniel Fire Cloud, a catechist under Bishop Hare of Dakota, and a fine type of the native mind as it has been cultivated on the ground by the missionaries. He spoke forcibly and eloquently in his own tongue, and his speech was interpreted by George Bushotte, also a Sioux, and a student at Alexandria Theological Seminary. Fire Cloud asked for more schools and churches, for allotments and titles to their lands, and demonstrated the evil that is done the Indians by the example of unworthy white men on the Reservation. He, with his wife and four boys, are now at Hampton.

Senator Dawes, the father of modern Indian legislation, stated that the inspiration of success was in the work outside of Congress. "Ten years ago we appropriated \$300,000 for Indian education this year \$2,000,000. Is not this a growth in grace? (Applause.) Twenty-two hundred patents were issued last year to Indians. We are diminishing appropriations for subsistence, and increasing them in the direction of civilization and self support. We appropriate this year \$50,000 for "additional farmers" to teach the Indians agriculture. A bill has just passed giving 8 acres for a school farm to the school at Salem, Oregon. Congress can supply the money for these things, but it can't do the work. You can't put the Indian down in the middle of 100 acres of limitless prairie and bid him be a man. Unless private enterprise and devotion will take up the work where we drop it, we might better leave him where he is. Congress will do what it can, you must do the rest."

Mr. Ellis was received with effusion, and spoke at some length in a flowery and discursive style. "I don't agree," he said, "with Gov. Long, that we owe nothing to the Indian except on the ground of our common manhood. By a continent wrested from him by force and fraud, by the sharp edge of a sword turned ever against him, we owe the debt. (Applause.) The Indian can no longer look to the West; he sees there the railroad and the church spire; he is surrounded, caged. His can upon a thousand hills are gone. He turns with flashing eye and glowing cheek and burning heart to find himself dependent—dependent upon his enemy! He has now to surmount the scalp-lock and the eagle-feather with the crown of American citizenship. We must educate Indian agents. The Aztec cruelty had placed him, was told of a heaven, 'Do Spaniards go there?' he asked. 'Then I don't want to go where Spaniards go.' The Indian may well say, as he looks at some of the representatives of this Government in the Indian country, 'Is this civilization? Then I don't want it.' I congratulate you, ladies of America, on your share in this great movement. 'By the hand of a woman has this city been delivered.' The wrongs of a race which have been redressed, a people will have been led up into the light by the strong hand, the gentle hand, the soft hand, the beautiful hand of American woman."

John Taokasin, a full-blood Indian from Dakota, educated at Hampton, delivered with force and spirit an original address. His words were simple and direct. "In the old days the white people did not try to help the Indians; they help themselves and they drive the Indians to the West. I think about those days, and it makes me very sorry. But those old times and old ways are passed away long time, and it grows new as we live now. You have books in your language, and you are studying since you were small boys and girls. Some of you take fourteen or fifteen years to finish your school. We Indians have not so long to get our education; we have only three years. My friends, some people say that the Indians do not want to go to school, but that is not true. The Indians really want to learn your ways." He then mentioned the report of the Holman committee on returned students, and gave a detailed account of the twenty-two boys and girls from Hampton at Standing Rock Agency, only one of whom had "gone back to her old ways again."

Mr. Herbert Welsh, of the Indian Rights Association, is always an effective speaker, and his earnestness and the logic of his facts. "The moment is encouraging," he said, "but it is also extremely critical. According to the statement of the late Commissioner of Indian Affairs, Mr. Price, the Indians have increased 11,000 in five years. Unless we do something at once, they will be left without a home. We, as a people, and as a people expressing ourselves through Congress, must save them. They have given us every evidence of capacity. The machinery of Congress will not do it all; there must be in this work the principle of self-

sacrifice. Do you realize the demand? Does it touch your heart and your life?"

Rev. A. L. Riggs, of Santee, son of the veteran missionary, spoke from the mission standpoint, and Rev. Mr. Gravatt, rector of St. John's Church, Hampton, said a few earnest words for the returned Hampton students, and stated very strongly that he had brought no children East without the parents' consent. It was a characteristic and interesting "Indian meeting." With such facts as these, so well and widely stated, it ought to be difficult to find a man or woman of average education without an intelligent opinion on the "Indian question."

ELAINE GOODALE.

The writer of the following speech delivered on Commencement Day, and omitted in the June number for want of space, is Fire Cloud, a full-blooded Indian, who four years ago sent his son, a boy of nine, to Hampton. Two years later he sent another boy, and last year came himself, with his wife and two younger children. He had for some time been sexton and lay reader in the Episcopal church, at Crow Creek.

#### "My People."

My Dear Friends: I am very glad to see you here to-day. I am at school here with my wife and four children, and I want them to learn something.

My friends, you have given us Dakotas, two good things, missions and schools. Again I want to ask you for something good. The Dakotas have much land, and we think it right to divide it. And if the land should be sold, we want each man to have some land, and a good title to it. We want the money for the land that is sold, and we want the Great Father to hold it in trust for us, and to take care of it for us and our children. They have already put a railroad through our reservation, and given us 700-odd head of cattle for it. But we didn't know how to take care of them right, so we lost them all. My people are getting more interested in school, and in the ways of the white people, and my friends, we wish you would help us in them more. And, my friends, there are a great many bad people who write to those who don't know all about the Indians, and tell them false things about us. I own that among the Indians there are some bad people, who are always praising themselves, and I don't quite know, but I think it must be the same among you white people. It is with us as it is with you; some are bad and some are good, and we ought to be all treated like human beings. And if our land should be sold, there are a great many Indians who do not understand the ways of the white people. So if our land is opened to white settlers, we want good settlers. I know the good and the bad live together, but I think it is better for us to live with good Christian people. There are a great many white people who are wise in their head, and see clearly with their eyes, but who are blind in their hearts, and we don't want to live with that kind of people.

One more thing. If you had seen me ten years ago you would have laughed at me, but now I am a student before you like a white man. How did you civilize me? Is it property, or what is it? It is Christ our Savior.

#### Died at Hampton.

June 21. Elizabeth Kennedy, from Yankton Agency, Dakota, aged 21 years.

June 23. Louisa Banks, from Crow Creek Agency, Dakota, aged 23 years.

June 30th. Virginia Medicine-bull, Sioux Indian, of typhoid-pneumonia. Aged 17 years.

## DENTISTRY.

Dr. T. H. Parramore,

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King Street, opposite Barnes' Hotel.

T. A. Williams & Dickson,

WHOLESALE GROCERS

AND

Commission Merchants,

28 & ROANOKE SQUARE,

NORFOLK, VA. 6-86.

### Incidents of Indian Life at Hampton.

BORN, April 27th, a daughter, (Isabel Eustis,) to Irish and Stella Leaming.

Was there ever a prettier baby than the one now on exhibition at Winona?

We have the pleasure of chronicling a visit from Miss Folsom, who is as welcome as Spring to the Indian Department.

Mr. Rathbun is training a quartette of Indian male voices to sing in the choir at St. John's Church, Hampton. And yet a recent critic tells us that "the red race is musicless."

Miss Gilman, of Boston, is the prime mover of a fair, whose proceeds are to be devoted to paying the scholarship of Tommy Firecloud aged seven. A box of Indian dolls, paintings, etc., is on its way from Hampton.

A very interesting collection of Indian curios and relics has lately been sent us from Standing Rock. It includes several necklaces of elk's teeth and bones, medicine rattles, the elaborate wig of the only bald Indian on record, and a tomahawk bearing the hieroglyphic story of its former owner's career.

"Talks and Thoughts" is the name of a little sheet written, edited and printed by Hampton Indian students. The June number contains a letter from the Indian graduate who is preparing to study medicine at Dartmouth, the Washington speech of another student, interesting letters from two of the girls, and other characteristic things. The little paper may be obtained for a year by sending twenty-five cents to Walter Battice, Hampton.

### The Annual Picnic.

The severest critic of weather could have found nothing to say against the perfect May day which dawned upon our Indian picnic, and the general opinion seemed to be at the close of the afternoon that everything had "passed off" unusually well. The way in which people take their pleasures is said to be a fair test of character and refinement, and we think that the ordinary observer of our boys and girls on a holiday would find his opinion of them considerably raised.

While all, and especially the boys, are pretty free from self-consciousness in their honest efforts to have a "good time," there is a fair amount of tact and thoughtfulness, and full average dignity displayed on all such occasions. The devotees of croquet, and the base ball crowd, as well as those who strolled by twos and threes in the direction of the pine woods or the shore, seemed to improve every minute for enjoyment, while doing it with perfect decorum.

An abundant treat of strawberries, added to the usual supply of sandwiches, cake and lemonade, made every one happy when the time came for supper, and the boys and girls drew up in line to receive their allotted portions, afterward making up into little groups which scattered themselves picturesquely over the grassy field. The great slow-moving barge, loaded to the water's edge, which conveyed the party to and from their picnic grounds, must not be omitted in an account of the fun.

### Our Last Debate.

The last literary meeting of the year adopted as its subject for debate the comparative advantages of Eastern and Western schools for the Indian. There were good points made on both sides. Prof. Painter, who was present, was called upon to decide the question, and with much tact established the union of the two interests, and settled the question in favor of schools both East and West.

Among the further literary exercises of the evening was an original essay read by John Tlaokasin. He said: "Now just think about the early times! The white people they used to be savage, but now you can see them, that they are more civilized than the other people. But before they civilized they have to work hard and study hard; now I we want to be civilized, then we must work hard, as they did. Suppose if you want to cut down a large tree—and we know that it is very hard work to cut down a large tree—now how long you suppose it take you to work and cut down that tree? I think it take you long time, and you have to work hard, but don't give it up! And if you gave it up to cut down that tree, and just take what is fall off from that tree—perhaps some little sticks—but it will not take you long time to use, and you cannot cook many good things to eat, especially at winter time. Suppose if you have a large house at the winter time, and if some people stay with you in your house—now if they want you have light at the night time so if you gave to them your light—and again suppose they want to have warm room, so you gave to them the sticks which you got from that large tree, and you use all up what you have. Now what you think when you use all up what you have? I should think you be sorry, and perhaps you will look back at where the tree is.

Now I think that is just like in this school. Sometimes some of us hurry up to go home. We did not get enough of what we came after. When we go back to our homes, then we don't know what we are going to do. We know that it is very hard to study and work, because we never do those things before, but we know who can help us if we trust him. He is always above us, so if we need help then we must ask him to help us—and that is our Great Father."

### A Geography Lesson.

The following compositions on Russia are the result of a week's study and two informal lectures, kindly given to the class by a lady visitor who had travelled much in that country:

*The position of* Russia is in the eastern part of Europe. Russia is the largest country and it is larger than all of the other countries taken together. The surface is very low and level; there are very little hills, but not very much. Their language is very different from our language. The Ural Mountains are in the north-eastern part of Russia. The climate is mostly cold—seven months cold—they have a great many forests. They have not any coal except in the central part. Some of the men are very rich, and some of them are very poor. Their governor's name is Czar. The principal occupation is agriculture. The garments that the Czar wears are made with diamonds.

G. E.

*Russia is in the eastern part of Europe. It is larger than all the other countries of Europe together. Its surface is very low and level. The climate is very different from our climate; they have their seven long months of winter, and short summers. Their language is very different, too; they have different letters from ours; it is not very funny for them, but it is for us. I suppose our language is funny to them, and I know we make our letters. I think if a Russian would come over to America and go through the streets of our cities they would find it very hard to read our letters and spell the words. The trade with China is carried on by sleighs. The principal cities of Russia are St. Petersburg, and it is the capital; and the other cities are Nijvi Novgorod and Moscow. The government of Russia is governed by a Czar, and he can make the laws himself. Their government is very different from ours in America. The principal occupation is farming.*

D. C.

*Their trade is carried on in a very different way, and they do not have any cars to carry the trade. With the trade of Siberia they go by sledges, with three horses abreast, and they get very nice furs from Siberia, and from China they get tea. Tea is the national drink of the Russians. The cities are St. Petersburg Moscow and Nijvi Novgorod.*

rod. St. Petersburg is the capital of Russia, and it is situated on a marsh or something, but it stands firmly because they have filled up the place.

A. D.

*It is a plain in Russia. The people have sleigh-riding all the time, because snow there about seven months of the year. The language is very hard. In that country they trade with the Chinese, they like tea very much. And they send out Russia leather, and they cross the Atlantic Ocean and they find very little coal, and they have nice furs. City are St. Petersburg and Moscow, and the government is one man name Czar, and he only can make the laws and he is very powerful. Russia is the strongest country in the world and the city have homes on the houses and they are very beautiful. And some of the people are very rich and some are very poor. And they have houses for children who have no mother and father and nobody claims them, and they send them to that house and great many of them are train to be soldiers.*

C. LaF.

*The trade in Russia is very great because they have so many rivers and seas so they trade all over the world. They trade with China and get tea and silks from them and they send out leather and very fine furs from their country. St. Petersburg is a very beautiful city and it is great and shiny and beautiful buildings. Nijvi Novgorod is noted for its great fairs that they have there every year and Moscow for the people who make pilgrimages to it every year.*

### The Story of Esther.

*Written from memory by Cora Rulo.*

Ahasuerus, the King of Persia, made a feast for the men, and Queen Vashti made a feast for the women. After seven or eight days after the feast, the king wanted Vashti, and he came out with her crown on her head and take her veil off so the people could see her. She must have been very pretty lady. When she heard that she must come before the king with her face uncovered, she did not want to, and the king did not like it, and he was angry, and ask the people what he should do with her; and they said she did wrong, and the king thought to get another one; and the king liked this, and he made a decree, and send all over the provinces, and send his servants to get all the nice young ladies that which he liked king Ahasuerus. He might be queen instead of Vashti. Now they brought all the young ladies, and there was a Jewess name Esther, who was brought up by her uncle, and so Mordecia brought Esther here, and he told her not to tell she was a Jew.

Now the king sent Esther and liked her very much, and the king made her queen and put a crown on her head, so she was queen, but still she always did what her uncle Mordecia told her, if she saw a queen. Now there was a man name Haman there, and he was one of the king's high servants, and this Jew Mordecia use to sit at the king's gate, and when Haman pass there Mordecia would not bow to him, although all the other servants did this, because the king told them to do that, but Mordecia at the gate would not bow to him, and this made Haman very angry, and he went to the king and ask him if he want make a decree that all the Jews might be killed or destroy every thing that belonged to them, on the thirteenth day of the twelfth month, and the king gave him his ring, and let him make a decree just as he wanted it; so Haman did so. Now ever one that heard this decree felt very bad and cried, and Mordecia heard it, and he cried in the streets, and wore sack cloth and put ashes on his head, and queen Esther did not know it, but her maidens heard of it, and they told her, and then queen Esther sent him some other close, and tell him to dress up, but he went out; and then she ask him, or rather send some body to ask him, what was the matter, and he told her about this decree, and Haman sent one of the paper or letter that had this decree on it, and Esther sent it and was very sorry. Haman told her to go to the king and beg him to save her people, and Esther said the king had not called for me, and if I go there when he has not called me I shall be put to death, but Haman still told her to go, and she said she would go, and she said she was ready to die for her people if she would have to be put to death. So the next day queen Esther put on her beautiful close, and went to see the king, though he had not call for her, and she went and stand where the king could see her, and the king felt kindly toward her because God made him like that, and he held out his golden sceptre, and she took hold of it, and

the king said what do you want, queen Esther; it shall be given unto you even unto the half of my kingdom. Queen Esther said if the king be willing I want him and Haman to come to a banquet or a dinner that I will make ready to-day. The king told his servant to make haste, for the queen want Haman and the king to come to a dinner that she will make ready to-day. So the king and Haman came to the dinner, and the king ask again what do you want, queen Esther; it shall be given unto you even unto half of my kingdom, and then Esther said if the king be willing I want him and Haman to come to another dinner that I will make ready to-morrow, and then I will tell you what I want. They went out and Haman was very proud, but when he came by, where Mordecia was sitting, Mordecia would not bow to him, and he was very angry, and when he got home he call all his people and told them of all his honor, and then the queen invite only him and the king, and yet Haman said I cannot be happy as long as that Jew Mordecia is at the king gate. He said this because he hated Mordecia, and wanted to kill him. Now his wife and his friends said let a gallows be made fifty cubits high, and to-morrow ask the king to hang him. In the night the king could not go to sleep, and he took a large book that had everything that had happened perhaps, and found something about Mordecia. It was something about some man, I think, want to kill the king, and Mordecia heard it and told Esther, and she told the king, and so he said the king from being killed. The king said what thing has been done to Mordecia for doing this? and his servant said nothing and I think it must have been about nothing in the morning now, and some body made noise out in the court, and the king told his servant to go and see who it was, and he went and see, and it was Haman came to ask to hang Mordecia. When he came in the king said to him, what do you think is best to do for a man that he wants to honor very much; and Haman said to himself, the king means me, and he said let him wear the king's clothes, and let him wear the king's crown, ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king's crown, and let him ride on the king's horse, and let one of his princes to lead him through the streets, and let him cry out, thus shall it be done to the man whom the king wants very much to honor. Then the king said to him, what do you want to honor very much, and he said let him wear the king's clothes, and let him wear the king

to see anywhere; for although some of us did not see many dishes, we had very fertile imaginations.

But life changes, and soon the happy household was separated, and while father and mother stayed at home, four of us girls kept house in a little brown house at the Agency, three miles away, so as to be near the school-house, where one of us was to teach. We divided up the work among us, the oldest sister teaching in the Government school, thus supporting the little household, while the rest of us tried to keep the house clean. When the long winter evenings came, and while the oldest one read out loud, we cut and sewed our dresses. In that way we finished many a book and many a dress.

But how fast the years go by, and we are all in different places now, our childhood ended, for some of us have begun our life work, while others of us are preparing for it. But to that dear father and mother who are so anxiously watching and waiting for us, who day after day send up their petitions to the dear God, that our lives may be all that which is pure and good, for them our childhood will never end, and to them we shall always be children.

We are preparing for our life-work. God has given each one of us a work to do for him. Some people have to wait for their work to be revealed to them, but from the outset the work of an Indian girl is plain before her. When the Pilgrims first came to this country they were the pioneers of American civilization. We who are educated have to be pioneers of Indian civilization. We have to prepare our people to live in the white man's way, to use the white man's books, and to have his laws if you will only give them to us. The white people have reached a high standard of civilization, but how many years has it taken them? We are only beginning; so do not try to put us down, but help us to rise. Give us a chance. I have seen the progress which my people have made in a few years, and one of the most hopeful signs I have noted is the respect which they are beginning to show for women.

When I have finished my education here, I hope to go to a medical school. With a good knowledge of medicine I hope to be able to do a great deal more work than I would as a teacher among them. I can help them physically, teach them the importance of cleanliness, order and ventilation, how to take care of the bodies as well as care for their souls. I know I have a long, hard struggle before me, but the shores of success can only be reached by crossing the bridge of faith, and I shall try hard. I shall have an advantage over a white physician in that I know the language, customs, habits and manners of living among the Indians. I can only rejoice that the Lord has given to me such a great privilege, and that I can be permitted to labor among my people, to help in bringing them into the light of the gospel of Jesus Christ. This is what I hope to accomplish. In my womanhood, and I look forward to the coming years with a great deal of pleasure.

As you look out on this beautiful valley you see the ships go sailing down the bay, some with new sails, some with old, but all tried as yet, others with torn sails which show their struggles with the winds and storms; and are they not as beautiful showing work that has been done? If all are going forth to work. We do not know the storms and struggles with which they will have to meet. It is even so with us; but with our faith firm in God we know that whatever shall befall us, He will bring us unto the "desired haven."

#### A Medicine Dance.

A VILLAGE OF ANT HILLS. BRAVES AT THEIR TOILET. BLUE SPIRITS AND WHITE. BRINGING THE BEAR TO LIFE. LIGHT AMID DARKNESS. MISSION AND SCHOOLS. HAMPTON'S RECORD. WHAT HOPE.

The Ree houses, like huge ant-hills, are curiosities of primitive architecture. They are from fifty to seventy-five feet in diameter, a dome, constructed of poles, supported by a stockade of logs around the circumference, and four great masts or pillars toward the centre, which is from twelve to fourteen feet high. A thatch of brush and hay is laid over the poles, and the whole covered thick with earth. A fireplace is hollowed out in the middle, and above it a hole is left in the roof for the smoke to escape, and the light of day to enter. A curtain of canvas—it used to be of skin—hangs over the doorway. They are very comfortable summer dwellings, but so large that it is very difficult to warm them for winter, and they are now seldom built. Often several families of relatives find shelter within one. The beds are ranged round the circumference of the circle, the resting-place of the favorite son marked by the white canopy above, and

the ornaments suspended around it. I saw some picturesque family parties gathered round the central hearth where the soup kettle swung on its long chain, the fire crackled, and the lights and shadows over the dusky roof. The top of the dome outside forms an excellent watch tower and pleasure resort for the owners. I saw many seated in solitary contemplation, or enjoying a sociable smoke and talk. Only one woman did I find enjoying this elevation, and spying at the same moment a rude ascent by notches cut in a log, the temptation overcame me. What was it to have ascended the dome of St. Peter's if this one remained unscathed? With the Major's helping hand ambition was gratified, and though I was somewhat afraid of breaking through the roof as well as through Indian etiquette, the lady of the house was not ungracious, and I enjoyed for a few minutes the birdseye view of the strange little village, and then succeeded in getting back to earth without breaking any bones. But the Major proposed a still more daring feat. "Wouldn't it be like to look into a Ree Medicine Lodge?" By all means, if it is allowable. The Lodge is close at hand, the largest circular Ree house in the village. A withering tree is stuck into the ground before the door, with some medicine bags suspended from it. The roof is adorned with a complete ring of the ghastly buffalo skulls. "Oh, there is the bear!" an awe-struck whisper, and the young Gros Ventre with us shrinks suddenly to my side. "Only a bear skin, my dear!" It is rather a formidable object lying above the entrance like a sentinel. "But sometimes they are 'chance people'!" "A ha! I don't believe that, I'm sure." "No." Perhaps there's a man inside of it," I laughed, but my companion retreated, and I saw her no more. The Major boldly drew back the door curtain, and looking in, we surprised a party of

#### BRAVES AT THEIR TOILET.

They knew well that the medicine dance is only held on sufferance, and are not disposed to dispute the Agent's entrance. So, quite calm and collected, as "Josiah Allen's" would say, we make the tour of the lodge, stopping to exchange a word with some of the groups not too deep in their devotions to talk as one party, at least, appears to be, solemnly seated in a row before a small antelope skull, which they are appealing or invoking, with a pan of burning coals and a tobacco pipe as incense. The seven groups ranged round the circumference of the lodge at separate stations, about twenty-five men in all. Their ornaments and insignia, rattles, feathers, bear-claw necklaces, and what not, are suspended near them ready to be donned. All are engaged, with a small round mirror in one hand and brush or cake of paint in the other, in adorning themselves with every strange device, making themselves into very fiends, though fiends that can exchange jokes and compliments, as harmless as the "lion of Blotom, the weaver." There are red and blue and yellow fiends and parti-colored fiends; but the most original and effective were a pair of lavender fiends, one of them further beautified by narrow stripes of vermilion on the lavender background. They tried to bargain for one of the rattles as a souvenir, but were unsuccessful, but was more than compensated by a fine new headress offered me afterward by an Indian girl who had made it for one of the braves to wear at the dance, but took a freak to sell it, perhaps to tease him.

Somewhat against the approval of the good missionary I went to see the medicine dance, whose preparations I had witnessed. If I were working or living on an agency I certainly should not frequent the Indian dances. But I had duties also as a reporter, and in any case should not think I was living up to my opportunities if I neglected the chance to see once this curious remnant of a primitive rite that is passing out of existence. The Agent kindly offered his escort, a missionary lady who viewed the matter as I did accompanied us, and a Hampton student, who understood my motives, went as interpreter. The distance from the Agency to where we entered the village. The Ree quarter was awake. Now and then a white-robed figure glided by us, but most were already at the Medicine Lodge. Light was streaming from its cracks. We entered and found that it all came from a great fire blazing on the central hearth, replenished from a huge brush heap, from time to time, by a stoker in red. An audience of perhaps a hundred were gathered between the fire and the door; the women and children seated decorously on one side, the men, mostly standing on the other. The flames threw a fitful gleam over the crowd, and searing out the furthest recesses beyond, revealed here and there dusky groups, in which I recognized the heroes of the morning's toilet. Two drums beat incessantly all for so long that I began to think the dance had been

given up. But just then half a dozen young athletes leaped to their feet, and, walking abreast, stood in a line and began a chant. They sang of their prowess as medicine men, and promised to do great deeds. One held up a small stick with four jagged strips whittled down its sides and bent back like the horns of a buffalo. This pleasant melody, the virtue of his "strong medicine," he would proceed to swallow, and he stomped the five to do as much. As many more jagged sticks were produced with equal bragging, and holding them aloft, all six dashed off on a wild race round and round the fire, faster and faster, with occasional side spurts into the dim recesses where the other medicine men sat. At last the spell was at its height, the drums stopped suddenly, the racers knelt side by side, with their backs to the audience at the furthest side of the dim lodge. Two old medicine men stood over them, making passes and invoking the powers of mystery. They threw back their heads, opened their mouths, and lifting their barbed sticks as if they were strings of macaroni, prepared to swallow them point first. Their contortions were certainly as violent as if they were doing it, and when the first young brave who had stumped the rest sprang to his feet, spreading his arms in various directions, the stick was gone, and smacking his lips to intimate that he rather enjoyed that kind of diet, the drums beat wildly and loud applause burst from his appreciative audience. One comrade shared the failure of the first "medicine," and tossed their sticks sadly into the fire. One party after another took the field, with various feats of the black art, swallowing arrows, cutting a lariat and chewing the ends together without a knot, making a feather stand up on the ground and a flat bone ornament rest against a silk hiker's hand nearly perpendicular—tricks not very overwhelming to one who had seen Heller's, but highly convincing to most of the audience, and well done considering the lack of pockets in a costume consisting chiefly of paint. The interest to the unbelieving pale-face was, of course, in the wild grace and agility of the dancers, the wild race of the feet-footed athletes, "blue spirits" and "white, red spirits and gray," weirdly lighted up the fitful flames. The prettiest sleight-of-hand performance was a representation of an otter hunt; the beautiful, airy and so dexterously manipulated by the gentle savage who bore it that it almost seemed to be gliding and winding of itself round the ring in front of its pursuers. But its fate was a foregone conclusion, as it was the very claw of the dog, who, with a canine growl, brought the scene to a climax by seizing it by the neck with its teeth and giving it the fatal shake, while the drums and the audience applauded with "How! How!" and the hunters came up and carried off their prey.

The grand finale was the bear fight. Of course, the bear must first be brought to life in order to be slain. By the moment an old medicine man lifted the skin from the spot where it had lain supine all the evening a surprising sensation shook the audience. All rose to their feet and fell into seven steps in counter-motion. I felt the little Gros Ventre girls fear was well founded, and they do "sometime chance people." At the same moment the "red spirit" in charge of the fire threw ashes on the flames till they sank to smoke. Indian stoicism was not proof; children cried, women screamed; the men themselves retreated a step or two. I was afraid of being trampled by the pursued if not devoured by the pursuer; but the Major came to the rescue, and with my back against one of the great pillars I was ready for my fate. "Bring on your bears." They brought them on. There was no lack of impressiveness in that; the panic-struck crowd behind; clouds in front, through which savage figures flitted, crouched, leaped, tossed wild arms, touched now by a lurid glow, now dissolving into smoke, writhes; while from some far recess of the surrounding darkness, was heard the low incantation of the conjurers. Suddenly an angry threatening growl! A new sensation seized the audience, but my pillar stood firm, the bear was coming! The dance grew wilder—which of the heroes should meet him? One went forth to the single-handed conflict. Now fiercer growls, mingled soon with fearful groans. The brave was wounded. No one goes to his help, unless the wild dance brings him mysterious aid, or the drum inspires his sinking courage. Is his heart strong and his medicine good. A shout rises. The drum sounds louder. The fire suddenly blazes out again, the lodge seems to spire his sinking courage. Is his heart miraculously cured of his wounds, dragging off his victim—only a bear-skin once more. It is dumped again into its corner, but a pan of live coals is placed before it, to appease it, perhaps, for being so bandied about between life and death. This was the grand finale,

and all went home but the young medicine men and the old ones who were to initiate them into further mysteries, i.e., put them up to new tricks.

I will leave your readers to do their own moralizing over the Medicine Dance, which all who understand its bearings, except the medicine men themselves, desire to see abolished in spite of any picturesque or historic interest, and say a few words of the

#### MISSION AND SCHOOLS.

With all the adverse influences around them it is no wonder that the faithful missionary who has labored for nine years among these people has seen fewer evident results than more favored fields can show. Those who know the history of missions will understand how he can work on with courage, still expecting the harvest. Poverty, isolation, fear of enemies, superstition, disease, diversity of language, which a hundred years or more of close association has not so far overcome that a separate service for the Rees is not still necessary—these are the obstacles. Even the present scattering out on to farms, while it is, on the whole, most desirable, vastly increases the work of the missionary as well as the agent. One of his church members has gone sixty miles up the river to live. To visit the Indians on the west shore he has sometimes had to cross the Missouri in a "bull-boat," the Berthold Indian's remarkable craft, a basket frame round as a wash tub, with a hide stretched over it, in which they paddle and spin around the treacherous currents of the Big Muddy. The little church, supported by the American Missionary Association, has sometimes a congregation of about seventy-five. This mission school, with an average attendance of twenty-six, is also under its charge, with Government assistance for the last year of \$75 each for ten little girl boarders. His faithful lay assistants do all in their power, I believe, in the homes as well as the school.

The Government Boarding School is seventeen miles from the agency, at the old military post of Fort Stevenson. It has been running but two years, and difficulties in the management have put it back. Major Gifford is anxious to secure the detail of Lieut. George Le Roy Brown of the Eleventh Infantry, U. S. A., for three years commandant of cadets at Hampton Institute, and stationed at Fort Lincoln, D. T., an officer of high character and long experience on the frontier, for Superintendent of the Fort Stevenson School. If this be accomplished it will be a happy event for the Berthold Indians. The school accommodates about eighty pupils. For the boys, there is work on the forty-acre farm and in the shoe shop, run for the last year by a Hampton student, teaching four apprentices his trade. For the girls, there is housework and sewing; the assistant teacher in the sewing room for the last two years having been a Hampton girl, who has now returned to Hampton for an additional course. When I visited the school it had just been painted and repaired, had opened full, and seemed to be running as well as possible, without a regular superintendent.

#### HAMPTON'S RECORD.

The record of returned Hampton students at Fort Berthold Agency has been remarkably good, considering the disadvantages. Of four girls and five boys who have been home from one year to four years, two girls one boy have done finely; two girls and four boys fairly well. None have returned to the blanket. All are at work at school. Three girls have just returned to Hampton. One of the girls and one of the boys are married respectably. Besides these, four boys have died; three of them not till several years after their return home, one a consumptive when sent to Hampton. "One of these yielded to the temptations of camp life at a military post off the reservation; of the others I heard a fair account."

#### WHAT HOPE?

The chances for returned students are small on this reservation at present, in the Agent's opinion, and he advises all who can shall keep away from it. The village is no place for girls, and there are few positions to give them. For boys the places for trades are few, and there is slight encouragement to farm till there is a proper survey and some security in taking claims. There should also be some appropriation for school. My letter is long, and I will leave conclusions to your readers. The last time I walked through the antique little village I saw some of the Rees taking down their ant-hill dwellings, chopping up the poles for firewood, preparatory to moving out to their new farms. Gradually the whole village will disappear before stronger forces than their old enemies, the Sioux; the pressure of civilization from without, the new desire for it from within. Life is starting; shall it have a chance?

HELEN W. LUDLOW.  
in Boston Journal.

### The Apaches at Fort Marion.

On one of the saddest pages in Helen Hunt's "Century of Dishonor," the story is told of the massacre by white men of Apache Indians in the Spring of 1871. The Indians asked to be permitted to live in the mountains, and raise corn in the valleys, where their fathers and their father's fathers had lived before them. They laid down their arms and began to work, while the army officers, convinced of their honesty, intelligence and ability to support themselves, urged the Government to grant their request. Before the reply came, a party of white men made a raid on the Indian camp, killed one hundred and twenty-eight persons, all but eight being women and children, and drove the rest of the band to the mountains.

The record since has been a terrible one. The story of the last four years needs no repetition.

Fortunately for our honor, General Crook has been in command of the Department of Arizona, and knowing, he was fighting, wronged, though guilty men, he has risked his life and reputation to save those whom he was compelled to conquer.

Seventy-five of the Chiricahua Apaches, a part of the band remaining hostile, surrendered to General Crook in March, and were sent to Fort Marion, in St. Augustine, Florida.

There are 15 men, 31 women, and 29 children in the party. The braves are rather short, thick-set men, of great physical strength; with one or two exceptions, they have not the faces of criminals. Old Nana, who, the Indians say, is 127 years old, bears the reputation of having killed a white man for every year of his life.

The women and children vary in age, from tiny babies to intelligent, well-groomed boys and girls, and from young unmarried women to old crones, whose faces are wrinkled, and whose backs are bent with age.

They arrived at St. Augustine in the half-clothed condition in which they surrendered in Arizona, and as the army stores contain no supplies for women and children, their condition could not be improved.

"Repulsive creatures," people said, though the men's faces are strong and fine, and the women's are full of expression. As we watched the strange group, we could forget the rags and dirt, and admire the courage and endurance of women who, carrying heavy burdens, had kept pace with their husbands and brothers along blind trails, over the wildest mountain passes.

We wondered at the chivalry and tenderness of men who, fleeing for their lives, had not suffered one woman to lose their care, nor left behind one toddling baby.

Chi-hua-hua, the head chief of the Indians at Fort Marion, a short man with heavy frame, and firm, expressive face, is the natural leader of his people, and is very anxious for their welfare.

His address to General Crook at the surrender is full of Indian eloquence.

"I am anxious to be better, for I see the sun looking down upon me, and the earth listening. It seems to me I have seen the one who makes the rain and sends the winds. He must have sent you to this place. \* \* \*

I surrender to you, because I believe in you. You have never lied to us. You do not deceive us. You must be our God."

"I want you to be a father to me, and treat me as your son. I want you to have pity on me. \* \* \* I am now in your hands. \* \* \* I surrender myself to you. \* \* \* Do with me as you please."

What will the nation, whom Gen'l Crook represented, do with Chi-hua-hua and his band.

The men are prisoners of war. Their future is in the hands of the War Department, and the tenderest hearted friends of the Indians may not plead for them.

If they had cause for revenge, they are still guilty in wreaking that revenge on people innocent of any crime against them.

If, as fugitives, with scores of women and children dependent on them, they must live by depredation, and cover their traces by the death of their victims, they have no excuse for being fugitives. Three years ago they pledged to General Crook a lasting peace—that they would work for their own support, with no expectation of aid from the Government. By the Indian's own code, the most contemptible crime is a broken covenant.

But after the Indian warriors have been judged, the women and children remain to be provided for. What is to be done with them? The quick response will come from every friend of Indians in the land. "Educate them; civilize them."

Work again, the beautiful miracle in character and life, which has been often wrought before, through Him who saves men. It has been proved that there is no depth of degradation which His redeeming hand cannot reach. Prove it again. There in the tents, on the ramparts of old Fort Marion, begin to teach the sweet lessons of a Christian home, and guide these

people, now utterly surrendered to you, to usefulness and peace.

General Ayers, who is in command of the post at St. Augustine, will give his hearty support to any wise work for them. The noble women who begail the work of teaching Captain Pratt's captives, still live near Fort Marion, and are ready to do such work well, under the present conditions, requires both money and strength. It demands the whole time and energy of people trained to the work. It is not fair to ask a few women to perform the service voluntarily, noble and capable as they are, whose time is already crowded with niter cares.

We can hardly expect a wise and generous policy in the Government. The time has not come yet when the American people require "fair play for the Indian."

A vast number of people in the Western States and Territories demand that he be crushed down and exterminated; and a large majority in our Eastern cities are indifferent to his wrongs, and careless of his fate.

The wistful, pleading eyes of the girls who followed me to the entrance of old Fort Marion, follow me still; and looking back, I watch the babies in the court-yard, learning to take their first steps. Who will make paths for their feet?

ISABEL B. EUSTIS.

No. of Indian " 139.

Total 601.

A little more than half are girls; average age, 17 years.

Its object is the practical Christian education of these two races; especially the training of teachers.

It is a private, chartered institution, owned and controlled by a Board of seventeen Trustees, with a majority of no denomination. It is aided by the State as an agricultural school, and the Government pays \$197.00 apiece annually for 120 Indians, but it needs from private charity every year for its support, the sum of fifty thousand dollars.

About half of this has been given in the form of Annual Scholarships of seventy dollars a year, which pays the tuition or cost of education of one who pays in labor for board, clothing and books.

It needs a partial endowment fund.

Five Hundred Thousand Dollars

are asked for that purpose.

Circulars and general information sent on application to the Principal.

REUTER & MALLORY,

22 LIGHT ST.

BALTIMORE, Md.,

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 1.80 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth.

The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond, Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Sea-board. For sleeplessness and nervousness, the delicious to the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

## Hampton School Record.

VOL. XV.

HAMPTON, VA., AUGUST, 1886.

No. 8.

A Committee of the Legislature of Virginia, consisting of Senators Stubbs and Gee and Delegates Cardwell, Starke and Curlett—appointed as intimates in the Principal's Report in our June number, to investigate the claims of certain citizens of Hampton that the Normal School is violating its charter and injuring the business interests of the community in its industrial operations, met in the Court House in Hampton, July 1st. The sittings were continued through four days, and twenty-six witnesses were examined with the utmost patience and fairness on the part of the Committee. Every facility was given to both sides to make their statements, and the light that was thrown upon the case will result, we believe, in general good to the relations of the School and the community at large.

It became more and more evident in the progress of the examination that the effort of the memorialists had resulted from ignorance of the facts both as to the School's charter and working, from exaggerated ideas of its wealth and resources, and from the personal grievances or prejudices of a few, aggravated by idle talk. Naturally, therefore, the leaders of the effort had the disappointment of seeing their witnesses often weaken the statements expected of them and unable to sustain those they did make, and on the other hand obliged to testify, sometimes very readily, to the vast preponderance of advantage over disadvantage to the community from the School and its industries, in a business point of view as well as in moral influence; in the large employment of mechanics and laborers, in the patronage of merchants, the improvement of stock and machinery in the county, the accommodation of citizens, and the increase of wealth and demand. They testified also to such a constant policy of delicately refraining from competition when possible, that three witnesses acknowledged they would far rather not see the school forced into free competition by taxation.

The School offered through its witnesses and submitted accounts, the actual facts—favorable or unfavorable in appearance—as to its property, and the workings of its various departments. It voluntarily gave to the plaintiffs the best points they were able to establish as to any instance of personal loss from these; so that it was playfully remarked by an outsider that the best witnesses for each side were furnished by the other. Which had the best of this exchange however, may be inferred from the fact that both together were unable to show that more than two individuals, both of whom are prosperous men in their business have been seriously affected by the School's competition. And of these, the most concerned is a warm friend of the School, and testified with emphasis that he should consider its removal or obstruction a calamity to every interest in the community, his own business included.

On the other hand the figures showed that the School has expended in the community, an average of \$25,000 a year—increased the past year to over \$25,000 by the building of the new Chapel—and an aggregate of \$400,000 in the eighteen years of its existence, the benefits of this great amount going chiefly to mechanics, then to laborers, then to merchants, farmers and other citizens; and largely represented in the homes of the people, their increased number and comfort. As was said

in the Principal's report in our June number, the Normal School, Soldiers' Home, Hygeia Hotel, and Fort Monroe, have all a share—and we believe with many of the witnesses that the Normal School has by far the largest share—in making this one of the most prosperous sections of the State in a business point of view. The School is at the same time doing a work which no other agent pretends to do for the prosperity of Virginia in the practical education of an important class of her citizens, doing a work which belongs to the State without charge to its taxpayers, the only aid it receives from Virginia being from the interest of the College land-scrip fund which was given by the General Government for agricultural schools and invested in State bonds, the interest of which is paid, one-third to the Hampton School for the Negro race, and two-thirds to the Blacksburg college for whites.

As to the School's charter, hardly one of the memorialists who appeared had read it. Many were surprised to learn the latitude which it allows the School in managing its property and workings according to its own judgment of its needs in carrying out its purposes of instruction and mechanical training. On the other hand, it was shown that this very liberality on the part of the State, by throwing the School on its honor in the interpretation of these needs and the use of its liberty, had always proved the most effective of checks, holding it far within the generous limits; and that it is desirous to be as careful, or if possible more so, in this direction in the future.

All the facts and figures as to the School's purpose, plan, resources and proceedings, lie open all the time, of course, to the public. Some mislaid ignorance of them was manifested by some of its friends as well as its opponents. A little careful personal inspection might have made the public investigation unnecessary, and saved the memorialists from the mistake which some were frank enough to acknowledge they had made in signing the petition.

But for the School's own sake the more public the investigation the better. It desires nothing more than to come to the light, that its deeds may be manifest.

That some prejudice as well as much ignorance of the facts and their relations is responsible for the petition, we have no question. There are doubtless a certain number who feel as one witness was honest enough to say he did, that there is no virtue in the School or its work, that it is simply a money making scheme for the enriching of its Principal and his associates and supporters, and that its place might better be occupied by a lake. Such prejudice, spoken or unspoken, we do not expect will be diminished by the investigation, but to a degree perhaps intensified and brought out. Prejudice never yields to evidence, but only to slow growing intelligence, or sudden self interest. It is natural that some should exist. There is less than might be expected, less we believe, in this State than in any other in the South. We regard the whole experience indeed, as simply phenomenal, a phase in the School's history curious to study but not disturbing. We attribute no intentional wrong to any of the signers of the petition. All their honest ignorance of facts has had considerable enlightenment to which they can easily add. Any difference of opinion after that, we do not believe will amount to

much. We are rather obliged to them on the whole, for so good a chance to see Hampton Institute before the Hampton public.

Another good thing that the investigation has set before the public is the fact, finely illustrated in this honorable Committee, that party politics have nothing whatever to do with the interest which intelligent men have in the cause of Negro education. Republicans and Democrats on the Committee, it would have been impossible to tell which was which, for both were evidently deeply and equally interested in the objects of the School, while as anxious to do full justice to all classes of citizens.

We are glad to take this opportunity also to acknowledge again, as we often have before, the many and increasing evidences the School has received of friendliness from its Hampton neighbors, both business men and others. And while we regard this less pleasant experience in its history as but phenomenal as we have said, what is real and abiding is the noble position which Virginia has taken—far in advance of any other Southern state—for the education of all her citizens. Her recognition of this Hampton School's work for part of them, the liberal charter granted to inaugurate and sustain it, her continued approval of its course shown in her prompt and hearty payment of the interest on the land-scrip fund, done on a more liberal basis than in any other state in the Union, her constant employment and encouragement of our graduate teachers—all these have been the realities of the past, and we believe will be the realities of the future.

A most valuable contribution, in popular form, to current socialistic literature is the "Notes on Industrial Conditions" by Mr. J. B. Harrison. We mention it not with any critical intention, but merely to preface certain extracts from it and to recommend our readers to get it, if possible, for their own instruction. Mr. Harrison says:

Our system of government was diverted from its normal course of development by the accident of our civil war, and we have never returned to the line of natural and healthful evolution which we then abandoned. The habit of employing the powers of the general government for everything that could be accomplished by their instrumentality, which our people acquired during the war, prepared the way for an over-production of legislation during the period following the close of the struggle. This powerful impulse toward the abnormal extension of the powers of the national government was accompanied and re-enforced by a general decay and dissolution of the local communities. The energy of the township life before the war was not less moral and social than political in its manifestation. A vigorous and decisive public sentiment, which did not always need formal expression, was effective in upholding public order and morality. This sentiment had its sources chiefly in home life and training, in the influence of religion, and in the traditions of ancestral character and public spirit, and of honorable service of public interests, which were transmitted in families from generation to generation. The war developed influences which seriously impaired the vitality of local self-government and of the moral and social guardianship of public order and honor. The most potent factor in this evil change was the new thirst and passion for wealth which appeared amid the morbid conditions of the life of the people after the great conflict. Under the influence of this all-absorbing ambition, the moral administration of the local communities was to a great extent abandoned, and it has never been resumed. Multitudes of citi-

zens, relinquishing the warfare against disorder into which all true men are born, devoted their powers wholly to the acquisition of wealth, and this pursuit soon became a mad struggle for success and pre-eminence which produced unwholesome intellectual and social conditions, still everywhere prominent in the national character and life. Here was the source and birth of American socialism. It is the fashion to assert that socialism in this country is of foreign origin and this notion is a comfort to many persons, but the socialism which is most vital and dynamic among us to-day is the growth of our own soil. It had its origin in the changes in thought, feeling and action produced by the rise of an overmastering desire for wealth, which has weakened all properly social motives and efforts, diminished civic patriotism, and in a great measure destroyed the sense of a spiritual and moral community.

Our industrial disturbances have their source in the prevalent feeling in regard to wealth. By the natural potency of their example, and other means of influence, rich people have imparted to the whole mass of the population a large measure of their own feelings and ideas respecting the objects of human life and desire. Their estimate of the value of wealth is universally accepted. Its pursuit is regarded by the teachers and leaders of the time as a normal and proper object of endeavor for all men. There never was a time when the growth of wealth, and of the selfish individualism which accompanies it corrupted so many poor people as now. Rich and poor are dominated by the same ideals, and inflamed by the same feverish desires. For a large proportion of the working people, the most important part of the population, the springs of life have been poisoned, and character irreversibly embittered and deranged. The source of our labor difficulties is psychological. It is in the thought and character and life of our people. Those who work with their hands are not chiefly responsible. The prevalent feeling about wealth has naturally and necessarily developed the intense and unlimited competition which now makes life a struggle, not with the powers of nature to obtain the means of subsistence and comfort, which is the normal life for all men, but a struggle of men with each other in which an ever-increasing number must inevitably fail and be crushed.

No juster statement of the causes which underlie the present agitation, and of which that agitation is the uncontrollable expression, has yet been made, and after reading it the author's analyses of results and suggestions of remedies. Of the former he says:

The conflict between labor and capital, or the revolt of the laborers against what they esteem the hardships of their condition, has but just begun in this country, and no one can foresee the rate at which it is likely to advance. That will depend chiefly upon the pressure of industrial conditions upon the laborers, but somewhat also upon the natural rate of development of thought in their minds. The abnormal and desperate impulses which are born of starvation are already a perceptible factor in the thought and passion of the time, and they will henceforth have their part in many a bitter denunciation and wild appeal.

We have not properly estimated or recognized the natural effects of existing industrial and intellectual conditions upon the development of thought among the working people. They think and feel exactly as other people would under the same conditions. One of the most potent and decisive influences in the life of a considerable and increasing number is despair. They can barely live by practicing economies which they feel to be cruel and extreme. They can have no hope of improving their condition, of gratifying any taste for beauty or hunger for knowledge, or desire for anything beyond a bare subsistence. They can make no provision for sickness or old age. Even honesty and self-respect are denied them, for misfortune sooner or later compels them to contract debts without any prospect of being able to pay them, and to accept the charity which is often scattered with lavish hand by those who have been deaf to all the requirements of justice. To

these men and women life is empty of hope and beauty and tenderness. They live and die without faith in God or man. It would be the same with my readers, and with all the cultivated and prosperous people in the land, in the same situation and environment. It is not safe for any country to have too many people living under such conditions.

The uncertainty or indecision of the leaders and legislators of the nation regarding the monetary system and currency of the country after the extinction of the national debt, is a distinct and important factor in the prevailing discontent and agitation among the working people. The adoption and announcement of a well-defined, intelligible and practical system for the permanent direction and regulation of the national currency would have a favorable and quieting effect upon the existing agitation.

As to remedial measures he makes one or two suggestions which are well worth attention.

The establishment by the national government of a system of non-interest paying postal savings banks would be a valuable measure, with far reaching results. People should pay a small fee for the registry of deposits, and the plan would thus be free from socialistic tendencies. What the working people need is not interest, but absolute security for their savings, and this can be guaranteed by the national government only. The effect upon the labor agitation would be wholesome. The arrangements for the publication of works on political economy at John Hopkins University at Harvard and at Columbia College, promise excellent results among our cultivated young men. But it is a remark made by the people of wealth and culture to exert any influence of an educational character upon the working people.

We need a journal for the working-people in which the questions, dangers and duties of the time, and the whole range of interests dependent upon the industrial situation shall be discussed from the point of view of the working-men, which shall provide such reading as American working men and women need for the right development and ordering of life and character, personal and social, which shall deal in a sensible and practical manner with the interests, dangers, and discipline of youth and the home, and with the relation of labor to mental and moral sanity and to the perpetuity and strength of the nation. There is no adequate agency now in existence for the propagation of such ideas and principles as are required for the basis of a rational and practical system of culture and life for the working people. A voluntary association composed of a few men acquainted with each other, without projects or visionary theories, who understand the laws governing the propagation of ideas and who have no personal ends to serve would be the best instrument for such work as the time requires in this field. It should be organized for the dissemination, by the use of the printing-press and any other available means, of such knowledge, doctrines, and influences related to the true place and value of labor in human life and society, as are necessary to correct the false and bewildering sentiments now everywhere prevalent and to prepare the way for better modes of life among those who toil. Its influence would promote intelligence, self-respect and prosperity among the working people, seriousness and public spirit in men of wealth and the unity of all in a vital patriotism. Very little effect can be produced by essays, or dissertations on such subjects. If any real improvement is to be effected it must be the result of the persistent, systematic teaching and propagation of true and appropriate ideas, illustrated, applied and enforced in innumerable ways, developing all related truths and principles, till the entire sphere of human education and of practical life in all its relations is occupied and illuminated; and such teaching must be reiterated, multiplied and continued until its reverberation fills all the air of the time and compels attention. It needs little reflection to make it plain that no existing agency is suited to the performance of such a work, but there is a general unwillingness on the part of prosperous men to admit that any new measures are necessary.

There is real, practical stimulus in such thought as this, and there is not one of us, rich or poor, who could not take Mr. Harrison's final summing up of the case, and by working it out in our daily lives, do something immediate and tangible towards the advancement of humanity.

We need a different feeling about wealth, and about labor. Men must have new ideas, must learn to think in new and higher ways about the objects of human life. Life is really and rightly a stern and arduous ser-

vice for all thoughtful men. A life of ease and pleasure for mature men is wrong and unwholesome. For men who think aright it is impossible. Here is all this disorder, bedeviling and wrong in the world, and here is our duty and opportunity to strive to reduce and mitigate it, and to sympathize with and guide those who are its victims, who are found alike in all grades of society, in all conditions of life. This is an endless task, and is the only true life for any human being.

## SOUTHERN SKETCHES

BY ORRA LANGHORNE.

### Northern Friends and Helpers.

The article on "What Virginia People Read" in the April WORKMAN has produced such unexpected results that I am tempted to give a full account of what was almost a random shot, but has brought down some very fine game.

The article was written with a desire to defend the Virginians from an unprovoked attack made by an ungracious Englishman. I forgot in that paper to mention that Mrs. Nicholls had been living for some years in a community where the Virginia women were not only read, but write. In one family where she was hospitably received, one lady had published a book of "Plantation Reminiscences" and another furnished several interesting sketches of war times. The Charleston *News and Courier*, afterwards reprinted in a volume of selections by the editor of the *Courier*. In a village near Mrs. Nicholls, a magazine was published monthly, pretty badly to be sure, by an energetic Virginia woman, who had more zeal than knowledge for her task.

I might have stated also that Miss A. H. Ruffner, some years since prepared a map of the State, which was purchased by the board of education as the best map of Virginia yet made.

I had no thought of other effect from my article than a refutation of Mrs. Nicholls' except I did hope a little that Mr. Clemens or some other "good Yankee" might be moved to send me a copy of the "Innocents Abroad."

A few days after the WORKMAN came out, I began to receive letters from kind people in the North, and then boxes of books began to come. My sister, Miss Gray of Harrisonburg, who had somehow missed the WORKMAN, was surprised by letters from unknown correspondents and at this writing we are both feeling quite rich in supplies of charming books for circulation.

Just here I may mention one of those curious coincidences which sometimes happen in this world-day world, and seem to indicate the communication of mind with mind in a manner that annihilates time and space.

For some years past I have been writing at odd times a book of reminiscences, and at this time have come to the last year of the war. I had just written an account of meeting Gen. Wm. S. Lincoln of Worcester, Mass., in the dreary prisoner's hospital after the battle of New Market. Gen. Lincoln has been one of our cherished friends ever since the war, and since I have lived in Lynchburg has visited us, and gone over the battle fields and other memorable scenes of those days of trial. Reading over the General's "History of the 34th Mass. Regiment" and writing the account of our first meeting made me think a great deal of him, and I realized regretfully that a year had passed without any direct communication between us, though he sends me regularly the Worcester *Weekly Gazette*. Just as I was resolving to write at once and inquire for him, an express package was brought me, containing over a dozen nice new books, with a graceful note from "Gen. Lincoln's sister, Mrs. Canfield," and a day or two later came a letter from Gen. Lincoln, saying he was just thinking of his Virginia friends, when his sister sent him the WORKMAN with my article "What Virginia People Read." The box contained a shining new copy of "Innocents," Hawthorne's charming notebook and Corneille's admirable travels *Around the world*, with other valuable works.

Then I received a letter and package of books, many of them very valuable, some of which what I wanted for my "constituents," and all showing the delicate, refined taste of the sender, a New Jersey lady. Since the publication of "Aunt Titia's" story, under the name of "A Member of the Old Aristocracy" this gentle hearted lady has written me a sweet letter, compassionating the sorrows of my people in a way that is extremely touching to one who has seen so much of ruin and desolation as have passed before us in recent years. She has given substantial proof of her sympathy by sending me a new dress for "Aunt Titia," and ten dollars in money, a sum quite un-

usual for the poor old lady to handle in these days of poverty and helplessness. It gave me great pleasure to take these tokens of kindness from an unknown friend to "Aunt Titia," who lives in a quiet side street, about half a mile from my house. The little cottage, somewhat out of repair, looked very tidy through the open door, at which Aunt Titia was seated in a large rocking chair. She was dozing peacefully and looked very old and feeble, but started up as I entered, and the wrinkled face brightened with a cheerful smile when she recognized me. She was much surprised when my errand was explained, and I wished the kind Northern lady could have been present, when the poor old slave woman, to whom freedom came all at late, poured out her thanks for the gifts sent her, in terms of simple eloquence. Aunt Titia has a very childlike faith, and these comforts given her by a friend of whom she has never heard, just as she was in urgent need, seemed to her a direct answer to the prayers she constantly offers to Him who has brought her safely thus far, that she may not be deserted in life's extremity. She seemed a little bewildered at first, and then declared, "It was the Lord, she knew was the Lord." She begged me to thank the kind lady who had become the instrument in His hands, adding in trembling accents, "I do not know her, but I know she is a Christian, none but a Christian would have thought of doing such a thing. I have never seen her, but I know when we meet in His presence I shall know her and we shall praise Him together there." The room was as neat as hands could make it, the walls adorned with photographs of "old master's family," whom Aunt Titia firmly believes to have been the most elegant and refined of human mould, with portraits of the late "Uncle George Washington," and several colored posters and sundry gay prints, which she has been collecting all her life.

When I left, Aunt Titia followed me to the door with thanks and blessings, and learning that I was going to see one of the ladies of the family she begged that I would give her love, and gathered some rose huds from a bush, her dear "Miss Katie," herself had brought from the old home in Williamsburg to plant in the yard of the little cottage and I must tell Miss Katie how sorry she was not to be able to come to see her.

About this time a lady in Connecticut who has sent my sister some nice books, and written both of us letters showing the most kindly interest in our little circulating libraries, enclosed me an order on Webster & Co., the New York publishers of "Mark Twain's" works for any six books by that famous writer. The order was signed "S. L. Clemens." It was difficult to realize that this extremely gratifying business letter was actually written by the same pen, which for many years has been furnishing amusement for multitudes all over the world.

The "Innocents" and "Tom Sawyer" and "Roughing it" have long been household words with us, and have been relied upon for cheering influences like the anti-bilious remedies and infallible recuperators puffing by the medicine men for poorly paid doctors. I do not know whether Mr. Clemens has been among the poverty stricken, dismal, desponding, broken down aristocracy of poor old Virginia, since "Lec's surrender" in the flesh, but he has been here in spirit, and his mirth-provoking books have helped many a "poor and proud" Virginian, who was mourning over evil days, to bear the sorrows of unaccommodated and wounded pride. I think I can keep two copies of the "Innocents" going all the time, and my sister writes that she must have two copies, and thanks to Mr. Clemens and Gen. Lincoln's sister, we are both supplied.

Like poor old Aunt Titia, words fail me to express my thanks for the kindness shown us, and I can only hope God will bless those who take such kindly interest in us. On reflection I believe I must thank Mrs. Nicholls a little bit too. But for her malicious and exaggerated account of our "Intellectual deadness" these "good Yankees" would not have been moved to send us these nice books, or to express the kindly sympathy so grateful to our hearts.

I wish the book senders could follow us into the houses of the poor and sick, often the "weary and heavy laden," and witness the pleasure conveyed by the books, which would probably never have been seen by any of the poor readers, but for the liberality of our northern friends. One noticeable effect of such benevolence is that long cherished prejudices are broken down and buried away among the things of the past, by the kind hands which send these treasures of literature to carry "light into dark places." One of the ladies sent a large package of handsome Christmas and New Year's cards, many of which I have given to the children of poor white and colored people around us. The poor, who see few beautiful things,

delight in these cards, which rich people hardly notice, and many a humble home is brightened by the pictures, bearing lessons of purity and love among the dwellers in want.

I am very busy just now gathering raspberries, which are my principal "crop," and bring good prices in the city market. Picking berries is a lively trade at this season with the little colored children, who are paid two cents a quart, and these earn a good many pennies among the market gardeners. One day this week I had three little bare-legged colored girls in my "patch" by 6 o'clock in the morning. They picked busily until 8 o'clock, and then stopped to go to school. As they brought in the baskets of June "Antwerps" they laughed merrily over their dripping little skirts which do not hurt them at all, as they are used to the work.

After my little pickers were duly paid off, I gave each of them a gay picture from the Jersey lady's box and the children went off in high glee, much elated with their pennies and pictures, the latter an unexpected pleasure.

We are glad to rectify an error which occurred in a late number of this paper in our mention of Prof. Stewart's book "Liberia." We said "It has an introduction by another representative colored man, Mr. G. W. Samson," and the New York *Freeman* corrects us as follows: "Dr. Samson is one of the ablest white educators and ministers in the United States; he was for years President of Columbia College, Washington, and is now Professor of Theology in the Bible Workers' College in this city, Secretary of the American Colonization Society, and President of Rutgers' Female College."

The writer of the review in question confounded Dr. Samson with Prof. J. P. Sampson, author of "Temperament and Phrenology of Mixed Races," who, we suppose, may fairly be called "a representative colored man," and neither of these gentlemen has ever been Secretary of the American Colonization Society, that position having been for years held by Mr. Wm. Coppinger.

FATHER AUGUSTUS TOLTON, the first colored American priest, celebrated his first Mass in the United States in the little church of St. Mary's, Hoboken, on Saturday last. He was invited to say Mass by the kind and energetic pastor, Rev. Father Corrigan, who knew the colored clergyman and his parents when they were very young. Father Tolton, as stated in last week's *Pilot*, was ordained in Rome last week. He was born in Missouri 35 years ago. His father and mother were slaves, and he was born in slavery. At an early age he became a teacher of the catechism in a Catholic Sunday school. After the war he was made a free man, and went to the Missouri College, where he studied until 1868, when he was sent to Rome to finish his ecclesiastical studies. Father Corrigan asked him to preach in his church last Sunday, but he said that the Cardinal at Rome advised him to preach his first sermon among the colored population, so on Sunday he preached in the Church of St. Benedict the Moor, in Bleeker street, New York, of which Father Burke is pastor. He will at once proceed to Quincy, Ill., where he will have a parish.—*Pilot*.

We are glad to see that Prof. Washington is receiving a more than usually appreciative welcome in the North.

The Boston correspondent of the *Freeman's Journal* says:

Prof. Booker T. Washington of the Tuskegee Normal School, in Alabama, is still in the city. Invitations are pouring in upon him from the Unitarian and Congregational people to speak at their churches on the subject of southern education. Last Sunday, the 11th inst., he delivered an address at Concord, Mass. Next Sabbath, the 13th, he will speak at Clergy, Conn., in the morning, and at Birmingham in the evening. The National Unitarian Conference which meets in Saratoga, N. Y., on the 20th of September, has asked him to address it.

Terms: ONE DOLLAR a year IN ADVANCE.

The "Industrial South" and "Southern Workman" Together for One Year, \$2.00.

Entered at the Post Office at Hampton, Va., as second class matter.

Subscribers are reminded that the "Workman" is reduced to eight pages during the next four months, resuming, in November, the twelve page form.

## The Southern Press--Both Sides.

That Southern whites are counting too much upon their present immunity from labor troubles is evident and alarming, because their future safety is contingent directly upon wise action in the present, and is by no means to depend upon any hap-hazard conjunction of circumstances. The Norfolk *Landmark* says:

The Lake Shore strike seems to have been without any foundation in reason, but it still has inflicted considerable loss on the railroad and the public at large. The road is under the protection of the police and Pinkerton's detection of a free country. The South has great cause to be thankful that such scenes as have lately been witnessed in St. Louis and Chicago are unknown among us, and that becomes more and more apparent as such affairs go on that the White Man and the Negro get along better than white people do in many great and opulent communities to the North of us. There is a natural alliance between the white and colored people of the South which has been broken up by selfish and designing men; but the Negroes are cutting loose from bad advisers and are able to believe their second-souther thoughts are better than the impulses under which they acted when they were taught that the "white folks" were their enemies.

But such utterances do not touch bottom, on the contrary, they are hopelessly superficial and indicate just such indifference to underlying causes as has brought about the present business complications in the North and West. Mr. Fortune, in the *Freeman's Journal*, strikes a different and possibly a more nearly prophetic note, one at least, which can not safely be disregarded, and which is sure to find, sooner or later, a ready audience.

In the book "Black and White" published last year by the editor of this paper, the position was taken that all the future trouble in the South would arise out of industrial complications, and this is a curious spectacle in a free country. The South has great cause to be thankful that such scenes as have lately been witnessed in St. Louis and Chicago are unknown among us, and that becomes more and more apparent as such affairs go on that the White Man and the Negro get along better than white people do in many great and opulent communities to the North of us. There is a natural alliance between the white and colored people of the South which has been broken up by selfish and designing men; but the Negroes are cutting loose from bad advisers and are able to believe their second-souther thoughts are better than the impulses under which they acted when they were taught that the "white folks" were their enemies.

All the land laws in the South are made in favor of the planters, and it is notorious that the wages paid by them to their employees are simply pauper wages; and this is aggravated by the store account and order system by which the laborer seldom ever

sees a dime of cash and is frequently allowed to overdraw his account, or is overcharged, for the purpose of being held at the pleasure of the planter. There is more direct and indirect robbery of the colored laborers of the South than is practiced anywhere else on earth. The thing is simply infamous, and will cause infinite trouble in the future.

Rather sharp criticism of what are generally supposed to be the typical faults of North and South, is conveyed in the following from the Norfolk *Virginian*:

The Floridians have adopted a novel, if not extravagant, method of disposing of their criminal population. It appears that there are about three hundred convicts in Florida. It costs on an average about \$30 per head to convict them, or a total of \$9,000. These criminals are not hired out. That would bring something into the State treasury. Apparently, in order to avoid such a result, the convicts are turned over to a New York man, who works them on his big turpentine farm. This is not all. The State pays this man \$3,000 a year to take these unfortunates, and the estimate is that this shrewd Yankee has an annual income of \$50,000 as the product of these unfortunate people. This is a new phase in Southern folly, but entirely consistent with the conduct of our people in many other respects. We are really glad, however, that Northern and Western men about who are not only ready to utilize the convict labor of the South without conflicting with the general interests of workmen, but who are ready to develop and enrich themselves by mining, manufacturing, transportation and agricultural operations, which people "to the manor born," for nearly a century, have refused to appropriate and establish for their own benefit. Virginia and other Southern States are overcrowded with Esans.

The *Virginia Critic*, Staunton, would like to maintain its allegiance to the Republican party, but does not consider that the blind loyalty of the past can any longer be kept up.

All have said that the Republican party is the Negro's party. The Negro indorses this fact in the main, actually and constructively, in consideration of their belief that the Emancipation Proclamation and the XIIIth amendment, giving freedom, the XIVth amendment, giving citizenship, and the XVth amendment, giving civil and political rights, are all successive acts of the same great party. The Negro below Mason and Dixon's line has stood in a solid phalanx for the G. O. P. This party, after giving freedom and citizenship, left her ward alone to fight his own and her party's battles with a brave and unrelenting foe. Knowledge and superior advantages overcome ignorance, and numbers.

Allegiance to party, to State, to country, failed to secure protection to life and liberty in the land of the brave and the home of the free. The party promised through platform and her vast number of eloquent orators, but fails to fulfill its part of the contract. This disregarding of pledges, this violation of promises, the continual nominating men who do not practically accept the political and civil equality of all men before the law, is the undermining wedge, the rock on which the party will divide her Negro votes.

The Negro, as a voter, owes no man, no party anything, that is not actually defending his own rights and advancing his interests in common with the American citizens. We should bend our energies to reformation within our own party.

The impressions of Gen. Armstrong as given in his editorial letter this month, in regard to the gradual fading out of the color line in politics, deserve careful reading. Corroboration of them, direct and indirect, comes from many quarters and in many shapes, and is one of the most cheering signs of progress in the South. The white politician quoted by Gen. Armstrong who said "we must have the Negro's votes, and if we don't vote for them, they won't vote for us," was talking "business," and just this practical recognition of the fact that men must bend to forces which they cannot break, is going on all over the South. The following editorial from the Richmond *Whig* is particularly interesting being so evidently written solely with a view to the enlightenment of the Negro vote:

In another column is a communication on this subject, signed "Republican," called forth by a paragraph in a recent issue of the *Whig* suggesting that the colored people

prove their faith in the future by breaking the color line.

That paragraph had solely in view the prevailing disposition among colored voters to vote all together and all one way, apparently more by instinct than by reason, and without regard to the public questions at issue.

We did not question their right to vote in this way. That is beyond question. We merely desired to raise a question in their minds of the utter hopelessness and inutilty of this absurdly ignorant method of voting.

If "Republican" know anything at all about the motives and rules of action governing the Negro's political conduct, he knows that he votes altogether from a race standpoint and from race prejudices--and not from motives of intelligence, patriotism or of civil policy, or from considerations of the public welfare.

It is not so much his fault that he does this, as his misfortune. His political horizon is circumscribed within very narrow limits. He has not attained to that higher degree of citizenship which regards the greatest good to the greatest number as the principal aim of enlightened government.

White voters do not thus array themselves by a race classification, and vote accordingly and solely for no higher purpose than to secure a possible race advantage. They divide on economic questions, and questions of public policy, and in Virginia and other States of the South, they would divide on such questions, but for the stolid unyielding wedge of Negro solidarity which threatens to take a demoralizing race advantage of any opening that may present itself.

It is for the Negro's own good, and that he may the quicker qualify himself for a higher state of citizenship, that the *Whig* advises him to break the color line.

The editor of the New York *Freeman* is at least not afraid to speak the truth, as he sees it, to his constituents, and his editorials are almost always good reading.

We should look at this office-holding business in a practical, common-sense light. Politics is politics, and there is very little fiction or nonsense mixed up in the business. Even if the civil service law should ever be amended so as to make it as hard for a man to get out as to get in, there must always remain a large number of votes not subject to civil service regulations, and these by far the larger number and more important. Consequently--removals for partisan reasons will always be a part of the policy of whichever party controls the affairs of the government. It is a feature of republican government. It will naturally, therefore, be the aim of the party in power to fill the offices at its disposal by appointing persons who are in sympathy with its politics. It is natural and proper that such should be done.

How many colored men in this country sympathize with the objects and aims of the Democratic party, past and present? How many of such men have any right to expect special favor and consideration from the Democratic party? Preference goes by favor for value received in politics as in business. How many colored men are entitled to such preference for services rendered the Democratic party? And what right have colored Republicans to expect any different treatment from that given white Republicans by the Democratic party? The thing reduces itself to this absurdity.

We present these views because newspapers and individuals all over the country are constantly directing our attention to removals of colored men by Democratic officials, and asking us with a broad grin, "Now what do you think of the Democratic party?" We think the Democrats are entitled to the offices, since the people have committed the government to the Democratic party; and when the Republican party comes into control of the government, we shall say let the offices go to the Republicans.

If colored men desire to hold office under the Democratic party, the same as under the Republican party, they must divide their vote in such a way as to have the same claim upon the Democratic party which they should have (but have not got) on the Republican party.

Office holding, while desirable, is in no sense the most desirable work our men could engage in. Few fortunes are made in politics. Few men rise from clerical positions to the higher and lucrative positions. The prizes of politics go to the few, who are favored by circumstances or exceptional character and abilities. There are richer fields than that of politics. The office should seek the man.

## Commencement at Tuskegee.

A visit to Tuskegee is always a pleasure--increasingly so year after year--to us of Hampton Institute. That Tuskegee felt my turn this year in accepting Mr. Washington's invitation to the school's fifty anniversary exercise, which occurred May 27th, just one week after our own. There were many to say, "I'd go too if I could arrange it," so I took my seat in the train for the summer South, unseasonable as the time would seem for a trip in that direction. Hampton to Richmond by the Chesapeake and Ohio, Richmond to Atlanta by the Piedmont Air Line, Atlanta to Chehaw, Ala. by the West Point Railroad--that is how you do it--and then the Narrow Gauge to Tuskegee, or better, as I took it, a five mile drive through fragrant woods in the freshness of the May morning. For there at the little station, while I made my railroad toilet at limited express speed, lugging in Yankee style at the easy going ways which had nearly left me uncalled, and thanking their pleasant manifestation which kept the whole train quietly waiting for me, I heard a voice inquiring for "a lady for the Normal School," and on emerging from the car, satchel in hand, found with the Normal School wagon some one I remembered as Ferguson, class of '83, now Tuskegee's Mr. Howe, farm manager, brick maker, and all the rest. And at the end of that lonely morning drive, I could have half fancied myself at home again, welcomed by such a Hampton company: the Principals, Mr. Washington and Miss Davidson; Mr. Warren Logan of '77, Treasurer, and his clerk--can I call him anything but Tommy Ferguson of '84; Mr. John Washington of '79, re-introduced to me as "Our Tuskegee Mr. Briggs"; Mr. Wm. Brown of '82, as "Our Mr. DeWitt"; Miss Ida Lee of '84, as "Our Miss Davidson"; Miss Rosa Mason of '80, as "Our Miss Lettie"; Miss Ada Wallace of '82, as "Our Miss Galpin"; and Mr. Courtney of '79, representative. I took it of Hampton teachers in general. Is it a wonder that I felt at home and proud of such an array of "our jewels"? The three or four associates of the Hampton company, two of them graduates of Atlanta University, and another of Bates College, Lewiston, Me., seemed to fit very congenially into the Hampton set.

The Commencement exercises began with a drill of the boys under their United States flags, the first raised in Tuskegee since the war. Recitations followed the morning, as at Hampton, and were attended by throngs of pleased parents and friends of the school, and teachers. I found time, of course, to make a tour of the industrial departments: the girls' sewing room, with its neatly made and laundered garments, making room too for the display of the farm and brick yard; then outside to the printing office, small as yet, but already doing a paying job work business on its hand press, besides publishing the *Southern Elder*, the school's organ; the "Slater Carpenter Shop," founded by a donation from the Slater fund, and doing all repair work of the place, and making much of the school furniture; the blacksmith shop, established by gifts from the colored citizens of Montgomery, and the brick yard, where Mr. H. C. Ferguson has proved that bricks can be successfully made in Tuskegee, and supplies bricks for all the buildings. Beyond it is the woodland, which will become very valuable to the school, with the acquisition of the saw mill just secured from generous New England donors, through the efforts of Gen. Marshall.

The afternoon exercises began with laying the corner stone of their third large building, to be built of brick, and to accommodate the young men now huddled in a row of quite too well ventilated cabins, hired out at too great cost. The corner stone address was delivered by Rev. J. O. Andrew, D. D., of Montgomery, a white clergyman, son of the late Bishop Andrew, of Alabama. It was a very excellent and friendly address, and there has been ample evidence already that the best men in the State agree with him that "Such an institution as this deserves every encouragement." A number of the principal colored and white citizens of Tuskegee and Montgomery attended the rhetorical exercises which followed. Their numbers have indeed increased every year. The orator of the afternoon was the Hon. John M. Langston, who made a long and brilliant speech. The students' essays were simple and sensible. The salutation made such an impression on a white lawyer from Montgomery, present for the first time, that he engaged the young man the next day to teach a school which he promised to open on his plantation and keep running himself through the year. Diplomats were present to a graduating class of 18, by Rev. R. C. Chilton, a white minister of Tuskegee. This is the second class graduated by the school. The ten who graduated last year have taught ever since, and there is "room for many more." H. W. L.

## Editorial Correspondence.

## POLITICAL SITUATION.

It was an exciting day. For the first or second time since the war the Democrats had lost control and a Republican was elected Mayor, not merely as a party affair, but on a citizens' ticket, in which both parties united to break up the existing order of things. Mr. Yost, editor of the *Valley Virginian*, was chosen, having been urged to run, he said, by his political opponents. The same day a similar thing occurred in Richmond, where the regular "state" was broken by Democrats and Republicans uniting.

The political situation in Virginia, and indeed in the whole South is very interesting, especially to those who care more for general tendencies than for immediate results. As there are some among the whites who have decidedly Republican inclinations, so there are some among the blacks who have Democratic leanings. The color line in politics is swiftly fading. The last Presidential election undoubtedly hastened this, at which all good citizens will rejoice. Ideas are coming more and more to the front, color and caste are on the full retreat. Mr. Yost said that intelligent colored men were discussing the tariff, and such questions as they never did a few years ago, from the stand point of laboring men inclined to protection. Large numbers of them, not uneasy about their rights, are indifferent as to voting, or ready to be bought or otherwise influenced.

Pour in the schoolmasters, and enlighten the people, who, many of them, are still in utter darkness, and out of school range, to say nothing of the incompetence of half the teachers. The Blair bill has failed, and I do not regret it. It was not good as a means to an end, for so much money in so short a time would risk and might ruin the school system. The perhaps irretrievable blunder of the Republican party was in neglecting to rush through, when it had the power, Senator Hoar's bill, assigning the proceeds of the public land sales, and certain revenues of the patent office, to Southern education. This would have supplied a moderate, steady, annual sum, continued indefinitely, which, though perhaps not needed in some States, would at least in them made things no worse than they are, while Virginia, Tennessee, Georgia, North and South Carolina, and probably some others, would, I think, have been stimulated to effort, and would have pushed illiteracy somewhat from its present power.

If we admit that Republics depend for their stability upon the intelligence and morality of their citizens, then such measures are legitimate, while justice and humanity surely have something to say in the case. As I read events the present state of things is wholesome, so far, at least, as the Negro is concerned. From his quondam friends who nobly and wisely built the bridge from slavery to freedom, and marched him through the triumphs of citizenship, he has to-day nothing to expect. The cause upon which they turned their backs was taken up by the magnificent charity of the North, which responded to a wonderful and most creditable effort in the South to educate the ex-slaves. This effort, made at first under pressure, became at length so strong that no public man or demagogue dare say a word against it.

One loves to linger among Virginia's grand mountains, with their life-giving air and inspiring scenery; they are full of rest and strength. Here are the conditions of a fine people. Hon. Alexander H. Stewart and Rev. Dr. Barnes Sears, the latter from abroad, have been identified with Staunton, the one as a statesman the other as educator, in active connection with the Peabody Fund. It was very pleasant to hear the Hampton boys speak of Mr. Stewart as most kind and friendly, always appreciating and encouraging, and it was pleasant to see him in his home, lonely in his advanced age, for death has taken all but one of his immediate family, and to hear him speak of his associates in Congress and in the Cabinet—Clay, Webster, Adams, Benton, Calhoun, and others. He has ably championed the ex-slave's claim to education, and urged upon the government its duty in relation to that real emancipation, without which the mere legal act is only half-way work. He spoke of Dr. Sears and of Dr. J. M. Curry, now minister to Spain, as providential men, each of them being, in his time, as agent of the Peabody Fund, the best man to be had for the place. The one in a masterly way developed the common school idea in the South, the other, with equal zeal and splendid eloquence, urged upon Southern legislators the same educational law for both races, and fought successfully every reactionary tendency.

I regretted to hear at Charlottesville that under the "Loopy ticket" law the majority had voted the "Wet" ticket, that the white vote alone would have made the town dry,

but that the majority of the colored people favored free whisky. It is surely a pity that rum should be strengthened by the Negro vote. An intelligent man told me that the prominent deacons and church leaders favored the liquor interest, a state of things precisely like that recently described by Col. J. T. Preston, in the *Christian Union*, as existing in Lexington, Va. But grape culture and wine making are largely on the increase in Albemarle county, while Augusta county, in which Staunton lies, contains, I was told, more distilleries than any in the State. Prohibition has small chance here, but all is not at stake in Prohibition; public sentiment is the chief thing, and to create that is the great work, especially among the blacks.

## OF GRADUATES AGAIN.

Arrived at Staunton just in time to be present at a combined May festival and reception of the colored M. E. Church. I went, at 8 o'clock, to find a very African state of things. No one there, except the pastor, Rev. Mr. Robinson, a strong and original character, who said, "With our people it is not right till it is dark." Struck by his clear cut and sensible talk, I asked where he was graduated. "I was educated in a bakery and graduated on the wharf in Alexandria, Va." He had studied as a slave, first by himself, under difficulties; then as a freeman, Mr. Jameson, let him study with his boys. He improved every chance, was first baker, then weigher of wheat on the wharf, owned a good house, the recent destruction of which by fire has left him poor. His grandmother, he says, is mentioned in Sparks' *Life of Washington*, as Caroline Braumer, owned by Mr. Curtis, stepson of Washington.

Speaking of the congregation, he said, "This place is rather intellectual; in some places we have to hallow to make them listen; here we can preach a little. While waiting for the people, who came standing in I was introduced to a bright-looking black man, sitting near us, as Mr. Newman, Principal of the public graded school.

"This certainly is a graduate: from what school?" I asked.

"From nowhere," was the reply. "I was raised in Winchester, learned the trade of cabinet making and upholstering, and studied by myself. A self-made colored man on either side of me, was my thought; there must be a good many of them. Assisting him were Miss Lizzie Saunders, Messrs. Oliver Derrit, W. B. Davenport, and S. L. Morris, all from Hampton, the last two not full graduates, at salaries of \$27 a month, the Principal getting \$40 for eight months in the year. The feature of the evening was the work of the Hamptonians, who gave the colored children of Staunton the first May party of their lives.

Eighty Negro girls, with long wands wound with fresh flowers, marched slowly in to music. They were dressed in white, with quantities of flowers and wreaths on their heads, and were led by a little girl who scattered roses in their path. They halted in the aisle, and with their gay wands formed an arch, through which passed their chosen Queen of the May, a pretty child, to her floral throne. On either side were two more maidens, who, in turn stood before her, and presented her crown and sceptre, reciting appropriate verses. Then rose the Queen, little but dignified, bowed to her subjects, and spoke graciously and well. Among others a newboy and a boot-black ran in, and, after proper obeisance, offered each the best he had, and trotted out again. The girls retired and re-formed the arch under which the Queen passed out, to return for further proceedings, after which all descended to a supper in aid of the Sunday School Library, which needs about \$22. It was a Hampton festival of long standing, introduced among new surroundings, and beautifully carried out. It seemed to me, more than anything else, like a worship of the goddess of purity, so expressive of purity was the exquisite outward whiteness, so simple, so honestly obtained, so decently done, so charmingly decorated with flowers, that every heart must have been touched, every better impulse stirred. It seemed very far from the old times. Could the mothers of these children have dreamed of such things?

Rev. Mr. Young, of a prominent colored church, said to me, "I heard you say that you trained your Hampton graduates to be like cats, to land on their feet when they chance to fall."

"Have they done so, far as you know?" I asked.

"Yes, I think they have," was the satisfactory reply.

## DO THEY LAND ON THEIR FEET?

This is what I find in Charlottesville and Staunton. Benjamin Tonsler has a very nice two-story house, a good-sized lot very neatly cultivated, worth about \$700. He has a wife and three children, has cared for thirteen months for his helpless mother,

who has recently died, has an invalid sister on his hands, and owes about \$50. He is an independent thinker, who won't always follow the crowd on election days, but who has taught for 12 years steadily in Staunton. Robert Keiser, his assistant for six years, had married a girl with some money, had built a house on it, and was paying for it. George Inge, another assistant for two years, is a good fellow, owns no property; his father is a carpenter in Danville, lives in excellent house, and has brought up a fine family. His brother, a Hampton graduate of talent, has taught several years in St. Louis, Mo., at a salary of \$100 a month. W. B. Davenport, not married, has built a good house on his mother's land, and is taking excellent care of her in return for the help she gave him at Hampton. He did not finish, and will soon return to take his Senior year. Miss Lizzie Saunders, class of '85, has taught with success, and held her own as a true, self-respecting woman, belonging to that small but increasing class who hold aloof from the unworthy. Such young women are obliged, by their very attractiveness, to run a terrible gauntlet of temptation, without protection from civil or social law. Their steadiness and integrity are positive virtues far beyond those of their white sisters, who are shielded as by a triple wall. She is one of many who illustrate the womanhood that more than anything else is the hope of this or of any race.

I went to the home of Mr. Oliver Derrit, as I did to all—a very pleasant two-story house, with quite a garden, well cultivated, and plenty of fruit trees. As he is unmarried, his sister was keeping house for him; a married brother was living with them; all were helping to pay for the property. Derrit is in partnership with S. L. Morris, a Hampton Junior, in a provision store, where they are doing well. They are about to remove to a better stand, and one may stop teaching to look after his business. His sisters are now at Hampton. S. C. Curtis is now editing and printing a weekly paper in Staunton. He picked up the printer's trade after leaving school; is not yet making money, but has taught school, and hopes to win reputation and influence, but will not, I trust, get to Congress.

The above is illustrative, not exhaustive. It shows fairly well the results of the Normal teaching and industrial training of Negroes. Unless head, hand, and heart, are equally educated, there is danger of failure. I am convinced that it is better to make thorough teachers with a good English education than to broaden the basis of knowledge with a less direct pedagogic drill. They need to know the business. Skilled labor always sells. It has given students the advantage and the habit of self-help and self-reliance, directed by Christian instruction and a consecrated purpose, has made them strong in good work in Sunday schools, as well as day schools, in the temperance cause, and as examples to the people.

## PETERSBURG.

Those who in 1862 stood for months in the trenches around this city find a special interest in visiting their camping ground of twenty years ago. The line of earth works are still distinct, for though the rains have been made to wash away, they are marked by an almost continuous line of young and thrifty peach trees. Cultivation has, at intervals, effaced every vestige of them. The crater is, for the numerous visitors, the chief point of attraction.

Petersburg is a city of about 25,000 inhabitants, the two races being about equally represented. White Republicans, added to the Negro vote, have long given that party the control, but it is now likely to be overthrown by a combination of both parties on a citizen's ticket. Abuses, which come of long political control, whether by one party or the other, are sure to be met and overcome in Southern cities by a union of the best elements of both. The odium of voting for or with the Negro is no longer what it was. A prominent Democrat, who favored the Reform ticket, said to me, "I never expected to vote for a nigger, but if we want them to vote for us we must vote for them. A political adjustment of races is a hopeful feature in some parts of the South, and I think will spread everywhere. I noticed the liberal, fair tone of the *Index and Express*, the leading Democratic newspaper, which must exert an excellent influence. The social life is said to be exceedingly pleasant and simple in contrast to Richmond, which has more wealth. There are about 100 cotton gins, six cotton mills, making plain goods, a large business in pea nuts, several great tobacco warehouses, and six flour mills. Its water power, furnished by the Appomattox, is equal to any in the State. There is a monopoly in tobacco work, white labor monopolizes cotton. The public school system of

Petersburg is very excellent and complete for both races, each having 12 teachers at work. Sessions last nearly ten months in the year; school houses are good and well-appointed. To Dr. Sears, agent of the Peabody Fund, much credit is due for his wise and stimulating scheme for supplementing local aid to popular education.

Granting to this, and many other Southern cities, say \$2,000 a year if they would raise by taxation \$3,000 to \$5,000, then a great start and pushed them forward in this direction many years. I visited the Peabody colored school, built from the Peabody Fund and well-appointed, where there are 150 pupils and 12 teachers, in charge of Mr. N. L. Hamlin, a colored graduate. The course of study includes Algebra, Latin, History, Arithmetic, and Physical Geography, all of which seem to be well taught and readily mastered. The annual rhetorical exercises were held last evening, at the Academy of Music, which was crowded with colored people, every foot of standing room being occupied, while declamations and songs were creditably rendered. A few whites were present. Another Hampton graduate, Wm. H. Johnson, class of 1878, has taught for six years in the city and county of Chesterfield, keeping school six months and working the rest of the year at his trade as cooper. Both he and Mr. Hamlin are living in pleasant homes, neither married, but in excellent surroundings. They are doing well by their families, and are thrifty and forehanded. Johnson spoke of the colored people's distrust of savings banks, owing to their first experience. The Postal Savings Bank, recently discussed in Congress, is a much needed thing for the colored people of the South, who require, above all things, absolute security, and have been led, through the ill-fated Freedmen's Savings Bank, to suspect all private concerns. I heard the Baccalaureate Sermon in the Virginia Normal and Collegiate Institute, a State school for Negroes, preached by the Rev. Mr. Williams, a colored Baptist clergyman, to the graduating class, numbering thirteen. President John M. Langston stated that it was the best he had heard in the history of the ex-slaves of the South. An audience of 1,500 were present in the large and attractive assembly room. This institute, planned on a large scale, is built of brick, three stories with mansard roof, is to provide for 500 boarders, and cost \$125,000. The recitation rooms will accommodate 750, and, as all is under one roof, the edifice is commanding, and conspicuous for miles around. Steam heating, cooking, washing, and gas, are to be introduced. Established in 1882 it is still far from being finished, but the attendance is already about 150. It will be pushed to completion this summer. The present Board of Education (Democratic) seem anxious to build it up and make it efficient as did that of the Republican regime. Gen. Mahone was its inspiration, I believe. It promises to be less partisan than before. Politics have had too much to do with it. There is a Normal (English) course of three years, and a three years' Academic course devoted chiefly to History, Mathematics, Latin, and Greek; also a Training Department. None under 14 years of age are admitted. Each school year is divided into three terms of three months each, for which the charges are \$10.00; \$3.35; board and room rent, \$20, not including washing, which costs the young men about \$1 a month. The girls do their own and take care of the rooms, which are very well ordered and cleanly. The boys do the same, and their rooms are also tidy and creditable. Except the fifty State students, who pay no tuition, each boarder pays in advance (cash) \$7.78 a month. The fare is plain, and will eventually, so far as I can judge, be in excellent shape; with only one wing complete, the school is at great disadvantage. The Hampton school charges \$10 a month, including washing and mending of garments, part or all of which is payable in labor.

There is to be a State Teachers' Institute for two months this summer, which State colored teachers are required to attend, paying \$8 a month for board. Several hundred are expected, and great benefit to the cause of education may be looked for. This Institute will be watched with interest, as illustrating the success of a large public school solely under the influence and instruction of colored teachers. It is now under the direct control of the State Board of Education, consisting of the Governor, the Superintendent of Public Instruction, and the Attorney General. The State Board of Visitors is reduced to nominal authority. Among its teachers are four Hampton graduates and one ex-student, Mr. Norton. The former are Miss Sallie Gregory, under Mr. Norton in the Training Department, Miss Morse, matron, a neat, vigorous, and efficient worker; Mr. R. W. Whitney, treasurer, and Mr. W. Bell, who has just finished a classical course, having taught with credit for several years. He has introduced the industry of poultry raising. This institution

## Southern Workman.

### Indian Department.

HELEN W. LUDLOW, In Charge.

CORA FOLSON.

Regular Contributors:

HERBERT WELSH, Cor. Sec'y Indian Rights Association.

ELAINE GOODALE.

MRS. A. S. QUINTON, Gen'l Sec'y of the Woman's National Indian Ass'n.

We regret the loss of Miss Elaine Goodale as editor of this department of the SOUTHERN WORKMAN, but are happy to say that she will continue her connection with it as a regular correspondent from her new field of work for Indians. She leaves Hampton, as some of our readers know, with Miss Laura Tilestone, whose successful work as teacher will also be greatly missed here, to take charge of a new Indian school to be established on one of the agencies in Dakota, partly by the Government and partly by the Episcopal Church Mission, under pastoral care of Bishop Hare. The exact location and character of the enterprise is not yet fully decided, we believe. White River Camp, on Lower Brule Agency, the camp of Chief Medicine Bull, who sent a son and daughter to Hampton, has been talked of. It is the ladies' desire to make it a day school, that shall demonstrate the possibilities and value of day schools on reservations, and be a centre from which others may be developed and helped.

We wish the young missionaries all success in their endeavor. It cannot miss the best.

#### Incidents of Indian Life at Hampton.

A happy journey and safe return to our head and chief, Miss Richards, in her European tour.

Between the pain of parting with Miss Goodale and Miss Tilestone, and the pleasure of thinking that they are going to live in the Indian country and work for the Dakotas, the hearts of the Indian girls and boys have been torn with conflicting emotions, but every one wished that the station selected might be his or her agency, and the Lower Brule constituency, happy in the strongest probability thereof, were envious by all.

Mr. J. H. McDowell, head of the Indian Training Shops, who took charge of the party for the West, is well fitted by thorough interest in his Indian apprentices, and long successful experience in their practical education, to be one of the best of Hampton's investigating corps of visitors to the Agencies. He will be a close and conscientious observer. He is expected back with a new party the last of this month.

The Indian department has settled into the summer order. Eighteen girls and fifty boys remain, after the eastern and western parties have departed. Indian school from 1 to 2.45, with classes in drawing, reading, arithmetic and history; boys' study hour in the evening; girls' study hour in the afternoon. The work goes on briskly in this unusually cool and comfortable summer, with play and picnics thrown in for spice of life. The Sunday services and Friday night prayer meetings go on as usual, Rev. Mr. Gravatt residing at the school, as usual, in the absence of Mr. Friessell, school chaplain.

Two little deaf mute girls, from the asylum in Washington, have come to spend their vacation with us, and learn something of domestic arts. They are daughters of Ponca chiefs, and one of them bears proudly upon her forehead a blue tattooed mark of distinction, in honor of an act of benevolence performed by her father. Our Indian

girls are generally very considerate of their little visitors, who are very bright, chatter away on their fingers to each other, and have no difficulty in making themselves understood by others by expressive signs.

#### Off for Berkshire.

A merry party of girls and boys, with their escorts, started on June 21 to spend the vacation among the breezy hills of Massachusetts. Twelve girls and thirteen boys have been provided thus with summer homes among the Berkshire county farmers, where they will have enough light work to occupy them, and be learning some English words and American ways in thrifty country homes. They are, on the whole, a very good party, and we expect them to come back to us in the fall, as others have, improved in many ways by the bracing influence of the New England atmosphere. The trials of an unusually rough passage up the coast were compensated by the wonders of New York, a ride on the "L," and a visit to the Zoo. Their escort writes that all have good homes, and have made a pleasant impression on those who received them. Letters received from several, since their arrival in Berkshire, are in a cheerful vein. One girl writes: "I am very happy here. Everybody is very kind to me. I don't do anything but wash dishes, but there are many, as we have a few boarders. When I think about all my kind friends everywhere I am a little home-sick for my own home and for Hampton, but I shall soon get over that. It has rained every day since Wednesday, and I have not seen the sun since I came here. I don't know whether they have any sun in Massachusetts, but I hope they have one."

#### Westward Ho!

Twenty-two Indian students, eleven girls and eleven boys, were returned last month to their homes in the West, leaving Hampton July 6, under escort of Mr. J. H. McDowell, manager of the Indian Training Shops. The following is a somewhat descriptive list:

#### To Standing Rock Agency, Dakota Ter.

Ho Washte (Goodvoice) age 21; arrived April, '85; a bright boy; has worked in tin shop; doesn't speak much English yet. Returned on account of ill health.

Rosa Pleets; age 21. Arrived first in '78; remained three years, and after two years at home returned again to Hampton in '84; to stay two years; has made fair progress; speaks English; is a good worker, neat, steady, and conscientious.

Katie Running-girl; age 20; arrived in '85; a good, faithful girl. Returned because delicate in health.

#### To Yankton Agency, D. T.

Charles Picotte, Jr., age 20; arrived first in '79; to finish his course; graduated this summer from the Normal School; hopes to return East to study law; is an excellent tinsmith; competent to run a shop.

David Saul, aged 17; arrived Dec. '82, and goes because his time is out; he has made good progress; speaks English well, and is a good shoemaker.

#### To Cheyenne River Agency, D. T.

Mary Traverse, age 15; arrived first in '79; went home June, '83, and returned Sept. '83, for two years; is in the middle class of the Normal School, and an excellent worker as a seamstress and in the cooking class.

Edna Traverse, age 13; arrived June, '82, and has completed the time for which she came; has made good progress, and is a very efficient little worker.

Sophie Launder, age 14; arrived Sept., '83, and leaves because her time is out; speaks English well; not far advanced in studies; but is a very good worker. It is hoped that she and Edna

may return in the fall for a further course.

Felicia Rivers, aged 13; arrived Dec., '82, and leaves because her time is out; fond of work, and very efficient in this, though not in books.

Theodore Little-boy Miller, aged 15; arrived Sept., '83, and leaves because his time is out; speaks English fairly, thoughtful, and promising; has worked in Engineer's department and on farm.

#### To Crow Creek and Lower Brule Agency.

Samuel Medicine Bull, age 24 years; arrived first Oct., '81; went home May, '84, returned here Nov., '85, for a year; speaks English fairly, and is well fitted to be a teacher in some camp school; he has an excellent character, and is anxious to do good among his people; he has learned the carpenter's trade.

Leon de Shuquette, age 22; arrived August, '85; an intelligent scholar speaks English perfectly; is returned on account of his own desire and somewhat delicate health.

Mrs. Susan de Shuquette, age 19, returns with her husband; a bright woman and excellent worker; understands English somewhat; bright in her studies.

Geo. Tompkins, age about 20; arrived August, '85, and returned on account of health; a quiet, obedient boy, but has accomplished little; has worked on a farm when able.

Thos. Tompkins, age about 17, brother of George, and about the same record, but in greater degree.

Wesley Huntman, age 22; arrived in '82, and is also returned on account of delicate health; speaks English; has worked faithfully in the paint shop; has weak lungs.

#### To the Pottawatomie Agency, Indian T.

Robert Baldan, age 21; arrived Aug., '85; returned on account of weak health and general unsuccessfulness.

Mrs. Lucy La Flesche, age 24; arrived August, '84; graduated this summer from the Normal School, and goes to join her husband, who returned in the spring. She will do good work among her people.

Susan La Flesche, age 19; arrived Aug., '74; graduated as salutarian of her class, and with the prize medal, in the Normal School, this summer; hopes to return East in the fall and study medicine to be more useful among her people.

Marguerite La Flesche, age 22; arrived August, '84; is in the middle class of the Normal School. An Eastern friend sends her home for a recreation, and she hopes to return in the fall to complete her course. These three sisters of "Bright Eyes" may be expected to do great good for their race.

Mrs. Stella Lemming, age 18; arrived August, '85; returns to join her husband, who returned in the spring on account of delicate health. She takes with her a baby girl a few weeks old. She has not been much in school, but is quick to learn, and efficient and faithful in work.

Albert Morgan, age 13, was transferred to Hampton from St. Mary's Episcopal School, in Baltimore, Dec., '85. Had been there three years, and his time is out. Speaks, reads, and writes English quite well, and should go to school at the Agency.

#### The Indian and the Mammoth.\*

In the spring of 1872 a young farmer in Berks county, Pennsylvania, picked up a "queer stone" at the plow-tail, and added it to his collection of Indian arrow-heads and various relics. This fragment was subsequently sold to a young man in the neighborhood, with a "fancy in collecting Indian antiquities," and nine years later the second half of the carving was discovered in the same spot by the same youth, and presented to the owner of the larger piece. This is the history in brief of the so-called "Lenape Stone," which has excited some discussion among archaeologists, and even been considered worth writing a book about, as what is not nowadays?

\*The Lenape Stone; or, The Indian and the Mammoth. By H. B. Mercer. G. P. Putnam's Sons, 1882.

This aboriginal carving, if it be such, has been made upon one of the puzzling "gorget stones," or perforated tablets of slate, which seem to have been the peculiar property of the North American Indian, without a counterpart, as far as the writer can learn, in the stone implements of other uncivilized races. It is unquestionably a picture of a combat between savages and the hairy mammoth—an encounter such as our imagination has not yet connected with the ancient forests of America, and drawn as well as an Indian who had seen the great monster could have drawn it. Most of the figures seen represented according to the common conventional method of the modern Indian, yet there is certainly a seeming picturesque relation between them, of which we can find no example in the few ancient Indian pictographs which have been preserved to us. We can almost fancy a foreground, a distance, and a faint chiaro-ocuro.

"The combat, we might imagine, takes place on the confines of a forest, and if we may judge, from an upward inclination of the foreground on the right, at the base of a hillside. The monster, angry, and with erect tail, approaches the forest, in which, through the pine trunks, are seen the wigwags of an Indian village. In the sky overhead, and as if presiding over the event, are ranged the powers of heaven: forked lightning flashes through the tree-tops, and from between a planet and the crescent moon, beyond which we seem to see a constellation (represented by a series of crossed lines) and two stars, the sun's face looks down upon the scene.

"Four human forms confront the monster: the first holds in his right hand a bow, from which the arrow, just discharged, is sticking in the side of the enraged beast, and in his left (if it is not planted in the ground) a long lance; a second warrior, with head-dress of feathers, stands farther to the right; and still farther, and near what may perhaps be called a rock, a third sits, with his ground apparently smoking a pipe; a fourth figure is easily distinguishable, trampled under the feet of the mammoth."

Such is Mr. Mercer's graphic description of the stone, in whose genuineness he firmly believes; and his imagination sees yet more in the primeval picture. "The strong effect upon the fancy of this rude carving, as we gaze upon it, would be hard indeed to resist. Its stern naive and characteristic look of æsthetic purpose bring upon the mind a haunting sense of the reality of the event it represents, and our sympathies seem genuinely awakened for the four human beings who have dared to confront the monster with their rude weapons of stone, yet whose destiny, like that of their large antagonist, is overshadowed by the near presence of a supernatural power, seen in the great phenomena of nature which the artist has connected with the scene."

The question whether the mammoth, in America, survived into the human periods, is one of considerable geological interest. This stone is not the sole evidence of a face of human beings who lived in the time of the hairy mammoth, or which goes to prove that these men were Indians. There are Delaware Indian traditions of a "Big Buffalo," and it is interesting to compare these tales with the carvings on the "Lenape Stone," discovered in the middle of their ancient territory.

"Viewed in the light of these legends," says Mr. Mercer, "and compared with the fragments of ancient Indian history which chance has preserved to us, the carvings upon the Lenape stone vividly impress upon our minds the reality of that dark period of our continent's past, antecedent to the first coming of the white man; separated from us by not a few centuries, yet where the boundary line between history and geology becomes indistinct; where for hundreds, perhaps thousands, of years the Indian lived alone on this great island, and while those deep-rooted peculiarities of his character, which civilization has failed to eradicate, were slowly growing out of his wilderness life."

Passages as suggestive as the above, with engravings of various somewhat fascinating mammoth "documents"—pipes, mounds, and head-dresses—make the little book of interest to the general reader, while an appendix contains all the evidence for and against the relics, including the sworn statement of the finder and others, and the testimony of experts.

ELAINE GOODALE.

## DENTISTRY.

Dr. T. H. Parramore,

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King Street, opposite Barnes' Hotel.

The colored work in this diocese grows. We now have seven colored ministers and 400 communicants, and three more just ordained make ten colored ministers and seven or eight postulants or candidates for the ministry. The work growing, we should let it grow, with as few restrictions as the purity and good of the church demand.

### Farewell to Bethesda Chapel.

Perhaps nothing could have been said to deepen the impression of the association that thronged upon those who, on the third Sunday of last May, sat for the last time in the little chapel in the National Cemetery, where for sixteen years the church of Hampton Institute has gathered for the worship of God. Built first for the soldiers whose tents and hospital wards stretched far around it, surrounded by 6000 Union soldiers' graves; ringing, still, with the hymns of the freedmen, and crowning the effort to lead their children to the freedom of the truth; welcoming their brethren in oppression from the western plains; gathering three races in the brotherhood of the Father's house; consecrated anew by the last noble words of Garfield ready to be offered for his country, Bethesda spoke to the hearts of those who met for the farewell, as none could speak for her.

The ministers officially connected with the chapel have been five. Rev. E. P. Roe, its founder, and Rev. James Marshall, both U. S. army chaplains in the volunteer service, give their own story of its early history below. The church of Hampton Institute was organized in 1870, from the school and some of the colored and northern white people in Hampton, and obtained ready permission from the War Department and Presbyterian Board, who held joint jurisdiction, to use it on the day of its opening, it in repair. As is well known, the school being undenominational by its charter, its church was a union or independent church, flying no banner but the banner of the Cross. Its first pastor was Rev. Richard Tolman, of the First Congregational Church in Tewkesbury, Mass. For over seven years he did most faithful and successful work as its pastor. The regret with which the college accepted his resignation was consoled by his continued residence on the place, and valuable assistance in the new department of Bible study established for colored pastors. His final year, the year of his death, as announced in our last number, is a great loss to the school.

Rev. John Denison, a son-in-law of ex-President Horatio Williams, who became the second pastor of the school church in the fall of 1879. Obligated for his health to give up his charge of a large Congregational church in New Britain, Connecticut, Bethesda was able to enjoy his ministrations in her pulpit for two years, when he left to find full restoration in a European tour, becoming college chaplain at Williams on his return.

In the fall of 1879 Rev. H. B. Frissell, present Normal School chaplain, took charge of Bethesda, coming here from mission work in New York city, as colleague of Rev. Dr. Chas. Robinson, of the Memorial (Presbyterian) Church.

On two occasions, the last time in 1881, the War Department contemplated the removal of the chapel, but on representation of its usefulness to the school, the orders were rescinded in a very friendly way. It was left, however, to be only a question of time, when the need of more room in the cemetery still used as a burial place, and the veterans of the army should be imperative, and the increasing decay of the building and growth of the school, make some change a necessity. The burden of providing a new church building, however plain, was lifted from the school by one generous and timely gift far beyond anything it would have asked from the public. The beautiful Memorial chapel, whose tower rose heavenward before Bethesda had to be left, made the farewell one of tender regret only for the past with no anxiety for the future.

The presence of all its five pastors was hoped for at the farewell service, but none of those not resident here were able to accept the invitation. Rev. J. J. Gravatt, rector of St. John's church, Hampton, who has been for several years officially connected with the school in its religious work for the Indians, and in the Pastors' class, was present. The occasion happening to fall on the last Sunday before commencement, and on the eve of Mr. Tolman's departure, the Baccalaureate sermon was preached by the school's first pastor, and the service was thus in effect a threefold farewell to the class, the pastor, and the chapel. With the stirring text, "In the name of our God we will set up our banners," Mr. Tolman spoke feelingly of the spirit in which the church was founded, and the words urged the class of '86 to go bravely out among their people, and set up the banners here consecrated and entrusted to their hands; "the banner of Work, the banner of Thought, the banner of Right, the banner of the Cross." Appropriate hymns were sung, and at the close of the sermon the pastor, Mr. Frissell, read the letter from Rev. E. P. Roe, which we print below, with extracts from one previously received from Rev. James Marshall.

And so, while some of its wooden timbers, wrought into the walls of humble homes, may thus find no unworthy ending, Bethesda chapel that we know and love, flows away into that sphere of the imagination in

which Emerson says material forms find their most real existence, untouched henceforth by time or change, safe in our memory and affection. The living church it sheltered will long live; we trust, to do God's work in the world and set up his banners.

REV. E. P. ROE'S LETTER.

Cornwall-on-Hudson, May 11, '86.

MY DEAR MR. FRISSELL:

It is with deep regret that I yield to circumstances which deprive me of the privilege of being present at your last meeting in the old chapel. I doubt whether many others can have such memories of associations in connection with the building. I first looked upon its site in the spring of '64. In February, President Lincoln had appointed me chaplain of Hampton Hospital, but my commission did not arrive in time to prevent me from accompanying my regiment on Kilpatrick's and Dahlgren's raid, having as its object the release of our prisoners in Richmond. When our battered forces reached Yorktown, I was sent with dispatches to Washington, by way of Fort Monroe, and having a few hours on my hand, I walked out to the hospital on a dreary March morning and saw the thirteen or more great wooden barracks in which the patients were cared for. There were but few sick and wounded present at the time, and the wards were comparatively empty.

After a brief visit North I brought my patients to the hospital, and we entered upon our labors. As spring advanced the hospital began to fill, and by the time the army reached the James, not only were the wards crowded, but tents also, for the accommodation of the sick and wounded, were erected on every side. At one time there were 3500 men under treatment. The harvest of death was awful. I have buried twenty-nine in one day, and no day passed that I did not follow the dead cart, piled full of coffins, once, twice, or thrice. Steamers were constantly arriving at Hampton wharf with the wounded and dying. It was a sad and terrible experience, which gave little rest to mind or body. In two months I had lost thirty pounds, and although many succumbed I was favored in keeping my health. This was largely due to the care of my wife, who was with me, and greatly assisted me in visiting the wounded, and also to out-door duties. I obtained permission to start a garden on the ground now occupied by the chapel and Hampton Institute; convalescent patients did the work, and we soon began to have fresh vegetables for the hospital. During the spring and summer of '64 twenty-one hundred and fifty-eight bushels of various kinds of vegetables were raised, and, in addition, a profusion of green onions, sweet corn, cabbage, melons, etc. Many of the patients that we received had been subsisted on salt food so long that they were inclined to scurvy, and all needed a change of diet. The chief of medical staff said that these vegetables, eaten fresh from the garden, were worth more than all the medicine, and the convalescents renewed their health while contributing to the recovery of their comrades.

During the early part of the summer of '64 the terrible flux of desperately wounded men left little breathing time. The steamers brought the worst cases to Hampton, while the men who could better stand transportation were carried further North. We had no library work, training, and I learned that reading matter was one of our chief needs. Hundreds of men were confined to their cots for weeks and even months, and time hung heavy on their hands. One of my first efforts was to obtain books; the liberal-hearted North responded; publishers threw off fifty per cent. from their prices, and I was soon able to gather 3000 volumes. Some wards were filled with men who had lost a leg or an arm: Even the slightest jar caused by careful tread along the floor made these men lift their stumps and cringe with pain. I have seen many a poor fellow thus lifting his mutilated limb, and contracting his brow with suffering, yet never taking his eyes from the fascinating pages of Scott, Dickens, Thackeray, or Cooper.

We had no good room in which to keep our books, and no better place for religious services than the great, odoriferous, barrack dining-room, crowded three times each day by men taking their meals. Yet often, for weeks together, we met nightly in this dim, barn-like apartment; in it also the Bible-class was taught. With the exception of the Sunday morning service much latitude was allowed the men, and very many took part. Sometimes in one evening three or four would speak who had to balance themselves on crutches, and they usually spoke as directly and pointedly as they bad thought.

The need of a chapel, library, and reading room, grew daily more apparent, yet how to obtain them I scarcely knew. My foreman, den work under my direction, proved himself to be something of a mechanic, for in the building of a poultry yard and rustic fences about the hospital grounds he had shown

much ability. After consulting with him I began to believe that we could build a chapel with the labor of convalescent soldiers. Permission to try was at length obtained from Dr. McClellan, Surgeon-in-Charge, and we set to work in the late fall of '64. Under Mr. Ray's direction pine trees were felled back of Hampton, and the shingles all got out by hand. During a brief leave of absence I raised the money I could get, and with this we bought from the Government the rest of the lumber, incurring a debt for part of it. The wards were searched for carpenters, and almost the entire labor was performed by convalescent patients. If there had been proper sympathies and help on the part of the hospital authorities, the building could have been finished before winter, but delays which might have been prevented took place, and the chapel was not completed until late in the spring of '65. If it had been ready it would have been crowded every night during the winter of '65. As it was the services were largely attended in the cheerless, fireless dining room.

During the spring of '65 the character of our patients changed, and Hampton became practically a hospital for the colored soldiers. They crowded the chapel on Sunday morning, and formed one of the most intelligent and interesting audiences I ever met. I shall never forget the singing, and have never heard a chorus of such volume and richness of melody.

If the war had continued longer, it can be understood what an effective means the chapel and reading-room would have been. Happy peace came, and the number of patients in the wards dwindled daily. In October, '65, I felt that my services were no longer needed, and I resigned. The maintenance of the chapel was assumed by the Home Missionary Society, and from that day to this, I trust, the little edifice, erected by soldiers' hands, has subserved useful purposes.

Such, in brief outline, is the history of my connection with it and with the Hampton hospital.

Yours sincerely, E. P. ROE.

REV. JAS. MARSHALL'S LETTER.

Rev. Jas. Marshall writes: At the close of the Chesapeake Hospital, the Camp Distribution, the Muster Out Camp, and the Military Prison (all within the grounds of the Chesapeake), about July, 1865, I was transferred to Hampton Hospital. My first effort was to finish the chapel and render access to it possible by filling up the ground with oyster shells and earth, as the ground was so low that the chapel was usually surrounded with water.

In the fall of 1865 the chapel building was transferred by the War Department to the Presbyterian Committee of Home Missions of New York, provided said Committee would finish it and use it for religious services. I used without expense the Church Committee while U. S. Chaplain, and, in addition to my chaplaincy work, organized and carried on chapel and Sabbath school at the chapel for the benefit of the white people of the surrounding region, as the colored people had schools and churches and teachers in abundance, under the auspices of the American Missionary Association. The chapel was in the open air, and when the hospital wards would be removed by the Government the chapel would present an isolated appearance, with no right of way to it, and liable to fall into the hands of the original owner of the land, or to be destroyed in case of removal, for it stands on pines, and removal would be its destruction in any case. In locating the new cemetery we had three things in view: First, the right of way to the chapel; Second, its perpetuity for religious work; and Third, the saving of expense to the Government by retaining as the nucleus of the new cemetery the largest of the old ones, which was the Hampton hospital cemetery, lying between the chapel and the creek.

The officers of the Government fully understood all the facts at the time, and acted accordingly. Gen. Blunt did everything possible to locate the cemetery, remove the bodies, surround the grounds with a suitable picket fence, and save the chapel for the future uses of the Government, or some religious body working in the interest of the Government's work. I was mustered out of the Government service in April, 1866, but I remained in the interest of the religious work of the Presbyterian Committee until July following, and was at the same time actively at work with the erection of the monument which now stands in the cemetery. I was one of six thousand of our nation's heroic dead. But my health failed, and I was obliged to leave before the money was all raised or the amount received. When I found that I must leave I went to the States and had an interview with Miss D. L. Dix, so long and so widely known for her efforts in behalf of the insane in both England and America, and for her connection with the Sanitary Commission during the

war. She knew our work well at the Fort, and I asked her to assume the responsibility of raising more funds and securing the erection of the monument. She at once accepted the duty and entered cheerfully upon the work, thus adding another chapter to the long list of her life of philanthropy. Miss Dix immediately visited Philadelphia, New York, and Boston, for the purpose of raising funds. She succeeded. She then contracted for the monument, and when completed the Government transported it from the East to its present position. In the year 1867 the monument was erected, and the grounds set apart as a permanent National Cemetery with appropriate ceremonies. Many persons were interested in its erection, and all the officers then at the Fort gave their cordial support to the enterprise, but to no one more than to Miss D. L. Dix is the honor of its completion due. It will stand as a testimony to her energy, as well as an honor to the affection of our friends and relatives of the dead heroes, whose service for the nation it commemorates. The history of the chapel is inseparable from the history of the whole work, and under the control of the Government, Most truly yours,

JAMES MARSHALL.

President Garfield's Address in Bethesda Chapel, Hampton Institute, Sunday, June 5, 1881.

"As I drove through these grounds today I was impressed with the thought that I was between the representatives of the past and the future.

"Crippled and bent with service and years those veterans in the Soldiers' Home represent the past. You represent the future—the future of your race—a future made possible by the past, by these graves around us. Two phases of the future strike me as I look over this assemblage. For I see another race here, a race from the future. These two classes of people are approaching the great problem of humanity, which is Labor, from different sides.

"I would put that problem into four words: Labor must be free. And for those of you from the far West I would omit the last word in order to enforce the first lesson. To you I would say: Labor must be—for you, for all. Without it there can be no civilization. The white race has learned that truth. They came here as pioneers, felled the forests, and swept away all obstacles before them by labor. You come from a people who have been taught to destroy—to fight, but not to labor. Therefore to you I would say that without labor you can be nothing. The first text in your civilization is, Labor must be! You of the African race have learned this text, but you learned it from under the lash. Slavery taught you that labor must be. The mighty voice of war spoke out to you, and to us all, that Labor must be forever.

"The basis of all civilization is that Labor must be. The basis of everything great in civilization, the glory of our civilization, is that Labor must be free. I am glad to see that General Armstrong is working out this problem on both sides—reaching one hand to the South and one hand to the West—with all this continent of labor, and with all this continent of work; it out in the one way that will give us a country without sections, a people without a stain."

### Three Virginian Days.

PICTURESQUE MEETING OF RACES—GERMAN CAUVEES AND HAMPTON STUDENTS—AN EASTER "BAPTISM"—VISIT TO AN OLD COLONIAL HOME.

HAMPTON, Va., April 27.

The sweetest and coolest of southern breezes, the softest of sunny skies, the freshness of leaves and blossoms make April in Virginia an oasis in life's desert for those to whom Fate has allotted such an experience as has lately been ours. On three successive days of last week, Saturday, Easter Sunday, and Monday, there was added for us, to the exquisite beauty of land, sky, and sea, a series of vivid impressions which perhaps deserve chronicling, so curious were they in themselves and so strongly in contrast the one with the other.

Just off Fort Monroe, at the point where the splendid expanse of Hampton Roads meets the rivaling waters of the Chesapeake, are lying a couple of men-of-war, schoolships of the German Navy. Their officers, men whose thorough training includes careful observation of all educational work which comes in their way, had accepted an invitation from General Armstrong to bring the boys of their respective ships to visit the Hampton school, and on Saturday, according to the programme, half-a-dozen well-manned boats, gay with flags and music, came up the broad creek, upon whose shore the school buildings are growing into a somewhat imposing group. Drawn up in line to receive the German boys were 400

Negro and Indian students, and as the first boat touched the bank the school band did its best with "Des Deutschen Vaterland," to whose rhythm the young sailors, followed by the dark background of their hosts, marched up into the chapel of Virginia Hall. As an effect in human coloring nothing could be more striking than the white and red of the young Northerners in their spotless sailor dress, as they marshaled upon the platform in front of the assembled students, who in contrast presented a mass of absolute blackness. But when from out the dusky depths was lifted the triumphant "Rise and Shine of the Negro bymn and their really grand "Hallelujah" chorus, one felt that the inferior race had its compensations, and the enthusiasm of the Germans was no more than a fitting response to the power that called it forth. At the two poles of musical expression were the perfectly finished execution of the German band and the wild appealing harmony of the rich Negro voices, the one, to a musician, bearing infinite suggestion, the other satisfying completion.

After a few kindly words from the German officers, spoken by proxy, those in command offered, to the delight of the students, to make return for their entertainment by a drill of their boys upon the campus. All the world knows what a German drill means, and to inaccurate, careless Negro youth the perfection of it was fairly miraculous, and brought out many characteristic comments.

Then came the return to the boats, with the school band's vigorous "Wacht am Rhein" as a send-off, and the last beautiful picture, when the students crowded on the wharf to receive the choicest of their well-pleased guests, who sent back, as they floated off, such a rousing "Hail Columbia" as will long linger among the Hampton echoes. The Easter bells of the next morning called us within no walls, for no walls could hold the assemblage to whose numbers our little units were to be added. At our disposal was one of the graceful, gliding canoes, so dear to the heart of the Virginian, and its sharply lifted bow gave us the best possible stand from which to take in the salient points of the great "baptism" of the year, an event which makes itself felt through the whole neighborhood.

Again Hampton creek was made the scene of operations, and the long bridge and the contiguous shore were literally black with spectators. Here and there a white face, usually that of a Northern visitor, struck us with a strange effect of pallor, and it is no exaggeration to say that in the midst of the deep coloring of the crowd which pressed about us, we felt ourselves to be faded, sketchy, and, in point of picturesqueness, altogether unsuccessful. Among all the delightful variety of craft which covered the creek with a gay, but quite insignificant, multitude, our canoe held its own, but as the troop of white capped converts, led by the blackest of ministers, "shouted" their way through the crowd to the water, we were so impressed with our "white trashiness," that but for the encouragement of our friendly Negro boatmen, we should have vacated our hard-won position, in favor of some party whose equipment in the matter of complexion and costume gave them a more evident title to it. Waist deep in the troubled water, the minister received his new "brothers and sisters," and performed, with creditable gravity the ceremony of "ducking," which whatever may be its permanent results, is at the moment deplorably absurd. Hysterical shrieks and "Thank God's!" were frequent, but any decided outbreak was nipped in the bud by the stalwart master of ceremonies, who with a practised hand gripped by the back of the neck and vigorously shook the unduly excited among his dripping flock. Notably the scene was quieter and more decorous, the crowd more respectful, and the evidences not only of authority but of self-control more patent, than would have been possible twenty or even ten years ago. With the closing hymn, a genuine old-time chant, the crowd dispersed, the boats slid smoothly homeward, the converts and their leader departed.

The lifting of a veil of gray sea mist on Monday morning found us steaming up Hampton Roads, past the great docks of the embryo city of Newport News, into the grand sweep of the James River. On past low-lying green shores, with here and there the chimney of a distant house or an outstretching pier, past the square red tower of the Jamestown Church, past one, and another historic point, till at midday we came to a stop beside a narrow wharf, where even our noisy coming awoke no sign of life. A little rising path, a gate, a stile, and then an English park meets half-way a Virginia wilderness, and we are told that this is "Branford," famous in colonial history, and even in its decay a home for which men may be forgiven for having desperately fought.

Avenues of trees planted 200 years ago lead from the river to the fine old brick house, and stretch far behind it up the

wooded hill. Giant magnolias, elms to whose very top climb purple and white wistarias, lawns where honeysuckle covers the ground knee deep, long borders of corn, slips and periwinkle skirting hedges of clipped box, golden falls of jessamine—everywhere color and light and warmth.

It seems hardly pardonable to go further and speak of the cordial welcome which met us at the open doors and led us through the wide hall into the rooms where old Colonel Byrd and Lord Albemarle looked down upon us from their faded state, and it was something more than formal courtesy which led the ex-soldier of our party to ask forgiveness for the cruel scars of shot and shell which marred staircase and wall and had gone near altogether to destroy this fair domain. Cromwell's daughter, Lady Betty Claypole, held court in one corner of the drawing room and divided our homage with the really beautiful portrait of Evelyn Byrd, over whose shoulder, on a leafy branch, perched a scarlet Cardinal bird, the adopted crest of the American branch of the family. Old books, old silver, old china, buried and hidden through the war, told silently their story to our curious eyes, while the sweet, slow voices of our entertainers fell pleasantly upon our northern ears, and in remembrance add another charm to our recollections of the day. Regretfully, in obedience to the shrill call of our waiting steamer, we turned our backs upon the dreamy, enchanting influences which filled all the air about us, and through flowery paths went down to the river-side, where the softly lapping waves seemed a fitting barrier against the clamor of the world. We asked no better close to such a day than to go back to its end, as we had entered its beginning, through the gray mystery of the sea mist, which for us will somehow seem to the loveliest of Grimé—M. F. A. in *The New York Evening Post*.

### THE HAMPTON NORMAL AND AGRICULTURAL INSTITUTE,

AT HAMPTON VIRGINIA.

S. C. ARMSTRONG,	F. N. GILMAN,
Principal.	Treasurer.
No. of Colored students,	462
No. of Indian	139
Total	601.

A little more than half are girls; average age, 17 years. Its object is the practical Christian education of these two races; especially the training of teachers.

It is a private, chartered institution, owned and controlled by a Board of seventeen Trustees, with a majority of no denomination. It is aided by the State as an agricultural school, and the Government pays \$197.00 annuities for 120 Indians, but it needs from private charity every year for its support, the sum of fifty thousand dollars. About half of this has been given in the form of Annual Scholarships of seventy dollars a year, which pays the tuition, cost of education of one who pays in labor for board, clothing and books.

It needs a partial endowment fund. Five Hundred Thousand Dollars are asked for that purpose. Circulars and general information sent on application to the Principal.

REUTER & MALLORY,

22 LIGHT ST.,

BALTIMORE, Md.,

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 13 miles south of Baltimore, and 13 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond, Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway. The Hygeia is four stories in height, substantially built and comfortably furnished, has two Otis hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over 25,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer, 59° in winter, 44° in winter, and 32° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Sea-board. For sleeplessness and nervousness, the delicious to the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph, H. PHOEBUS, Prop.

## AND Hampton School Record.

VOL. XV.

HAMPTON, VA., SEPTEMBER, 1886.

No. 9.

An aerial visitant descended upon Hampton on Friday, Aug. 13th, in the form of a thunder-bolt which struck the tower of the new chapel of the Normal School, splitting the capstone of the final in two at the iron bolt, knocking off tiles and bricks, and making a hole in the roof of the church on its way to the earth. Mr. LaCrosse, a painter at work near the entrance under the tower, was prostrated, and several persons on various parts of the school grounds, and in the village of Hampton half a mile away, experienced slight shocks, but no lives were lost or serious damage done. The injury to the chapel is provided for by the terms of its insurance. The storm was the most sudden and violent that has been known here in many years, the meeting of two great clouds rolling up from the west and north in elemental conflict grandly terrific, like the warfare of the gods.

To the ordinary reader, a "Report on Education in Alaska" does not hold out any special promise of interest, but there are reports and reports, and somehow Mr. Jackson has contrived to make of his, not only a valuable, but a very readable and attractive piece of work. That his material is of rather an unusual character must be granted, for there are few educators of whose field it can be said, as Mr. Jackson says of his, in regard to the establishment therein of the "U. S. Public School System."

"To inaugurate such a system in Dakota or Montana, with the assistance of railways and stage lines, is one thing; to do the same thing in Alaska, with its vast area, not only without public conveyances, except a monthly steamer in the southeastern corner, but without roads, and largely without any means of transportation save the uncomfortable log canoes and skin bidaraks of the natives, is another and quite different thing. And yet the establishment of schools in Alaska will require tens of thousands of miles of travel—a fact which becomes obvious on a careful survey of the field."

The descriptions which follow of the physical features, the climate, and the population of Alaska, are exceedingly interesting, and being supplemented as they are by extracts from letters and reports of government agents, missionaries, and explorers, furnish a storehouse from which the would-be student of Alaskan history may draw much valuable material.

In March, 1885, the Secretary of the Interior assigned the work of making provision for the education of children in Alaska to the Bureau of Education, and, in April, directed the establishment of the office of "General Agent of Education in Alaska," to which position Mr. Sheldon Jackson was appointed. His own statement of the risk which lay before him supplies the salient points of so curious a picture, that we cannot forbear quoting it in full:

"It was a work of great magnitude, on a new and untried field, and with unknown difficulties. It was a work so unlike any other that the experience of the past in

other departments could not be the sole guide. It was a problem peculiar to itself, and must be worked out by and for itself. It covered an area of one-sixth of the United States. The schools to be established would be from 4,000 to 6,000 miles from headquarters at Washington, and from 100 to 1,000 miles from one another. And that in an inaccessible country, only one corner of which has any public means of intercommunication. The teachers of five schools in southeastern Alaska will be able to receive a monthly mail; the larger number of the others can only receive a chance mail two or three times a year, and still others only one annually.

"It was to establish English schools among a people the larger portion of whom do not speak or understand the English language, the difficulties of which will be better appreciated if you conceive of an attempt being made to instruct the children of New York or Georgia in arithmetic, geography, and other common school branches through the medium of Chinese teachers and text-books. Of the 36,000 people in Alaska, never over 5,000 speak the English tongue, and they are mainly in three settlements.

"It was to instruct a people the greater portion of whom are uncivilized, who need to be taught sanitary regulations, the laws of health, improvement of dwellings, better methods of housekeeping, cooking, and dressing, more remunerative forms of labor, honesty, chastity, the sacredness of the marriage relation, and everything that elevates man. So that, side by side with the usual school drill in reading, writing, and arithmetic, there is need of instruction for the girls in housekeeping, cooking, and gardening, in cutting, sewing, and mending; and for the boys in carpentering and other forms of wood working, boot and shoemaking, and the various trades of civilization. It was to furnish educational advantages to a people, large classes of whom are too ignorant to appreciate them, and who require some form of pressure to oblige them to keep their children in school regularly. It was a system of schools among a people, who, while in the main only partially civilized, yet have a future before them as American citizens.

"It was the establishment of schools in a region where not only the school-house but also the teacher's residence must be erected, and where a portion of the material must be transported from 1,500 to 4,500 miles, necessitating a corresponding increase in the school expenditure.

"It was the finding of properly qualified teachers, who, for a moderate salary, would be willing to exile themselves from all society, and some of them settle down in regions of arctic winters, where they can hear from the outside world only once a year.

"To the magnitude of the work, and the special difficulties environing it, is still further added the complication arising from the lack of sufficient funds to carry it out, there being appropriated only \$25,000 with which to commence it."

The account of the way in which these difficulties have been attacked reads more like one of Jules Verne's romances than like an official resume of facts. For example, Mr. Jackson says:

"If I wish to visit the school at Bethel, I take a mail steamer from Sitka to San Francisco, 1,600 miles; then wait until some vessel sails for Unalakleet, 2,418 miles; then wait again until some trading vessel has occasion to visit the mouth of the Kuskokwim river, 461 miles, and go from thence in a bidarka (sea-lion skin canoe) 150 miles up the river, a total of 4,639 miles. By the same tedious route the teachers receive their annual mail, except that it starts from San Francisco."

The stories of these voyages might well fire the hearts of young adventurers, and yet they are from the pens of some school teachers and earnest missionaries, who know what their work in its true meaning includes, and who are equipped to give that training of "heart, mind and hand," which alone can help the semi-savages of this strange land.

Mr. Jackson is an enthusiast for industrial training, and has apparently shown much wisdom in grafting his work upon that already begun by the missionaries of various English and American societies.

His plan, so far as shown in this report, is based on thorough knowledge of the conditions, and in his hands the work seems full of promise. Certainly no one who reads his report for 1886 will fail to look with interest for its successor.

The Second Annual Report of the Industrial Education Association which has just reached us, shows what can be done practically and speedily towards elevating the standard of labor in this country. When we come to see that labor, properly stimulated and guided is as different from enforced drudgery as the butterfly is from its chrysalis, life will alter its aspect for most of us, and the sense of disproportion in its allotments will be far less than now. Anything which tends to establish wider and wiser views of the industrial situation is to be welcomed, and we are glad to let the Association make its own statement as to its objects.

"We are told that there is an industrial training, which is neither technical nor professional, which is calculated to make better men and better citizens of the pupils, no matter what calling they may afterward follow; which affects directly, and in a most salutary manner, the mind and character of the pupil, and which will be of constant service to him through all his life, whether he be wage-worker or trader, teacher or clergyman. The training of the eye and of the hand are important and essential elements in all good education. These elements the State is bound to furnish." To promote their introduction into schools of all grades, both public and private, is the great object of the Industrial Education Association. But, while this must ever be its chief aim, it will not do to overlook the welfare of those for whom changes in the school curriculum will come too late; who need now to have the education of the head supplemented by special opportunities for the training of the hand, whose demand for preparation for the every-day duties of life is too urgent to be ignored or denied. Thus, until the schools supply the education towards which all the influences of to-day point, it is clearly within the province of the Industrial Education Association to combine both phases of the work. There is no reason why the two should not be harmonious, since both propose the same ultimate end—the development of character and the cultivation of all the faculties for the stern uses of practical life."

The organization for this year includes committees on Household Industries, Mechanical Industries, Industrial Arts, Bureau of Teachers, Vacation Schools, Plans for Outside Organizations, Industries for Reformatories and Orphanages, Industries for the Insane, and Kindergartens. In all these various directions the progress during the year has been satisfactory, and we find particularly interesting the account of the establishment of Industries for Girls, in regard to which the Secretary says:

"The interest shown by some of the public school teachers is most gratifying. At much personal inconvenience they have brought their pupils to join the classes. One teacher of a night school begged that something might be started to fill the place left vacant by the closing of these schools. The result was the formation of two evening classes in cooking, with twenty girls in each. The further interest of the teachers is indicated by their request that classes might be formed for themselves, and we have now a large class of teachers studying industrial drawing, clay modelling, and cooking for their personal benefit."

\*Washington Gladden in April "Century."

Much might be said of the wholesome influence of all these classes; of their value in teaching the dignity of labor; of the high ideal set before the young cooks in the beautiful motto from Ruskin which hangs in their cooking-room; of the exquisite order and neatness required in every department; of the surprising interest shown in the sewing-classes; the enthusiasm in the modelling-room; the delight of the younger children in the little housekeepers, and of the older girls in the domestic economy classes; but we pass to the consideration of a smaller but no less important department in the Eleventh Street House—that for the training of servants.

Rooms are reserved for the accommodation of fifteen inmates, who are received for a three months' residence and course of training. During this time they receive no wages, but give their services in performing the work of the house. Thorough training in every department of household work is afforded, and a course of lessons in plain sewing given to each girl. At the end of the three months it is the intention of the Committee in charge to provide suitable situations and to exorcise a watchful care over the interests of the pupils. Three months' satisfactory residence in the house, with three months' satisfactory service in a family, will entitle a girl to a certificate of recommendation from the Committee. It is hoped to establish this Training School for Servants on a dignified basis, and to make it a place sought after, like the Training School for Nurses. The aim of the Committee is to inculcate a right estimate of the dignity of household service, and to win to it a class whose interests would be materially advanced by choosing the family, instead of the shop, as their field of self-support.

If such a plan as this can be carried into effect, it will produce something little less than a revolution in American family life, and its attempt shows a change in the general attitude of society, which is most hopeful. We have space only to draw attention to another point of special interest, viz: the report of the Committee on Reformatories and Orphanages.

"The Committee on Reformatories and Orphanages has confined itself to the purely student work of gathering information as to the industrial methods pursued in other institutions. Several have been visited, and, in June last, a circular letter was sent to about three hundred institutions, in all parts of the country, with questions relative to their methods of industrial training. Prompt and correct replies indicated a marked degree of intelligent interest in this great problem. Much practical information was secured which the Committee hopes to use advantageously at no distant date."

This information points strongly in the direction of three vital conclusions, viz:

I. That every child in these institutions should be trained to become a producing factor in the community.

II. That if such training is to have permanent value in the after-life of the child it must be conducted on a basis of education to the child, and cannot be made to any extent a source of revenue to the institution.

III. That the moral results of such training are most satisfactory.

The last clause coincides so completely with the experience, long since put on record, of the Hampton School, that it is no surprise to us to find from the next Committee, viz: that on Industries for the Insane, that to a similar series of questions sent to asylums throughout the country with the view of ascertaining how far the experience of those best qualified to judge approved the application of industrial training as a remedial measure in the treatment of the insane. "The replies were in all cases most courteous and the general sentiment strongly in favor of the adoption of suitable forms of manual training."

man" is reduced to eight pages during the  
next four months, resuming, in November, the  
twelve page form.

## The Southern Press—Both Sides.

The death of Mr. Tilden has called  
out general eulogiums from the South-  
ern press, and reviews of the vexed  
questions of the election campaign of  
'76. The Richmond *Whig* says:

"The calm and dignified manner in which  
Mr. Tilden bore himself during the whole  
of that memorable struggle, and the quiet  
grace and patriotic fervor with which  
he submitted to being defrauded of his rights  
rather than see the country plunged into the  
horors of another civil war, cannot be too  
highly commended. It showed him to be a  
patriot in the highest sense of the word, and  
not a mere seer after his own personal  
aggrandizement."

Mr. Tilden was one of the ablest and most  
gifted men of our time. Not only was he  
remarkably gifted as a party organizer and  
leader, but he was a statesman in the high-  
est acceptance of the term. He was a close  
student, and was thoroughly conversant  
with the theory and science of government.  
As Governor of New York he exhibited re-  
markable executive abilities, while his sterling  
integrity and rugged honesty made him the  
terror of jobbers and corruptionists.  
Had he been permitted to assume the duties  
of Chief Executive of the United States, to  
which the people called him, there is every  
reason to believe he would have purified the  
civil service, as he did in the State of New  
York, and left behind him a record and rep-  
utation second to none of the great Chief  
Magistrates who preceded him. The fact  
that he was defrauded of that high office  
gives him one distinction possessed by no  
other man—that of chief victim of the  
greatest political crime of this country. In  
history he will take rank along with Jef-  
ferson and Madison and Jackson, and other  
great leaders of the people."

The appointment of Mr. James C.  
Matthews, a colored Democrat, as Rec-  
order of Deeds for the District of Col-  
umbia, is received with exultation by  
most of the colored papers. The Lou-  
isiana *Standard*, New Orleans, says:

"The colored press almost unanimously  
and unreservedly endorse President Cleve-  
land's action in reappointing James C. Mat-  
thews to be Recorder of Deeds for the Dis-  
trict of Columbia. The only exceptions we  
have seen are the *Chattanooga Tribune*, the  
*Western Appeal*, and the *Cleveland Globe*."

"The *Tribune* commends the President,  
but thinks a better man than Matthews  
could have been found. This is mere differ-  
ence of opinion, and as Mr. Cleveland is the  
one who appoints, he alone will bear the  
responsibility. The *Appeal* deprecates the  
appointment of prominent Negroes under a  
Democratic administration, but takes occa-  
sion to remind the G. O. P. of its niggardly  
treatment of colored Republicans, and points  
out the result likely to follow unless it  
mends its ways. But the *Globe*, while seem-  
ingly congratulating Mr. Matthews on his  
good luck, charges the President with 'de-  
fying the Constitution, consuming the wealth  
of the tax-payers of the District, and  
snapping his fingers in the face of Congress.'  
Awful crimes! And it intimates that the

President may be impeached when Con-  
gress reassembles. Pulls, thou art great!

The Richmond *Planet* also criticizes  
the appointment and the man, saying:

"Despite Mr. Cleveland's statements that  
he did not propose to have partisans in  
office he appoints this Negro Democrat. No,  
any colored man that would wade through  
the sufferings of our people that far back  
and glory in being a Democrat we would  
denounce from a thousand miles of it in  
our power. We have no tears to shed. We  
have never expected much of President  
Cleveland. He has only proved more of a  
failure than we anticipated, and stands  
forth to the derision of the people of this  
civilized community."

The Philadelphia *Sentinel* says:

"The stinging rebuke that the President  
has given those Republicans who consid-  
er the colored voter bound, gagged, and  
delivered to them, to be disposed of in any  
way they may see fit, has been overwhelm-  
ing. All honor to Mr. Cleveland for up-  
holding the principle of the right to opinion  
and its expression."

The *Star of Zion*, published in Salis-  
bury, S. C., "congratulates the Presi-  
dent upon his splendid exhibition of  
manhood in this matter," and adds:

"We entertain different political views,  
but the matter hinged upon the question of  
recognition, and the Negro has suc-  
cessfully achieved a signal and triumphant  
victory, and we feel gratified."

The New York *Freeman* replies to  
the commendation of the Brooklyn  
*Engle* for its endorsement of the Presi-  
dent:

"As far as the *Freeman* is concerned we  
are free to say we have always had the cour-  
age to 'rend unto Caesar the things that  
are Caesar's,' whether the Caesar was a Dem-  
ocrat or a Republican. President Cleve-  
land should receive from his colored fel-  
low-citizens full credit for every effort he makes  
to place the Democratic party in advance  
of its former position on all matters affecting  
us, and the editor of the *Freeman* has done  
and will continue to render him such full  
credit."

"The Democratic party throughout the  
country must brace up on this matter of  
square justice to colored men. Sentimental  
nonsense and hide-bound prejudices must  
give place to common sense and justice. It  
is votes that count, and colored votes in the  
future can only be secured on a basis of just-  
ice and fair play."

"The National Republican party aban-  
doned the colored people of the South in  
1876, and it is reasonable to infer that it will  
not venture in the coming Presidential elec-  
tion to contest that territory with the Dem-  
ocratic party. The colored voters there are  
in consequence left free to make such terms  
with the enemy as they can. From reports  
of recent elections in the South we learn  
that colored voters are pursuing this course.  
In short, the Republican party has left them  
no other to pursue. What the future will  
develop in this respect is, of course, beyond  
conjecture; but that a strong feeling of frater-  
nity between white and colored voters  
seems to be gaining ground is quite evident.  
The South is the place where the shoe  
pinches the colored people; and it behooves  
the Democratic party of the North and the  
South to ease this pinching by giving col-  
ored citizens more justice and fair play, and  
thus destroy the only argument colored  
voters have for voting, as they have done  
for years, on the one side of all questions."

"We shall rejoice when we are free to  
take sides on all questions upon their mer-  
its; when we can plead for civil service re-  
form, for a reduction of taxation to the ab-  
solute requirements of the government, for  
such tariff legislation as will protect the  
consumer as well as the manufacturer, and  
for such legislation upon the money ques-  
tion as will place our financial system in ac-  
cord with that of the leading governments  
of the world; when we are free to discuss  
these questions and to vote upon them as  
we feel without jeopardizing our constitu-  
tional rights, we shall be quite happy."

Quoting the *Southern Workman's* re-  
view of the political situation in Vir-  
ginia, the fading of the color line in  
politics, and the tendency of intelligent  
colored men to divide on questions of  
the day, Mr. Fortune adds:

"This is a correct diagnosis of the situa-  
tion, and it is very gratifying to those who  
are interested in the permanent peace and  
prosperity of the South."

The development of mineral resources

and manufacturing industries in the  
South is creating naturally a division  
of opinion on the question of protec-  
tion or free trade. The *Virginian*, Nor-  
folk, publishes an "Expostulation with  
our Farmer Free Traders."

"Now we have here in Virginia—yes, here  
in the splendid Bessemer deposits on the  
Gulf and Le Grand belt, eight miles below  
Lynchburg—ores of the same description,  
and almost of equal quality, with those  
mined in the districts of Bilbao, Cartagena,  
and Marbella, in Spain, in Africa, and in  
Cuba."

"The tariff question is one that must be  
dealt with in a practical manner. Your  
theorists and idealists, and dreamers, who  
can never get a foot beyond the text-book  
teachings of their college days, are not safe  
advisers in the practical problems of life.  
To conclude as we began, one great avenue  
of deliverance from our present impover-  
ished and apathetic condition is in the de-  
velopment of manufacturing industries. The  
most important of these is the iron indus-  
try. The profitable iron industry of Vir-  
ginia is to be found largely in the fact that  
we possess the non-phosphorous ores that  
are essential for the production of steel.  
And the development of these desirable  
ores would be greatly stimulated by the ex-  
clusion of our foreign competitors by reason  
of convict labor, are able to successfully  
compete with them. This is our syllogism.  
Can any one show wherein it is fallacious?  
If so, let us hear him. We are open to argu-  
ment."

The Charleston *News and Courier* is  
ready for the argument, calling the ex-  
pected advantages of protection "A  
very dear whistle." It says:

"We have been frequently assured of late,  
by the tariff organs North and South, that  
the iron industry in some of the Southern  
States will undoubtedly soon lead those  
States into the protection camp. The growth  
of iron manufacturing in the South is, of  
course, very gratifying, but that it is con-  
fined to a few small districts seems to be  
overlooked in all the calculations we have  
mentioned."

"As compared with last year, Alabama  
turns out, in round numbers, an increase of  
28,000 tons; Georgia, 15,000 tons; West  
Virginia, 14,000 tons; Tennessee, 16,000  
tons, and Kentucky, 2,500 tons. The entire  
increase for the year in all the Southern  
States is about 72,000 tons, which would be  
a moderate product for one small plant.  
The whole increase could be sold in any one  
Northern iron market without affecting  
prices."

"It is too much to expect that the farm-  
ers of the South will consent to be impov-  
erished to support manufacturing enter-  
prises all over the country, even if a few  
iron mills are established in this section.  
It will always be unprofitable to them to pay  
out a dollar in order to get back ten cents,  
and that is about what protection means to  
them in every case."

The Lynchburg *Weekly Virginian*  
confesses that:—

"One great reason why our agricultural,  
manufacturing, and mechanical industries  
languish here in Virginia, is that we are too  
much addicted to politics. *Politics* is the  
bane of poor old Virginia. We are born to  
politics. We drink it in with our mother's  
milk, and inhale it in our mountain breezes.  
We expend upon it that thought and time  
and activity which should, in part at least,  
be given to the promotion of our material  
interests." It declares: "We are going to  
give greater consideration to our material  
interests—to improved methods of husban-  
dry; the development of our dormant nat-  
ural resources; the building up of manu-  
facturing and mechanical industries."

An excellent move in this direction  
is the enterprise of the Department  
Agriculture of whose card we publish  
herewith, to collect and publish infor-  
mation concerning the advantages of  
different sections of the State. An-  
other is the bill to be introduced at the  
next meeting of the Assembly, by the  
Virginia Agricultural Society, for the  
reorganization of the State Depart-  
ment of Agriculture. The bill pro-  
vides for a State Board of Agriculture,  
to consist of the Executive Committee  
of the State society, and Presidents of  
all the other agricultural societies be-  
longing to the department, and the  
State Commissioners of Agriculture.

It provides also for the organization of  
a Farmers' Institute to discuss agricul-  
tural questions, and the establishment  
of three experimental stations, located  
at or near the Blacksburg Agricultural  
College, the University of Virginia,  
and the Hampton Normal and Agri-  
cultural Institute, on condition of their  
furnishing a sufficient amount of land  
and all chemical analyses free of  
charge.

## COMMONWEALTH OF VIRGINIA.

Department of Agriculture,  
Richmond, Va., August 10th, 1886.

Request for Facts and Figures.

The last edition of the *Hand-Book of Vir-  
ginia* is rapidly exhausted, and new ap-  
plications for copies of it are coming in al-  
most every day from other States and from  
foreign countries, written by men who say  
they are thinking of settling here and mean  
business, and want information which will  
guide them in searching for a location. An-  
other edition must be issued, and it should  
contain all the information that can be con-  
sidered in its relation to the resources, de-  
veloped and undeveloped, of the State—ac-  
curate statements concerning its agricul-  
tural capabilities; the products which flourish  
in the different parts of the State; its mines,  
forests, manufactures, fisheries—in short,  
all sorts of sources of wealth. What is  
particularly wanted is short articles descrip-  
tive of each county and city, setting forth  
their advantages and conveniences—giving  
an account of the improvements recently  
made, railroads, lines of steamers, better  
county roads, schools, colleges, discoveries  
of minerals, mineral springs—anything of  
public interest.

I ask, then, that you and other pub-  
lic-spirited citizens will send me such sketches  
to be used in compiling the hand book.  
They will be good advertisements for the  
respective cities and counties.

I hope to have responses (one or more)  
from every county in the State, but I trust  
that any other citizen who may chance to  
see this, and has useful information of the  
kind referred to, will oblige me and benefit  
the public by communicating it. Of spe-  
cial interest and importance would be state-  
ments concerning the value of farming lands,  
the condition of farmers, the average yield  
per acre of various staple crops, the supply  
of labor and the wages paid to laborers.

There are many other important subjects  
which will suggest themselves to well in-  
formed citizens. I beg them to write fully  
and freely, and as soon as they conveniently  
can—if possible, by September 10th.

Yours obedient servant,  
RANDOLPH HARRISON,  
Commissioner of Agriculture.

STATUE OF "LIBERTY ENLIGHTENING THE WORLD"

## More Money Needed.

The Committee in charge of the construction  
of the pedestal and the erection of the Statue,  
in order to realize funds for  
its completion, have prepared, from  
model furnished by the artist, a perfect *Academy*  
Minuteman Statuette, which they are delivering  
to subscribers throughout the United States at  
the following prices:

No. 1 Statuette, six inches in height—the  
Statue bronzed, pedestal, nickel-silvered—at  
One Dollar each, delivered.  
No. 2 Statuette, in same metal, *white metal*  
Alloy, beautifully bronzed and nickel-plated,  
at Five Dollars each, delivered.  
No. 3 Statuette, *white metal* Alloy, finely  
engraved, Statue bronzed, pedestal, *nickel-silver*  
Alloy—*Plated*, wire raised, at  
Ten Dollars each, delivered.  
Much time and money have been spent in  
perfecting the Statuette, and they are much  
improved over the first sent out. The Com-  
mittee have received from subscribers many  
letters of commendation.

The *New York World* Fund of \$100,000 com-  
pletes the pedestal, but it is estimated that  
\$60,000 is yet needed to pay for the iron fasten-  
ings and the erection of the Statue.  
Liberal subscriptions for the Minuteman Statu-  
ettes will produce the desired amount.  
Address, with remittance,  
RICHARD BUTLER, Secretary,  
American Committee of the Statue of Liberty,  
35 Marcor Street, New York.

### Letters From Hampton Graduates.

Occasionally, from one or another motive, our graduates are led to turn faces northward, but as the experience of this writer shows, they do not find that there are any geographical limits to the difficulties which beset the path of a conscientious teacher.

N. Y., Oct. 19, 1885.

My dear Friend:

Though my letter may be somewhat tardy, I hope it may be in time to exonerate me from the charge indicated in your circular. I assure you that nothing is further from my desire or intention than the nearest approach to incivility. Perhaps the best reason I can give for delaying my duty is that I have so little of interest or importance to relate. My experience differs from that of some of my fellow members. The seats in my school house are not made of logs, split, and supported by stakes. It is not necessary to use umbrellas in the house nor have my boarding place furnish an observatory from which astronomical investigation may be made. I would not have you think, though, that I am entirely without inconveniences. What teacher is? My school house is not built with any regard to ventilation or any other sanitary consideration. My black boards, maps, and all kinds of apparatus, seriously lack attention. My pupils attend very irregularly, and this renders it an exceedingly onerous task for me to regulate their conduct either in regard to scholarship or deportment. These inconveniences which I have enumerated are by no means peculiar to my school, though I venture to say they are to an unusual extent. The excess of these evils makes it important that more strenuous efforts should be made for their removal.

Yours respectfully,  
J. R. D.

One of the graduates of the school who has been ten years at work, will not admit that time has weakened his sense of obligation to his Alma Mater:

N. C., Oct. 15th, '85.

Dear Friend:

I received your very kind letter of Oct. '85, and believe me, it was received with emotions of joy. Perhaps you and Gen. Armstrong think that I am one of the poorest correspondents in the whole number of Hampton graduates, from the fact you only hear from me when you specially call on me. Now there is a reason for this. First, I am a very poor correspondent; secondly, I have been so much engaged in my every day transactions, that I have not taken the time to write. Next, I have never forgotten Hampton, or its interests, but I do not want to be a burden to you. I have allowed myself to put off too much, and too long.

There is one thing above all others, from the tone of your letter, and that is "have you been an honor to Hampton or not?" Though you may not hear from a student for months and even years, but if when you do hear from that student, you hear that everything is well with him, and that he has never ceased Hampton to mourn for a moment on account of his having disgraced himself, I say that the school should feel proud. Such has been the case with me. I love Hampton, I love its cause, and I love Gen. Armstrong, because he has done so much for me and my race, and is still doing.

When I get to writing to Hampton, or to a representative of Hampton, there is nothing that affords me more pleasure than that. Therefore if you will only bear with me a little while, I will tell you the whole story in short. I graduated June 10th '75. I left Hampton and came to W—, and after spending a short vacation, I engaged myself in the work of teaching, and have been following it ever since, with most happy results. Every where that I have taught in North Carolina the people have always wanted me to stay. I have been teaching something over ten years. I am not teaching now. Owing to the health of my family, I had to resign my position in the city, and move out on the Sound, to my farm. I am now keeping a grocery store, and running farm in the meantime. I am getting along well, and have ever since I left Hampton. I have always got along well among the white people of the neighborhood in which I taught. I have never had any trouble in school worth talking about, since I have been engaged in the work. For as you know, there is always a right way and a wrong way, and if we do the right way, we always get along as a general thing, though that does not always hold true.

Gen. Armstrong need never be uneasy about my doing anything that might hurt Hampton or its cause. I might say more, but being aware that my letter is too

long already, I will come to a close. My kindest regards to you, Gen. Armstrong and other teachers.

I am yours with much respect,  
J. A. H.

That a Hampton teacher in the mountains of Tennessee should find it part of his work to "root out dime novels" seems almost incredible, and yet who can tell how far such poison reaches:

Tenn., Oct. '85.

Miss C.

This is my second time I have started a letter to you. Somehow I can't find time to do letter writing, yet I can't bear the idea of putting off writing to you any longer. Your circular I received, but I am so sorry you had to send it before I wrote. You have been so kind to me that I had promised always to be prompt in letting you know my whereabouts.

This is the third time I have been appointed principal of the colored school. This alone tells how I am thought of here. You know last year I taught school in Virginia. The pay was so irregular there, I was not anxious to go again.

You remember two years ago, you and a friend gave me several books for the school. Most of the books are here in service still, though greatly worn. I am so glad I rooted out that trashy stuff, (Saturday Night, dime novels, etc.) from the children. I have carefully noticed the children during the past six months, and I am glad to say their mind is now turned to better literature.

As you know, my work don't end in the school room. I am often visiting the poorer people and doing what I can for them. One sick mother with five children (the youngest only about four months old) was nearly forsaken by her husband, and asked help. M. E. church pastor (colored) called for a collection for her and \$2.00 was given her.

I am told that wheat bread was a rare thing in the family. Last Saturday on my morning visit, fifteen children I found could not attend school as their parents or friends could not properly clothe them. I have bought a pair of shoes for a boy, who was exceptionally bright, to keep him in school. Our town is right in the mountains, and we see some real cold days.

I am going to have "Thanksgiving exercises" on Thanksgiving night. Thanksgiving morning, a sermon will be preached to the children and at night our exercises will be held in the church.

I am getting on very well so far. My health is not good, still I am doing very well. As yet I am following teaching altogether. If my health fail I will have to do some other work. Last summer I purchased a small evaporator and went into fruit drying, but did not succeed, as our crop being so very large, prices went down.

My school this year is very full—have now 104 on roll. I have one assistant teacher.

My work here is very delicate. I have a large number of young girls (between 15 and 18) very wild and thoughtless. Especially true is it with the boys. Most training of the boys and girls is not the best.

I feel very lonely down here in Tennessee sometimes. Anything you can do for me or send to me, will be gladly welcomed, and I can assure you it will do good.

Very thankfully yours,  
P. B. H.

Our scholars' familiarity with the newest and best methods and appliances, makes their influence in public school work particularly helpful. For example, here is a teacher who has introduced charts into the schools of a city where they were previously unknown, or at least not generally used:

Va., Feb. 18, '86.

Dear Miss C.

I meant to let you hear from me the first of the term, which was in September, but have been kept so busy I was waited until now. I presume you have learned that I now teach in the city of P—. We have six teachers in our school with the principal. Two are Hampton graduates. One of our teachers, Miss Fannie Nichols, left Hampton in her Senior year, this year, is her first experience as a teacher; she gets on well. I have the first primary grade. The average age of my little ones is only eight years. I presume I have 50 present in my room. You can imagine from this the size of the school. I am pleased to say that we have a building just as comfortable as the Academic at dear old Hampton, and most everything to facilitate us as teachers. A chart was never used in this school before this term. I sent word to the School

Board, through the Principal, that a chart was much needed, and that I could not get on satisfactorily without one. I quite satisfied them they sent to New York, for a Monroe's Chart, and I find that it helps me very much. My little ones work me very hard, but I enjoy it, and would not swap rooms with any of the other teachers. It is such a pleasure to deal with such young children, still it requires much patience. My little girl is with me now. I shall soon have to say my big girl for the grows quite fast. If you come to commencement this year, and can make it convenient, please call to see me in passing. I shall be glad for you to see our school. My parents are well. I am about seven miles from them. I went to see them on Sunday last. I would say more, but I am now in school and must stop.

Yours truly,  
M. A. B.

One would like to visit this little school "far out among the yellow pines," which has never been taught before:

S. C., Feb. '86.

Dear Friend:

Your very kind letter to the graduates of Hampton, which was sent me a few months since, was kindly received. I have been quite busy and also somewhat perplexed since the arrival of that letter, please let me beg an excuse for my delay in replying. I am engaged at teaching in the free public schools of B— Co. in the neighborhood of the little town of B—. My school is far out among the yellow pines and had never been taught before I took it. I have thirty-six pupils. They are doing well. Their parents take great delight in their new opportunity. There are many white people in this neighborhood; the better class of them are kind and friendly to the colored people, but the majority of the poorer class is unfriendly and meddlesome. The colored people about here are all farmers. They are very industrious. They generally make fine crops, but the land rent and the small price for their labor, and produce prevent their rapid progress in the growth of real estate property, but still they are slowly securing homes. Many of the old slave owners are anxiously offering their vast plantations for sale, but they don't find ready purchasers.

This winter is the coldest and most disagreeable that even our oldest citizens have ever seen in the South. It was cold enough last month to freeze the ponds and many of our small creeks thick enough to bear the weight of a horse. This has never been witnessed before now. I do not think my school will last longer than four months. Our trustees are doing the best they can for us.

I am your obedient servant,  
J. De W.

A teacher whose time is spent in her school and Sunday-school, in saving wood, in reading and studying, in visiting the sick, can hardly be blamed for sometimes neglecting her correspondence:

Ind., Dec. 30, '85.

Dear Miss C.

Your kindly greeting was received sometime ago, and I fear that I am guilty of a breach of politeness. I have desired to write to you for sometime, but I really have not had the time to do so. I am teaching at River Springs this term. I have a very comfortable school building, nicely furnished.

I have quite a large attendance. The children are for the most part very young, their ages being from four to fifteen years. When I began teaching my eldest boy had not seen more than nine years, and you would have laughed to have seen us trying to saw wood. The little fellows would pull on the saw, but with little success. I thinking that I might be able to help them tried my hand at wood sawing. But I was not so skilled in the business as I had supposed, and my attempts, like those of the boys, proved a failure, and we would have suffered for fire, had it not been for the kindness of a gentleman who lived near the school.

The word method met with much opposition at first, but now everything seems to grow in the same old way. One of my patrons said to me about four months ago "Please teach my girl the A. B. C's. Some of the people here think it quite a marvel that the children learn to read without first learning the A. B. C. as they say."

The Christmas exercises were the first of the kind that were ever held in this place, and they were largely attended, both by white and colored. Every one was pleased. An old doctor expressed his admiration in this manner "I could never have believed had I not seen it, the colored children could have acted so smart."

I have a Sunday school in my school-house, and old people as well as children enjoy it. We have very few books or papers as yet, but we hope to do better after a while.

Miss T. very kindly sends me papers quite frequently. I am always glad to get them, because I can make them useful in connection with my work.

There are vices of every kind here to be subdued, and when I think of my feeble efforts for good, and how little I am able to accomplish, it makes me feel somewhat discouraged. I am trying to do my duty as a teacher in every sense of the word. I seem to understand teaching much better this term than I did last, consequently I enjoy it more. I visit the sick whenever I can. I spend my quiet evenings in reading and studying, so you see my time is not a burden to me.

Wishing you a prosperous New Year,  
I am yours truly  
G. E. M.

W. Va., Jan. 6, 1886.

GEN. ARMSTRONG,

Dear Sir:

I very much regret being compelled to apologize for not having complied with my obligation before now. However, I hope you have not classified me with those who make promises and soon forget them. I suppose you would like to know something about what I have been doing since leaving Hampton. As a teacher I have been very successful. I taught two years in Virginia; last year at B—, and the year before at S—. I am now teaching the second grade of the City school, and am getting along very well. I believe so far I have now forty-three pupils enrolled. There are five more teachers in the school besides myself, two ladies and three gentlemen. The colored people of this place, on a whole, are not a people who care very much for an education, and they have a tendency to discourage or in other words pull back one who tries to get an education. Please find enclosed a receipt for \$13.72 the amount due on my school bill.

Very respectfully,  
C.

It is a fact worthy of note that the most successful book subscription publishing houses in this country are those owned and controlled by men who commenced as canvassers themselves. B. F. Johnson, who is head of the house of B. F. Johnson & Co. of Richmond, spent eight years in the field, traveling through Va., and other Southern States. The junior member of this firm commenced canvassing for him a few years ago in S. C. with a cash capital of less than \$10. Now they have the largest and most efficient force of agents of any house in the South. Their large experience as canvassers enables them to place in the hands of their agents only such are books as adapted to the wants of the Southern people, consequently their agents share with them the reward of their good judgment in this matter.

**JAMES PYLE'S**

**PEARLINE**

The Great Invention,  
FOR EASY WASHING,

IN HAND OR SOFT, HOT OR COLD WATER.

Without Harm to FABRIC OR HANDS,  
and particularly adapted to *Washing Clothes*.

No family, rich or poor should be without it.  
Sold by all Grocers, but beware of vile imitations.  
**PEARLINE** is manufactured only by  
**JAMES PYLE, NEW YORK.**

The "boss" book agent of the South is Mr. W. T. Hopkins of Eastern N. C., who is working for the publishing house of B. F. Johnson & Co. of Richmond, Va. Mr. Hopkins' profits are frequently footed up to over \$200 a week, and it is thoroughly under the impression that the books published by B. F. Johnson & Co. sell faster than anything else on the face of the earth.

*Oake, Hughes Co., Dakota, June 14, '86.*

Only a few years ago the Teton tribe of the Dakota Indians were a wild race, knowing nothing of books and caring nothing for these things, fully content with their own mode of life. Their dwellings were made of the buffalo skin well tanned, with the fur left on and the flesh side handsomely trimmed with porcupine quills, or painted with red and black. The history of the head of the family and his ancestors. The deer skin well tanned, made their clothing in summer and in winter the buffalo robe was used for the winter. They used the same material, and though the Dakotas are a bareheaded race, yet we never see them with bare feet. Their food was buffalo meat, and corn, and the history of the corn, and corn. These were all dried to store away until needed and every woman must be taught the art. A young girl's first accomplishment was to be able to embroider on the buffalo robe, and the history of the porcupine quills, which were highly colored with roots, leaves, and colored earth. Their food was cooked in kettles made from the buffalo horn, and the history of the green and put over a stone the size of the kettle wanted, and when dried retained the shape. Water was put into it and the meat, and the history of the water, and the history of a hot stone put in to make the water boil. The stone was removed as fast as it cooled and another hot one put in, so the cooking was done. The food was served from the food well cooked too. The food was served from the kettles in wooden dishes carved from the knots of trees and was eaten with a common horn spoon. The women's work was to make the robes, and the history of the get the wood and water and do the cooking, but the men's work was fully as hard. They guarded the house, planned all hunts and the history of the family provisions and clothing. Their rude, uncultivated lives were not without reward. They had good health, and the history of their many old superstitions caused much mental and physical suffering.

Now how changed! Even if we would turn them back to their old mode of life, which may be a full of poetry, it would be impossible. Our civilization has already broken the spell. The white man's gun has laid low the Dakotas' means of subsistence. Now the well dressed buffalo robe, his home is a tent made from cloth which will not keep out the rain and snow. His clothing, half made of cloth, is not made of cloth, but of body from the cow, and government rations are far from being sufficient to support his physical needs. So, with starved bodies and minds, they are still clinging to their old worship of the many gods and are drifting away of their own accord from their old beliefs. We must turn their beclouded eyes into the light of knowledge, and not have them live in a world of darkness.

Our school at Oahe is trying in a small way to catch up the thread of some of the lives and weave them into a beautiful garment that shall cover the nakedness of the body laid bare to the world by the rapid decay of the old time garment of fear, superstition and ignorance. Here the missionaries are trying to please God and satisfy the hearts of the Indians' friends, by giving to these girls and boys a knowledge of our best civilization. The girls in this school range from five years old to eighteen years of age, boys from five to ten. The girls are taught to sew and I have been surprised to see little ones not more than seven years old, hemming and stitching beautifully; the older girls make their entire garments and do it well, while the wholesome bread baked by these girls, some of whom are not more than ten years old, shows that the time will come when there will be good, happy housekeepers among the people. They scrub the floors, clean the windows and do their own washing and mending. The mending is carefully done by the girls themselves when the clothes are taken from the wash. The chattering in English will not fail to remind one of the difficulties under which the children labor. It is no small thing to acquire a new tongue, as some of us know, and I saw girls who had only commenced English three years ago, working problems in interest and reciting page after page of history in fair English. The homes are feeling the influence of the lessons taught in school. We find fathers building houses of logs in order to make the children content to stay at home when they return from the school. Mothers make quilts of bright bits of calico and curtains of scarlet or blue for the windows, and so our little ones leave a home where there is no sign of home comfort and often return to a home that has much to make their lives more pleasant. While the teachers are laboring in season and out of season for the training of the children, the missionaries are laboring also in the homes. It is this faithful work in the homes that has made our boarding schools possible. A Dakota Bible in a family, and one to read it, inspire a heart with a desire for more knowledge of books, and the result is that the Dakota scholar is not content with his small library but learns English that the white man's books may no longer be sealed to him. These little ones are some of those of whom Jesus spoke when He said, "Suffer them to come unto Me." In the past, we, as a nation, have not only done nothing to save this race, but we have really not been willing even to "suffer them" to come into the light. This school at Oahe was built by personal work. We saw and felt the need of home training in this school, and the American Missionary Association could not supply the means, so we made effort and finally raised the money to put up the building.

We cannot now buy furniture any more rapidly than the money comes, for we have resolved not to create a debt. The windows are still wholly curtainless, the walls are bare, and there is only such furniture as is absolutely necessary to keep the students there. We need a thousand dollars now to put in the needed furniture before school opens in the fall. Whatever is done for Oahe is done for the Dakota, as follows: It is done for America as well as for the dear friends in the East who have done so much for us.

MARY C. C. COLLINS,  
Oahe, Hughes Co., Dakota.  
Mrs. Granger, "Old South Church, Boston," will receive donations to this object."

#### New Arrivals.

Mr. McDowell arrived at Hampton, Aug. 19th, with the new party of Indian students from Standing Rock, Dakota, as follows: Makcan, or Antoine de Rockbrain, aged 15—half breed.  
Mato-hasina, or James Bear Robe, aged 18.  
Mato-maza, or Jerome Iron Bear, aged 12.  
Tasapa, or Claude Bow, aged 23.  
Aguaninyanke, or Running-with, aged 23.  
Sunka-sda or Joseph Red-Horse, aged 18.  
Cetan, or Martin Hawk, aged 22.  
Nonpa-oph, or Shot-Twice, aged 19.  
Hupan, or Elk, aged 20.  
Heraka-peta, or Cassimir Fire Elk, aged 23.  
Pisicawin, or Fannie Cross Bear, aged 17.  
Tasagreduta, or Catherine Cross Bear, aged 15.  
Tasubeduta, or Julia Kathleen, aged 21.  
Wanbell, or Annie Eagle, aged 16.  
Zintkana, or Bird, aged 15.  
Awahinkita, or Mary Currier, aged 18.  
Takanukyusipi (Happy Road), or Bibi-  
anna One Dog, aged 16.  
Tasagreduta, or Her Red Cane, aged 14.  
Lucy No Ears, aged 15—half breed.  
Witanansaniwin, or Virgin, aged 21.

We give the names as they came to us. It is not the custom at Hampton to change them, unless, as may seem likely to

be the case with some of the present party, the students themselves, after awhile, prefer a more euphonious or civilized one. In spite of their moody and sullen, aboriginal names at present, they all looked very civilized, in full citizen's dress, and with hair neatly cut. The party seemed indeed, with few exceptions, a very good one in all respects. The report of their examination by our resident physician is given below, as usual.

Four can speak English, more or less; quite well. Claude Bow, who is a cripple, has been at school for seven years, and comes to be qualified for a teacher. He brought his books with him, and studied on the way.

Cetan, or Martin Hawk, showed some genius in the same direction, gathering the boys about him every evening on the cars to teach them English words, and to count to one hundred. The girl who speaks English is a sister of a Hampton girl who is now teaching on the reservation. She was a bright scholar in the government boarding school, and a mainstay in the housekeeping department. She was particularly regretfully by her teachers for her own good.

One of the girls had been at Mr. Riggs's school, at Oahe, but the attractions of home so near proved too much for her, and it was thought best to send her further from them. Two others, daughters of Chief Cross-Bear, attended a reservation day school, taught by a Hampton girl and her husband. They walked a day last winter, and never missed a day all last winter.

Mr. McDowell says that all were cheerful, observant, and ready to take in all they saw on their journey, and were unusually ready to talk with those who were, as usual, anxious to interview them. Indian etiquette of *nil admirari* was proof, however, against all its succession of novelties and wonders, until on their way to the Capitol in Washington, they almost flew out of the street car in their astonishment and delight at the sight of a goat carriage, driven by a small boy. The ice thus broken, they all uttered exclamations of *Tanka! Tanka! Big! Big!* at the bird's eye view from the top of the dome.

They seem remarkably cheerful and happy in their new surroundings. The boys have been assigned, according to their preferences and prospects at the agency, to various trades. Their spirit seems very earnest and good.

The intense heat, which surprises the inexperienced traveler in Dakota in the early summer, and makes him think there must be a North Torrid Zone, was even more mitigated than usual this summer, the mercury reaching 117 in the shade outdoors and 104 within. In such temperature it was impossible to go about much, and Mr. McDowell, consequently, saw few of our students, and those he had hoped to. He heard, however, good accounts of many, and saw some industriously working in the shops at Crow Creek and Standing Rock.

Mr. McDowell further reports that, in spite of the heat and some delays, he had a comfortable trip, and is greatly indebted to the courteous assistance of Mr. Allen, Mr. Percy Smith and Mr. Jaycox, passenger agents of the B. & O. C. M., & St. Paul, and of N. W. roads; and also to other officials, and to some of his fellow passengers. The students gave him no trouble. The four parties, that, on account of the arrangement of tickets, had to branch off from him at Chicago for Mandan, Yankton, Lower Brule, and Omaha, and those of their number put in charge, departed in dignified good order, and all arrived in safety at their destination. The baby travelers of the party behaved as well as babies could, and every girl was ambitious to relieve their natural guardians of part of their care. As his party caught the first sight of the Missouri from the windows of the train approaching Pierre, their delight rose to excitement, and when they crossed in skirts from Fort Bennett to Cheyenne River agency, tin cups flashed and splashed for a first sweet draught from the Big Muddy. At Cheyenne River he was pleased with his inspection of the pleasant school building of the Episcopal mission, and his interview with its superintendents, Mr. and Mrs. Kinney, who inquired with interest concerning the pupils at Hampton and the industrial training, of which he was just the man to tell them. The sister of one of our Hampton boys is doing finely in Geo. Le Roy Beyer's former commandant at Hampton, who had been transferred from Fort Lincoln with promotion to the position of Regimental Quarter Master.

At Santee Mr. McDowell had a most interesting visit to Rev. Alfred Riggs's fine school in summer session for the seventy pupils who live too far away to return home

for vacation. He was also greatly struck there with the advancement of the people, who, with the exception of a small class of clothing and ration for the aged and sick, are self-supporting. The new agent here, Mr. Hill, has the advantage, like Dr. McCasney, of long residence on the reservation, and was very pleasantly impressed with him, and also with Maj. Anderson, the new agent at Crow Creek, but had little opportunity to converse with the latter, who was occupied with the visit of the inspector. In respect to notice at Crow Creek, as at other agencies, was that blacksmithing and wheelwrighting are of first importance, then carpentering, then harness-making, and shoe-making. There are good opportunities for work at the first three trades, and a new shop was to be built, and the new school house to be again enlarged.

The mail wagon from Chamberlain to Crow Creek is run by "Dont-Know-How," "Mr. D. K. How," as he prefers to be styled. Though somewhat old, he is a "rustler," in the expressive dialect of the Plains. Another one, "Badger," drove Mr. McDowell to Highmore to take the train to lead Mandan, and they had a run of ten miles before a prairie fire. Mr. McDowell was impressed with the beauty of the country he passed through on the "Jim River Road," and with the interest and admiration expressed by many in the neighborhood of Standing Rock, for the great work Major McLaughlin has accomplished there. The people of La Grange, a town on the east shore of the Missouri, twenty miles below Standing Rock last July invited Rosa Bearface—a Hampton girl, whose school at Standing Rock drew enthusiasm from the Ho-man Committee, and was called to their remembrance in Congress last winter—to read the Declaration of Independence at their celebration of the Fourth. She went and "read it beautifully," they said, and with an accompaniment of piano and entertainment.

A distinguished candidate for admission to Hampton was Chief Rain-in-the-Face, a prominent Chief of Standing Rock, who has been trying hard to get an education, has learned to write, and followed Mr. McDowell about urging him to take him, but his age and other considerations obliged Mr. McDowell to decline the honor. Mr. McDowell visited Antelope's, Longfeather's, and Sitting Bull's camps, or farming headquarters rather, and others, and was greatly pleased with the condition of all. On the way up to Bismark, on the General Terry, with its genial Captain Woolfolk, he had a pleasant interview with Mr. and Mrs. Swift, whose long and noble work at St. Stephen's Episcopal mission, above Cheyenne River, has had telling effect on the Indians of that region.

The exceptional heat of the summer had disastrous effects on the crops everywhere. At Cheyenne River, Mr. Kinney's school boys were cutting oats as hay, not a head filled with grain in all sixty-five acres. He saw hundreds of acres of wheat that would never be cut. At Standing Rock a storm on the 3d of July had finished up what the drought had left on a path of six miles in width. Mr. McDowell thinks the Indians in general, and those he has seen, remarkably well under all their discouragements and disadvantages.

#### MEDICAL REPORT.

Hampton, Va., Aug. 23, 1886.

General S. C. Armstrong—

Dear Sir:—The party of twenty Indians, which arrived Aug. 19th, was examined by me on the day following their arrival.

The ten girls passed a favorable examination. Two have had scrofulous enlargement of the cervical glands; one of these has incipient phthisis, and will require constant care if she remains. Two are somewhat delicate in appearance, but without evidence of present disease.

Eight of the boys are well developed and robust in appearance. One, who is apparently sound in every other respect, is lame from an injury received when eleven years of age but will be able to fill his place in one of the industries. Two have unsound lungs. (In one case the local disease is of such considerable extent as to suggest a grave prognosis.) The other case is less marked. The boys should be returned with the next party. One of them confessed that his desire to come to this school was so great that he used what means he could to deceive in his health examination at home. It is a case for profound regret that any who are feeble or otherwise incapacitated should be sent from home to fill the places of others who could make future use of their instruction.

Yours respectfully,

M. M. WALDRON, M. D.

#### From an Indian Graduate.

GENOA, NEBRASKA, Aug. 20, 1886.

Gen. S. C. Armstrong.

Dear Sir:—I am going to write a letter to you this morning, and tell you of my life and how I have been getting along since I returned home. I kept house for my sisters and father since I came home until February. I accompanied one of my sisters to school. I have been trying to do my level best since I have been home, and have succeeded in keeping my good name. I have tried since I have come home to teach, and I cannot, for there is not a vacant place anywhere. At my home there was a vacancy, so applied for the place, and I had an answer last evening from the Department, telling me that the place was already filled by an Indian girl, so you see I always strive for positions and fail to obtain them. I am not discouraged though, for I am determined to keep my good name, and I have worked here like every other pupil, and since July I have helped the head clerk in doing the clerical work. I enjoy my work very much. General, this is a good Indian school. The Superintendent is a good young man, and shows a great deal of interest in all of us, and has improved everything since he took charge last September. The children have improved since I came here. There are over one hundred and fifty pupils here from Dakota, and Nebraska; tribes represented are Omaha, Winnebago, Arickaree, Mandan, and Pawnee. The boys work all day now, some, and they are going to get double pay, the girls the same. If you could walk in any Sunday morning you would see over one hundred and fifty Indian children dressed in the best Sunday clothes, neatly and clean, and behaving as well as any white children. Every Sunday morning we have service, and in school time we had different Sunday school classes. I taught the little children; all can say the ten commandments and part of the church catechism. They are bright and grow more intelligent every day. I am very proud to tell you that one of the old Hampton boys is here (Kawhat), a Mandan, but he is called Thomas Suckly now. He is doing very well, and speaks English very nicely.

The front yard of our building is fixed very nicely, a flagstaff in the centre and a U. S. flag is waving here; it is a new one too. Each tribe planted a tree last Arbor Day, and they are doing nicely—a boy from each tribe, I mean to say. The children have swings, see-saws, ball playing, and many other out-of-door games, which are enjoyed by us all. It is wonderful how much repairing is going on, and we expect to have a new building, which will add to the looks and improvement to the school. The girls, I must say, are very good; they keep their room, hall and kitchen clean, and you would hear their clear voices ringing while in their large sewing-room, if you walked in any morning. They do all kinds of house-work; even the little ones have charge of rooms, and keep them very neat. They keep their clothes looking neatly and their bureaus, and I think Hampton girls would say so too if they saw the dormitories here.

The teachers are earnest workers; our Macon is very good to us, and also the teachers in the school room. One of the teachers, Miss Chandler, sings for us always. Miss Parton has charge of the sewing room. We tease her lots of times, but she is so good-natured that she is not much minded by all of the girls since she went away for her vacation. Mrs. Granger has charge of the hospitals; very kind to all, and always has something good for us if we go to her room.

All are good and earnest workers, and I know this school will be one of the best schools in this country some of these days. The boys don't smoke any more; all behave like gentlemen, and they work on the farm, carpenter shop, shoe shop, and blacksmith shop in the town; all are learning something every day. An Episcopal minister holds service here every month. I close with good wishes to you all at Hampton.

Yours very respectfully,

JULIA J. ST. CYR.

One of our returned Indian girls writes from the West: "General, will you take my sister and my little brother into your school? Both are healthy and will be helpful. If you can take them, I'll bring them, paying my way, if you can get transportation for them."

#### DENTISTRY.

Dr. T. H. Parramore,

begs to inform the residents of Hampton, and vicinity, that he has resumed the office of his profession in Hampton. Office on King Street, opposite Barnes' Hotel.

## Report from the Omahas.

Mr. Frank La Flesche, an educated and intelligent young man of the Omaha tribe, a brother of Bright Eyes, and for the last five years a clerk in the Indian Bureau at Washington, spent a day at Hampton recently, and brought the latest reports from the reservation, which he has just visited. There are 1200 Omahas, all of whom are now settled on their lands in severalty with good titles—secured, as will be remembered, through Miss Alice Fletcher's untiring exertions. These are made inalienable for 25 years, giving heads of families 160 acres, and single persons over eighteen 80 acres, under eighteen 40 acres each. Mr. La Flesche says the patents were received in July, and the people now feel encouraged to go ahead.

He says the crops have been somewhat injured by a severe drought of six weeks, but are moderately good, and, taking the whole of the reservation, compare favorably with those of the white farmers around it. There were a few who did not work, but lay around hoping to be appointed as councilmen or policemen. There are still nine councilmen allowed, who appoint their own successors, and are confirmed by the agent. He thinks this a relic of barbarism, which ought to be done away with at once. It keeps up a show of the old chiefs' power, to no purpose but to deceive the people and divert them from work and sense of their real status under the law. The councils spend their time in idle feasting and talk, in which the lazy and non-progressive join to elect one for appointments. These do not get re-elected, they have no real authority, and are not needed.

The same Act of Congress which in 1882 gave the Omahas their patents, gave them all the rights of citizens except the suffrage. They can appear in the courts of the county and State, can sue and be sued for any injuries either between Indians and Indians or Indians and whites. It will take some little while for all to appreciate the fact, but Mr. La Flesche thinks "it needs only one or two lawsuits to straighten out things," and show them where they stand. "One case of assault tried, and the offender punished according to the laws of the State, would make a good impression." A complaint is about to be carried before the courts in this way, instead of to the council, and it will have a good effect. Mr. La Flesche says that he has never heard of any annoyance resulting from the inability to dispose of a portion of land on removing to another part of the reservation at marriage. There is no obstacle to employing another Indian to cultivate one's land. Mr. La Flesche has his own eighty acres thus cared for, but intends to settle on it some day. He says it is rather unfortunate that the last progress of the tribe are chiefly settled on the part of the reservation most likely to be entered first by visitors. About a third are not progressive. The rest, though not all, have accepted Christianity, are trying to advance, and want to educate their children.

They have received no rations for about twenty years. The annual receipts of money resulting from former sales of land had dwindled to two or three dollars apiece, but for the last two years have risen to \$7, since the dropping of all government employees but the agent. The present Secretary and Commissioner favored giving them the principal in two payments of \$4,500, but Congress has taken no action on it as yet. Mr. La Flesche does not think that any stopped work in expectation of this. Some went in debt, but bought agricultural implements and horses.

He agrees with Mr. Harrison, that a good agent should be retained to encourage and guide them, and teach them the laws and their duties under them. They have an agent who resides on the Winnebago reservation adjoining, and visits them about once in two months. As for other employees, he thinks they are not needed, and it is better that they should learn self-dependence. Blacksmithing and carpentering can be done in the neighboring towns, or some could set up shops of their own, and \$300 or so when there is no more hope, will be employed by government to allow systems of \$300. Policemen also have been dropped for some months, and are no more needed, as all arrests can and should be made by the regular county officers.

There are good physicians in the towns around, who respond to any call, and are better than many agency doctors. The towns of Decatur, Bancroft, and Peader, are right on the edge of the reservation, and Lyons is but five miles away. The Indians do much trading there, selling grain and vegetables. Some few get cheated, but most have learned to hold their own. White farmers also are settled close around them. The white people generally are kind and pleasant. Some doubtless covet the land, which is very good, though, like prairie land generally, hard to break. Some

told Mr. La Flesche that the western portion of the reservation, which is open for sale, is spoiled because the Indians have caused no work. They did not complain of them, however, except as non-taxpayers, who could not help support day schools. Cultivated land in the neighborhood sells up to \$20 an acre; uncultivated from \$3 to \$12. The Indian land will probably bring \$9.

A Presbyterian mission has been established there for thirty years. Mr. La Flesche went to the mission school himself when a boy, and regrets that it is now confined to girls alone. He speaks highly of Mrs. Wade, the teacher, and the missionary, Mr. Cope, who has now, however, removed to the less progressive part of the reservation, where he started a night school, but the young Indians got tired of it. A night school is considered a severe test of character at Hampton. He hopes he will not be discouraged there. He did not see the government boarding and industrial school in session.

Mr. La Flesche brings a good report of the students returned from Hampton, especially the two young Indian families, who have built houses with money loaned by Eastern friends of Hampton. Philip Stabler is living in his. Noah Flesche is nearly completed, and both are doing well. Their influence is good, and many other couples want to come to school. Mr. La Flesche's own father, one of the most progressive of the Omahas, has a nice frame house of four rooms, worth \$800, and a farm with 110 acres under cultivation and 50 in hay. His two daughters—one of whom graduated at Hampton last year, and will return East to study medicine in the fall—the other returning to graduate at Hampton—have worked in the hay field to help their father this summer. Mr. La Flesche thinks his sister will have a great field of usefulness as a physician, especially in instructing the women of her tribe in the laws of health.

The people are poor; the majority, he thinks, live chiefly on corn and vegetables, with meat but once a week, mostly pork, which they have learned to like. They drink coffee, but don't like milk, and don't know how to make butter. Those who are well off have chickens and eat eggs. He thinks many of the white settlers around have meat more than twice a week.

Mr. La Flesche thinks highly of the agent, Gen. Holman, of Nebraska, whose appointment has lately been confirmed. He thinks that while there has been hardly time for the effects of the changed conditions to be seen, and some friction is natural at first, and some difficulty for the old people to conform to the new order, the chances for the young people are good, and the outlook generally very hopeful. The crowning privilege of citizenship, the suffrage, should follow, the sooner the better, perhaps for their final security on their land, though at present, naturally, the majority of the Indians are indifferent to it, and the number of able voters is too small to be cared for much probably by the State.

Our friends will be interested in the following letter from the Hampton Indian graduate, and would-be medical student whose case is presented in another column. It was published in the *Christian Register*, and is sent us by the lady to whom it was addressed, who fills the office of correspondent to Hampton graduates:

"I am very glad to hear from you, and to read the words of encouragement contained in your letter and circular. I feel that such words are needful to me in my new undertaking.

It is natural, of course, for one to feel lonely on first arrival among strangers. I had such feelings, and it seemed, as though I was truly alone, being so far from home, but am glad to say not very far from friends.

I have been too busily engaged with my studies, which are this term Latin, French, and geometry, to allow myself to indulge too freely in lonely and cast-down thoughts.

Last June on finishing the course at Hampton, I returned to my home in the Indian Territory, where four months ago I spent very pleasantly among friends and in teaching the school at the Agency. I considered myself very fortunate in obtaining the position, because many returned Indian students from Hampton are not able to obtain employment of any sort and are at last forced to return to their old customs and ways, in order that they may not suffer from the boys from my Agency who attended school at Hampton are doing very well, except two. They are not wholly lost.

My term of school was of short duration, only lasting two months. As I had to leave on short notice for the East, I closed school

Friday, at noon, and came away the following Saturday morning.

It was with a feeling of regret that I left the little flock of children that I had come to know and to teach. Although teaching was not a very agreeable occupation to me, still I would have been willing to continue to teach for some time to come.

I had twenty very bright Indians in my school, the average age being eight years. They were very anxious to learn, and all seemed to take a delight in coming into the school-room to study and recite. They were not very advanced in studies; and, of course, children of their age were not expected to be. To those who had never before attended school, everything was entirely new to them. People who have been accustomed to live in civilized society, and have never had occasion to change their mode of living, cannot conceive what a very difficult thing it is to change from a nomadic and idle life to a life which causes them to stir and put energy into each day's duties. But these children, when they enter school, are changing from a life which they have learned to love to a life that is new and strange to them. They, as a general thing, do not at first make very rapid progress—not because they are not willing to study, but because they have disadvantages, the greatest of which is the English language that they are required to learn. I found them willing to learn anything, whether the thing to be learned was in the school-room or in the field, or in the house.

The school buildings are situated at the Sac and Fox Agency. The name generally applied to this school is the Manual Labor Boarding School. It is capable of accommodating some forty or forty-five students. It is a brick structure, and really never was a fit building for a school. The government employed men to build, and they did not care to do a very good job. The money was all they worked for, and they got it, with very little substantial work. Some little distance from the main building stands the school-house, made of brick also, and is capable of seating forty or forty-five scholars, and is very well furnished inside with blackboards, maps, tables, and other small things necessary for a school-room. It is well ventilated and has plenty of light. Considering all these things I thought myself very fortunate in being so blessed with such favorable surroundings, when so many of the students who go out to school are in small huts in which to teach. There is a great deal of courage shown in that respect among the colored graduates of Hampton. Notwithstanding their discouraging surroundings, they go ahead and do the best they can. I hope in time, that their efforts among their people, as well as our efforts among our people, may prove successful and lead to the betterment of the people of the Negro and that of the Indian may soon be solved. And when the time does come when the Indian will not be looked upon as one of the despised races, but as a citizen and the same rights as citizens of these United States, there will be, I think, a feeling of pride in many a man's bosom whose skin they say, is red.

My surroundings here are pleasant. My main object here is to learn the Latin language, which is necessary in the study of medicine. I shall spend one more year here, and by that time I shall have enough Latin to go ahead with my medical studies. I expect to return home when my course is finished, where I have a splendid chance of helping in the great work of doing some good for those of my race who need help. A good doctor can do a great deal of good among such people, and I hope that I may be able to do some good for my people when I return.

In reply to the question in regard to my life here coming to school, I shall, although reluctantly, give you a short description of it.

I must say it was not a very profitable one. I was what they call a wild and reckless fellow, little thinking or caring what became of me. My principal occupation was herding cattle—"a cow-boy," as one is generally termed who herds cattle.

Men who come out in the far West and follow herding, soon become very wicked and reckless. They acquire all the bad habits one can imagine, although the majority are honest. Being thrown in such society, as my work was among them, I soon became like them.

This kind of life went on for some time, and at last I longed for a change. I did not think at the time I would change that I left for a school life, and, when I was first asked to come East to school, I was very indignant. But, by consideration and persuasion, I at last concluded to come. I have never had cause to regret that step, because it was a turning point in my life, and now I see the good, I hope, with the help of the Great Spirit, to continue on in the good way."

THOMAS NILES.

## The Earthquake.

An observer seated in a corner room on the fourth floor of Virginia Hall, thus describes his experience of the recent earthquake:

"I was sitting in a rocking chair, reading aloud, when suddenly I felt my chair slightly shaken, with a sensation of something striking the rocker. The feeling instantly recalled that of the earthquake of two years ago, as I had felt it in Litchfield, Connecticut, and I was on the point of speaking of it when I felt it again more slightly, and, no one else in the room seeming to notice it, I concluded that I had rocked over something, or some inequality of the floor, and went on reading, with only a moment's pause. I hadn't read through another paragraph when the whole room seemed in motion, windows rattling and the floor heaving and rocking. We all sprang at once to our feet, with the one thought that the walls would fall in another moment. Out into the corridor we ran—then the thought of others forced us into a moment's deliberation: 'Shall we call the girls?' The shock has passed. A panic might be worse than an earthquake. Lights were out; all seemed quiet; perhaps they would sleep through it; it would be better so. We hurried to see how others were doing; the Doctor to look after her patients. As we reached the first floor a third shock came, little more than a vibrant tremble, the end of the wave. We found a group of teachers gathered on the porch recounting their various experiences. Only one distinguished herself as having felt anything though standing by her bureau 'quite awake.' The girls, by hearing others leave their rooms. Every one thought of the church tower, which had been so recently struck by lightning, but it looked very straight and solid, and no one cared to make a closer inspection that night. Of course the boys were out, the highest dwellers on the ground first, as from the mill tower and top floor of the Academic, while the wooden 'cottages' felt the shock less and kept some of their inmates. The Wigwam was deserted of its Indians, but though one relieved his feelings in a wild chant, all were really very orderly, and there was no disturbance on the grounds. A good report came back from the few sick ones. 'All right, nobody alarmed or excited.' So we turned back to look again after the girls we had left quiet in bed five minutes before. Every corridor and staircase was lined with double rows of ghostly white-robed figures, solemn and still. Some were praying aloud, but all were too frightened to go into hysterics. 'I don't know where my room is no more than nothing,' pitiously exclaimed one, too slightly robed for safety. It would have been cruel to command them back to bed, and with kind words they were guided back to their rooms and encouraged to dress sufficiently to protect themselves from the cold, and then gathered into the girls' sitting room on the first floor, till their nerves were sufficiently quieted to go back to their rooms, all but those on the top floor, who were provided for at a lower level. There was, fortunately, not a sick girl in the building. The Indian girls in Winona Lodge behaved with still more equanimity. After Western thunder, storms, hail stones, prairie fires, and cyclones, I suppose a moderate Eastern earthquake would shake one up much. The rest of the night passed in quiet, but some who sought a more stable resting place on the first story were heard in the morning to make comparisons between earthquakes and mosquitoes rather disparaging to the former."

With encouraging crop prospects more books and Bibles will be distributed throughout the South this summer and fall than for many years before. B. F. Johnson & Co., the well known publishers of Richmond, have been expecting and are prepared to meet any reasonable demands that may be made upon them. Those who have not yet made arrangements to work for them this season had better communicate with them at once.

### Missionary Work.

VALENTINOV, delivered at the Eighteenth Anniversary of the Hampton Institute, May 20th, 1896, by Martin Woodin, of Philadelphia, Pa.

What is a missionary? The title is generally applied to one who goes to foreign lands, teaching and preaching to the heathen. But we have learned here to look at it from a broader standpoint. We have learned that missionaries are those who have at heart the interest of others—those who live and work, and are willing to die for the uplifting of ignorant, debased, and down-trodden humanity, whether it be found in foreign lands, in our own town, or even in our own household.

And while we are mindful of the importance of foreign missions, it seems to us that the first duty of the missionary is at home, for if we are not right ourselves, how can we expect to show others the right way? And it is in the home that the germ of civilization is found. It was from there that Christ started his mission on earth. All the influences that have civilized and Christianized the world in the past have come directly or indirectly from the home, and all the influences which are to continue the good work must come from the home.

When parents learn the responsibility that rests upon them, children will no longer crowd the House of Refuge, the jail, and the penitentiary, but will fill such places as Atlanta University, Lincoln, Fiske, Howard, Oberlin, Yale and Harvard, and last, but not the least, the Hampton Normal and Agricultural Institute. The greatest lesson that we are being taught here is, that we should live to help those who need our help, and are trying to help themselves.

There is no place in which the need of mission work is more apparent than in our own Southern land, among our own people, and, I might say, in our own immediate neighborhood. There are scores of old people, right around us here, who are poor and infirm—people who are not able to earn their own living—illiterate people, who have neither the comforts of the body nor the mind. Then the country around us is thickly dotted with *gin-shops*, which are ruining the characters, and blighting the lives of many of the young men, and I am sorry to say, not the young alone nor the men alone.

To enter this great home mission field there was organized, a few years ago, a Young People's Christian Association. In small companies we go out every Sunday, in various directions, teaching Sunday schools, visiting cabins, the poor house and the jail; establishing Sunday schools and prayer meetings in the country around, and missionary and temperance societies in the churches and school houses.

The most interesting of our work, to me, is our visits to the cottages and cabins. We visit some families who are perhaps more destitute than any you have ever seen, more ignorant than you can imagine. It makes one's heart ache to see some of the poor souls as we have visited them in their humble homes.

Two of our teachers went out with me one Sunday to see an old man and his wife, and found their house surrounded by water to the door. By wading over our shoetops we reached the half-tumbled down cabin only to learn that the old people had been without food for two days. I have more than once found them in rainy weather with scarcely a dry place in their house—in snowy weather with their beds and floor sprinkled with snow, such was the open condition of their cabins.

At one time there was brought to our notice the case of a family living three or four miles back in the woods, who were more ignorant than one could believe. The wife had not been out to the public road for twenty years, and a little daughter, ten years old, had never been out of the woods, nor seen more than three or four persons beside her own family in all her life.

I had the honor, for it is an honor to help the poor, of carrying them a dinner last Christmas, and found them very much improved. The little girl, instead of crying when spoken to, as she did one year ago, seemed quite bright, and this Spring has been attending Sunday school and also the public school.

While we meet with a good deal of opposition in our temperance work we have also many encouragements. Though many of the fathers and older young men turn a deaf ear to our earnest pleadings for temperance, we are winning over to our side the most promising part of the families—the mothers and little children.

We feel that if we can get the mothers and children we shall soon be able to reach the whole community.

We have been able, through the blessing of God and the kindness of our Northern friends, to build two school houses and two dwelling houses, to repair several little cabins, and to relieve suffering in many other ways.

One of the pleasant things about our work, to me, is, that our most worthy ob-

jects of charity show no disposition to beg, but are more than grateful for what we do for them.

I have not told the half, and on the other hand I would not have you understand that the majority of our people here are in a peaceful condition. There are many self-sustaining, and some very comfortably situated people around us, but it is in accordance with human nature to be selfish, and as it has been said, "The great caravan is moving on," and there are many of these old people who drop behind, are forgotten, and left to the mercy of charity.

Since the Local Option Bill has passed our Legislative Assembly, our energies are all bent on making fight, and, by the help of God, carrying our surrounding neighborhood fur no license, and we hope to be able to carry our point.

When our Southern land shall be thronged with sober, honest, earnest, and industrious men of the Negro race—men whose heads, hearts, and hands, are educated—with intelligent, virtuous women—women who have some true purpose at heart—women who realize that while men mould babies, they should mould character, establish homes, and build up society—when our "Sunny South" shall be thronged with such characters, then shall we be a people of whom America will not be ashamed. Then we shall have our homes, then we shall have our farms and business establishments. Our present trouble will be near at an end, prejudice will be on the downward road, and the sunlight of happiness will fall as directly upon the American Negro of the South as upon any people of this great land in which we live.

### THE HAMPTON NORMAL AND AGRICULTURAL INSTITUTE,

AT HAMPTON VIRGINIA.

S. C. ARMSTRONG, F. N. GILMAN.

Principal. Treasurer.

No. of Colored students, 462

No. of Indian " 139

Total 601.

A little more than half are girls; average age, 17 years.

The object is the practical Christian education of these two races; especially the training of teachers.

It is a private, chartered institution, owned and controlled by a Board of seventeen Trustees, with a majority of no denomination.

It is aided by the State as an agricultural school, and the Government pays \$107.00 apiece annually for 120 Indians, but it needs from private charity every year for its support, the sum of fifty thousand dollars.

About half of this has been given in the form of Annual Scholarships of seventy dollars a year, which pays the tuition or cost of education of one who pays in labor for board, clothing and books.

It needs a partial endowment fund.

Five Hundred Thousand Dollars are asked for that purpose.

Circulars and general information sent on application to the Principal.

REUTER & MALLORY,

22 LIGHT ST.

BALTIMORE, Md.,

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Crichton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equaled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness. Malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being specially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery offering delightful drives by day and filled with picturesquely scenic offering especially attractive romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Sea-board. For sleeplessness and nervousness, the delicious to rest of the pure ocean air and the lullaby of the waves roll up to the sandy beach, but a few feet from the bed-room windows, are most healthful soporifics of the Hygeia.

## Hampton School Record.

VOL. XV.

HAMPTON, VA., OCTOBER, 1886.

No. 10.

School opens October 1st, with promise of very full attendance.

The agitation of the Prohibition question in the South is likely to have results altogether beyond the expectations of those who inaugurated it, and in its present phase presents a particularly interesting study. The fact that it is the Negro districts which make the best showing for prohibition has its bearing not only upon the temperance question, but upon certain economic problems which for some years have been a serious feature in Southern life.

The growing tendency of the Negro to spend his own meagre earnings in the rum-shop instead of for the support of his family, has been made more heinous in the sight of his white neighbors by the fact that it has been supplemented by a tendency to make use of his neighbor's goods when his own proved insufficient to meet the demand upon them, and as the root of the evil lay indirectly in the temptation which the too frequent rum-shop offered to his pliable nature, the result has been, in the districts which are most at the mercy of the colored man, to throw the white vote, as a matter of self defence, wholly in favor of prohibition.

The breaking down of party and race lines which this necessitates has produced a certain confusion in the political arena which has not yet had time to settle itself, but which is manifestly beyond the power of politicians to control, and this has been increased by the readiness of the best men of both races and all parties, to unite for the support of the prohibition idea.

Again, the struggles of both parties to obtain the Negro vote are having their effect upon all temperance legislation, varying, of course, as the local conditions vary, but being always and everywhere reacted upon by the strong feeling which the present agitation has crystallized into something like unity of action. We have seen no better illustration of the practical shape which things are taking than is given in the following letter from Jackson, Miss., published in the *Voice*, and detailing the incidents of the Prohibition campaign in Hinds Co. In this county (the most thickly populated in the State) there are three Negroes to every white, and as therefore the colored vote was essential to success, the efforts of both "wet" and "dry" factions were unremitting. The "wets" fell back upon their trump card and tried to persuade the Negroes that the success of prohibition was only the first step toward their re-enslavement, the argument being that taking away their liberties in one direction could be nothing less than the prelude to taking them away entirely. How the "drys" met this is best told by themselves and goes to show that an extremely rely campaign can be carried on without the assistance of alcoholic stimulants:

"In this state of things a convention was called at Raymond five days before the election. About 100 of the best men in the county of all callings and of both races were present. After reviewing the situation and deploring the race issue thrust upon us, it was resolved to meet the crisis, and with 'terrible earnestness' in the interest of all the people, it was resolved to carry the county. No threat was made, but this grave assemblage of preachers, lawyers, physicians, farmers, merchants—men of both races—solemnly called upon the people to rise up and rebuke the unholy purposes of the whiskey ring. The word was given the county. Nine-tenths of the white people

and practically all the colored preachers and teachers were on the side of 'Prohibition,' as were all the educated colored people except two or three politicians. All business was practically suspended, and the men and women gave themselves to the one thing of carrying the county. The people were of one mind and they pressed the fight with great vigor and wisdom. Not a single act of violence was perpetrated, but the whiskey men were not allowed to address the Negroes anywhere without the presence of Prohibitionists. This paralyzed them. They were compelled to divide time at many places. No attempt was made to break up their meetings. The stories telegraphed over the country are fabrications.

No sooner had the Raymond resolutions voiced the sentiment of the good people of the country than the whiskey leaders quailed and lost heart. They began to explain, deny, and beg. Their following melted away before the simoon of hot indignation which their conduct had raised and which swept the country as dry as the summer threshing-floor. Prohibitionists, on the other hand, waxed valiant in light, and pressed their victory till the closing of the polls. Never did this county witness such a scene. In Jackson the women had an all day prayer-meeting, and bells were tolled. Telegrams were received from other counties, saying: 'We are praying for you.' The whiskey majority in this city, their stronghold, melted down from a boasted 600 to 300, and they do not claim any interference here. Many colored men secretly voted 'dry.' More than an average vote was polled in this county, and the majority for prohibition in the county was 1,230."

The Boston *Transcript* (Rep.) offers some very sensible advice to the colored people of the South, in a recent editorial, from which we clip the following:

"The sooner the Negroes refuse to play the role of professional political martyrs for or against any political party, the sooner will the class stigma be forgotten." "The Republican party, long ago, did everything for them that law and government can; it can never legislate them into social equality. But every black man's or woman's individual abilities, character, wealth, and accomplishments, will, undoubtedly have due recognition here as in Europe, fifty years hence. The key of gold will unlock many a barrier, and with the showing of the census statistics there must be a class of wealthy colored men arising even in the South. We have yet to witness in this country the social phenomena that would surround a colored millionaire in New York; and the effect of two or three generations of wealth and culture on a colored family is wholly unknown. It will only retard such developments to have the colored people continually depending on their mass and class rather than on individual personal manhood."

Nothing is more noticeable in the development of our ex-slave population than the fact to which the last sentence quoted above draws attention. They have not yet acquired the knowledge of social laws which would enable them to understand the distinctions which society makes between individuals, or to appreciate the fact that these distinctions are based upon a variety of causes, of which race prejudice is only one. It is as yet difficult to make them see that society would close its doors against all but a small proportion of their people—even were they to be transformed physically into the purest Caucasian type, should they remain otherwise as they are now, viz., unequal in all directions to the demands which society makes upon its members. They cannot measure themselves by ordinary standards, because they are ignorant in regard to them, and a first result of this ignorance is, unfortunately, to intensify their conviction that they are socially proscribed solely because they are Negroes.

As a matter of fact there are probably few cultivated people in this country who would refuse to receive at their tables a colored man or woman who in education or culture was fairly their equal, and there is no difficulty in opening doors when once the right key is found.

It is, as the *Transcript* says, a question of individual development, and it will not be long, we believe, before a few colored men and women will be able to prove their claim to the best that society can give, and in their own persons and experiences will settle, with little or no friction, that "social difficulty."

"The Negro" is the striking title of a new monthly magazine just started to represent "the best Negro culture, and discuss Southern race problems from the Freedman's standpoint." If these purposes are well carried out, it will be an interesting and valuable contribution to the literature of the Negro question, and we hope it will be encouraged. The first number is attractive in appearance, well printed, with good type and paper. Besides the editorial introduction and general notes, its articles are on characteristics of Negro Christianity, institutions devoted to Negro education, the poor whites of the South, and a poem reprinted from the A. M. Church Review, whose title, "AFRERICA," we took for a misprint till we discovered it to be a new-coined title for the African-American woman. The verses, by a representative of the class, have merit and interest:

"No Jewess, when in Goshen wronged,  
In trusting God'er firmer stood  
Than sad America, who, through  
The thickening of the midnight gloom,  
Looked steadfast on the North Star true,  
And knew Jehovah held her doom.  
So pass for twice a century,  
She sang the song of jubilee."

We give the whole poem on another page. Some mistakes are only to be expected, as counting Hampton Institute in the list of schools "under denominational and State supervision," and some extravagance and bitterness, as in declaring that "Nashville and Atlantic are conspicuous examples of Christian malevolence in the matter of rival institutions," and arraigning Dr. Haygood's book on "Our Brother in Black" as "a truculent and vicious apology for race proscription and Southern domination." On the other hand we note with pleasure such sound thoughts as "Small farms held by contract for a fixed term of years, or, better still, actual proprietary control, with a system of rotary crops and local production of all food consumed, will do more for the matter of social regeneration than any other movement." "A general diffusion of knowledge of the most elementary type is to be preferred to a small number of well-trained but isolated individuals." "Good normal and industrial training schools are an urgent necessity and indispensable to Negro education; the first imparts a needed literary culture, the other creates a respect for work without which no people can succeed. Industrial education will prove a leading factor in Southern regeneration. The Negroes are inured to toil as farmers and mechanics, but in neither capacity are they trained workmen. To educate them to an honest, competent, and exact performance of all industrial pursuits will be an inestimable

achievement." In the illustrated article on the "Poor Whites of the South," the writer takes fair enjoyment in showing that superstition is not all of one color, in the description of a poor white man's funeral he attended. "He commenced to sink after dinner time yesterday," said the sorrow-faced wife and mother, "right after there had been a young hoot-owl come and lit on that tree in front of the door and hooted, and he turns his eye on me and he says, 'Melindy, my time hez come; that's the token,' and he never spoke nary no ther word ontill he died." "One of the men said in a low tone, 'I know'd three weeks ago as how thar was a goin' to be a death in our settlement, 'case one of our dogs came in whar my wife was a-sittin', and walked around and round her cherr three times, and then laid down by her feet.'"

"BLOOD THICKER THAN WATER. A FEW DAYS AMONG OUR SOUTHERN NEIGHBORS;"—BY HENRY M. FIELD, D. D.

Without the "Strange Adventures of a Phaeton," or the exciting emotions of proprietorship of an "American Four-in-Hand in Great Britain," Dr. Field carries his readers with him on a pleasant special-car trip through the principal Southern States, in company with a round half-dozen of capitalists, merchants, railroad men, oil men and cotton men, but, as he reassures us, "whatever they might be in Wall Street—whether bulls or bears or ravenous wolves, in this latter circle, very quiet gentlemen, each disposed to add to the happiness of all."

The New York-Southerner "Cotton King," Mr. John H. Inman, who organized and invited the party, made a good selection of so genial a historian as Dr. Field, some of whose friends he tells us, "have a quiet smile at his enthusiasm," telling him that he "finds good in every country and every people." From the plate glass windowed King's chamber of a Presidential special, the guest "honored with the deference of the lords temporal to the one lord spiritual among them," could not fail, of course, to see the bright side of things, and why shouldn't it be seen and "made a note on?" It is a pleasant thing for the eyes to behold the sun, a pleasant thing for brethren to dwell together in unity, and the unity is fostered by the sunshine and the enthusiasm—else were blood indeed no thicker than water. The special takes a zig-zag course from Washington, south by west to Atlanta by the Virginia, Midland and Piedmont Air Line, the West Point line to Montgomery, the Louisville & Nashville to Montgomery and New Orleans, their southern goal; "Every morning waking up in a new state; one day it is Georgia, then it is Tennessee, now it is Alabama; stopping now and then at points of historic association or present commercial interest; reviving memories of the old South, or inspecting the progress of the new South; welcomed and feted everywhere, meeting distinguished people, making eloquent speeches, exchanging good stories and fraternal sentiments. At the stations, 'alive with colored folk of both sexes and every age,' he 'observed with satisfaction the absence of a cowed look which is the badge of servitude stamped on the forehead. Now they are free and show it in every motion. At Charlotte he asks the owner of a cotton factory 'How do you get along with the Negroes, how they are free?'

"Very well," he said, "though they are not suited to the factory work as well as to the field. A Negro works with his hands rather than his brain. Set him to watch a loom where he has nothing to do but to keep his eyes open, and before he knows it he will be fast asleep." Quite a contrary testimony was given by Maj. Booker, an ex-Confederate officer, he met in the army, who during the war, finding the army suffering from difficulty in procuring proper equipments, the white carpenters, blacksmiths, wagon makers, saddlers and harness makers being all drafted for the army, conceived the idea of training the Negroes to be skilled mechanics, and established thus a large manufactory whose great success showed at once the capacity of the Negro and the wonderful skill and energy of the men who afterwards organized the great Exposition at New Orleans. "Biddle", "Atlanta", and "Fisk" Universities were visited with interest by the party, as well as Vanderbilt University. The iron works of South Pittsburg, Tennessee, and Birmingham, Alabama, inspired them to prophecies of the great future before these States with the development of their vast buried wealth. They found the residents of these towns ready converts to the Pennsylvania doctrine of protection. At Montgomery they were formally received by Governor Alexander O'Neal, one of Stonewall Jackson's lieutenants—but bronzed old soldier as he is, the very picture of gentleness, responding warmly to the sentiment "Liberty and Union forever." They dined with him, and Dr. Field says "I am not a bit disturbed at meeting the Confederate Brigadiers, for I found them brave men, and however I dislike the cause for which they fought, I can but appreciate their heroic courage. Recognizing this, I could say in truth, in the few words that fell to me, that much as we might mourn the calamity of war, it had at least one good effect, viz: to inspire the combatants a profound regard for each other. Apropos to the Southern manifestation of this fact, the Dr. says: "They do not object to telling a story against themselves. A very good one they tell here of Judge Rice, a well known Alabamian who before the war declared the Yankees would run like sheep and he would whip them with pop guns. When reminded after the war of his boast, he replied 'with wit that disarmed criticism. Yes, we could have whipped them with pop-guns, but (with an oath) they wouldn't fight that way.'"

From New Orleans, the party had an exceedingly interesting visit to the wonderful salt mine near New Iberia on the Southern Pacific road, where discovery made during the war, when the Confederacy was hardest pressed for salt, was looked upon by the South as a special providence in their favor, and which is still the most remarkable salt deposit in the whole country. The cotton Exchange, cotton presses, and cotton seed oil factories of New Orleans, the sugar plantations of Louisiana, and cotton fields of Mississippi, received their due attention. The enterprise and picturesque of Tennessee, the vigor and valor of Kentucky aroused the Dr.'s "enthusiasm" as he is borne northward again in his flying palaces over the new Chicago, St. Louis & New Orleans R. R. to Memphis, thence on the Louisville & Nashville to the borders of Ohio, and turns to pronounce his parting benediction which his readers will heartily join in—"Kindred in blood, we are brothers in heart, and to the South as fervently as to the North, do I say: Peace be within your walls, and prosperity within your valleys! Peace on your mountains and your valleys and in all your happy homes!"

The "Every Day Life of Abraham Lincoln" is announced by N. D. Thompson Publishing Company, St. Louis, Mo. and New York City. The plan of the work is very original, it being made up of contributions from nearly two hundred of his intimate friends and acquaintances, from the

flat boat to the White House. Among the distinguished names are Bryant, Bancroft, Admiral Dahlgren, General Custer, Dr. Leonard Bacon, Henry Ward Beecher, Robert Collyer, Moncure Conway, Frank Carpenter, Judge David Davis, Frederick Douglass, Schuyler Colfax, Rev. Edward Eggleston and Jas. G. Blaine. Judge Davis's contribution is said to have been the last literary work of his life, and like the rest, consists of actual personal reminiscence. Thus composed the work must have a many fold interest and value. There is no such delightful way of studying history as in the light of biography, no better training for the youth of our country than to keep before them the pure and lofty lives of our real heroes. We are glad to see that, while well gotten up and fully and handsomely illustrated, it will be brought within popular reach. The publisher's advertisement will be found in another column.

The fairest summer days that Hampton has known for several years, have passed into as perfect an autumn. The long summer work upon the new steam plant which will bring both economy and comfort of warmth for the cold winter, approaches completion. The teachers are returning and gathering to their work. The school is opening with good attendance and material, of which we will give further account in our next number as usual. While, on account of the attack of heart disease of which our friends generally know, the Principal will be in less close connection with it and its attendant work through the coming year, and will probably be absent for part of it, we are glad to say he is still steadily improving, with good hope for future recovery, with proper rest and carefulness, still retaining his advisory relation to all its important operations and his hand upon its helm.

#### A Summer Jaunt in the Shenandoah Valley.

BY ORRA LANGHORNE.

About 4 o'clock P. M., July 2d, I left Charlottesville for Harrisonburg. The ride through the mountains was delicious; it seemed to me more beautiful than ever before. The remarkably rainy season had given an exquisite greenness to forest and shrub, and the many little mountain streams were full to the brim, and bubbling over the rocks with turbulent haste. Our train sped swiftly over the hills and down into the sweet vale to which it is ever such a delight to me to return.

It is always a fresh astonishment to me to observe the difference in the appearance of the country in Eastern Virginia and the Valley. It seems so strange that within such short space such change is seen. In many districts east of the mountains the land is good, the water delicious, the climate softer than that of the Valley. But in Eastern Virginia there seems to be a lazy, ragged, helpless, shiftless air about everything, in striking contrast with the tidy, prosperous, thrifty look of the country west of the mountains. The cause is found in the people, not in the land.

The Eastern Virginian is but too often the Englishman run wild, enervated by slavery, consumed with ancestral pride, helpless, hopeless in poverty. The Valley people, usually holding their land in small tracts, and never greatly under the domination of the sturdiest elements that go composed of the American character. The upper Valley was settled by Scotch-Irish, the lower countries by Germans, and the blended nationalities are full of brain and brawn.

I reached my sister's house at 11 o'clock P. M., and in spite of my efforts to get in quietly, was soon surrounded by a tumultuous party of half-robed welcome, of all ages and sizes. I had not been home for two years, and there was so much to see and hear. The lovely baby who had been through the hubbub, and did not stir when I kissed his white brow.

BLOODED STOCK IN THE VALLEY.

I found my brother-in-law, Capt. Daingerfield, absorbed in his business of raising blooded stock with apparently good prospects of success. "Sam Purdy," once the California "King of the Turf," the pride of his owner's heart, seems to be in his prime, and his beautiful colts, owned all over the Valley and in Lynchburg, are the admiration of all beholders.

Captain Daingerfield, who is an enthu-

siast in his study of horseflesh, is convinced that the Shenandoah Valley is as well adapted to raising fine horses as any other section of the country. He is by precept and example bringing many of the farmers of his district to adopt his views. It is evidence that his horses are coming into favorable notice, that he is constantly receiving letters on the subject from people all over the country. Citizens of eight States and territories are already among his patrons.

The Captain, who is of the old English stock himself, is like most of his class, an ardent admirer of fine stock of every kind, and looks quite patriarchal surrounded by his large family of boys and girls, with colts, calves, dogs of various kinds, and even high-bred chickens around him. It is a sight worth seeing when the two famous "Sam Purdy" and "Dan Sparling" racers, "Sam Purdy" and "Dan Sparling," are led out for exercise. The Jersey cows are the delight of the ladies and children of the family, and they, spreading itself gradually over the hills, and making many improvements.

I found my native village, always pretty much as it was, and making many improvements. The great spring on the public square which attracted the early settlers to the place, and which was the source of water for the aid of private wells and cisterns, is found insufficient for the wants of the growing town, and a northern contractor is boring an artesian well, which is expected to give abundant supply of water for all purposes.

A great steam mill, built in very handsome style and doing a fine business, stands close to the railroad depot, and the flour is shipped as fast as ground. The county has made a wonderful crop this year, nearly a million of bushels it is said, but it is feared the wheat was to some extent damaged by the wet weather.

Near the centre of the town is the fine building, not yet completed, built by the Government for its public offices; the United States District Court meeting here.

Harrisonburg has now a town almshouse, an institution unknown in my residence there. My sister is a regular visitor to it and to our school, and I was honored with an invitation to see and hear her "pets." The poorhouse is a good two-story frame building, standing in a large grassy yard, well shaded with apple and cherry trees. The place was clean and comfortable, and its inmates, not more than six or eight at this season, seemed to have everything they could reasonably ask for. Dinner was being served by a neat-looking black "sassy" in the kitchen as we entered, those who were well enough sitting at a well-furnished table, while one or two invalids were waited on in their rooms. There were three or four old Negroes, and a white man and woman.

I talked for some time with a very old black man, who recognized my sister at once, and made a great effort to stand up on his feeble limbs to speak to us, but his strength failing, he fell heavily back on his chair. He had the pleasant, respectful manners of the old Virginian slaves, could still talk cheerfully of his past and adventures. To other people it seemed that he had not gotten far from the starting point. He said he was down on a plantation "on the other side of the mountain," as he had been sold to a gentleman on that side of the mountain. He had landed in the poorhouse, about fifty miles from his birthplace. But his humble life had been full of trials and misfortunes. He had been sold two or three times, and met the sad vicissitudes to which the slave is liable. He said he was very comfortable now, however, his last wife, the tidy cook we had seen, was living with him, and she was sure to see that he fared well, and everybody was kind to him. When asked about his early life he brightened up, and remembered "times and scenes of old," wonderfully well. "Why, mistress," he said eagerly, "I helped to build the University of Virginia, and I remember when Mr. Jefferson, what had been President of the United States, used to stand out in the yard at his place and watch we all at work through his spy-glass."

The Caucasian race was represented in the almshouse by a stretched-looking girl, apparently in the last stages of disease, and a most amusing old Irishman, Johnny Grubbin by name. Johnny's account of himself was that he had been in the Union army, and had been wounded in the head. Though somewhat "out of kilter," mentally, he was still hale and vigorous looking, and when he first came to this county had applied for work to a contractor who was building a bridge over the Shenandoah. Johnny was engaged at good wages, and saw in hand began to cut the rough ends of the timbers hanging over the river. He sawed busily between himself and the beams of the bridge, and soon found himself to his great surprise in the water; from which he was taken by his more discreet, ferocious workmen without more serious injury than a good ducking.

He next enlisted the sympathy of a young man belonging to a prosperous Irish family in the county. His new friend thought a pension might be procured for Johnny, if he could prove his story about having been wounded in the service of the Union, and Johnny much pleased with the suggestion, was sure "the good lady who was like an angel in taking care of him in the hospital knew all about him, and would help him to get the wages he had earned by shedding his blood."

His friend offered at once to write to the lady and gain her assistance, and desired Johnny to furnish the name and address for the letter. This puzzled Johnny, and rubbing the scar on his head he answered indignantly, "sure an' the good lady knows her own name, an' there is no use of me giving it to you." No further progress could be made in the pension business, and Johnny found an asylum in the poorhouse, where his wants are supplied, and goes about in the village when it suits his doing odd jobs when so disposed, and furnishing fuel for the citizens with his quaint sayings and Irish ways.

From the poorhouse my sister took me to what seems to me the saddest place on earth, the jail, where I was grieved to find six or seven strong, hearty-looking white men among them, a father and two sons in one room, and several able-bodied young colored men in another. There were also one or two women. Strange to say, most of the Negroes could read, and most of the white men could not. The jail clerk, the white men could not, the prisoners, however, by no means uncomfortable, the prisoners kindly treated and well fed.

Here, as in nearly every county in the State, lunatics are kept in jail, because there is no room for them in an asylum. Nothing in the present condition of affairs in Virginia is more depressing than the great number of lunatics, of both sexes, among the cause of so much mental disease, and also for proper provision for the unfortunate ones kept in jail. Some of these cases could be well provided for in a workhouse, an institution greatly needed in our State. There are many of these so-called lunatics who are entirely curable, if they could receive proper treatment in the early stages of the disease. Some of them need only wholesome restraint and regular employment to make them useful members of society.

In the jails their condition is often rendered more worse by association with criminals, confinement and enforced idleness. Nothing impressed me more in seeing and hearing of the varied interests of Harrisonburg than the active influence exerted by strong-minded women, to use that much abused term in its best sense. Here, as elsewhere, women are the leading element in the church and society, but in town, women have a voice in matters too often left to the control of men alone, and as "it is not good for man to be alone," some essential portions of the works are often left done or left undone.

Some years ago one or two ladies who visited the almshouse regularly, were distressed by hearing from the pauper, constant complaints of bad food, and of harsh treatment. Talking of these things in their comfortable homes, various opinions were expressed. Some persons were sure that the authorities whose duty it was to see to such matters, managed them properly, and that paupers were always unreasonable and given to complaining for lack of other occupation. A kind-hearted lady, who was not properly, decided to investigate for herself. She was usually occupied with the cares of a large family, but the poorhouse was in sight of her pleasant, well-provided home, and it grieved her motherly heart to think that the poor helpless creatures there should suffer for food. Taking a basket on her arm, she one day astonished suddenly in the almshouse, where that thrifty individual was serving out a supply of well-picked bones for the pauper's dinner. To the great disgust of the functionary on duty she insisted upon gathering up the dinner, which she placed in her basket, and carried home to be inspected by her surprised husband, who was one of the city fathers. The matter was duly presented at a meeting of the Town Council, and a prompt change of administration occurred at the almshouse, where there has since been no just cause of complaint.

I found the cemetery of the town in beautiful order, and felt grateful that loving hands should thus care for the resting-place of the loved ones lost of my countrymen. The friends of my youth, whose familiar forms I miss on the streets in my visits at home. I learned with much pleasure that the cemetery is under the care of the women, ladies who by great and unremitting effort have secured the necessary funds, and have

# SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

Reduced to eight pages from July to October.

Printed on the Normal School Steam Press by Negro and Indian students trained in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG, } Editors.

REV. H. B. FRISSELL, *Chaplain*,  
MR. W. N. ARMSTRONG,  
MRS. ORIA LANGHORNE,  
MISS ALICE N. BACON,  
F. N. GILMAN, *Business Manager*.

TERMS: ONE DOLLAR a year IN ADVANCE.

The "Industrial South" and "Southern Workman" Together for One Year, \$2.00.

Entered at the Post Office at Hampton, Va., as second class matter.

Subscribers are reminded that the "Workman" is reduced to eight pages during the next four months, resuming, in November, the twelve page form.

brought the grounds into their present beautiful condition.

Having taken such an active part in municipal affairs, temperance work having also engaged their attention, and faithful effort having been made in that direction, it is not surprising that the ladies of the town begin to feel their own strength. Quite a number of them realize that their efforts are cramped by the lack of privileges enjoyed by the male portion of the community, and strange as it may sound to say it of Virginia women, THEY WANT TO VOTE!

In private life some of the ladies, property holders, and above the average in capacity, are acknowledged to be among the leading citizens of the town.

Two or three were spoken of especially as being successful managers of their property, making contracts, building houses, collecting rents, etc., in excellent fashion. All these ladies are very womanly at home. They have faithfully brought up children, guided the house, and fulfilled the other directions given by the apostle, even to "washing the saint's feet," when those in need of such ministrations appear, as they did in great numbers in the Civil War. At least there was many weary and foot-sore, needing help, if they were not all saints. The little town was full of hospitals in war-time, and the women of the community, forced to unusual exertion then, doubtless learned many lessons that have since been useful to them and others.

## SCHOOLS.

The colored schools of Harrisonburg, in which Lucy Simons, a Hampton graduate, has been for years a valued and successful teacher, were said to be doing very well.

The white schools, from what I could hear, were less encouraging. Some years ago the Rockingham schools were attracting attention from their excellence. Rev. A. P. Funkhouser, then County Superintendent, received a silver medal at the Richmond Convention of school officers for having given evidence of having the best schools in the State in his bailiwick.

It seems good proof that we need some "Civil Service Reform" in Virginia, that a few months later this officer was displaced, a new party having come into power.

The last school term of the town ended in March, three months earlier than usual, owing to mismanagement of the county funds.

The schools were spoken of as unsatisfactory in many respects, and inquiries made on the subject from various people disclosed sufficient reasons for producing that result. Mistaken economy had lost to the town the efficient services of Professor Robertson, recently elected School Superintendent of Staunton. The schools had been left too much to sectarian influences, which had not been judiciously exercised. Many people interested in the schools were disappointed and discouraged in regard to their being made successful in this community.

The women of the town had not taken hold of this subject, and there is little doubt that they could do so with good results in this direction as their efforts have produced in other interests of general importance.

Build up our schools, "that our sons may be as plants grown up in their growth; that our daughters may be as corner-stones, polished after the similitude of a palace."

## The Southern Press—Both Sides.

The Southern papers of the month have naturally been occupied chiefly with the earthquake facts and theories and the general sympathy excited by the terrible disaster that has befallen the beautiful city of Charleston. While as has been suggested, had it happened twenty years ago, there would have been some to see in it a divine judgment and providential rocking over of the cradle of secession, we have not a doubt that then as now, a wave of human and brotherly sympathy would have moved the heart of the continent from ocean to ocean. There is but one side in the presence of such vast misfortune and suffering. The noble proclamation of Mayor Courtney finds many echoes as he says:

It is a source of gratitude to me to know that we are not grappling with this unspeakable disaster alone. The sympathy of the whole Union of States has touched us deeply and the spontaneous giving of practical and speedy aid in this struggle shows that the large and true heart of the people of this country beats with us now as it will hereafter. In this hope, and cheered with this promising future as part of a great people whose helping hands are outstretched to us, let us turn manfully to our heritage, and as many times in the past on this very spot, work out, under the blessing of God, a new future for our now shattered and dearly loved city."

The Norfolk *Landmark* observes that:

A novel and encouraging feature of the situation is the fact that the congregations of the African Methodist Episcopal Church in South Carolina, composed exclusively of colored people, are taking up collections for the Charleston relief fund.

The New York *Freeman* calls upon colored people generally to contribute to the needs of their Charleston brethren, saying very justly that while these will share the assistance of the general relief fund, such a manifestation of race feeling would be but proper and becoming.

Of the industrial progress of the race, and of colored State fairs, the *Freeman* also well says:

One of the most encouraging signs of the times is the activity displayed by the colored people of the South in seeking to show the people of the country the industrial progress which they are making. This activity is showing itself all along the line.

Arrangements are now being made to hold Industrial Fairs in Arkansas, Mississippi, and North Carolina and one is talked of in Florida.

The North Carolina Industrial Association has become a permanent recognized institution and has held State Fairs for a number of years past. The best men in the State have the matter in hand, and their past successes are a guarantee that the Fair which will be inaugurated at Raleigh Nov. 8, to continue five days, will be all that its projectors hope for it.

The Arkansas Association is controlled by equally as good management, and the most satisfactory results may be predicted.

We know of no enterprises originating with us more to be encouraged than these State Fairs. They not only show what the race is doing, but they encourage greater effort on our part and compel the respectful attention of our white fellow-citizens.

As we have said before, the industrial condition of the race is the very foundation of our future or success as citizens. The "hewers of wood and drawers of water" badge has been our great stumbling-block ever since the war. To divest ourselves of this badge is the very first importance.

No method could be hit upon more effective for this purpose than State Fairs where the industries of the race are displayed before the eyes of friends and foes alike. The zeal and fidelity displayed by the New York *Evening Post* in giving prominence to this activity on the part of the colored people of the South is not only commendable on the part of that great paper but encouraging to the race at large.

May these Fairs multiply in the South. They are a sure index to the progress we are making in that section, and evidence of this progress is of incalculable value to the color.

Of the colored Agricultural and Industrial Fair about to be held in Virginia, the *Richmond Whig* says:

In response to an invitation tendered Governor Lee by Mr. A. W. Harris, president of the Colored Agricultural and Industrial Association, which convened on the 19th of October, he writes as follows:

## GOVERNOR'S OFFICE.

RICHMOND, VA. Aug. 26, 1886.  
Mr. A. W. Harris, President of the Colored Agricultural and Industrial Association, Petersburg, Va.

My Dear Sir—I have duly received your communication inviting me to address your agricultural and industrial association on the 19th of October. Firmly believing it to be a duty, because the whole State is interested in advancing the agricultural and industrial condition of your race, I accept the invitation, and am very respectfully your obedient servant.

FITZ HUGH LEE.

This is the first colored agricultural association ever opened in this country.

We quote from the *Whig* also, the following condensed statement of the discussion that has been held regarding the results of Prohibition in Atlanta:

"The private letter of Mr. J. W. Clayton, formerly a wholesale liquor dealer in Atlanta, to a business friend in New York, reciting the disastrous effects of prohibition upon the growth and business prosperity of that city, has called forth strong testimony in rebuttal from other leading citizens in different lines of trade. Mr. Clayton's letter was published by permission in the New York *Evening Post*, and afterwards republished in the Atlanta *Constitution*, so that the purport of its statements, which were very sweeping, were fully understood by the gentlemen who have emphatically denied their accuracy through published interviews in Saturday's *Constitution*.

Mr. Clayton's letter stated: 1st. That there were 3,000 unoccupied houses in Atlanta. 2nd. That the population of the city had decreased 10,000 to 12,000 in the past few months. 3d. That Atlanta's commercial territory had been reduced and her trade diminished.

The first charge, Mr. Kelly, a reliable citizen, disproved by making a detailed canvass of the city and showing by actual counts that there but 225 unoccupied dwellings in Atlanta, including everything from the Negro shanty up to the finest dwelling.

The *Constitution* says that the charge that the population of the city has decreased 10,000 to 12,000 is so absurd that no answer is needed.

Referring to the school census as the surest measure of population, it gives an official statement to the effect that there is no diminution in attendance on the public schools or the application for places. The directory men, who are nearly through with their work, testify to the same result. As a refutation of the third charge, that Atlanta's commercial territory has decreased, the counter-statements of the business men above referred to are given. Their testimony is that Atlanta's trade has improved in those articles not oppressed by freight discriminations, and that the extent to which her trade territory has been narrowed in heavy goods has been solely due to this cause and not to prohibition.

The *Constitution* concludes its leader on the subject as follows:

The city of Atlanta is engaged in a very difficult experiment. Its results will be important, no matter in what direction they may tend. But that they will permanently, or even seriously, affect Atlanta's future, no sensible man believes. Cities are not built by chance, nor destroyed by accident. They are the outcome of social or commercial demands, and depend on infinitely various causes for their prosperity. They can no more be destroyed by casualty than they can be built without reason. Atlanta is and will continue to be the chief city of the South Atlantic States. This eminence she reached by natural laws, and this eminence she will maintain. Now, as before, she offers advantages to the home-seeker or investor that no rival city can approximate. Now, as before, these inducements will attract citizens and investments."

The Atlanta *Constitution's* sketch of Mr. John B. Inman will be read with interest in connection with Dr. Field's Southern letters reviewed in another column. The *Constitution* records Mr. Inman's recent large investment in the Pratt Coal and Iron Company's iron works at Birmingham, Ala. and says:

There is no man in this country who has the confidence of investors in New York and Richmond alike to equal extent with Mr. John B. Inman. His command of money in New York is almost unlimited. His following in the South is as large and quite as earnest, if not so heavy. From Galveston to Richmond he could command the unbroken support of the best, most liberal and progressive elements of the South, and no where to a fuller degree than he has done in the way of developing Southern interests. He invested nearly \$2,000,000 in the Tennessee Coal and Iron Company, he is one of the strongest directors in the Louis-

ville and Nashville railway system; he is the moneyed power back of the Macon and Covington road; he loaned the Georgia Pacific Company \$250,000 when it was a straits, and afterwards took about \$2,000,000 of its bonds; he is a director and leading influence in the Richmond and Danville railway system; he took the entire loan of Atlanta 1 per cent, and made the first bid for the Georgia State loan of \$2,140,000; he has over \$200,000 invested in Atlanta real estate and securities, and now lays an investment of \$4,000,000 at the gates of Birmingham.

What a miracle of courage, sagacity and success his career has been? Less than twenty years ago he went into New York, a rebel boy, in an *ante-bellum* suit, which had not been put where moths do not corrupt, and less than \$100 in money and property. He has now a fortune of several million dollars, is director in institutions that aggregate more than Vanderbilt's wealth, and has been instrumental in having brought into the South more millions than he had dollars when he left her.

The *Industrial South*—whose excellent work in the interests of Southern progress we have noticed before—republishes to a correspondent's rather discouraged view of the prospects of agriculture in Virginia, with statistics and calculations based on the census to prove that the intelligent farmer has as good a chance of success in Virginia as in Iowa; the State selected for comparison, and probably as in Kansas, Texas, Dakota or Washington Territory, and adds:

All that we have said, be it to your mind relates to the Virginia of 1879, when the old-style agriculture was but little changed. Even now but moderate progress in new and better courses has been made, and dry bones are beginning to move, and there is light ahead. The rural mind, slow to resolve, and the rural habit, reluctant to change, are perceptibly yielding to the irresistible promptings of reason and interest.

The farmers of Virginia are entering upon new methods and changed applications of their industry that promise more for them than they have ever enjoyed in the past. They are hundreds of miles nearer to the great markets of the country and of Europe than the western producers are, and though through rates of transportation are against them, it must be remembered that nineteen out of twenty of the western farmers have to encounter local rates before they reach the point at which they get benefit of through rates. From Chicago to New York rates are very low; but how are they from the farmer's local station to Chicago? Perhaps our friend "K" never thought of that. On the other day we saw an account of a Kansas farmer who had sent his corn to New York, having to pay for transportation two dollars a car-load more than his corn sold for. Virginia farmers are near to the great cities and great ports of the country and cannot suffer in this way. Enslage and creameries will put the State on an equal footing with the West in the production of meat and milk, and the fabrics of the dairy. She can easily compete with Kentucky in horses, mules, mules and tobacco—the things that have made that State prosperous. She has the advantage of California in fruits, grapes and wine, since hers are of better flavor and nearer to market by the width of the continent. She has almost a monopoly of "trucks" and peanuts, and an advantage in all garden stuffs, melons, berries, poultry, eggs, and all the smaller products of the farmer or the housewife's industry.

The Virginia farmer's fortune is in his own hands. If he doesn't prosper along with the most prosperous of other States, it can only be because he is lacking in industry or intelligence; and without these he would not thrive anywhere.

Gentlemen or Ladies who contemplate canvassing any part or all of their time during the present season, will find it greatly to their interest to make the acquaintance of B. F. Johnson & Co., subscription book publishers of Richmond, Va. They have the most attractive and fast selling books at the lowest prices.

## Gold for You.

One of the most successful books that has been sold in the South for years is Honorable Alex. H. Stephen's "History of the United States," with an appendix by Mr. R. A. Brock, Sec'y of the Va. Historical Society. It is a curious to recount what it has done made quite a "hit," and their agents too have enjoyed a bountiful harvest, selling this valuable work.

### Letters from Hampton Graduates.

FROM AN EX-POSTMASTER—STARTING A READING ROOM. ANOTHER EX-OFFICEHOLDER. FROM STRENGTH TO STRENGTH. HOMES WITHOUT WINDOWS. STILL IN THE CIVIL SERVICE. A SUNDAY SCHOOL OFFICER. WHAT IS "ENOUGH TO MAKE ONE FORGET EVERYTHING ELSE." FROM SOME VETERANS IN THE FIELD. "ONE GENERATION SHALL TELL IT TO ANOTHER." TWELVE YEARS A TEACHER.

FROM AN EX-POSTMASTER—STARTING A READING ROOM.

The uncertainties of official life in Government service are less dangerous to a young colored man, with a trade and a teacher's certificate in his hands, than to some white boys with no practical training for life. One of the more fortunate kind writes cheerfully of what would be a great misfortune to the other, and tells of his efforts for his people in returning to his old occupation.

Nov 21st, 1885.

Miss A. E. C.

Dear Friend:—I notice by the *Alumni Journal* interest you are showing in the welfare of "Hampton Graduates and ex-Students," who are engaged in the worthy vocation of teaching. Since the change to our National Government I have resorted to my original profession, that of "Teaching the young idea how to shoot." I am now in the above place, having charge of the school here. I have enrolled 112 scholars, with an average attendance of 90. My school building is a large one-story brick building, with all the modern school apparatus. I am assisted by a student of "Lincoln School" in this State. The standard of intelligence is above the average, and we are now making arrangements to add a reading room to our school. We are meeting with cordial support from our white friends so far, but the enterprise is not a success yet. We need newspapers, magazines and books, old or new, and will be thankful for assistance from any source. I send paper by this mail.

Very respectfully,

R.

FROM STRENGTH TO STRENGTH—HOMES WITHOUT WINDOWS—ANOTHER EX-OFFICEHOLDER

Furnishes as good an illustration of the convenient faculty with which Hampton graduates have been credited, of "falling on their feet." From a Government clerkship to trusteeship of Wilberforce is going, indeed, "from strength to strength," in honors, but in the earnest work of a country teacher among windowless homes, he will find, we doubt not, his best rewards.

N. C., April 10, '86.

Miss A. E. Cleaveland.

Dear Friend:—When I wrote to you last I spoke of what I expected to do. Now I can speak of what I am doing, which, I think, sounds better, and I know makes me feel better. From the 11th of January I have been teaching in a school district about ten miles from my home. It is the largest district in this county, except the one including the town. The school is so full that I have to require the assistance of one of my most advanced scholars in order to give each one a part of my attention. Even with this I am unable to do by them as I wish. You are too well acquainted with our school system, and the general situation of affairs, for me to go through a recapital of all the inconveniences attending our work. In the face of many hindering causes, I can see marks of progress in the advancement of my people. The children show their anxiety to improve by prompt attendance and faithful study. The majority are poorly clad, and, judging from the supply put into their luteous buckets, they are but half fed. To learn more of their condition I have visited several homes. You can find large families crowded in the one room of a low uncomfortable log house, with but one opening—the door—through which to gather light or fresh air. In this one room they do the cooking, eat, wash, ironing, sewing, and sleeping, but still they make it like home by placing wild flowers over the fireplace and dotting the walls with pictures cut out of papers. In many places you can see marks of pride which tell the visitor that a battle is being fought daily and hourly by the opposing elements of ignorance and superstition on one side and intelligence

and Christian virtues on the other. The struggle is a noble one, and, judging from the present outlook, in a few years the victory will be ours.

Let the work go on. Let Oberlin, Wilberforce, Howard, Hampton, St. Augustine, and others, continue to send out earnest workers. Let the benevolent friends of the North continue their gifts, and let the Master continue his blessings all will be well.

I now turn my attention to your inquiries. As to losing my position as postal clerk, I shed no tears of sorrow. In leaving it I was thankful for the opportunity afforded me to provide for my parents and sisters and brothers at home, for which I have so long longed. To do this I felt called upon to sacrifice some of my individual wants and acquisitions, but wherein I find comfort is in the assurance that I have made others happy. I have long felt the need of a higher education, and have tried in many ways to see how I can make it possible to obtain it. It would not benefit me only, but would better prepare me for the work before me.

The last N. C. Conference of the A. M. E. Church honored me with the election as a trustee of Wilberforce University, and the bishop urges me to be present at the Commencement, but the expense will be so great I fear I can't get there. The "St. Augustine" is known as a good school, and is sending out some useful men and women.

My sister returns best wishes. She is teaching in another part of the county, and seems to like her work. My school will end the last of this month, when I will have to leave home in search of employment, or engage myself on the farm.

Hoping to hear from you again, I am yours with much respect.

N.

### STILL IN THE CIVIL SERVICE.

And here is a young man who has survived the change of administration, and finds himself still in his responsible office, and, we are glad to see, without losing his place or interest in Sunday school work.

WASHINGTON, D. C., Nov. 30, '85.

Dear Friend:—Yours of Oct. 9, '85, was read with pleasure. I was especially glad to feel that, although some time has passed since I was at school at Hampton, you still have me among those in whom your interest is felt and expressed.

I truly appreciate this, and take great pleasure in replying to your kind and information asked for. I am still employed in the Inspection Division of the P. O. Department. My duties are to examine the weekly money order statements and accounts of Postmasters. I have 23 offices in my section, in the State of Ohio. Each week I have to receive and examine these accounts—I mean of the Postmasters of my section. Sandusky, Springfield, and Toledo, Ohio, are the largest offices in my section. I am still secretary of the Presbyterian S. School, which position in the school I have held for six years.

Hoping for you and the school continued success, I remain

Truly yours,

H.

### ENOUGH TO MAKE ONE FORGET.

Our friend's excuse for forgetfulness of outside interests has always been recognized as a strong, if not always a sufficient one. We readily admit it, especially as it seems to only double its purposes and opportunities to do good work.

—MD., Oct. 24, '85.

Miss A. E. Cleaveland,

Poughkeepsie, N. Y.

My Dear Friend:—Your hint reminds me of the words of Thomas Jefferson, "A gentleman will answer letters." The only apology I can tender for not replying to your communication of last year—well I won't call it procrastination, but frankly compels me to say that my mind was all absorbed in matrimonial matters; whether it is one of "the natural shocks that flesh is heir to" or not, it seems to make one forget everything else. I married last year and settled here, as I thought the combined efforts of my wife (who is quite energetic and devotes much to the welfare of others) and myself would result in some good in this vicinity. I labored here as teacher for a year prior to my marriage, and I have had some chance to study them morally, intellectually, and domestically. In entering upon my duties, which began the 1st inst., I felt less inclined to labor than at any time since 1875, when I left the Normal Institute at Hampton, and began teaching, but as I am a disciple of Pluck and not of Luck, I dismissed all despairing thoughts and

mustered up courage to work with more zeal and energy. Perhaps I give myself more concern this year than I've done heretofore because of my wife's surroundings have always been pleasant, and indeed it is a great sacrifice to give up home with its pleasant associations, and come to a place where one is nearly ostracized. It would have really been a surprise to you to have witnessed the sensation created when my wife had arranged uniquely her little country home, thus showing by example how Christian people should live at home; while some approved and admired the taste, others disapproved and only said, "They are putting on airs." Ignorance surely begets prejudice. When I note among my friends some of the most intelligent and wealthy class of white people, and on the other hand among my most bitter antagonists are found the most ignorant and poorest specimens of humanity, I am ambitious and resentful, and I dare say such traits are as but oil poured upon the flame of prejudice.

I find, from observation, that the white schools are as poorly attended this time of year as the colored. Illiteracy abounds a great deal among the whites, yet there are plenty of schools both for white and colored. The ignorant parents have not yet learned that "Knowledge is power." It may surprise you when I say I do not attend church service regularly, but such is the case, and that is because their devotional services are not consistent with good common sense, but it is their way, and I suppose they'll have their reward. My wife and I interest ourselves in the Sabbath school work, for it is the young mind I delight to instruct. I am glad to inform you that among my scholars I have many that are promising; if their parents only give them a chance they will make bright men and women. The quaint ideas that are rooted and grounded in the colored people who were subjected to slavery, I believe, can only be dismissed as they shuffle off this mortal coil.

Very respectfully,

H.

FROM SOME VETERANS IN THE FIELD.

Letters from two of Hampton's earliest graduates will be read with interest.

"ONE GENERATION SHALL TELL IT TO ANOTHER."

How the years roll on! It is enough to make a veteran Hampton teacher feel old to read such a record from a veteran graduate.

VA., Nov. 9th, 1885.

Dear Friend:—Your circular came to hand a few days ago, and should have been answered before now. Please pardon my delay.

I am teaching where I have been for four years. I taught in the country eight years before I came here, making in all twelve years that I have taught in — county, Va. There are more than two hundred men and women in this county who have learned to read and write in my school. Many of them are married and have children going to school, and still they look on me as their teacher. I feel thankful that the Lord has enabled me to do some good. This year we opened school the first Monday in September. We have a full school and are getting on nicely. My little Sabbath school is still alive and doing very well. We expect to have a Christmas tree if we are able.

Times are very dull here just now. The past week or two everybody has been excited about the election. Now that is over we are still in a wondering state. This leaves my family and self well, and trusting in the Lord.

I trust that you are well and enjoying the comforts of life. May the Lord bless you while you live and save you when you die. As ever yours in Christ,

Y.

### TWELVE YEARS A TEACHER.

Many graduates have acquired comfortable homes, and other property, by their industry and thrift, making the most of their salaries as teachers, and earning much more, often by vacation work. One writes as follows:

Oct. 27, 1885.

Miss A. E. Cleaveland.

Kind Friend:—I am here at my same post, and before saying more of the place, a line or so about my vacation would not be very foreign. It was longer than any that I have ever had since I've been teaching. Most of my time was spent at home on my little farm of one hundred and three acres, with my wife and three little children, two boys and a fine and bright daughter of five months.

I planted some corn and tobacco 600; bad about 24,000 tobacco hills, and it is very fine tobacco indeed. Used 14,000 pounds of the Tinsley's Fertilizer. My wife had a nice garden of vegetables which also added greatly to our comfort. I didn't do very much Sunday school work. Was taken down about the middle of August with the bilious fever, though the S. S. kept up regularly. The colored people in my own county are buying houses and accumulating property very fast. They begin to see the importance of having their own places. Right around me there are five families comfortably settled, and doing pretty well. Some deprecate their old habits while others still cling to them, and believe in conjuring and such like evil devices. We need good teachers down here, such as will take an interest in the work. We have a very poor corps of teachers in the colored schools of this county this fall. The trustees seem less interested in the matter this year than they have at any time since I've been teaching in the county. There are only four of us who have attended an institution of training. Most of the colored schools are filled with persons who have had scarcely any training in our Primary schools. Hampton graduates don't find the way to this county. Miss S. H. is the only one in the county. Our Superintendent is a nice man, and has done good work since his appointment to the office which he now holds. We expect to lose him after this year, which will add greatly to our sorrow. Politics does us harm in a great many ways. I take no stock in them; only vote one ticket, which is the Republican.

Now a word or so concerning my present school, and I will close. I opened on the 12th inst, with 14 pupils first day; have now on roll 27; they are coming in daily, and, after having such an extensive vacation they are fresh and vigorous. I trust that we may do better work this fall. With best wishes to Hampton and friends I am very respectfully,

E.

P. S. This is the 17th year I have been engaged in the work of teaching since I left H.

E.

### A LETTER FROM TUSKEGEE.

We are always glad to hear from Tuskegee.

NORMAL SCHOOL,

TUSKEGEE, ALA., Mar. 23, '86.

Dear Miss Cleaveland:—Shall I say that I have been busy, therefore could not write? I think you know that all of us have been so busy that we have had time enough to write, but thought that there were so many of us here together that you would get tired of hearing about Tuskegee. I have put it off, saying, "I will write after awhile," and you know "delays are dangerous."

You have heard ere this that I am matron here, a position, I have always felt, that did not belong to me. Such a position, especially in a school like this, requires a person of experience. However I am trying to do the best that I can. When I came here in '83 everything was new. There were no conveniences. The basement of Porter Hall had just been fitted up for a dining-room; there were no chairs and we had to use rough stools, made by the students; these being made of green lumber, would very often break down. Upon the whole we had a very dreary-looking dining-room, and at times I felt discouraged, especially when the meals were not on time. This happened very often. When I spoke to the cook about meals being on time, she would usually give this answer: "I never did see such a place as this in my life. I has always seen the cook get breakfast ready and then ring the bell, but here, whether you is ready or not, the bell rings and folks comes pouring into their meals."

After much trouble we succeeded, about a month ago, in getting a cook that gets meals on time.

We are getting along quite nicely. I like the work better now that we are in better quarters in Alabama Hall, though the girls are still crowded. Our room together, and the rooms not any larger, if as large, as those in Virginia Hall at Hampton.

The fourth floor is now being finished, and we hope soon to put some of the girls up there.

The dining-room in Alabama Hall is very pleasant.

The teachers have made the students a present of chairs, but have not finished paying for them. Some of the teachers got up a literary entertainment some time ago, and raised a little money, and in some other way we hope to get the remainder soon. I think all of us felt well paid for our trouble when we looked into the bright faces of the students as they came into the dining-room the first evening after the chairs had been put in.

Well, if I make my letter any longer, you will not care to have me write again soon. Sincerely yours,

R.

### Indian Department.

HELEN V. LUDLOW, In Charge.  
CORA FOLSOM.

Regular Contributors:

HERBERT WELSH, Cor. Sec'y of Indian Rights Association.

ELAINE GOODALE.

MRS. A. S. QUINTON, Gen'l Sec'y of the Women's National Indian Ass'n.

"Lend a Hand," Edward Everett Hale's new magazine, is lending a hand efficiently to many a good work for our many-hued American humanity. We hope that most of our readers read it for themselves, though, in that case, our various extracts from it this month will be superfluous.

What to do with Geronimo, now that he is captured at last, is discussed with diverse conclusions by the papers. Some are for tempering justice with mercy, remembering that the savage chief "had little sense of guilt in his acts, and that the foundation of the whole trouble was, as usual, in our own wrong doing and blunders." Others are vehement for the utmost rigor of retribution. The *Evening Post* quotes Commissioner Atkins as saying that "There is no doubt that the public sentiment of the country demands the death of Geronimo," and the *Tribune* says: "We are as far as ever from realizing (in action) that the only way to civilize these unruly people is to apply the laws of the country to them. Under those laws Geronimo and his lieutenants would years ago have gone to the gallows as common murderers."

Another disposition of him is suggested by the facetious pencil of "Life," which represents our noble prize on the platform of a West Point class room, in professorial garb with variations of scalp locks and coon's tail, as Professor of Tactics demonstrating to an eager class of embryo generals the problem illustrated on the blackboard before them. "How to capture One detached, hostile savage, when you can bring only one Army Division into the field."

That will do for a joke in one aspect of the case, but it is easy to sit at home and caricature a campaign in a vast mountain wilderness, that has taxed to the utmost the skill and endurance of such commanders as General Crook and General Miles, and such troops as make up our frontier army. Nor would we, as friends of the Indians, and praying that no new disgrace should be added to our country in adding to their wrongs fear to leave the disposition of the Apaches both for justice and mercy, to the decision of these two Generals who have conquered them. A true soldier is not revengeful. No stronger words of kindness to the Indian and indignation for his wrongs have been spoken than have been spoken by General Crook and General Miles, and some other Indian fighters. We agree, of course, with the *Tribune*, that "the only way to civilize the Indian is to apply to him the laws of the country," only let them be applied a little earlier in the day. It is curious how much difference it makes, whose bull is gored, in desiring the application of law. If there had been law for Indians as for white, perhaps "Geronimo and his lieutenants would have gone to the gallows years ago," or perhaps they would have been living in peace with their neighbors to-day; perhaps there would have been no starvation of Indian women and children; perhaps there would have been no retaliation on innocent settlers; perhaps there would have been no Indian war; perhaps there would be no Indian question.

The Women's National Indian Association reports through "Lend a Hand" a great amount of work accomplished since January 1st, in distribution of literature, organization of and correspondence with auxiliary societies in twenty-seven States, public addresses, and petitions to Congress—sometimes five in one day—for the passage of bills for Indian appropriations; for aid to Eastern and other Indian schools on the occasion of the attack made upon them in the House; for the Dawes Sioux bill and Dawes allotment bill, and for the relief of the Mission Indians of California. Another very important work successfully prosecuted by the Association, is that of aiding educated and progressive Indians to build comfortable homes; not pauperizing them by injudicious gifts, but educating them by loans on a business basis, taking a mortgage on the property till paid for, and insuring it against fire, lightning, and wind. Two of Hampton's young Indian couples have been thus aided, and are doing well in their new homes. Five mission stations have also been established and are doing excellent work.

#### More Eastern Education.

The Government's practical faith in Eastern education for Indians is shown in its deportation of 85 more Apaches from Arizona to St. Augustine. These Indians, whose women and children outnumber the men five to one—63 men, 175 women, 147 children—were not actively engaged with Geronimo, but only suspected of supplying that valiant rebel with provisions and ammunition. Though sent under a guard of 85 soldiers to Fort Marion, they will not be long detained as prisoners probably, but settled on a reservation in Florida, where, if they survive the change from their mountain fastnesses to the salt marsh lands, their wild spirits may be brought into the harness of civilization. The children, at least, may be helped to better things, and here is an opportunity for the friends of the Indian to come to his rescue from a dismal fate. Carlisle, Hampton, and other schools, east and west, stand ready to receive them. Have they come East for education and civilizing, or death by inches?

The report from the Interior Department—in another column—of the progress already made in the survey and division in severity of Indian lands, makes an excellent and hopeful showing. In encouraging and furthering this civilizing process, the Department has shown good intentions and done good work for the Indian. It is the foundation of all good work, giving the Indian his first sense of a security without which hope and progress would be impossible to any people, his first assurance of good faith in the Government, his first lesson in civilized living and his first motive for desiring it. That all do not desire the opportunity before they receive it is not a reason for abandoning them to be swept out of existence instead by the rushing stream of emigration. There has been and will be of course, individual disaster. But the success of the experiment, already attained, the ambition and effort already aroused, and the degree of advancement made under still harassing difficulties and disabilities, are evidence enough that the move is in the right direction. We trust that the Government will go on in the course marked out for it by justice and humanity and success, and by a growing public sentiment which demands and will sustain the application of the administration's standard of civil service reform to the Indian branch of the service.

The important and non-partisan service of the Indian Rights Association in the cause of the Indian, and in assisting Government in the protection and civilization of its wards, are forcibly

set forth by Mr. Herbert Welsh, in a letter to the *Evening Post*, of Sept. 20. He calls attention to "the case of the Crow Creek lands, which were restored to their rightful Indian owners by executive order of President Cleveland, after 50,000 acres had been opened illegally to white settlement by the former administration. The facts were carefully and laboriously collected by the Indian Rights Association, and were presented under a fire of partisan Republican denunciation to President Cleveland in such form as rendered it possible for him to restore the Indians their lands."

In the case of the Mission Indians of California, whose rights to their homes are now being defended in the California Courts, the Government appointed an able attorney, Mr. Shirley C. Ward, to plead the cause of these civilized but defenseless people, but provided no remuneration for his services. He was about to resign, when by my persistent efforts upwards of \$540 were raised through the subscriptions of charitable persons in Boston, and Mr. Ward was enabled to prosecute his work. The case, strange to say, lost on the first hearing in the California Courts, has been appealed. "Mr. Ward telegraphed the Indian Bureau that bonds to the amount of \$3,300 were necessary to prevent the execution of the Indians any day by execution of the lower court. The Bureau directed Mr. Ward to allow the execution to issue, but to assure the Indians that should their case be gained on appeal, Government would reimburse them for their losses."

Mr. Ward, as a last resort, appealed to the Indian Rights Association, and immediately the necessary sum was furnished by a single member of the society, sending his check for the amount."

Mr. Welsh also adduces the case of the removal of an unworthy official on satisfactory evidence presented by the Association to the Government. He makes the strong and just statement that "The Indian Rights Association is composed of men who work for the welfare of the Indians and for the honor of the public service without any pecuniary reward in view, and without any political axe to grind"—that his "own service is purely gratuitous, and in pursuance of just duties it is necessary to arouse at one time the wrath of Republican politicians, and at another (as in the present case) that of the Democrats."

Any lasting friction between the Indian Department and Indian Rights Association would be an obstacle in the way of Indian progress, which its friends in both must deplore. In urging "the extension of civil service reform to the Indian service," Mr. Welsh is but urging the principles which it is the glory of the present administration to have identified itself with.

#### The First Step.

William Justin Harsha, in the September number of *Lend-a-Hand* says: "A very practical question was that President Cleveland asked, when the committee from the Mohonk Conference laid the claims of Indians before him: 'What is the first step to take?' He was impressed by the facts stated; he was interested in the question, more than that, he seemed to be sincerely anxious to do what lies in his power to right a century's wrongs to our wards. But he was in doubt as to where the first blow should be struck."

To me, with a rather wide acquaintance with the Utes, Sioux, Omahas, Winnebagos and the scattered remnants in some of the more eastern and northern states, it seems that the first thing to be done is for Congress to declare the Indian a person. We have not now the crisis in affairs that enabled Lincoln to seize the difficulty of slavery with a strong hand and set so many free. But surely we are in that position of great need which authorizes the use of heroic measures. We stand at the point where something needs to be done at once, or all that we have gained will be lost. The granting of land in severity, the missionary and educational projects that have been entered upon, the votes of legislators, will all prove abortive, unless the Indian is placed in a position to defend his possessions and

enjoy his education and elect his officers of law. This can only be done by Congress removing the unjust restrictions resting upon the Indian as the impersonal, irresponsible ward of the government. Let him be declared a man, and not an infant or an idiot, and he will immediately take his place as a citizen under the fifteenth amendment. It might be wise to delay his entrance upon the higher privileges of citizenship, such as voting and holding judicial office, until he has been educated and elevated. The mistakes of government with colored men in the South might lead us to wiser restrictions for the red men of the Northwest. But the first step to take is to bring the Indian out of the false light in which he stands, to break his awful anomaly, to grant him his birthright of personality, as being one of the diverse sons of the great Father."

#### Bishop Whipple on the Mississippi Reservoirs.

"The St. Paul Chamber of Commerce practically gave up its entire session recently, to listen to an address upon the condition of the Leech Lake and Winnebagoish Indians by Bishop Whipple, who said for a matter of national honor that the condition of these Indians should be considered and the duty of the government to them understood."

In 1880, for the better protection of the interests of the Mississippi river, it was deemed necessary to build reservoirs at the head waters of the river. But at the time that Congress authorized the construction of the reservoirs, the opinion of the attorney general of the United States was solicited as to the legality of the act. He stated then that in his opinion the government had no right to overflow the land of these Indians which they legally held, nor to take material from them in the construction of the reservoirs. In the face of all this the dams were built, the Indians' lands overflowed, their crops destroyed, and the fish and wild rice, their main sources of subsistence, destroyed. A peaceable, friendly tribe, from them had been taken their living. Reports of this state of affairs have been sent to the government, but without avail. The commission of which General Sibley and Russell Blakeley were members had thoroughly investigated the state of affairs, and made an elaborate report that came to naught. Congress had offered but \$13,600 to the Indians for the destruction of their crops and the overflow. They are 2,000 in number, and their condition demands immediate attention.

At the conclusion of his remarks the Bishop read a letter from the Rev. J. A. Gillfillan, who had been a missionary among these Indians for many years, which gave a detailed statement of the condition of affairs at this time. In the early part of June Mr. Gillfillan visited Leech Lake. He found the water much raised and that in consequence the Indians could catch hardly any fish, and were hungry; a condition of affairs unknown before the building of the dam. In consequence of the rise of the water, the fish had left their former haunts and could not be found, and the Indians were thus deprived of almost their entire subsistence in summer.

Neither is this all; the great overflow has destroyed their rice fields, a fact that will make their condition in winter even worse than now. The Indians are well aware that these dams have been built contrary to law, and they are patiently waiting for the government to send them relief in some form before they die of starvation. It is already four years since these dams were commenced and not one cent of relief has yet been sent them, and if winter sets in without some adjustment of the matter it is hard to tell what will happen. The Leech Lake dam is in charge of two men only, and the Indians may yet determine to destroy it if it made desperate by hunger. What the result of letting the water stored above the dams out suddenly would be, can only be surmised. It is a great body of water having a coast line of over 350 miles,—a vast sea extending far inland. The trees standing far out in the water are dead, the hay meadows all submerged, the roads overflowed and obliterated, the Indians driven to the hills and all communication stopped. The Indians are exasperated and bitter at the wanton destruction of their property, and are talking of the consequences of breaking the dams, when this vast body of water would sweep down over the lower country with a terrible effect.

The St. Paul Chamber of Commerce voted to do all in its power that the wrong done should be righted. The government treaty which gave the Indians the use of this land, is as binding as any treaty made with England, France or Germany. To deliberately break it, without compensation, is a national disgrace; and when it involves hunger and death, as this is certainly doing, it is a crime for which Congress is responsible."—*Faribault Democrat*.

### Progress in Allotting Land in Severalty to the Indians.

WASHINGTON, September 17.—Recent information received at the Interior Department indicates that the "Chippewa, Sioux, and Ute Indians in the Territories of Dakota, Idaho, New Mexico, Washington, and Arizona, and the States of Michigan, Wisconsin, and Nebraska, are to be divided up in severalty the lands now held by them in common, is making most satisfactory progress, and thus a great work of Indian civilization is being quickly developed. Up to the first of September last year, there had been issued 11,071 land patents, 1,290 certificates, and 930 allotments without patents or certificates to Indians in the States and Territories named. The difference in the character of the titles given is owing to the varying terms of the treaties entered into. There have since been issued up to the present time in the same region of country, 690 land patents and 80 certificates. Indians up on the following reservations now, as a general rule, hold their lands in severalty, their titles being guarded by restrictions on the power of alienation: Chippewas on the Red River, Red Cliff, I. Anse, and Lac Court Oulles Reservations, Wisconsin; on the Isabella Reservation, Michigan, and the Fond Du Lac Reservation, Minnesota; Sioux on the Crow Creek, Res. Dakota; Santee, Omaha, and Winnebago Reservations, Nebraska, and on all the reservations in Washington Territory except Chehalis, Dollyville, Columbia, Makah, Quinalt and Spokane.

In addition to the tribes to which allotments have been made, the following are entitled by treaty stipulation to such allotments: the Southern Cheyennes, the Crow, the Flat Heads, Montana; the Navajos of New Mexico and Arizona; the Grande Rondes, Klamath, Umatillas, and Warm Springs of Oregon, and the Shoshones and Arapahoes on Wind River, Wyoming. The Devil's Lake and Yankton Sioux, the Nez Percés, the Montana Crows, and the Oregon Grande Rondes, and Warm Springs Indians, according to information received by the Commissioner of Indian Affairs, are prepared to take their allotments in severalty. Two special agents are now allotting lands to the Crows in Montana, and write most encouragingly of their success. Many of the Sioux in Dakota are asking for allotments, but from the fact that the reservation has never been surveyed, except a few townships, and that suitable lands are not available for this purpose, little can be done at present. Some, however, are taking their lands by private survey. Indian Commissioner Atkins and Assistant Commissioner A. B. Upham are very earnest in pressing forward this humanizing movement among the more advanced Indian tribes, and are much gratified by the unexpectedly large measure of success achieved.—N. Y. Post.

### A Visit to White Earth.

#### A GARDEN SPOT OF THE WORLD.

NEW ENGLAND GONE WEST.—THE HOME OF THE CHIPPEWA.—BISHOP WHIPPLE'S GREAT WORK.—WHEAT VS. WHISKEY.—SISTER PHLOMENA.—A HERO OF '62.—THE PRESIDENT'S, THE INDIAN'S AND THE MISSIONARIES' CHOICE FOR AGENT.—WILD RICE AND THE MISSISSIPPI.

Correspondence of The Springfield Republican.

August, 1886.

The interest felt in the embassy about starting to negotiate with the Indians in Minnesota and the Northwest, which the *Republican* has already noticed as of "first-class importance," may give at least the merit of timeliness to a sketch of a visit to the White Earth reservation in Minnesota. To induce the Indians of the more northern settlements in the state, whose fields have been flooded by the Mississippi reservoirs, to settle on this more desirable location, is one of the objects of the commission, which includes their friend and champion, Bishop Whipple. The White Earth reservation is indeed, as the bishop has said, "the garden spot of the state." I shall never forget my 25-mile drive there from "Detroit City," one of the few five-year-old western cities, by the way, where, if I were a young man, I should feel tempted to stay and grow up with the country. It is a young New England gone west, exhilarated but not intoxicated with the new wine of the wilderness. Eastern ideas are in its shaded streets and tasteful homes, its intelligent society and its day through vistas of shimmering green and gold, with glimpses now and then of the fit-

tle lakes that bejewel this "Lake Park region" of Minnesota. We crossed the path of a recent cyclone that had twisted and flung about oaks like saplings; and once a fine ruffed grouse stepped calmly across the way and I inwardly gave thanks that no one in the wagon had a gun. Passing the reservation line, small clearings began to appear, and large ones with comfortable log and frame houses, fenced fields and stacks of harvested grain. Now and then we met a dusky pedestrian who looked up with a friendly smile and greeting—"aninde tjiain" (where are you going?)—in broken, but soorous guttural, with a musical cadence that sounds like shaking boiled peas in a tin pan.

The White Earth reservation was set apart in 1869, chiefly through the efforts of Bishop Whipple, with a view to making ultimately a home for all the Chippewas in the state, where they can learn farming and the ways of civilization. Those at Gull Lake, who were being demoralized by drink, were removed there at once. The head-quarters of the mission—here established there, four years later Rev. Mr. Gillilan became its indefatigable superintendent, as he still continues to be. The marvelous transformation which has been accomplished under the new conditions, is one of the many proofs of what can be done—and therefore of what ought to be done—for the Indian.

From a set of wild heathen and ration-fed paupers, they have become an orderly farming community. Rations are issued only to the destitute, aged and sick; and the agent thinks that many have gained the idea of laying up against a rainy day.—a long step ahead, certainly. They are nearer self-support than any but the five "civilized tribes" of the 1715 Indians now at White Earth, only 21 are reported as "partly Indian in dress and ways." They raised last year 70,000 bushels of wheat, oats and barley, and made over 600 pounds of butter, selling half of it off the reservation. They cultivated 500 acres. Half the families have farms with from 5 to 100 acres improved; many with 70 acres. The rest cultivate patches of from one to five acres. Farm implements and some cattle are furnished by the government. Allotments in severalty are beginning to be made. Ten acres so must be improved for 160. One Indian policeman, "Knickerbocker," resigned his position to take care of his farm. He has 60 acres improved, nine horses and a yoke of oxen. The Chippewas have an efficient police and court of their own. All marriages now are legally performed. There is an almost entire absence of crime among them, and so successful have been their removal from the temptations at Gull Lake, and the watchfulness of their police, that Mr. Gillilan asserted that he knows but one full-blood Indian on the reservation who still makes a practice of drinking. Most live in comfortable log-houses. I was taken to see, as a curiosity, two or three wigwags occupied for the summer; curious structures, consisting each of a half spherical frame, some eight feet high in the center, thatched with birch bark. The women were sitting outside, plaiting together by their husks the pretty red and mottled ears of the Indian corn for drying. Of the 471 children of school age, 108 are in school on or off the reservation. The government school building is new, large and commodious, standing in beautiful grounds, a natural park which the agent is planning to improve. The girls are also taught sewing and the boys raise vegetables in the five acres belonging to the school. They looked cheerful and intelligent.

A Roman Catholic mission has been in operation for 14 years, under the Benedictine order. They have within a few years built a new church, holding 400, and often full, Father Aloysius told me, some 65 of the people coming from 20 to 20 miles; and an orphanage which is assisted by government, and had a dozen little girls, who seemed well cared for by the two thirty German "sisters." Sister Phlorena is a practical farmer, and had made the board walk and picket fence with her own hands. In the group of the Episcopal mission buildings stands the beautiful church of St. Columba, built of boulder stone and seating 300, a wooden hospital building given by a Hartford lady and often very useful, though with insufficient means to run it properly; a neat parsonage occupied by the native pastor, Englishman, and the pleasant home owned by Mr. Gillilan, where I was hospitably entertained for half my visit; the other half as hospitably by Agent Sheehan, his kind wife. Near the church is a curious burial ground; a little wooden house built over each grave, with a window through which food was to be put for the spirits of the dead to feast upon. The Christians of course give up this practice. I attended the Sunday service at St. Columba. It has over 100 communicants and has over 500 on its roll. The congregation was as orderly and devout as any I have ever seen. The service, read in Chippewas in Ennagabow's mul-

cal tones was quite impressive. The next day I called on Ennagabow and had an interesting talk with the old man, though he began by asking if I were an Episcopalian. He declared with a queer mixture of caution and confidence that, since I was not, he must be very careful what he told me. Reassured, or forgetting himself after a while, however, he gave me a queer sketch of his early life and removal from Gull Lake, and the wonderful changes he had seen at White Earth. He spoke, too, with great warmth of his common man working with his workers, and that is what we like; not like some agents, who sit all day in their office with their cigars in their mouths—don't care for us Indians. We hope this man will be retained by the government.

I had been strongly impressed myself in a similar way by the agent, Col. T. J. Sheehan, an appointee of the present administration and does it honor. He was a gallant officer of the 5th Minnesota volunteers, and while waiting at Fort Ripley for orders to the front, was detailed instead to take so much of the present agent, Ridgely, against the Sioux in the great Minnesota outbreak of '62. He held it under hourly attacks by the savages till his little force was decimated. Seizing my interest in the story, which I had told in a history of the state, the colonel showed me the beautiful gold medal presented to him at the close of the war by his regiment, in honor of this and other heroic campaigns in which he had led them. It proves the Indians' own character and courage that they appreciate such a man for an agent. Smiles instead of sulks seemed to meet him from the moment I saw him. I saw that Mr. Gillilan also, in a recent letter, speaks of Col. Sheehan as "one of the best and most capable Indian agents to be found anywhere."

The Indians whom it is now proposed to bring to White Earth are those of Lake Winnebagoish, Cass Lake, Leach Lake, White Oak Point and Mille Lac, and perhaps Red Lake; settled under jurisdiction of the agency, but scattered through the wilderness from 50 to 80 miles apart. They are chiefly blanket Indians, living on fish, wild rice, berries and maple sugar, having a little but not cultivating the ground, except at Red Lake. The flooding of their wild rice and cranberry fields and hay meadows by the Mississippi reservoirs cuts off for some a great part of their wretched means of subsistence. Their land is too barren for farming, at the best. But the question goes beyond their bodily needs. Gambling, drinking and other vices are ruining them. At all but two of the stations, through the good bishop's and missionary's efforts, little churches have been built, and the Indian deacons in charge have worked faithfully and gathered some converts, "pork and flour Christians," some of them, perhaps, as the skeptical interpreter puts it—"but we find such everywhere"—but some are holding out bravely against great odds. Mr. Gillilan makes the tour of the stations every two months, and once a year the bishop accompanies him, with intrepid disregard of age and feebleness and the hardship of camp life and rough travel through the unknown. But the social and economic conditions of the white logging camps, the demoralization is terrible; so great at Mille Lac that Mr. Gillilan says it is useless to attempt any work for them while they stay there, for they are "never sober enough to listen." With no schools or care, their children are forced to grow up in ignorance and to vice. Removal to White Earth alone can save them, and such were many of those who were brought there first from Gull Lake. The present time is peculiarly opportune, as Mr. Gillilan says, Col. Sheehan being "the very man to settle them in their new home and start them on the upward road." The White Earth reservation is 36 miles square, with good farming and grazing land and ample room for the 6000, and they would fill it up with 160-acre allotments, made in severalty and inalienable, as they should be.

These Chippewas have never felt a hand against the white man. They resolutely refused the Sioux invitation to join in the massacre of '62. Mr. Gillilan declares them from his "personal knowledge" to be "as harmless creatures as exist on God's earth." They will certainly be far less harmful to the state as such decent, self-supporting farmers as those I saw at White Earth than as roving beggars and vagabonds. To the country as well as to the Indian, the bishop's humane embassy will do you well say, "of first class importance."

HELEN M. LUDLOW.

### Incidents of Indian Life at Hampton.

The arrival of a little brave in one of our vine-shaded Indian cottages, gladdened all hearts, beginning with his happy parents.

Frank Herbert, first born child of James and Minnie Hamilton of the Omaha tribe Born Sunday Aug. 29th. He is a fine boy, and looks as if he meant to fulfil the favorable augury that

"The child that is born on a Sabbath-day is wise and bonny and good and gay."

One of our girls who was a diligent member of the Cooking Class last year, having returned to her home, has sent back for her receipt book that got left behind in order to prepare some delicacies for her sick father. Some one who knows says: "If she makes him as good gruel as she used to make for me, he will think she has learned something at Hampton."

The Indian summer school of last year a day, closed Sept. 15th, for a full vacation of three weeks. School for the winter re-opens Oct. 5th.

The boys and girls in Massachusetts have had a busy summer from all accounts. Several of our teachers have visited them in passing through Berkshire county, and have found a pleasant state of things, and heard cheerful reports from both the students and the families where they stayed. Their return is expected Oct. 1st.

Out-Wigginsing Wiggins, a practical joker, put his head out of his room in the "Wigwam" at a late hour the other night and shouted "Earthquake!" at the top of his lungs. Effect more easily imagined than described.

The return of their beloved Miss Richards from across the great water, looking well and rested, has made happy all hearts at Wagona and the Wigwam.

### A Letter from Charleston.

Many will recall with interest the visit of Rev. A. Toomer Porter, D. D., of Charleston, to Hampton Institute a few years ago. Many more know something of the noble work which he started in faith and has carried on with the greatest originality of execution and devotion of spirit, for the education of Southern boys whose parents lost their fortunes by the war; a work to which Northern benevolence has freely contributed. A year ago his school house was damaged by a cyclone. A private letter received from him at Hampton Institute reports its share in the calamity. "We are glad to know that neither tempest nor earthquake can shake his faith in God and determination to stand by his work, and are sure both will be rewarded."

Charleston, Sept. 21st, 1886.

"Our calamity is simply inexplicable. There is not a brick house in this city not more or less injured, and the successive shocks and their avalanches for twenty-one days, have made us feel what at first seemed to have escaped. Our very foundations seem to be undermined. We had a severe shock this—Tuesday—morning which has done much damage and has destroyed confidence just returning. The windows and doors in my house are shaking now while I write, and our nerves are as much disorganized as our dwellings. Strong men and bold are appalled, amazed and abashed; not from fear but just our utter helplessness. It is now half past nine: one doesn't know at what moment the house will begin to heave like a ship and shake in every timber; and those of us who are in brick houses so far thought safe, feel our great insecurity. The shock to-day did my school house its first injury. All the plastering in eight rooms came down, I suppose loose before, but we didn't know it—and partly shifted the roof. The church shows damage it did not before, and indeed, we don't know where we are."

I had not paid for all the damage by cyclone of just one year and six days before, and now, O my Heavenly Father, I would like to drop my hands, but for faith. My brother, tell your friends I am going on going to open school on the 4th of October, and stick to the ship till she goes down. I don't know where the money is to come from. I shall need much for my work, much to help many who will not come before the general committee of relief. God help us. Your friend,

A. TOOMER PORTER.

[Contributions sent to Dr. Porter's address as above will, we hope, keep his good work from ceasing.]

## Letter From A Convict.

Editor Southern Workman—

I send to you a letter I received a few weeks ago, which at once surprised and gratified me.

It is, I think, a striking instance of the vitality, under the most unfavorable conditions, of religious truth received even partially; and thus it is an encouragement to all who are endeavoring to sow the precious seed.

The writer is a young colored man, who for many years was a scholar in the Sabbath school, established in Lexington, by Gen. Jackson and of which ever since his death, I have been Senior Superintendent.

He was my favorite scholar, because of his unusual mental gifts, his intelligent acquaintance with the facts and doctrines of the New Testament, his interest in the exercises of the school, and the propriety of his deportment. I had never heard of anything unfavorable to his moral character, though I subsequently learned that his temper was violent and dangerous.

About two years ago, under slight provocation, he killed in a most brutal and cowardly manner, one of his companions. He was sentenced to 17 years confinement in the Penitentiary. Only the compassion of the jury, moved by his previous good character, and by sympathy felt by the community for his respected and esteemed father, mitigated the extreme penalty of the law.

The Sabbath before his removal from jail, I visited him, and in presence of his afflicted family, conversed and prayed with him, and gave him Bunyan's Pilgrim's Progress. This explains some allusions in the letter.

J. T. L. PRESTON

State Prison, Richmond Va. Aug. 23.  
Kind Teacher:

It is with much pleasure I attempt to inform you by express to my circumstances at this time. I am well, and do truly desire to know the same of you and your family. I have been getting along well since I have been confined to this prison life, and I also have found your advice very true and comforting. There is not a day that passes but in which something arises to call my memory back to my early days of childhood, when you taught me in the Lecture-room, and the many sweet hymns selected by you for us to sing. It makes my heart feel sad to think of the many blessings I had, and then to cast them away. I am a poor sinner, but I can say after all my trouble, that we are parted in body, but not in mind and heart, as I will never forget my Sabbath-school. We have religious service here on Sunday, preaching in the morning, and the Sunday-school classes meet in the afternoon, which reminds me very much of your mode of teaching, but still I find no place like home. I would not forget to thank you again for the book you gave me, as it has been a source of comfort to me in my hours of sadness and misery.

Mr. Willie Preston was here not many days ago, and saw me. I was glad to see him, as I do not see many people from home. My regards to Mrs. Preston, and hope you and she are well; and also the Sunday-school teachers and scholars. I hope you will not forget to pray for me, and do not think the pains you have taken with me have availed nothing, as Christ says "If we confess our sins He is willing and just to forgive and cleanse from all unrighteousness," so you must not cast me away from your mind and heart, but remember me in prayer; and although now a prodigal son, it may be that in time to come I may arise and return again. The Sunday-school is conducted by Mr. Wm. P. Munford, of Richmond who takes great delight in the promotion of the school. Give my regards to my people if you please, I have written to them, but they have failed to answer my letter. I must close, and shall expect to hear from you again soon.

Your devoted scholar,

Owing to Mr. Booker T. Washington's absence in the North, where he was invited to present the claims of Tuskegee before thousands at the great Unionist Convention at Saratoga, we have not yet received his official account of the disagreeable experience which—as we were sorry to learn from some Southern papers—recently befell a party of his Tuskegee teachers, in being put off at a first-class car on returning from the wedding of two of their number. Whatever the details of the present case, Mr. Washington's own experience of the kind a year or more ago, when his manly bearing and action brought prompt sympathetic response from the leading citizens, newspapers, and even railroad companies of the State, and won from a convention of the latter, satisfaction of his just demand for equal accommodation, proves that

it is too late in the day for "outrages" to be perpetrated with impunity. The re-roll like a boomerang on the stupid sender. Tuskegee has the best intelligence and weight of the State with her, and is far too well established in both Northern and Southern esteem to need concern herself about insults. A real grievance can only fill her sails, it cannot be expected to crush her.

## The Indians of Virginia.

A Richmond paper says: W. A. Brady, chief of the Pamunkey tribe of Indians, of King William county, paid a visit to the Governor yesterday, bringing with him a lot of wild ducks and sora, which he presented to His Excellency as the annual tribute of his tribe.

The Chief had a long talk with the Governor, during which he informed him that his tribe were very much interested in the matter of education, and begged him to use his influence in having the school—which has been closed during the vacation—opened in the early fall.

Chief Brady said that the tribe consisted of only twenty males, each of whom had twelve acres of land, but they lived principally by hunting and fishing. Upon taking his leave the Governor said: "Be kind enough to return my thanks to your tribe for the kind present of ducks and sora, and say to them that I take an interest in their education and general welfare, and as long as I am Governor of this State it will give me pleasure to do whatever may lay in my power to promote both."

## America.

With cheeks as soft as roses are,  
And yet as brown as chestnuts dark;  
And eyes that borrow from a star  
A tranquil, yet a brilliant spark;  
Or face of olive, with a glow  
Of carmine on the lip and cheek;  
The hair in wavelets falling low,  
With jet or hazel eyes, that speak;  
Or brow of pure Caucasian hue,  
With auburn or with flaxen hair;  
And eyes that beam in liquid blue,  
A perfect type of Saxon fair,  
Behold this strange, this well-known maid,  
Of every hue, of every shade!

We find this maiden everywhere,  
From wild and sun-kissed Mexico,  
She where the Rocky Mountains rear  
Their snow-peaked heads in Idaho;  
From East to West, she makes her home;  
From Carolina's pine-clad State,  
Across the plains, she still doth roam  
To California's golden gate.  
Yet roaming not as gypsy maid,  
Nor as the savage red-man's child,  
But seeking e'er the loving shade  
Of home and civil habits mild.  
A daughter of nature,  
The problem of the age is she.

And why should she be strange to-day?  
Why called the problem of the age?  
Not so when slavery held its sway,  
And she was like a bird in cage.  
She was a normal creature then,  
And in her true allotted place;  
Giving her life to fellow-men,  
A proud and avocative race.  
That now, a child of liberty,  
Of independent womanhood,  
The world in wonder looks to see  
If in her there is any good;  
If in this new child, America,  
Can dwell in free Columbia.

"'Twas merry thought me here," said one,  
E'en Phyllis Wheatly, child of song,  
Who, horn beneath an African sun,  
In her kind mistress found no wrong.  
Though maid and mistress, they were true  
Companions, both in mind and heart.  
No sad impression Phyllis knew,  
She was content to play her part.  
In her was found the purest type  
Of African intellectual might,  
Which fast will grow and soon will ripe,  
When nourished by the Christian light.  
'Tis like Egyptian wheat that slept  
In mummy graves, while ages crept.

When first America began  
To get the world's nation new,  
Then this strange child, called African,  
Began to make her history, too.  
In New York's Knickerbock days,  
As she would in the corner sit,  
She sang with gleeful cheerful lay,  
Aid joined the family's mirth and wit.  
New England even took her in  
As service at her own fireside,  
She sang with gleeful cheerful lay,  
And wounding to a Christian's pride,  
To hold a fellow-man in chains,  
She washed her hands from slavery's stains.

The warm affections of her heart,  
Her patience and fidelity,  
Adapted her in every part  
A Washington's fit nurse to be.  
And other children, too, of state  
Were nurtured on her trustful breast:  
Their wants she would alleviate,

And so she went when in distress,  
Full well she filled her humble sphere  
As cook or drudge or ladies' maid;  
For all the varied household care  
Was on her docile shoulders laid;  
While in error her mistress' fault  
Was burdened with herself to bear.

Her lot grew harder year by year;  
For she was called from household care,  
And forced within the fields to appear,  
The labor of the men to share.  
In purple fields of sugarcane,  
At early morn, her task began  
In regions of the Pontchartrain.  
She did the hardy work of men  
From Florida to Maryland,  
In cotton, rice, and fields of corn.  
Such work as calls for masculine hands,  
All weary, overtaken, and worn,  
Subdued, she was compelled to do.  
She helped in clearing forests, too.

The cultivation through her toil,  
The liberal labor of her hands,  
Brought to perfection Southern soil,  
And swelled the commerce of those lands.  
But as she toiled she prayed and longed  
For freedom and for a new home.  
No Jewess, when in Goshen wronged,  
In trusting God e'er firmer stood  
Than sad America, who, through  
The thickening of the midnight gloom,  
Looked steadfast on the North Star true,  
And knew Jehovah held her doom.  
So thus for twice a century  
She sang the song of Jubilee.

Nor did she wait on God in vain.  
No disappointment comes to those  
Who ever strong in faith remain  
And in God's confidence repose.  
At last, a signal crisis came,  
When on the first of sixty-three  
Brave Lincoln made the bold proclaim:  
'Twas but a war necessity,  
Which Heaven did potentiate.  
That he on that day did decree  
Every fighting Southern State  
America forever free.  
God wrought this glorious victory,  
Triumphantly swelled the Jubilee.

Well did she use her chances few,  
Each opportunity she prized.  
As silvery drops of falling dew,  
Sent to her from benignant skies,  
So freedom found her not without  
Shedding the habits of her old life.  
In Southern cities, too, no doubt  
Her acquisitions proved her worth.  
In many of her homes were found  
Refinement, vice, and some degree  
Of culture there, too, did abound,  
Ere she was absolutely free.  
Her small one talent was not hid,  
Whate'er she found to do she did.

O turbulent America!  
So mixed and intermixed, until  
Throughout this great Columbia  
All nationalities at will  
Become their own, thy legal heirs—  
Behold, this colored child is thine!  
Deny it, if there's one who dares,  
Amid these glaring facts that shine  
Upon the face of this ripe age,  
That now, a child of liberty,  
We trace these facts on every page.  
These facts cry out like Abel's blood;  
And "I am vengeance," saith the Lord;  
"I will repay." Hear his own word.

This harvest of all problems hard,  
Which baffles wit of every school  
And further progress doth retard,  
Is solved but by the Golden rule.  
Be calm and think, sublimely—  
Have ye not learned, America?  
Is only sweet simplicity.  
Cease working out America;  
Most simple and sublime is truth.  
A truth divine points out to you  
The duty owed e'en from thy youth;  
One which you need not solve, but do.  
Acknowledge and protect thy child,  
Regard her not as strange or wild.

America! her home is here:  
She wants or knows no other home;  
No other lands, nor far nor near,  
Can charm or tempt her thence to roam.  
Her destiny is marked out here.  
Her ancestors, like all the rest,  
Came from the eastern hemisphere;  
But she is native of the west.  
She'll lend a hand to Africa,  
And in her elevation aid.  
But here in brave America  
Her home, her only home, is made.  
No one has power to send her hence:  
This home was planned by Providence.

Whatever other women do  
In any sphere of busy life,  
We find her, though in numbers few,  
Engaged heroic in the strife.  
In song and music, she can soar;  
She writes, she paints and sculptures well:

The fine arts seem to smile on her.  
In elocution, she'll excel;  
In medicine, she has much skill.  
She is an educator, too;  
She lifts her voice against the still.  
To Christ she tries man's soul to woo.  
In love and patience, she is seen  
In her own home, a blessed queen.

O ye, her brothers, husbands, friends,  
Be brave, be true, be pure and strong!  
For on your many strength depends  
Her firm security from wrong.  
Oh, let your strong right arm be bold!  
And do that lovely courtesy  
Which marked the chivalry of old.  
Butress her home with love and care;  
Secure her those amenities  
Which make a woman's life most dear;  
Give her your warmest sympathies:  
Thus high her aspirations raise  
For nobler deeds in coming days.

M. E. LEE.

—In the African Methodist Church Review.

## An African David and Saxon Jonathan.

FROM A YOUNG SOUTHERN GIRL.

"Come on, Thornton, let's get through our wedding and then mamma says we may each have an egg to pluck."

As I heard these words, I looked up from the book I was reading, and saw a fair-haired, hazel-eyed boy about seven years old, with one hand resting on the ragged sleeve of a small African whose eyes, which usually had an expression of mingled sadness and timidity said to see in so young a child, were now lighted up with a look of affectionate admiration, as they were turned towards his small companion.

Little Thornton was the son of our cook, an industrious, Christian woman, and when he came into the kitchen with some message from "papa" to "mamma" as he often did, he would stop to show little Willie a new method of using a sling shot, or spinning a top.

Willie's mother watched anxiously at first, fearing her son might learn evil from his small companion, but finding little Thornton had inherited her mother's sterling virtues and was truthful and honest, he was allowed to continue his visits, and he soon dropped the habit of bringing a message, as excuse, and came simply to play with Willie, and a close friendship sprang up between the children.

Though they were apparently ill-assorted companions, both boys gained by the friendship, for Willie's careful training and home influences, showing in his play and work, exerted, quite unconsciously, a good influence on his less favored companion, while on his part, Willie learned many valuable lessons of patience and gratitude from his young playmate.

Willie was never content not to share any job that was required of Thornton, and many were the arms full of wood they carried together, or the buckets full of water they brought in between them, and they learned also to cut wood, first with a hatchet, then a saw, and they were at last promoted to handling an ax. A cut too or finger was a very slight check to the ardor of these enthusiastic young wood cutters, and the anxious fears of Willie's mother were carefully hidden lest she should mar her boy's enjoyment of this new accomplishment. If "practice makes perfect" they certainly earned the skill they soon acquired, and by the time Willie was seven years old he could handle an ax with as good effect as a grown man.

It must be confessed, Willie was by nature more industrious than Thornton, but as Thornton was perfectly obedient, and their light jobs were followed by plenty of play, he worked as faithfully if not as willingly as his little friend. If they worked together willingly, they played together quite as cheerfully. Willie never quite thoroughly enjoyed any pleasure unless Thornton shared it. If his mother had not taken enough for both, half of Willie's was quietly slipped into Thornton's hand, and half of his marbles were pretty sure to find their way into his pocket. If a certain blouse struck his fancy, he begged mother to make one for Thornton, and when, observing Thornton's admiration for Willie's straw hat, his mother put a fresh band around a discarded one of Willie's and allowed him to present it to his dark playmate. Deep as was Thornton's delight to exchange his brilliant felt hat for this one, a place at Willie's bright face showed how much more he desired it to give than to receive.

Not long after this friendship grew up between the children, and when "Aunt Carry," Thornton's mother, had been cooking at Mrs. Pugh's and Charles had been teaching his husband, insisted that "his wife shouldn't work out no more," and with the submission that is required of wives, Aunt

Carry was obliged to go home, where, without the help of her weekly wages, for uncle Charlie had a constitutional aversion to work in any form) they suffered greatly, for with the care of the house and children and taking in washing, and other such work, Aunt Carry's health gave way, and she became the victim of a lingering sickness.

Her former employers were very kind, and many comfortable meals were sent her, with other gifts of food and clothes, but she would not let anyone know how much she suffered, for fear of being considered a "beggar." During Aunt Carry's illness, Thornton was obliged to stay at home more, for he was chief nurse and housekeeper, and Willie saw less of him.

When they met, Willie asked for his mother but seldom waited for an answer, and Thornton, considering the question merely a formal civility, as seldom replied.

But there came a day when in answer to the usual question, he answered with a choke in his voice: "She is dead now." Instantly Willie's eyes filled with sympathetic tears, and the fair, lovely boy threw both arms around his neck, merely exclaiming tenderly: "Oh! Thorney!" Then eager to offer some consolation in the overwhelming sorrow, he said: "come up and you shall have the hardest kind of an egg to pluck."

The next day, there was a quiet funeral, and the prison house, from which the brave spirit had escaped into the light of the perfect day, was laid in its last resting place.

After that, all that marked Thornton's sorrow to the eyes of his small world was a hit of crape tied around his hat, which was a consolation second only to plucking eggs. But the home was a very cheerless place, and though his mother's busy hands had long been in her guidance, and sorely missed, and dirt and disorder reigned supreme. The food and clothes that had been sent during Aunt Carry's illness were sent less frequently and all Uncle Charlie earned by the few odd jobs he would do, was worse than wasted in drink, and the children suffered much.

Mrs. D. seldom let Thornton go away after Thornton and Willie had been playing and working together, without a good meal, and one evening after he had eaten half of his supper so voraciously, none could doubt he could have disposed of the rest, he quickly left half untouched asking permission to carry it home to the baby, who was only a year old; unwilling to spoil the sacrifice, the lady resisted her inclination to double the amount, though she sent a large bowl of soup down to the cottage, by a private messenger.

Lately, uncle Charles has rented half of the miserable house to a colored woman, for her care of the children, in the other half, Thornton also has secured a home, where he will be well-fed and clothed and be taught habits of industry and neatness, and receive careful Christian training, so in spite of Willie's grief at losing his boon companion, he could but see the benefits for Thornton, and feel that his loss is Thornton's gain.

This is by no means the only instance of such friendship, between the children of Saxon parentage with those of African birth. Thousand of such friendships exist all over the South, nor are they forgotten when the children become men, for the colored youths are sure to find their former playmates, friends and helpers, who use their superior advantages to aid and encourage them, as much as in their lies, and the feeling of enmity and antagonism between the races in the South, which Mr. Cable describes does not and pray God, never will exist.

H. H. D.

\$7.50 in one month's time. It seems like a high profit for canvassing agent to make, but Mr. W. F. Hopkins of N. C., who is working for the publishing house of B. F. Johnson & Co. of Richmond, Va., did it and is still going bravely ahead. This too was done with no capital worth speaking of.

A little more than half are girls; average age, 17 years.

Its object is the practical Christian education of these two races; especially the training of teachers.

It is a private, chartered institution, owned and controlled by a Board of seventeen Trustees, with a majority of 10 of African descent. It is aided by the State as an agricultural school, and the Government pays \$167.00 apiece annually for 120 Indians, but it needs from private charity every year for its support, the sum of fifty thousand dollars. About half of this has been given in the form of Annual Scholarships of seventy dollars a year, which pays the tuition or cost of education of one who pays in labor for board, clothing and books.

It needs partial endowment fund.  
Five Hundred Thousand Dollars are asked for that purpose.  
Circulars and general information sent on application to the Principal.

Harrison Phoebeus, Proprietor.

**Old Point Comfort, Virginia.**

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height; substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort, or cold-weather sanitarium. Over \$15,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, malarial fevers being only rarely known. The record of the Meteorological Observations for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 48° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek genial winters of the South and cool summers of the North. The whole region round about is unsurpassed on the Atlantic seaboard. For sleeplessness and nervousness, the delicious topic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

Carry was obliged to go home, where, without the help of her weekly wages, (for uncle Charlie had a constitutional aversion to work in any form) they suffered greatly, for with the care of the house and children and taking in washing and other such work, Aunt Carry's health gave way, and she became the victim of a lingering sickness.

Her former employers were very kind, and many comfortable meals were sent her, with other gifts of food and clothes, but she would not let anyone know how much she suffered, for fear of being considered a "hegger." During Aunt Carry's illness, Thornton was obliged to stay at home, for he was chief nurse and housekeeper, and Willie saw less of him.

When they met, Willie asked for his mother but seldom waited for an answer, and Thornton, considering the question merely a formal civility, as seldom replied.

But there came a day when in answer to the usual question, he answered with a choke in his voice "She is dead now." Instantly Willie's eyes filled with sympathetic tears, and the fair, lovely boy threw both arms around his neck, merely exclaiming tenderly "Oh Thornton!" Then eager to offer some consolation in the overwhelming sorrow, he said "come up and you shall have the hardest kind of an egg to pluck."

The next day, there was a quiet funeral, and the prison house, from which the brave perfect day, was laid in its last resting place.

After that, all that marked Thornton's sorrow to the eyes of his small world was a bit of crape tied around his hat, which was a consolation second only to plucking eggs. But the home was a very cheerless place, and though his mother's busy hands had long been idle, her guidance was sorely missed, and dirt and disorder reigned supreme. The food and clothes that had been sent during Aunt Carry's illness were sent less frequently and all Uncle Charlie earned by the few odd jobs he would do, was worse than wasted in drink, and the children suffered much.

Mrs. D. seldom let Thornton go away after Thornton and Willie had been playing and working together, without a good meal, and one evening after he had eaten half of his supper so voraciously, none could doubt he could have disposed of the rest, he quietly left half untouched asking permission to carry it home to the baby, who was only a year old; unwilling to spoil the sacrifice, the lady resisted her inclination to dole the amount, though she sent a large bowl of soup down to the cottage, by a private messenger.

Lately, uncle Charles has rented half of the miserable house to a colored woman, for her care of the children, in the other half, Thornton also has secured a home, where he will be well-fed and clothed and be taught habits of industry and neatness, and receive careful Christian training, so in spite of Willie's grief at losing his boon companion, he could but see the benefits for Thornton, and feel that his loss is Thornton's gain.

This is by no means the only instance of such friendship, between the children of Saxon parentage with those of African birth. Thousand of such friendships exist all over the South, nor are they forgotten when the children become men, for the colored youths are sure to find their former playmates, friends and helpers, who use their superior advantages to aid and encourage them, as much as in them lies, and the feeling of enmity and antagonism between the races in the South, which, Mr. Cable describes does not and pray God, never will exist.

H. H. D.

\$750 in one month's time. It seems like a big profit for canvassing agent to make, but Mr. W. F. Hopkins of N. C., who is working for the publishing house of B. F. Johnson & Co. of Richmond, Va., did it and is still going bravely ahead. This too was done with no capital worth speaking of.

Total 601.

A little more than half are girls; average age, 17 years.

Its object is the practical Christian education of these two races; especially the training of teachers.

It is a private, chartered institution, owned and controlled by a Board of seventeen Trustees, with a majority of no denomination. It is aided by the State as an agricultural school, and the Government pays \$167.00 apiece annually for 120 Indians, but it needs from private charity every year for its support, the sum of fifty thousand dollars. About half of this has been given in the form of Annual Scholarships of seventy dollars a year, which pays the tuition or cost of education of one who pays in labor for board, clothing and books.

It needs partial endowment fund.

Five Hundred Thousand Dollars

are asked for that purpose.

Circulars and general information sent on application to the Principal.
